Resolved, That women have the same natural right to vote as men; that through their inability to vote, our politics lose the only natural factor by which it can be kept pure; that we should no longer withhold a right from our mothers, wives and daughters that we grant to aliens of nearly all nations; that our laws should be so amended as to allow all Americans, regardless of sex, the same human rights.

Referred to the Committee on Resolutions.

Worthy Master Johnston delivered his annual address, as follows:

Officers and Members of the State Grange of California:

In compliance with the requirements of the fundamental law of our Order, we are convened for the fifteenth time in annual session. The events of another year have passed into history—the books are closed—our year's work is finished, and we have come together to give an account of our stewardship. The year just passed is one of unusual prosperity. The health of our people has been unusually good. All the avenues of trade have been crowded with business—plenty of labor for the laborer at remunerative wages—plenty of food and clothing at reasonable prices.

Our Shops Are Overrun With Work.

Our crops are abundant all over our Golden State—so much so that the carrying trade is tasked to its utmost capacity in forwarding our produce to market; and although the prices of some articles have ruled low at times, yet, take the season through, the tillers of the soil have been fairly remunerated for the year's work. Then let us, as a fitting preparation for our duties, render our homage of praise, adoration and thanksgiving to Him who doeth all things well and has crowned the year with His goodness.

The Grange presents to the agricultural interests an organization of both State and National character, and is the only strictly farmers' organization through which the wants of the humble tillers of the soil are daily brought before the law-making power of the State and nation. At present it is doubtless clear to every reflecting mind that no great object, either of State or general interest to our people, can be accomplished by single individual enterprise or effort. All branches of business enterprises and occupations have fully awakened to the importance of

Organization for the Better Protection

And advancement of their respective interests. Farming is a *business enterprise* and requires co-operation. It is a *profession*, and requires as much study, talent and training to secure success as is required to succeed in any of the so-called learned professions. The really skillful and successful farmer nowadays must be a thoroughly wideawake business man, as well as a thorough scientist. He must be able to accommodate all his operations in the soil to the favorable conditions of nature, or to regulate and control nature's agents to correspond with his operations. It will no longer do to follow in the old, worn-out grooves of his fathers, unless those grooves are proved by science and enlightened practice to be in the right direction.

Now it is unnecessarily tedious and laborious to climb this scientific agricultural hill of progress alone, but by

Organization and Co-operation

We can mount the hill of progress together very much more easily than we can single-handed and alone. No man can make farming pay who does not in every respect keep up with the times—who does not attend strictly and punctually to his business, and take advantage of all the best modes of the cultivation of the

soil, planting, harvesting and marketing crops—who does not secure the best labor-saving machinery and keep it in the best of repair while in use—who does not obtain and keep good stock to do the work on the farm as well as for breeding purposes—who does not secure and keep good and reliable work hands with skill and ability and will to do his work in proper time and in a proper manner. And in order to be prepared to take advantage of his circumstances, he must co-operate with his fellow-tillers of the soil, not only in muscle and dollars but in ideas as well.

The past year is replete with success to our Order. Unusual activity has been displayed by our membership. More new members have been enrolled,

New Granges Established.

And dormant organizations revived, than during the same length of time for several years past. It is a pleasing duty to report the Order throughout the State in a prosperous and healthy condition. The very encouraging outlook just referred to is, no doubt, largely due to the able corps of deputies in the field during the year. It has afforded us much pleasure to meet our people in different portions of the State and become better acquainted with the Patrons throughout the State. In response to many urgent appeals for our services we have traveled and delivered numerous lectures in the interests of our noble Order, and on every occasion we received a cordial reception and evidence of appreciation. We exceedingly regret that private business prevented us from responding to many other demands for our services, which, under the circumstances, was impossible.

One of the grandest things the Grange is doing for the tillers of the soil in the way of education is teaching our young men and women to

Think for Themselves.

Not only in the study or library, but upon their feet. They are learning to stand upon the rostrum and tell what they know as well as any other class of young men and young women, no matter what their advantages have been. It has been one of the leading objects of the Grange to put in operation a system of education by which the farmers would eventually strike out from the old paths where they have been so long journeying, and place themselves on a higher plane of usefulness. Through this system we have been enabled to make some progress. Already we are realizing the importance of more information upon the great topics of the day in order that we may be better prepared to meet the issues of the times. Already we are standing in political bodies demanding and receiving recognition. Already we are sending representatives of our interests to

State and National Legislatures.

Who are demanding and receiving recognition in behalf of the interests of the tillers of the soil; and although we have not made as much progress in that direction as we should have done, nor as much as we expected to do, yet we have made a great advance over what we could have done without the Grange, and whenever we prepare our members to fill the important positions of honor and trust, and are willing to stand together and say, "These men are honest and capable, and we desire that they shall represent us in the legislative halls of the State or nation," we have the power to place them there if we are united and insist upon our rights.

The Grange found the tillers of the soil in an isolated condition, living too much alone, thereby increasing their selfishness and strengthening their prejudices. It persuaded them to give up *self* and

Live for Others.

And avail themselves of the power of the co-operation of a combined brotherhood. The Grange offers the farmers of the United States a means of combination of harmony of action such as they have never before possessed. It offers them the means of expressing their views and wishes as a body, and of enforcing them. Its objects and mode of accomplishing them are distinctly stated, and are such as to commend themselves to every member of the Order. An opportunity is afforded each member to give expression to his views, and the general discussion which follows such expression subjects the ideas advanced to a test which proves either their excellence or their fallacy.

The Grange is not a political organization, but it strives to educate men and women to think for themselves, and not to follow the dictates of party leaders and packed caucuses unless their own judgment approves. The Order seeks no affiliation with either or any of the political parties of the present day. It has nothing to do with what is called party politics. It is devoted to

The Interests of the Farmers

And leaves political questions to its individual members respecting every man's right of opinion and action in political matters. Just now the influence of the Grange simply loosens the bands that bind men to the old parties and makes them feel free to choose their own places. This at least places the balance of power in the hands of the Patrons of Husbandry, and if they will be true to their own interests and see to it that only men who are tried and true receive the support of the farmers, then the Grange will have accomplished one of its missions.

The farmers of the United States hold in their grasp a vast power, and they are begin-

ning to see that they must use it for their own protection. We think that we are warranted in asserting that fully one-half of the entire voting population of the Republic are engaged in agricultural pursuits. We have no statistics since 1880 from which to form a definite conclusion, yet we are sure we are very near the actual truth in placing the voting strength of the farming classes at one-half of that of the entire country. Now, if this be true, it needs no argument to prove to the farmers of this country that

They Have the Power.

And it is a duty they owe to themselves and to posterity to remedy the grievances of which they so justly complain. One-half of the voters of the United States, united in a common cause and seeking the triumph of a common principle, are capable of accomplishing anything that is just and right; but they must be united. There must be no divisions among them, no quarreling over petty issues. The great object for which we strive must be first achieved and minor differences can be settled afterward. State and National legislation can be so thoroughly controlled by this powerful army of voters that no unjust or burdensome laws can be enacted. The repeal of those of which they complain can be effected, and the passage of such laws as are necessary to the inauguration of an era of justice and equality secured. The founders of our noble Order did not do all they intended to be done, but they did more than any other set of men ever have done to advance the interests of the tillers of the soil and make it easier for us to fulfill the great purpose.

If we want to do a great and good thing and get out of the old grooves and ruts, the sooner we set about it the better for us and for those who follow after us. I know of no grand invention, no noble reform, no peerless enterprise, no superb stroke of work of any sort, which was not started from a spark

In the Fervent Fires of Youth.

Once well past that youth and you may dream of success, but the chances are that if you do not strike out in youth you will not reach the degree of success which you would have done had you improved your early opportunities. If we want to make our dream of a wider, better and more useful life of any kind come true, we must push out and do while the glow of it is in the heart, which is more than half the battle. I think the whole wealth of enterprise in all directions lies within the line of our earlier manhood and womanhood. There lies our chance of rising from the collective mediocrity into some sort of clear and clean nobility. There are very few of us indeed who do not find ourselves running in rather a narrow groove when we begin to think and look out for ourselves, and a good many take to the groove kindly and never want to get out of it. But there are a great many, again, who cannot quite believe what they are told or do as they are bidden. There is the stuff in them for something better than that, and so the idea dawns on them of leaving the old beaten paths, and if they ever do it to any sure purpose, they will start in youth.

Is there a divine ambition pulsing in the heart of your youth to do a grand work of any kind?

Push Out and Push On.

Would you be a leader and not a mere follower in a wider and better life? Now is the time. Wait a few years more and you will lose your chance and take your place with those who are on the down grade and cannot reach the brake. In this connection, and among the fruits of the Grange, I call your attention to the very elegant response to the intellectual address of welcome we have listened to to-day. While the young Brother did nobly, he is only one, picked up at random out of a hundred young gentlemen and young ladies in Sacramento county, who are his equals in every respect, and who, like him, are largely indebted to the Grange for their ability to properly clothe their ideas with words upon the rostrum. I do not wish to be understood of boasting of Sacramento county, for other counties are doing equally well, but to show what the Grange is doing for the young people as well as those of mature years. And while I point with pride to this, as grand a body of Past Masters and Matrons as any State in the Union can produce, I feel that it is only a question of time, and very short time, too, when these silvered heads shall have laid down their implements on earth and will have rendered an account of our stewardship and left our unfinished work in the hands of young ladies and gentlemen who comprise the youth and beauty of California Patrons of Husbandry. And I feel when that time comes they will take up the work and push on with more vigor and with greater success than we have been able to do.

When I read the accounts of the hardships, privations and difficulties under which the farmers of other States and countries labor, and then turn and look at those of our own beloved State, I exclaim with L. Montgomery Mather—

"Fair California! State of golden pride!
Thy fields are ever green and wide;
Thy virgin soil, tilled by industrious hands,
Has been transformed to most productive lands,
Yielding delicious fruits and harvests prime,
Feeding both mouths of home and foreign clime.
Hillsides and valleys that were once a waste,
Producing wines of rare seductive taste.
Thy sandy beach, kissed by an ocean's spray,
Appears an Eden in thy Monterey.

"Brave Pioneers! Tribute is due to you,
Whose brains and muscles framed your State so true.

To you she is indebted more than gold;
You gave to her your youth and manhood bold.
In ripened age your recompense must be
Her onward march to meet her destiny,
And in your declining years enjoy the gains
Wrought by your life of labor and of pains.

"You men of native birth who call her 'home'
Should not remain unknown in history's tome,
Borne to the light of day with scarce a cloud,
See that your natal pride ne'er wears a shroud.
The future's zealous care falls to your lot;
Let not the sacred charge be e'er forgot.
It rests with you and with your moral force
To wisely shape and safely guide her course."

California! An Empire in territory, climate and soil. Her mountains are surpassed by none in grandeur and formation. Her valleys are equaled only by those of the Po and the Nile. Her products are equaled by none. This year we have 1,000,000 tons of wheat to sell to feed the hungry nations of the world. The vintage this year will yield at least 20,000,000 gallons of elegant wine. If the season holds out favorably for drying, we will have 20,000,000 lbs. of raisins and 10,000,000 lbs. of other dried fruit for sale. I am informed by the secretary of the California Fruit Union that there have been shipped out of Sacramento alone this year, up to Sept. 20th, 21,000,000 pounds of green deciduous fruits, besides large quantities from other points which did not come from or pass through Sacramento. This fruit brought a net price of at least two cents per pound to the grower. I believe California is entering upon a

Continuous Prosperous Decade.

think that the State will make greater progress in the next 10 years in products, population, enterprise and prosperity than she has in the 20 years last past.

California is a grand field for investment; the opportunities are unlimited, and it would be strange indeed if a country possessing all the advantages of which California is possessed did not prosper. While the products of her gold-fields have been great and have largely swelled the treasures of the world, the products of her wheatfields, orchards and vineyards are far greater, affording a more abiding wealth and promising a far more stable prosperity; and I believe the fertility of her soil is equaled only by the enterprise and intelligence of its tillers.

But while we are booming everything and everybody, I think there is great danger of overdoing in our anxiety to increase our population; we are very liable to make a mistake, or rather repeat some that have already been made in regard to immigration. We cannot have too many sober, economical, industrious people here; but we already have too many such men as those who conducted the Haymarket murders in Chicago last year. The time has come when steps should be taken to guard our shores against

Promiscuous Invasion from Europe.

As well as from China. We should protect ourselves by some passport system, so that no immigrant would be permitted to land here unless vouched for by a U. S. Consul at the port of embarkation or at some city contiguous to the district from which he comes. Doubtless some persons will contend that a system of this kind is objectionable, inasmuch as it savors of European methods of espionage. Granted that it does, so do our custom-house, our police and our quarantine establishments. If we have found it necessary to protect ourselves against imported contagion, surely we have an equal right to protect ourselves against moral contamination and against the fanatic fools who wave the red flag. We have given asylum to the oppressed of other lands, but we are under no obligations to throw open our doors to ruffians who remain alien in sentiment, advocate assassination and threaten to burn down the roofs above our heads.

We have found it necessary to resist Chinese immigration, yet the Chinaman is an inoffensive and desirable creature when compared with the bomb-throwing anarchists. If the communists want to put their principles into practice, let them go out and occupy virgin territory, such as can be found in Africa, New Guinea or South America, and

Experiment On One Another

To their heart's content. We should be more careful in selecting our agencies for promoting immigration from foreign lands. We should not beg people to come to this country, but should give them to understand that it is a favor to be allowed to come to this land of the free and the home of the brave. There should be nothing of the Know-nothingism of 30 years ago, but there should be a disposition to welcome all deserving and honest emigrants, and it should be understood that we do not propose to make this country the dumping-ground for Europe, and that we are going to be more particular in the future whom we allow to come into it.

If natural causes were left to operate alone, the immigration into the United States would be large enough, but where it is stimulated, as it is now, by steamship and railroad companies whose only aim is to get as many passengers as possible, who do not have to care for the emigrants should they become a burden on the community, as they do not bear their share of the governmental expenses, and are therefore not interested whether they are good citizens or not, under these circumstances immigration

has become a serious injury and a great danger to the country.

This question of restricted immigration will play an important part in politics in the near future, and deserves the careful study of all interested in our continued prosperity, since it is evident we can no longer safely receive this vast herd of diversified humanity, this large infusion of disreputable, undesirable hostile element who are at war with the great principles of law and social order underlying our Government. Against the further importation of these paupers, criminals, anarchists, red republicans and scoundrels, the general acum and refuse of the Old World's cesspools, we enter our most solemn protest.

Constitutional Amendments.

At the last meeting of the National Grange the following Amendments to the Constitution were adopted, and I herewith submit the same for your consideration.

Amend Article I by adding the following:

"SEC. 4.—County or Pomona Granges may be represented in State Granges under such regulations as the State Grange may provide."

SEC. 5.—The State Granges shall have authority to confer the degree of Flora on all members of the Order in good standing in their respective States, who have taken the degree of Pomona, in like manner and form, as the same is now conferred by the National Grange; and each person receiving the degree shall be entitled to a certificate of membership in the sixth degree from the National Grange, duly attested and under its seal.

SEC. 6.—The initiation fee for the sixth degree, when conferred by a State Grange, shall be \$1 for each person—one-half to be retained by the State Grange, and one-half to be paid to the National Grange.

Worthy Master Darden promulgated the following amendments to the Constitution as having been adopted by the Constitutional Majority of State Granges:

Amend Article I. District and County Granges, Fifth Degree. Strike out, in fourth line, all after the word "be," to the end of the sentence, and insert, in lieu thereof, "Recommended by the Subordinate Granges as qualified and worthy candidates for membership in the District or County Grange."

Amend Article II, Section 4—Strike out all after the word "committee," in fourth line.

Amend Article VI.—In second line from end of said Article, between the words "by members," insert the word "two."

Amend Article VIII, Section 2—Strike out all after the word "determine," in second line, from end of said section.

Amend Article IX, Section 3—Strike out, in first line, the following words: "or charters."

Amend Article IX, Section 4—Strike out, in last line of said section, the following words: "Nor more than 20 men and 20 women."

Amend Article XI, Section 1—Strike out, in second line, the word "officers," and insert "Master and Executive Committee."

Since our last annual convocation, death has again entered our ranks and, as usual, has plucked some of our choicest specimens.

Hon. D. Wyatt Aiken departed this life April 6, 1887, at his home in Bokesburg, S. C. Bro. Aiken was one of the early advocates of the Order of Patrons of Husbandry, and in his death it has lost one of the strongest pillars of its support. His voice was heard on all proper occasions in the Subordinate, State and National Grange; also in the halls of Congress, in defense of the tillers of the soil, and, although he has gone from among us, his name will live forever on the brightest pages of the history of American agriculture, and will be remembered with emotions of affection and gratitude by its devotees.

Bro. A. D. Nelson, a member of this Grange, died at his home in Butte county. He was a charter member of Evening Star Grange; he was a devoted friend and an advocate of our noble Order, and his voice was often heard in defense of its principles; but he has gone to render an account of his stewardship in the Great Grange above.

Sister S. A. Ashley, a member of this Grange, died at her home near Woodbridge, Nov. 23, 1886. Sister Ashley was a charter member of Woodbridge Grange. She was a true Patron of Husbandry, a faithful wife, an indulgent mother, a kind friend, and is mourned by all who knew her.

Patrons, I will not trespass further upon your time. My official relations as Master of the California State Grange will close during this session, and when I return to you this gavel, the beautiful symbol of authority with which you invested me two years ago, I desire sincerely to thank you for the honor and the many expressions of your fraternal courtesy and regard. The remembrance of my official labors and association with you will ever remain as one of the brightest pages of my life. The honor of presiding over such an intelligent, honorable, honest, upright and representative body as the California State Grange of Patrons of Husbandry is one of which any man may well be proud. One and all, once more I return you my heartfelt thanks for your fraternal assistance.

Wednesday Morning.

At the session of Wednesday forenoon, 5th, committees were appointed to draft resolutions of respect to the memories of D. Wyatt Aiken, A. D. Nelson, R. S. Clay and Mrs. Ashley.

The following standing committees were appointed:

Irrigation—A. P. Merritt, V. E. Bangs, T. E. Ketchum, Wm. Ogden, T. T. Hooper, Mrs. G. Wheatley, M. N. Williams and Mr. Glad-ding.

Finance—V. E. Bangs, George W. Hack, R. M. Nixon, V. W. Still and Mrs. A. T. Dewey.

Legislation—J. Capels, J. H. Gardner, N. Jones, A. L. Chandler and G. W. Hancock.

Resolutions were introduced by J. Larkey, relating to a Viticultural Commission and by A. T. Dewey concerning agricultural work by the Geological Survey. Respectively referred to Committee on Good of the Order.

The District Deputies reported for appointment were G. P. Loucks, B. F. Frisbie, J. D. Huffman, Walter Renwick and V. E. Bangs.

Amos Adams gave notice of appeal from the action of the State Grange in regard to the election of two alternates to the State Grange, when the Master of a subordinate Grange has not a wife who is eligible to be a representative.

We shall report further proceedings next week.

Immigration and Temperance.

At the General Assembly of the Knights of Labor in Minneapolis, on the 3d inst., General Master Workman Powderly addressed a crowded audience in a hall whose seating capacity is 15,000. A portion of his speech is thus reported by telegraph:

"I have been taken to task on a few things. It has been charged that I do not favor immigration. It is a mistake. I am of foreign birth myself. I have no objection to foreign immigration. I favor it. Several land-grant companies, however, have their immigrant agents, and they bring in all manner of foreigners. If one of these poor creatures raises his hand, not against the laws (for he knows none), but against what he sees just before him, he is called an anarchist and is punished, while the men who loaded these poor creatures on this country go scot free. [Tremendous applause.] I hate anarchists and anarchy, but how can the child reared in poverty, squalor, ignorance and vice grow up to respect the institutions of his country? I say stop the agent of the steamship company. Take home the agent of the land company. Stop importing foreign paupers. Let only those come to our free America who come of their own free will to make their homes here. Is that saying anything against a foreigner? [Cries "No, no, no!"] This is why I am called a crank on the immigration question.

"I am also called a crank on the temperance question. I may be a crank on this question, but I am not ashamed to say that I would far rather see a man a sober man than a drunkard. There are those who have threatened to leave the Order because of my position on this question. To all such, I say go. I will trust the faith of this nation with sober men and women, and I will never take back one word of what I have said on the temperance question, so help me God."

In the death of Bro. D. L. Williamson, American River Grange mourns the loss of an earnest, thorough and faithful member.

Glimpses at Stockton Fair.

[Written for the RURAL PRESS by Mrs. W. D. A.]

On the 26th of September the bell in the fine, new pavilion proclaimed the opening of the 29th annual fair of the San Joaquin Valley Agricultural Society, comprising nine counties.

The First Artillery Band of Sacramento gave a grand evening concert and furnished music for the 12 days.

The crowd paid quiet attention and frequent applause Thursday evening to the address by J. P. Irish, remarkable for brevity and sense, and to the offhand speech of Gov. Waterman, with its prophecy that in ten years "we'll be selling our land with its rare climate by the foot instead of acre." Friday evening "The Floral March," conducted by Miss Bates of S. F., drew 10,000 spectators. One hundred and eighty young ladies in Ocan webs of ecru, in gauzy white, that graced rounded limbs and drooped from bunches of flowers, fruit, grain and nuts, marched twice through the main floor. One thousand eight hundred dollars was taken that day and evening. Wreaths, chaplets, clusters, a quaint cabbage-leaf bonnet set off youthful beauty in Grecian, artistic costume. Saturday evening Mrs. Dohrman's kindergarten school went through exercises pleasing to child-lovers.

At the main entrance one faced an array of hardware. John Jackson showed pumps of all sizes, gasoline stoves, etc.; Jackson & Earle, ranges, stoves, lamps and cutlery; J. E. Ruggles, an old-style printing press, on which he printed odd cards. To the left, Bowdoin's kitchen cabinets, smallest \$10, largest \$14. They hold so much and look so nice! Near is an admirable ice-chest for \$21. All these have sockets around the legs to hold water or anti-rust fluids. Mr. Bowdoin has also the "steamless, odorless, non-boil-over kettle," S. P. Millard agent, Stockton. Boiling and steaming is done at one time. A raised cover, water joint and a flue in the side, which carries sniff of cabbage and snuff of onion back into the stove, completes this boon to the housewife.

Austin Bros. had the finest home exhibit in the building—in a prominent and central position—an hexagonal figure or temple 26 feet in height, so exquisite in its color-tone, so unique

its design, that it shows the master-power of an artist. Hardware is made to yield itself to the necessities of mechanical drawing. The several devices for the firm-name would do credit to a professional designer.

Stockton Mail exhibited bookbinding, paper ruling and perforating machines—excellent in their line.

H. G. Boieselier had a pyramid of yeast powders and packages to give the body guessing the number in the pyramid. The "Blue-Gum Bitters" exhibit kept malaria out of the hall.

P. Musto showed bottled goods, sauces, wines, macaroni, chinaware and elegant dinner sets. H. H. Moore & Son, druggists' goods; H. H. horse liniment and beautiful wood-moldings and mantels by P. A. Buel & Co., also "Hill's" patent inside blind. Williams & Moore had a fine exhibit of soap and Cashmere goat mats. P. A. Buel, fine planing-mill goods. Kullman & Wagner, Pacific Tannery (largest in the State) made a handsome show of leather, harness, tanned skins and robes. Their posts were covered with bark, bright with green moss. A box of mountain quail twit near. C. V. Thompson filled part of the northeast conservatory with fruit and vegetables almost wholly from this county. Ashelving of canned fruit was flanked by immense squashes, melons, sweet and Irish potatoes, egg plants, etc., limbs of orange trees, with oranges of last and this year's growth, large and sweet; branches of raspberries and blackberries, strawberries and luscious peaches showed how late and early our soil yields (chestnuts and other nuts). A beautiful collection of non-irrigated fruit by Jos. Putnam, Clements Station, completed this splendid collection. A lovely lot of jellies graced this show.

The rest of the annex was filled by E. C. Clowes, "Stockton Nursery," with the now-popular olive trees, a large umbrella tree in the center, palms in the background, ferns and rare plants around it, elegant shrubs, specimens of dried fruit from the Zimmerman drier and fruit in glass; lettering in flowers and a beautiful sign, wrought by his aged mother, in evergreen; Mrs. Jos. Hale, tasteful pyramid of canned and dried fruit, jellies, etc.; U. S. Brewery, bottled goods surmounted by a big bottle; Southworth & Grattan, a four-columned pyramid of canned fruit; large jars fruit in spirits and fine disposal of grocery goods from their popular store. The Buhach Co. handsomely displayed their powder, dried fruit and melons from Merced; Moore & Smith showed plank-sawing—Humboldt plank, 5 feet wide and 20 feet long; Mrs. J. C. Reid, notable for jellies, canned fruit, etc., had a beautiful silk exhibit which, by mistake, was not on the list in Sacramento, but was of much interest, as are her jellies here; W. B. West had an unequalled table of grapes, nuts, fruit and flowers; S. March showed fine apples, fruit and vegetables and a fine tomato tree.

San Joaquin County.—Letters of wheat invite to all of the northeast side, where everything growing in the county was collected. Magnificent is the "Harvester," a picture, in colored and shaded club wheat, with a little barley and oats, eight feet ten inches long and seven feet high, sketched by G. D. Freeman, who directed the Stockton ladies in the work, on a wire screen 14x24 feet, through which the wheat stalks were drawn till the first mesh caught. To the right grandly rose 45 ten-inch bundles with corresponding sack and box. Under the harvester was another pile; most of it gathered by S. C. Waters and J. D. Huffman, of the committee; some of it bought and put into the neatest of bundles by Huffman, superintendent of the exhibit, wearing premium blue, won from ten other counties. S. Thornton, New Hope, showed up the tobacco industry, two crops in the year. Mrs. Locket, Brighton, had a fine show of dried fruit in variety, crowned with premium at the State Fair.

Mrs. Hill, Mokelumne, raiser of first buhach in California, shows plant and powder, fine fruit and vegetables. Geo. Wolsey of Q ranch, Amador, is welcomed for his fine green and dried fruit and other growths. Mrs. Miller, Calaveras River, lovely fruit, vegetables, flowers. Mrs. C. C. Castle, table vegetables and fruit. Geo. West, graded shelves, filled with choice wines and brandies from the famous El Pinal vineyard. John Elliott had a large and magnificent shelving of fruit, vegetables and nuts, praised by all. Mrs. R. S. Bates, in the S. E. conservatory, had lovely plants, flowers, tomatoes. Dickson and Woodhull had a fine marble exhibit. The unique Live Oak Log Cabin of watermelons, furnished by Mr. Childs, was a house 14 by 16 feet, and the best showing of the Lodi industry that brings \$80,000 to that town. Her ladies evinced great taste in its make-up of lace, moss from the live oaks, crowned with palms. Next came a "realtree," made of bark and branches of live oak, from which peered two squirrels and an owl; and here a walk led up a grassy slope to a rustic bridge, over a stream where lilies and grasses bent. In the shrubbery two geese were half hidden. At the side rested a ladder of red geranium and ivy. To the left a hammock swung, near where a bear emerged. The quiet of nature pleased every beholder of the sylvan scene, carried by the Floral Committee with Miss West at its head.

On the northwest corner a fine grain exhibit from the tule lands of New Hope was made by R. C. Sargent and others.

The west wing was filled by the large exhibit of H. C. Shaw in hardware and a grand lot of implements; and by M. P. Henderson and

Wm. P. Miller, with beautiful buggies, riages and buses. This is a manufacturing city. Next the Oregon Fruit Dryer, \$125, complete, carrying five first premiums, and drying from 300 lbs. to 3 tons a day. First prize at the State Fair, 1887, for unbleached fruit. H. S. Jory, who also shows pie-holders.

A. Bink had a patent buggy spring. Fine! B. S. Hite's patent cook-stove, fender and fruit evaporator, shuts heat and odors from the room. A. P. Day showed roller-bottom wash-machine, heater underneath, ironing-board—all \$30. A rotary dasher churn for a small family proved how easily butter can be made. The Del Monte Milling Co. had a fine show of flour and gasoline stoves. Sperry's mills, a pagoda made of choice brands. Inside on shelves, jars of grain, screenings, etc. Crown mills had a handsome pyramid of their excellent brands with a broad, gilded crown at the top.

F. S. Clark, San Francisco, beautiful folding furniture and iron bedsteads. J. T. Mills, ranges, tinware. J. Gross drew all the children by his candy factory in operation. The Examiner had elegantly designed samples, and near the entrance were dispensed samples of our own RURAL and the Illustrated Weekly. The new Decker washer, by E. W. Melvin, is sensible in make and liked by all who have tried it.

I am indebted to Mr. Jones' politeness for the following notes on

Machinery Hall.

In the machinery department the first thing to attract attention was the exhibit of W. T. Garrett & Co. of San Francisco, manufacturers of Hooker's direct acting steam pump, Richards' patent hydraulic machinery for irrigation and reclamation. Fred Ruhl of Stockton had in operation a large number of pumps of his own invention. Root, Neilson & Co. of Sacramento exhibited the College City pump. The endless chain sickle for use on harvesters, headers and reapers, manufactured by Ashley Bros. & Clark of Stockton, attracted a crowd of admirers. The Cal. Fence Manufacturing Co. had one of their machines in operation.

H. C. Shaw made an extensive display of gang, sulky and single plows and a general variety of agricultural implements.

J. H. Condit & Co. also had a fine exhibit of plows, cultivators and farmers' tools. The Grangers' Union occupied a large space with their exhibit of carriages, reapers, mowers and other farming implements. The Lubin pulverizer and clod crusher was also on exhibition. John Christian of San Jose showed thrasher teeth of his own manufacture.

The Stockton Combined Harvester and Agricultural Works make a fine display of grain-cleaners moved both by hand and by power. The Angle Sieve Cleaner and Separator is rightly named "The Champion Grain Cleaner and Separator of the World." All who see it work agree that it is the "boss." They also have in operation their improved cleaner for Combined Harvester. The Miller's Lightning Hay Press occupied a prominent place. It is becoming a great favorite on this coast. All the above won the first premium at the late State Fair.

† Daniel Best of San Leandro showed two fanning mills and one attachment for harvester and thrasher.

L. A. Lasher of Stockton had on exhibition the simple device which he calls "The Golden Age Trace and Whiffletree Guard" for the protection of trees and vines.

At the Park.

The six days of parade, racing, ladies riding and antics and races of the 100 Pintos with their chief, drew great crowds, as did the exhibits of harvesters.

A fine sale of Herefords was made. Four head to Senator Hearst, two-year-old cow, \$120, cow, \$140, yearling heifer, \$130, Bountty, a calf, \$150; to Mr. Burke a calf, \$85, and to Andrew Smith, calf, \$75, and cow, \$155.

Report of the State Board of Horticulture.

The biennial report of the State Board of Horticulture for 1885-6, which has just been issued because of delays in the State printing office, is the largest publication ever made in the interest of California horticulture. It includes upward of 580 pages, and contains the official statements of the transactions of the State Board, the accounts of expenditures under its authority and other official memoranda. Besides this, it has the stenographic report of the Sixth Annual Convention of Fruit-Growers held in Sacramento and of the seventh, held in Riverside. These two reports are of great value. There is also a condensed report of the Los Angeles Convention of 1885. Another leading feature is the report of State Inspector W. G. Klee of his work done during the year 1886, comprising his observations in various parts of the State. Mr. Klee has also a paper on the olive growing, noting the growth and production of the tree in different counties. This, together with President Elwood Cooper's essay, read at the Sacramento Convention, and Mr. Pohndorff's essay on varieties, makes the report especially interesting on the olive. The essays on other fruits read at the conventions, the full discussion on injurious insects and their repression, the colored plates of some of the most injurious scale insects and other matters make the report very rich in information on California fruit-growing. We are glad that a large edition has been published. Copies can be had by applying to B. M. Lelong, Sec. State Board of Horticulture, 220 Sutter street, S. F.

The Bravest Battle.

The bravest battle that ever was fought,
Shall I tell you where and when?
On the maps of the world you will find it not;
'Twas fought by the mothers of men.

Nay, not with cannon of battle shot,
With sword, or nobler pen;
Nay, not with eloquent word or thought
From mouths of wonderful men;

But deep in a walled-up woman's heart,
Of woman that would not yield,
But bravely, silently, bore her part—
Lo, there is that battlefield!

No marshaling troop, no bivouac song,
No banner to gleam and wave;
But, oh, these battles! they last so long—
From babyhood to the grave.

—Joaquin Miller.

The Feast of the Dragon.

San Francisco had the pleasure, on the 23d and 24th of September last, to see a really grand procession, gotten up entirely by our Chinese residents. It was large, expensive, gorgeous and barbarous to the last degree, except that no special cruelty had any part therein. It was intended as an occasion of joy and feasting.

The legend of the occasion was that the great god of China, represented by the material form of a monster dragon, and seen on the national standard, is weary of his confinement in the temple and must have a view of his people, and a temporary place of residence for one night. On Friday he went on his excursion, and on Saturday returned home for duty till next year.

The dragon, with a monstrous head, had the body and tail of a snake. It was at least 65 feet long, made up of wood, paper, brass, spangles and silk of the most gaudy colors, and supported all along by men who were supposed to be out of sight, but took no pains to support that pleasant illusion.

This leading dragon was followed and supported by another, no less monstrous in appearance, but with a much shorter body. This was the offset to the other. While the first was kind, this was all fury and destruction. A stout warrior, well armed, was ever maintained at its head, to restrain it from wholesale mischief. His prowess, however, always proved equal to the occasion, and no reckless spectator was devoured.

Otherwise the procession had many of the features of our own. There were soldiers, princes, nobles, priests and fairies. Several lesser divinities were carried in state. Banners abounded, and Chinese bands of what they called music. Some illustrations of these figures would perhaps be very interesting to those of our readers who did not see "the elephant" itself.

To the casual San Franciscan it was all very fine, but very foolish, though there were those who were so intensely anti-celestial as to put these bands in another shape, and pronounce it all very foolish and not very fine. It was indeed the barbarism of early dawn of invention before the severest critics of a matured civilization. California is solid, practical and real, and takes little delight in tinsel gewgaws. It is not capable of being horrified by monsters of paint and paper. Herein our Chinese entertainers were greatly chagrined at the utter failure of all their ef-

forts to inspire fear. When the monsters opened their huge jaws, even our women were more intent on discerning some new kind of trimming for a bonnet than paralyzed by that fierce cavern. To the ordinary observer it was just a thing of beauty, that like

germ and recognized it at once. China is at the head of the stream of human civilization. None of these chattels have floated up-stream to her. Wherever there is a faint likeness she was the teacher. The fable of the wolf and the lamb illustrates

borhood. It will read thus: New York, London, Paris, Rome, Greece, Persia, India and China. China was the first to have a great monarchy that we know anything about. It was the first to have a church. In the Court there, the fashion of dress the attendant halberdiers, the priests, the form of obeisance before the throne, were all well settled long before our modern civilization had its dawn. The Emperor was absolute and the obeisance uprofond. The same forms found their way westward. They were modified by a more free and sturdy race. In China they break their noses on the floor. In India they do little less. In Persia the form tapers a little. The manly Greek went on both knees. The Roman much the same. In France and England one knee filled the bill. In Washington a respectful bow is all that the sovereign citizen deigns to give the President. But it is all, the whole court, its dress, appurtenances and manners, almost a servile copy of the Chinese.

In church matters the likeness is even more striking. The priests in that procession had imitation metallic breast-plates and flowing somber robes. In the Josh-house lights and incense burn perpetually. The form of worship is the same, to kneel, to bow, to join the hands with the tips of the fingers up, the images, the altars, it is almost an exact copy. Our Protestant churches have stepped well away from the ancient Chinese forms, but still the germs are there.

The tinkling cymbal, the conch-shell and the ram's-horn by which the walls of Jericho were blown down were in that procession. And the celestial musician blew as though he thought our San Francisco might yield in the same way.

Our old men and women will remember the time when the morning milkman came with his yoke over his shoulder and his two buckets of milk. The original type was in that procession; not copied from ours, but on a Chinese pattern, manifestly original with them.

Those who have seen the procession of the Lord Mayor of London with the figures of Gog and Magog, in a moment recognized this Chinese procession as its original. Gog is the dragon and Magog the lesser and evil spirit that is fought at every step by an intrepid warrior.

Nay, St. George himself, the patron saint of But I-am-see is better, greater, and will in the end be greatest."

England, is only this same warrior, mounted on a good English steed, who kills the dragon outright.

An aged Chinaman, after all had gone by, said to us: "Plenty fool Chinaman! China got two kind of people. One kind fight that dragon of paper and think he all right. He got no sense. The other he fight the dragon of sin and injustice. He plenty understand. The first he follow Con-fut-see. He talk riddle, paradox, metaphor. He plenty fooler all men. He say, 'You no think! You workee and obey.' This good for all poor man, make him easy to rule."

"The other, he follow I-am-see. He speak fact, no more. He teach men to govern. 'I-am,' that mean what is, what is true, what is a fact. China wise man follow I-am. See, is truth. I-am-see, means I am truth. Con-fut-see, means to mix truth with figures and fables. Con-fut-see, (you call him Confucius,) said the people were foolish and must not be made wise. The Emperor like him, and call him great man, and the coolie worship

him. So there is wisdom in China. There are those who regard these mummeries as sacred things, and there are others who see them as they are. We, who have sipped at all these fountains of progress, of Persia, Greece, Rome, England and our Eastern States, smile at the foibles of old China, though still some dregs remain in our own customs.

We are destined to carry the flag of progress across the Pacific, and enlist the cradle of civilization in the march. LUKE.

THE DRAGON'S HEAD.

GREAT CHINESE DRAGON PROCESSION IN HONOR OF TAN WONG.

Bradley & Rulofson Photo.

a summer flower, fades and is gone forever. But to the scholar, the historian, the antiquary and the naturalist, there was more in this procession than what presented itself to the casual observer. It was a peep at the cradle of human society. These unprogressive children of Asia, in their simplicity, paraded before us many of the germs of our greatest institutions. We have modified them, strained them a little to our own taste and purpose, but in that procession we saw the original

this most beautifully. The lamb, drinking below, could not soil the stream above. So the nations who come after China could not have given her these fables. She gave them to those down-stream. She was the teacher. Whatever was in these mummeries that is like unto our own, we got from her. We find their origin in this procession.

Let San Francisco trace its pedigree as a ty back through the ages, and it will be found to settle back to China or to that neigh-

Autumn in the Sierras.

(Written for the RURAL PRESS by MRS. RANCHER.)

Here in the foothills above Sonora we have had our first storm for the season. All day Wednesday, the 21st, the clouds began to gather, and toward evening a slight shower fell. But it was not until Thursday morning at about 2 o'clock that the elements burst forth in their grandeur. From that time until almost sunrise flash after flash of lightning lit up the darkness, and the thunder reverberated through the mountains, while the rain fell in a heavy downpour.

This latter continued at times throughout the day, settling the dust and cleansing all nature in a delightfully refreshing manner. The amount of rain that fell here six miles above Sonora I have heard estimated at about one inch. From an eye-witness I heard a thrilling account of the same storm at the Buchanan mine, which is on the Tuolumne river, about 30 miles above Sonora. "The canyon where the mine is situated," said the narrator, "is very steep—1000 feet to the river—while the office is high up on the mountain and overlooking the gorge. The trees are immense here, and even in daylight the canyon is shadowy and dark. I had been up with the sick man until after 2, and had lain down for a little rest, when I was awakened by the terrific roar of the thunder. Looking down into the canyon, such a majestic scene I had never beheld. The entire ravine was lighted up as with the brightness of noonday. Here, where even the sun never dispels the darkness, shadows were entirely gone, and every twig and little rock was brought out in bright relief. And the thunder! It was as if the mountains were being torn asunder."

A feeling of sorrow has been cast over this community by the sudden death of your long-time correspondent, Mr. John Taylor of Mount Pleasant; and all hearts go out in sympathy to the daughters, on whom this second bereavement falls so soon after the death of their mother. One cannot but heed the lesson—"Be ye also ready."

As we write, the brightest of fall days is smiling upon us. The sun has triumphed once more, and a clear sky without cloud or fleck, such as only California gives, assures us that the melancholy days in our favored clime are indeed few in number.

Mayer's Ranch, near Sonora.

Well-Known Women.

QUEEN VICTORIA is writing another book, but what about nobody knows.

THE phenomenal violin player of Canada is Miss Edith Littlehale of Hampton, Ont.

MISS MARCIA MARVIN, daughter of the late Bishop E. M. Marvin, has been appointed matron in the Mission school at Piracicaba, Brazil.

MRS. EDITH KINGDON-GOULD cut up a \$10,000 point d'Alencon flounce that once belonged to the Empress Eugenie, to trim her baby's clothes.

MRS. JAMES G. BLAINE, JR., is one of the most enthusiastic of photographic amateurs, and her flower pictures form a collection worth examining.

SIGNORA VERDI, wife of the author of *Il Trovatore*, is a very charitable woman. She is now putting up a splendid hospital at Busseto, which she and Verdi will endow.

MISS MARY GRANT, an English sculptor of considerable reputation, and a niece of a former president of the Royal Academy, is on a visit to this country, and is now in Boston. She has made a bust of Queen Victoria.

MISS CELESTE STAUFFER of New Orleans is one of the leaders of out-of-door sports at Newport. Her taste in dress is superb, and Samuel Tilden left her enough money to enable her to gratify her tastes in any direction.

Lincoln as a Dry Goods Clerk.

When Abraham Lincoln was clerk in a dry goods store he sold a woman a little bill of goods, amounting in value by the reckoning to \$2.06 $\frac{1}{4}$. He received the money and the woman went away. On adding the items of the bill again, to make himself sure of correctness, he found that he had taken 6 $\frac{1}{4}$ cents too much. It was night, but closing and locking the store, he started out on foot, a distance of two or three miles, for the house of his defrauded customer, and delivering over to her the sum whose possession had so much troubled him, went home satisfied. This is a very humble incident, but it illustrates the man's perfect conscientiousness, his sensitive honesty, better perhaps than if it had been of greater moment. —*Toledo Blade*.

YOUNG FOLKS' COLUMN.

Miss Acton's Plan.

Hettie Hawley sat in the deep recess of the dining-room window. The snow was falling silently and swiftly; but Hettie was not thinking of the cold outside or the warmth or comfort within. To judge by her tear-stained face and the occasional quiver of her under lip, her thoughts must have been anything but pleasant; still, a close observer might have seen that it was not ill temper or sulkeness that caused her to look so very doleful in this the third week of her Christmas holidays.

"I can't help it," she said aloud; "I've tried and tried till I am sick of trying, and it's all no use."

"Tried what, dear?" said the kind, pleasant voice of a young lady who had entered the room unnoticed by Hettie.

"O Miss Acton!" cried the latter, springing to her feet in visible confusion, "I did not know you were here."

"And why do I find you alone, Hettie?" asked Miss Acton, when she had kissed her young friend, taking no notice of the traces of her grief.

Hettie colored and turned her head away a little; then she said abruptly:

"Mamma won't let me go out with the others because Jack and I quarreled. Of course he came off conqueror as usual. O Miss Acton! I really believe mamma hates me, I do, indeed."

"Hettie, my dear, hush!" said Miss Acton, seating herself in an easy-chair by the fire and drawing the little girl to a seat at her feet. "I am sure you do not know what you are saying or you would not speak of your good, kind mother in that way. But tell me all your trouble; I may be able to help you."

"No, Miss Acton," replied Hettie sadly, "I cannot help myself; so I am sure no one can help me. It's all my own fault; but oh, I am so unhappy!"

"Poor little girl!" said Miss Acton, kindly; "tell me all about it, and how it is your fault."

"Why, it is my own bad temper that makes everybody hate me," said Hettie tearfully; "and they do all dislike me, I know. Why, only last night when Lottie was bringing her doll to show me the new dress nurse had made for it, Eva called her back, saying: 'Hettie won't care for your doll, Lot, she's such an old crosspatch;' so Lottie went back, and I was too angry to say anything."

"And don't you think, dear," asked Miss Acton, "that you had done something to cause Eva to call you a crosspatch?"

"Oh, I dare say I had," replied Hettie, slowly; "but because I had scolded Eva for drawing on my exercise book, it was no reason she should try to make Lottie dislike me."

"You said before that it was all your own fault, but now you are blaming others," replied Miss Acton, gravely.

"Well," answered Hettie, "it is hard to think I am so bad when I really have tried to be better. One day I did everything I was asked, and took no notice when Jack and Bertie teased me and tried to make me answer back; but at night when mamma asked why I was so quiet, Jack said, 'Oh, she has put on the air of a martyr all day; I guess she feels sulky.' Then I could stand it no longer; so I spoke roughly and angrily to him, and spoiled all the good I had done during the day."

"Not quite all," replied Miss Acton; "you tried to do good, but you did not go to work the right way. You wanted to be perfect all at once, and that was impossible; and then you felt so proud of what you did that you thought yourself better than any one else. You could not expect the others to think so, because it takes a long time to earn a good name. Now, I think the others have faults, too, but you are the eldest girl and ought to make the first start; and I think I can tell you of a plan which, if carefully followed, may lead to great results."

"Oh, how I would love you if you could," said Hettie. "I will do anything you tell me."

"Listen, then," said Miss Acton. "You must begin to-morrow morning and provide yourself with a note-book; you need not try to do a single kind action at first, only refrain from making an ill-natured remark when any of the children are disputing. If you have nothing pleasant to say, be silent; then you must make a note every time you restrain yourself; and you will be surprised at the end of the day to find how many opportunities of being angry you have avoided. Will you do this, dear?"

"Certainly, Miss Acton; that will be very easy," said Hettie.

"I am afraid not," said the former; "but I will come over to-morrow evening and see how you have got on."

A few minutes later Miss Acton took her leave and left her young friend pondering over her advice.

The next morning Hettie got up a little earlier than usual. She took from her desk a small note-book and a nicely sharpened lead pencil; putting these in her pocket, she descended to the dining-room. Bertie and Jack were there alone. They had been out skating, and were scraping the snow from their skates on to the carpet. They had been forbidden to take them off anywhere but in the hall, yet like many

other boys they often forgot what they did not wish to remember.

"How mean they are," thought Hettie, "to do what they know is wrong." And she was about to tell the boys so, when she remembered her promise, and going over to the window made her first entry in the note-book. The rest of the family came in soon, and breakfast passed over without any dispute.

"Hettie, I wish you would wind this wool for me," said Mrs. Hawley, just as Hettie had taken up her story-book and settled herself to read.

"Oh, yes, mamma," said Hettie, more pleasantly than usual.

"Thank you," replied her mother; "Oh, here comes Eva! she will hold the skein while you wind it." Eva did as she was asked; but before the wool was half wound she began fidgeting. She was only seven, and naturally restless. "Oh, Hettie!" she cried, "how long this takes! you are moving like a snail."

Hettie was on the point of saying, "How dare you be so rude!" but she checked herself, and said instead, "It will be done soon, dear; I dare say your arms do ache."

"Oh, how nice you are to-day!" cried Eva in surprise; "will you come and play house-keeping with me?"

"Yes, dear, presently," replied Hettie, with a feeling of deep shame as she thought how unkind she must have been for Eva to think so much of a few pleasant words.

Mamma thanked them both when they took her the wool, and though she said nothing she noticed the bright expression on Hettie's face.

Just as the girls were leaving the room, Jack rushed in looking very hot and angry. "Mamma," he exclaimed, "those clothes you ordered are horrid. I don't want to be dressed like a baby all my life. Look at that!" and he threw on the table a pretty little gray plaid coat, trimmed with braid to match.

"These are not what I ordered," said Mrs. Hawley; "but what is the matter with them?"

"Why, you promised I should have a coat and vest like Harry Grant," answered Jack.

"And look like a little old man with your hands in your pockets all day," were the words that rushed to Hettie's lips and tried their best to escape before she remembered they were not kind.

We cannot stop to tell our readers how many opportunities Hettie had that day of restraining her unpleasant remarks. I am sorry to say that she forgot more than once; but when the evening came, and she brought her note-book to show Miss Acton, she was shocked and surprised to find there were no less than 23 entries.

"O Miss Acton!" she cried, "I did not think I was so bad."

"I did not expect you to do so well," said Miss Acton. "This is only one day; see how much more you will have achieved by the end of the week."

"But, Miss Acton," said Hettie, ruefully, "these are such little things. I am ashamed to think I ever felt inclined to be so unkind."

"My dear Hettie," said Miss Acton, "don't you know that a whole life is made happy or unhappy by small things like these? Many people who could sacrifice a great treasure find the tiny daily troubles more than they can bear bravely."

Hettie sat quite still for a few minutes; then she looked up with a more hopeful face. "I did not think of this before, Miss Acton," she said thoughtfully; "but will you please try to forget what I said about mamma yesterday? I found out to-day that she has loved me all the while, only I tried not to see it, because it was nicer to think the others were wrong and I was right."

"That is the way with older children, too," said Miss Acton, rising; "they often try to hide their own faults under cover of other people's."

From that day Hettie kept a very careful watch on her conduct, and was surprised to find how much pleasanter it was to be kind and cheerful when she had once made the effort.

GOOD HEALTH.

Mechanism of the Heart.

In Dr. B. W. Richardson's recent Canton Lectures, in speaking on the mechanism of the heart, he described the number of the pulsations of the heart in different animals—in fish, frog, bird, rabbit, cat, dog, sheep, horse—and made a few comments on the remarkable slowness of the heart—40 strokes per minute—in the horse. Then the number of pulsations in man at various periods of life, and at different levels, from the level of the sea up to 4000 feet above sea level, was brought under review, and was followed by a computation of the average work performed by the heart in a healthy adult man. The work was traced out by the minute, the hour and the day, and was shown to equal the feat of raising 5 tons 4 cwt. one foot per hour, or 125 tons in 24 hours. The excess of this work under alcohol in varying quantities formed a corollary to the history of the work of the heart, Parkes' calculation showing an excess of 24-foot tons from the imbibition of eight fluid ounces of alcohol. The facts relating to the work of the heart by the weight of work

accomplished was supplemented by a new calculation, in which the course of calculation explained by mileage. Presuming that the blood was thrown out of the heart at each pulsation in the proportion of 69 strokes per minute, and at the assumed force of nine feet, the mileage of the blood through the body might be taken at 207 yards per minute, 7 miles per hour, 168 miles per day, 61,320 miles per year, or 5,150,880 miles in a lifetime of 84 years. The number of beats of the heart in the same long life would reach the grand total of 2,869,776,000.

MOSES' KNOWLEDGE OF HYGIENE.—The eleventh chapter of Leviticus and those which follow are so remarkably replete with the most detailed and yet unimpeachably correct information that even the ancients have been struck with wonder at the completeness of the knowledge possessed by Moses. These chapters convey most interesting sanitary rules, which are to this day a treasure of infallible truth and an object of the admiration of all experts. But there is more in these chapters than mere sanitary rules. What entitles them to a place in the holiest of books is their moral import. It is a most mysterious fact in the household of Nature that, to a great extent, man is that which he eats. People rarely think of this fact when they are obeying the dictates of their constitution in their own way, but ethnology confirms this fact sufficiently to make it more than probably true. People who live on the seashore, and are compelled to subsist upon mollusks, are found to become foolish, while those Indians who live on a diet of vegetable and animal food are susceptible of culture. Other tribes that live on meat exclusively are savage, and those living on vegetable food gentle. What is true of nations applies equally to individuals; it is an established fact that a habitual eater of pork finally assumes the disposition and amiable manner of a hog—in short, the food makes the man, morally and in regard to habit and intelligence. There are, therefore, numerous sensible men who follow these biblical commandments, and regard them as excellent rules, which a man must follow in order to be a perfect man.—*Rev. Dr. I. N. Wise*.

DOMESTIC ECONOMY.

FRUIT PUDDING.—Place in the bottom of a pudding dish fruit or berries of any kind, as raspberries, strawberries, sliced oranges, peaches, etc., and sprinkle well with sugar. Let them stand an hour or two, then take one pint of milk, put on the stove and when it boils stir in the following mixture: Yolks of four eggs, a little salt and sugar, one teaspoonful of corn starch. Let it cook till stiff, stirring all the time. When done, turn over the prepared fruit and let it stand till cold. Just before sending to the table, make a meringue of the whites of two eggs and a little powdered sugar, and place on the top of the pudding.

GRAPE MARMALADE—RED COLOR.—Boil the skins of the grapes and strain them through a coarse cloth or jelly bag; to three quarts of juice add three quarts of cooked sour apples, and juice and pulp of four lemons, one ounce of stick cinnamon and seven pounds of sugar; break the cinnamon in small pieces, tie it in a spice bag made of fine white net or muslin; let all get hot together, and then add the sugar, stirring well until it is dissolved; cook for half an hour after it begins to boil; take out the spice bag when the flavor suits. To be put up in bowls like jam and covered with paper after it is cold. Will keep for years.

APPLE PUDDING.—Butter a pudding dish, place in it alternate layers of bread crumbs and thinly sliced apples; sprinkle sugar over each layer of apples; when the dish is filled, let the top layer be of bread crumbs, over which three tablespoonfuls of melted butter should be poured. Bake in a moderately hot oven, and place three nails under the pudding dish to keep from burning on the bottom; let it bake from three-quarters to a whole hour, according to the quality of the cooking apples.

CHOCOLATE CREAMS.—This recipe and the one following are given in response to an inquiry from a subscriber. They are both excellent. One quart of pulverized sugar and one-half pint boiling water. Boil 10 minutes without stirring, then set the basin into cold water and stir briskly until cold. Make into small balls and put on a buttered plate or waxed paper to harden. Melt one-half pound of Baker's chocolate over a boiling teakettle, and roll the balls in it with a fork.

CREAMED APPLES.—Pare your fruit and either scald or bake it until sufficiently soft to pulp it through a colander; sweeten to taste, fill your glasses three parts full with it, then plentifully sprinkle in some powdered cinnamon, put a good layer of rich whipped cream on the top and sift white sugar over it.

PEAR MARMALADE.—Peel and cut some pears and macerate them 24 hours, with three-quarters of a pound of white sugar to every pound of fruit. Boil them an hour at most, adding the juice and thin yellow peel of lemons to taste. The lemon peel should be cut very small, and be cut from fresh lemons.

GRAPE CATSUP.—Five pounds of grapes, boil and press through colander; 2½ pounds of sugar, one pint of vinegar, one tablespoonful each of cinnamon, cloves, allspice and cayenne pepper and a half-tablespoonful of salt. Boil until rather thick.

SAN FRANCISCO:

Saturday, Oct. 8, 1887.

TABLE OF CONTENTS.

EDITORIALS.—Adulteration of Foods and Medicines; The Witch Hazel, 275. The Portland Dairy Sensation; Economic Entomology; Indians' Rights and Settlers' Wrongs, 282.

ILLUSTRATIONS.—The Witch Hazel, 275. The Dragon's Head: Great Chinese Procession in Honor of Tan Wong, 280. Old Mission Church, Santa Barbara; Agricultural Pavilion, Santa Barbara, 283. A Horse-Power Pumping Apparatus, 291.

POULTRY YARD.—Poultry a Means of Wealth, 276.

COTTON AND WOOL.—Cotton Growing in California; The Woolen Industry, 276.

THE LUMBERMAN.—The San Diego Lumber Trade; Lumber Items; Pacific Coast Lumber; Illegal Timber Cutting; A Puget Sound Sawmill Product; Seasoned Timber; Timber in Placer County, 275.

THE VINEYARD.—To Avoid and Correct Imperfect Fermentation, 277.

HORTICULTURE.—Apricot Paste, 277.

PATRONS OF HUSBANDRY.—The State Grange; In Memoriam; A Tribute from an Outsider, 278.

AGRICULTURAL NOTES.—From the various counties of California, 287.

THE HOME CIRCLE.—The Bravest Battle: The Feast of the Dragon, 280. Autumn in the Sierra; Well-Known Women; Lincoln as a Dry Goods Clerk, 281.

YOUNG FOLKS' COLUMN.—Miss Acton's Plan, 281.

GOOD HEALTH.—Mechanism of the Heart; Moses' Knowledge of Hygiene, 281.

DOMESTIC ECONOMY.—Fruit Pudding; Grape Marmalade; Apple Pudding; Chocolate Creams; Creamed Apples; Pear Marmalade; Grape Catsup, 281.

THE FIELD.—State Fair Awards for 1887, 284.

SELECTED READING.—The New National Hymn; Joaquin Miller's Open Letters; Misses' Costume, 288.

Business Announcements.

Agricultural Implements—Frank Brothers.
Agricultural Implements—Baker & Hamilton.
Windmills—Pacific Manufacturing Co.
Agricultural Implements—Hawley Bros. Hardware Co.
Jersey Bulls—E. H. Schaeffer, Murphy's, Cal.
Pomona Nurseries—Wm. Parry, N. J.
Cherry Seedlings—E. P. Clark, Danville, N. Y.
Red Clover—F. C. Brownlee & Co.
Essex Swine—T. Hogan, Martinez, Cal.
Japanese Plants—H. H. Berger & Co.
Sawing Machines—Champion M'g Co., Quincy, Ill.
Fruit Driers—W. A. Mueker.

The Week.

The week has been a fair one despite the meteorological threats of the preceding days. Grape gathering has proceeded under favoring skies, and the outdoor raisin-drying has progressed favorably. The wineries are at the height of their season. There is some complaint that the juice is too rich in sugar, which might be expected when the rainfall is as short as this year. The crop also will be of lessened quantity, and the grower finds no compensation in the low rate ruling for his grapes.

The fairs continue in full force this week, no less than eight exhibitions being in progress as we write. This week closes the Mechanics' Institute Fair in this city, and the prize awards for agricultural displays are printed upon another page. The State Fair premium list is also given this week.

This week the State Grange is enjoying its annual gathering in Santa Rosa, and our advices are redolent with the fragrance of cordiality and fraternity. Our full report of the proceedings begins in this issue.

The Portland Dairy Sensation.

The dairy sensation at Portland has progressed considerably since our last issue. On Thursday last, according to the dispatches from Portland, a butter-dealer who had been charged with "selling adulterated butter from San Francisco" was convicted, and Justice Tuttle imposed a fine of \$50. The dispatch continues: "The conviction was made on the testimony of local chemists, who testified that the article furnished them for analysis contained only 40 per cent of butter. Ferrara will appeal to the Supreme Court."

This case was, it appears, decided upon the testimony of Portland analysts. The defendants in other cases had secured postponement until Wednesday and Thursday of this week, so that good expert testimony on the character of the material sold could be obtained. As we stated last week, the butter came down in duly sealed packages and was received by Mr. Harding. The analysis was made by Messrs. Harding and O'Neil in the laboratory of the State University at Berkeley, under the supervision of Prof. Rising. After a full examination Prof. Rising went north on Monday evening of this week, with everything needful to demonstrate his results in the court at Portland.

The chemical analysis showed, as we anticipated, that the material is pure butter beyond any doubt. Prof. Rising spent the past summer at the East and attended a convention of State chemists and public analysts at which the determination of purity of butter and detection of adulteration was one of the leading subjects under consideration. Some time before, specimens had been sent to 12 leading chemists for investigation, and at the convention they compared their results, discussed processes of analysis and agreed upon a method which would yield results beyond controversy. Prof. Rising employed the knowledge he gained during his Eastern trip in directing the analyses made of the material sent from Portland, and the result showed its genuineness and purity beyond any peradventure. His testimony cannot help but avail against the testimony of local Portland chemists whom we fear have proceeded in the matter without sufficient data, and have therefore declared results which they cannot demonstrate.

As corroborative of the results attained by the chemists, a microscopic examination was made by one of Prof. Hilgard's assistants, which also demonstrated the genuine nature of the material. The method laid down by Prof. Thomas Taylor, microscopist of the U. S. Department of Agriculture, with the use of the polariscope, was carefully applied, and the results were unmistakable. Prof. Rising goes to Portland equipped to introduce a practical demonstration with the microscope for the benefit of the court, if opportunity offers.

This matter, as we stated last week, is of great importance to our dairy interest. We do not propose to allow an officer of another State, through the results of incompetent analysts, to tarnish the good name of California butter. There is absolutely no question about it. If a person buys California butter at this time, he will get a pure article. We do not vouch for the future, though we have no reason to expect that it will be different. As we make pure butter and ship pure butter, we are entitled to the best price it will bring in any market it reaches, and it will be idle to attempt to crowd out California butter by trumping up charges that it is adulterated. This is the way our dairy merchants feel, and they have acted in a very enterprising manner. A dispatch from Portland on October 4th says:

John R. Sayers of C. E. Whitney & Co., San Francisco, arrived here to-day, and Feusier of Martin Feusier & Co., Brigham of Brigham, Hoppe & Co., Wheaton of Wheaton, Luhrs & Co., all dairy produce dealers, are on the way, accompanied by Matua, a dairyman, and Professor Rising of the California State University, to attend the trials of William Dunbar and Wadhams & Elliott, charged with selling adulterated butter imported from California. The Dairy Commissioner here and James Fisk, who assayed the butter and pronounced it only 40 per cent butter, have evidently trouble ahead. Dunbar has commenced suit for damages against Dairy Commissioner Sunderland, and the others arrested will do the same.

There is, as the dispatch says, a good chance that the Oregon Dairy Commissioner will have hard work to wash his hands of this matter. This aspect of the case he will have to settle with the Portland dealers, upon whose busi-

ness he has cast a shadow. We have nothing to do with the retaliatory measures. We are content to demonstrate the quality of California butter, and that, it appears, will be easy to do. One has a strong case when he has the right on his side. The experience in this case will doubtless serve as a good lesson to State officials, and to those who conduct chemical analyses. We hope it will lead them to proceed very cautiously when they think of declaring California butter impure.

Indians' Rights and Settlers' Wrongs.

An exceedingly sorry piece of business is being consummated at two points in this State, to wit: the ejection of settlers from what are claimed to be Indian reservations at Round Valley, Mendocino county, and Banning, San Bernardino county. Naturally, driving settlers from sites where they have for years been laboring and have made comfortable homes, excites much indignation in the neighborhoods, and the local papers in the two counties affected contain most indignant protests against what they call an outrage. We are not in possession of the ultimate facts in the case, but so far as we can judge, the Government is doing a most serious injustice to some of our people. The case as made out by the settlers who have had to give up their homes is certainly a strong one. The following protest was filed by S. Z. Millard of Banning, with the official who came to dispossess the settlers:

First, we are not trespassers on the lands. Congress invited citizens to occupy all unoccupied lands and improve them, and by doing so for five years become entitled to a clear title to them. This we have done. Our settlement was made months before the land was reserved for Indian purposes.

Second, on hearing that we were on railroad lands, which were given to the Southern Pacific in 1871, we applied to them for one section on which we had a valuable right.

Third, in compliance with the State law, we have acquired a valuable water right, which we have reserved for personal use. It has a value of \$10,000.

Fourth, on these lands we have mineral claims on which we have spent money and time.

Fifth, we have lived over ten years on these lands and have made improvements of value to us, which belong to nobody else.

Sixth, our right in equity is acknowledged, but our removal is ordered by the Executive, and we are not allowed the opportunity of proving, in a court of equity, these rights, thus denying us a right under the Constitution not to be dispossessed of property without due course of law.

Seventh, it is taking from American-born citizens their property, and giving it to those who are not recognized by the Government as such—although they were clearly made citizens by the treaty with Mexico.

Eighth, such acts are despotic and unjust, and deserve the denunciation of all citizens of the republic.

These seem to be very strong points, and if they are true, which we have no reason to doubt, the people should not be dispossessed. It is well enough to guard the property of the Indians and all that, and to prohibit hunters who kill their game and various other classes of trespassers; but to cast out settlers who came and made homes under government regulations, before the land was ceded to the Indians, is a breach of faith on the part of the Government which cannot be too strongly condemned. There is certainly unoccupied land enough to suffice for the Indian rancherias. It is a senseless operation to set apart an isolated territory for the California Indians, anyway. They are needed as workmen by our agriculturists and can do best in that way. As a matter of fact, it would be best for the Indians to have land in the neighborhood of American farms, and if such should be deeded to them individually or given to them without right of transfer, the interests of all would be subserved. Indians have been wronged fearfully, no doubt, but it is no way to right a wrong to commit another on an innocent party. So far as we can see, this business will be no credit to our executive department.

CATTLE DISEASE.—A dispatch from San Luis Obispo, October 5th, says: A disease resembling Texas fever has broken out among cattle in the vicinity of Cayucos, in this county, and several fatal cases have resulted. The disease first appeared at Los Alamos, Santa Barbara county, about ten days ago, and carried off a large number of cattle. There is alarm lest it become epidemic. It is considered an importation from Texas.

Nevada State Fair.

The Nevada State Fair began at Reno, Sept. 21st, and closed last Saturday, Oct. 1st. The earlier days were somewhat rainy, but the fourth morning opened beautifully, with clear, invigorating air after the showers, and most of the leading horse and cattle-breeders of the State were at the fair-grounds to view the stock-parade. This procession, according to the *Gazette*, was "unquestionably the finest of the kind ever seen in Nevada."

E. W. Crutcher, the famous stockman, appeared at the head of his herd, which embraces Shorthorn, Herefords, Polled Angus and Galloway—17 in all. Sam Davis of Carson and M. Gilling of Reno each had several superb Holsteins. Vail Bros. of Dayton made a magnificent showing—16 Shorthorns headed by the imported eight-year-old bull, Professor Mike; the hardy Galloway, Black Knight, with two of his calves from common range cows, which closely resemble their sire; and three beautiful, little red Polled Norfolk cattle from England. Jos. Scott & Co. of Halleck exhibited Herefords—Homestretch, a four-year-old bull weighing 2200 pounds, being at their head, and a Hereford-Shorthorn cross, John Henry, a five-months-old calf, which has gained 129 pounds of flesh per month since birth.

W. F. Marsh of Fort Churchill sent 13 fine Shorthorns, and the Jerseys were well represented in the herds of Gov. Stevenson and B. C. Platt.

Senator Stanford's score of Holsteins arrived on the grounds from Sacramento somewhat later, and aroused much interest among experts.

Among the horses the most remarkable were those of the Oasis Ranch Co. of Toano, who exhibited 11 admirable Norman Percheron stallions, and Jesse Harris of Fort Collins, Colorado, whose six superb Cleveland Bays attracted a deal of favorable notice.

Gov. Stevenson exhibited a dozen choice Berkshire swine; and the poultry shown comprised Houdan, Plymouth Rock, Brown Leghorn and game fowl, Pekin ducks and Bronze turkeys.

The horticultural display was not so large as in some previous years; but enough apples, pears and grapes, corn, pumpkins, beans and cabbages, potatoes, beets, turnips, etc., were set forth to redeem the credit of Nevada's fields, gardens and orchards.

Mr. Moore, an apiarist, had a very tasteful exhibit of honey, and a hive of bees busily at work under glass.

The ladies' riding tournaments and Indian pony races, proved very entertaining to the crowds that witnessed them. The tone of the Reno papers is exceeding cheerful as to the success of the fair as a whole. We shall try to find room another week for the list of premiums awarded.

Economic Entomology.

Every farmer should have in his library a work on entomology, and for California there is nothing better than Matthew Cooke's "Insects Injurious to Orchards, Vineyards, etc." It is fully illustrated, and by its aid most of the insects against which the farmer and fruit grower has to contend can be identified, and ways to destroy them learned. A number of copies of this book were left at the death of Mr. Cooke, and those likely to be benefited should procure them at once. We are authorized to offer them for sale, and they can be had at our office. The sale will not only benefit the purchaser but will be of advantage to Mr. Cooke's family, and knowing the general esteem in which Mr. Cooke's self-sacrificing work is held, we expect the remaining copies will soon be taken. The price is \$3 per copy.

Economic entomology is making progress in our public schools. The last Legislature passed a law making instruction in this useful branch of knowledge compulsory. Mr. Cooke's smaller work, which was entitled "Insects Injurious and Beneficial," is now being revised and a new edition will soon be ready. It will henceforth be called "School Entomology by Matthew Cooke." The Solano County Board of Education last week adopted this work as a text-book in the schools of the county for the next four years, and they also adopted "Cooke's Entomological Charts," which will soon be issued, for use in the primary grades. These works are the best to be had for these uses.

THOS. A. EDISON, the famous inventor, will spend the winter in California.

The Santa Barbara Mission.

This is, perhaps, Santa Barbara's most attractive point of interest, toward which all visitors gravitate, and whose quaint outlines all artists and amateurs transfer to their sketch-books. On the 4th day of last December was celebrated with imposing ceremonies the centennial of foundation of this most interesting of the Franciscan Missions. Its situation is more beautiful and commanding than that of any other, the building standing on an elevation 300 feet above the sea, and about three miles distant from it, overlooking the town and harbor. The view to the south and east across the channel to the dreamy islands of Anacapa and Santa Cruz, and to the valleys of El Montecito and El Carpinteria down the mountain-outlined coast, thence to the varied slopes of the rock-crowned Santa Inez and the cultivated plains of La Patera, on to the softened blue of the mountains of the Gaviota and the distant Point Conception, furnishes a series of impressions rarely equaled. From its elevated position, the whitened facade and long corridor of the Mission is seen far out on the Pacific, and forms a striking object to the sailor and tourist on his approach to Santa Barbara.

The church is built of sandstone covered with stucco and roofed with tiles. The larger timbers used in its construction were obtained on the distant San Rafael mountains, drawn by oxen to the summits of the Santa Inez, and by a slide were sent down their steep slopes and taken to the Mission.

The church and the buildings surrounding the court are well preserved, as are also the quaintly constructed fountain and washing-tank and the bath-house on the opposite hill; but the long rows of Indian barracks, guard-house, tannery and mill have little left but broken walls. The dam constructed by the Fathers to hold the waters of Mission creek was so solidly built that it serves to-day as a reservoir to supply the city. This is the only Mission in California yet in the possession of the Franciscans, 8 or 10 members of the Order residing there. The venerable Father Romo, who has long been at the head, has recently left the Mission to take up his residence in Jerusalem, where he will probably spend the remainder of his days. The library contains many valuable manuscripts pertaining to the work of the Order in California that have escaped from the wreck of the other Missions, and the student of the early history of the

coast finds in them a rich reward for his research. The accompanying view is looking along the corridor and facade of the church toward the mountains.

THE condition of the labor market in California was never healthier or better than it is to-day. Our iron-workers hardly know what it is to have an idle hour on their hands. Our lumbermen are as busy as beavers. The ordinary run of day labor is better than formerly, and there is not the least difficulty in getting a

The Santa Barbara Fair.

The Santa Barbara Fair was held last week and a brief notice of it appears upon another page. This year's fair was unusually fine, as seems to be the fashion with the fairs of 1887, and in Santa Barbara there was an exceptional blooming out of the fair enterprise because of the recent opening of railway connection, to which we have had several allusions in the columns of the RURAL.

We are glad to present to our readers an ex-

Manufacturing Enterprise in California.

Upward of 100 cities and towns throughout the West and Southwest are now holding out inducements, in the shape of bonuses of lands, power and money, with every facility for the location of foundries, machine shops, wagon and carriage shops, grist and sawmills, etc., for capitalists to come and invest money and build up local industries. This is a sensible policy for any community to pursue, and might be more generally introduced into California than

it has heretofore been. This State ought to produce many things for which she now depends upon the East. Every possible effort should be made, especially while the present tide of immigration is in progress, to make business for all new-comers and thereby induce others to follow, and fill up this great State. We must introduce more manufacturing enterprises, and thereby create a larger home market for our fruit and breadstuffs—a home market for a thousand cents of wheat, or a given quantity of fruit is worth more than a foreign market for ten or even 20 times as much. We have a State of immense possibilities, and just now is the time to prove it, while the attention of the whole civilized world is being turned in this direction, and studying the phases of an emigration movement which has never had a parallel except in the exodus hither of '49. Climate and other natural advantages will go a long way in keeping up the present influx of population; but it must be eventually supplemented by something else. Americans are an industrious people, and they must have employment to work off their surplus energy. There is no State in the Union where a mechanic can work so many days in the year as in California, and no place in the world where so much work can be done

AGRICULTURAL PAVILION AT SANTA BARBARA.

THE OLD MISSION CHURCH, SANTA BARBARA.

"job." Graders and track-layers, tunnel-men and bridge-builders are in steady demand by the railroad contractors at fair wages. The surplus Chinese labor seems to have all been called out. Thousands of Mongolians have left the city during the past two weeks for the grape-gathering and hop-picking districts. At the employment offices it is reported that the demand for nearly all classes of laborers is greater than the supply. Some of the railroad contractors could, they say, use twice as many men as they are now able to secure. These are busy times.

A FARMER drove into Charlotte, Mich., a few days ago, with a load of 20,160 eggs.

terior view of the Santa Barbara Fair pavilion. It was erected last year, and is somewhat of a departure from the conventional style of pavilion-building, as the engraving shows. The building is in the shape of a St. Andrew's cross, the extremity of each arm forming a large alcove, and the central floor being an octagon, with entrances on three sides, between the alcoves, and on the fourth an elevated platform for speakers, musicians, etc. The building is used for the annual rose fairs, citrus fairs, etc., as well as the regular fairs of the autumn-time. It is a very creditable structure.

WORK has begun on the San Jose electric road.

in the same number of hours, or with so little wear upon either the physical or mental constitution. These facts go far to equalize the results derived from the larger amount paid for labor here than at the East. It was for these reasons that Mr. Scott was able to bid lower than his Eastern competitors for the construction of the steamships which has recently been awarded to him by the Government at Washington. These are a part of our climatic advantages, which should be carefully considered by all employers.

THE track of the Oregon Pacific is now laid half a mile beyond the Santiam river.

THE FIELD.

State Fair Awards for 1887.

A List Worth Studying.

People may sometimes look upon the awards at leading fairs as mainly personal matters, but they can really be made to serve a much wider purpose. Though judging committees are very fallible and in some cases decide quite wrong, through lack of knowledge or through personal favoritism or prejudice, the list of awards must be regarded as the best available directory or index to the locality and ownership of the best products of the State. Thus a study of the premium list will put one on the track of those who have the best live-stock in the State. We would not advise our readers to blindly follow the awards of the first prizes, but note the names of all exhibitors and visit their herds and form their own opinions of which herd can furnish animals best suited to their purposes.

The awards too often give a clue to the home-seeker of the locality best adapted to certain crops which he may desire to grow. Let the list be scanned with this in view, and many valuable lessons can be learned.

The list should be filed away for reference, so that when questions arise as to who is breeding certain stock or producing certain crops, or selling certain machines, the answers are easy to find.

Owing to the length of the list we have selected in the main classes of exhibits most directly pertaining to agriculture.

Horses.

THOROUGHBREDS.

Best stallion, four years old and over, \$40, Joe Hooker; T. Winters, Sacramento.

Best stallion, two years old, \$20, Joe; L. U. Shippee, Stockton.

Best stallion, one year old, \$15, The Czar; T. Winters, Sacramento. Second best, \$7.50, Sureto; D. J. McCarty, San Francisco.

Best stallion, under one year, \$10, Norfolk-Marion colt; T. Winters, Sacramento. Second best, \$5, Hooker-Mattie Glenn colt; T. Winters, Sacramento.

Best mare, four years old and over, with colt, \$40, Marion and colt; T. Winters, Sacramento. Second best, \$20, Ballinette and colt; T. Winters, Sacramento.

Best mare, two years old, \$15, Verona; P. Siebenthaler, Sacramento.

Best mare, one year old, \$10, Isabella; C. Halveron, Routier's station.

Best mare, under one year, \$10, Norfolk-Ballinette colt; T. Winters, Sacramento. Second best, \$5, C. Halveron, Routier's station.

Best sire, with not less than five of his colts, \$50, Joe Hooker and colts; T. Winters, Sacramento.

Best mare, with not less than two of her colts, \$40, Marion and colts; T. Winters, Sacramento.

HORSES OF ALL WORK.

Best stallion, four years old and over, \$40, Maje; W. E. Comstock, Pleasant Grove. Second best, \$20, Echason; F. Skillman, Petaluma.

Best stallion, three years old, \$30, Leopard; Frank R. Shaw, Salina, Kansas. Second best, \$15, Francis; Frank R. Shaw, Salina, Kansas.

Best stallion, two years old, \$20, Jim Douglas colt; Frank Depoister, Sacramento. Second best, \$10, Mark Gibson; John Adams, Brook's Station.

Best stallion, one year old, \$15, Selim; P. Russell, Brighton. Second best, \$7.50, Johnnie Vernon; J. A. McCloud, Stockton.

Best stallion, under one year, \$10, Dennis; R. J. Merkley, Sacramento.

Best mare, four years old and over, with colt, \$40, Lucy Gray and colt; A. D. Miller, Walsh's Station. Second best, \$20, Fannie and colt; H. H. Wilson, Nicolaus.

Best mare, four years old and over, \$30, Dolly Douglas; W. E. Comstock, Pleasant Grove. Second best, \$15, Lena; W. Cole, Sacramento.

Best mare, two years old, \$15, Nellie Vernon; J. A. McCloud, Stockton. Second best, \$7.50, Flora Vandee; W. E. Comstock, Pleasant Grove.

Best mare, one year old, \$10, Topay; W. E. Comstock, Pleasant Grove.

Best mare under one year, \$10, Jessie; H. H. Wilson, Nicolaus. Second best, \$5, Maud; Jacob Heintz, Sacramento.

NORMANS.

Best stallion, four years old and over, \$40, Ernest Perriotti; F. Skillman, Petaluma. Second best, \$20, Hatchet; A. J. Ogden, Woodland.

Best stallion, one year old, \$15, Pixley; B. F. Chandler, Elmira.

Best stallion under one year, \$10, Shasta; B. F. Chandler, Elmira.

Best mare, four years old and over, with colt, Bisch and colt; B. F. Chandler, Elmira.

PERCHERONS.

Best stallion, four years old and over, \$40, Faisian; C. K. Bailey, Stockton. Second best, \$20, Hercules; F. Skillman, Petaluma.

Best stallion, three years old, \$30, Paradise;

F. Skillman, Petaluma. Second best, \$15, Black; C. K. Bailey, Stockton.

Best mare, four years old and over, with colt, \$40, St. Julia and colt; C. K. Bailey, Stockton.

Best mare, under one year, \$10, Carrie; C. K. Bailey, Stockton.

CLYDESDALES.

Best stallion, four years old and over, \$40, Duke; James Roberts, Irvington.

Best stallion, three years old and over, \$30, Lord Pollock 2d; Frank R. Shaw, Salina, Kansas. Second best, \$15, Sir Leonard; F. R. Shaw, Salina, Kansas.

Best stallion, two years old, \$20, Sir Francis; F. R. Shaw, Salina, Kansas.

Best stallion, one year old, \$15, Prince; James Roberts, Irvington.

Best stallion under one year, \$10, Jubilee; James Roberts, Irvington.

Best mare, four years old and over, with colt, \$40, Jule and colt; James Roberts, Irvington.

Best mare, four years old and over, \$30, Princess Beatrice; F. R. Shaw, Salina, Kansas. Second best, \$15, Lady Smith; F. R. Shaw, Salina, Kansas.

Best mare, three years old, \$25, Damsel; James Roberts, Irvington.

Best mare, two years old, \$20, Dolly; James Roberts, Irvington.

DRAFT HORSES.

Best stallion, four years old and over, \$40, Donald Dinie; H. S. Moddison, Sacramento. Second best, \$20, Earl Derby; R. G. McKenzie, Pleasant Grove.

Best stallion, three years old, \$30, Charley; Frank Cox, Elk Grove. Second best, \$15, Doctor; Frank R. Shaw, Salina, Kansas.

Best stallion, two years old, \$20, Vandee, Jr.; R. J. Merkley, Sacramento. Second best, \$10, French; A. J. Ogden, Woodland.

Best stallion, one year old, \$15, Dumas, Jr.; R. J. Merkley, Sacramento. Second best, \$7.50, Young Donald Dinie; James Coil, Sacramento.

Best stallion, under one year, \$10, Mack; R. J. Merkley, Sacramento.

Best mare, four years old and over, with colt, \$40, Nellie and colt; R. J. Merkley, Sacramento. Second best, \$20, Maggie and colt; H. S. Moddison, Sacramento.

Best mare, four years old and over, \$30, Fannie; R. J. Merkley, Sacramento. Second best, \$15, Belle; James Coil, Sacramento.

Best mare, three years old, \$20, Myrtle; H. H. Wilson, Nicolaus. Second best, \$12.50, Fannie; C. B. Harris, Nicolaus.

Best mare, two years old, \$20, Belle; H. H. Wilson, Nicolaus. Second best, \$10, Minnie; C. B. Harris, Nicolaus.

Best mare, under one year, \$10, R. J. Merkley, Sacramento. Second best, \$5, H. C. Moddison, Sacramento.

ROADSTERS.

Best four-year-old and over stallion, \$40, Ross S.; R. C. Sargent, Lodi. Second best, \$20, Privateer; Henry Klemp, Pleasant Grove.

Best three-year-old stallion, \$30, Don Marion; Frank Lowell, Sacramento. Second best, \$15, Kilmore; P. Fitzgerald, Woodland.

Best two-year-old stallion, \$20; Peerless; H. G. Casey, Sacramento. Second best, \$10, Tilton Almont, Jr.; Geo. A. Pierce, Woodland.

Best one-year-old stallion, \$15, General; George Woodward, Woodland. Second best, \$7.50, Privateer, Jr.; Henry Klemp, Pleasant Grove.

Best stallion under one year, \$10, Bookkeeper; L. Whitmore, Woodland. Second best, \$5, Archie; H. C. Howard, Brighton.

Best gelding, \$40, Bum; B. F. True, Chico. Second best, \$20, Orphan Boy; J. L. McCord, Sacramento.

Best mare, four years old and over, \$40, May Fly; John Batcher, Sacramento. Second best, \$20, Crescent; C. L. Pinkham, Sacramento.

Best mare, three years old, \$30, Nellie; J. H. Glide, Sacramento. Second best, \$15, Lute; L. Whitmore, Woodland.

Best mare, two years old, \$20, Beatrice; E. C. Morgan, Grass Valley. Second best, \$10, Yolo Maid; C. R. Hoppin, Woodland.

Best mare, one year old, \$15, Yolo; C. R. Hoppin, Woodland. Second best, \$7.50, Nora Vernon; J. A. McCloud, Stockton.

Best mare, under one year, \$10, Allie; J. J. McGrath, Marysville. Second best, \$5, Frances; Mrs. W. C. Stahl, Pleasant Grove.

CARRIAGE HORSES.

Best matched span carriage horses, \$50, Tom and Jerry; O. M. Corey, San Jose. Second best, \$25, Garland and Sister; E. M. Leitch, Sacramento.

The committee recommended that a special premium be awarded to the span of Shetland ponies—Goldsmith Maid and Lucy—owned by D. J. McCarthy, Jr. of San Francisco; and also a premium to Mr. Vaughn of Sacramento for his span of Welsh ponies.

ROADSTER TEAMS.

Best team of roadsters, \$40, Geo. Washington and Lady Washington; R. C. Sargent, Lodi. Second best, \$20, Lucy and Dolly Bloodstone; G. W. Griffin, Woodland.

STANDARD TROTTERS.

Best stallion, four years old and over, \$40, Clay Duke; J. W. Martin, Yolo Station. Second best, \$20, Fallie; F. P. Lowell, Sacramento.

Best stallion, three years old, \$30, Corsair; T. C. Snider, Sacramento. Second best, \$15, Shamrock; G. Valensin, Sacramento.

Best stallion, two years old, \$20, Creole; T.

C. Snider, Sacramento. Second best, \$10; Day-break; J. A. Grove, Fresno.

Best stallion, one year old, \$15; George V.; G. Valensin, Sacramento. Second best, \$7.50, Chuck; M. W. Hicks, Sacramento.

Best stallion, under one year, \$10, Billy Vernon; J. A. McCloud, Stockton.

Best mare, four years old and over, \$40, Tricks; Henry Pierce, San Francisco. Second best, \$20, Panay; W. F. Smith, Sacramento.

	American.	Foreign.
Baltimore.....	45,799	475,671
Boston.....	251,932	922,176
New Orleans.....	66,977	646,642
New York.....	947,256	4,611,632
Philadelphia.....	217,540	937,517
San Francisco.....	423,730	350,960

Hence San Francisco has about one and three-quarter times greater American tonnage than foreign, while all the rest have the foreign from over 4 to nearly 12 fold of the American. The reason of this preponderance is traceable in part to the large number of American steam vessels and the comparatively few foreign, something opposite to what is found on the Atlantic Coast.

J. P. STANLEY has prepared an exhibit of winter flowers grown in Santa Rosa gardens in open air, which will be shipped to the Boston Charitable Institute.

Notes on the Fairs.

The fair for the Seventeenth Agricultural District—Placer and Nevada counties—held at Grass Valley and Glenbrook Park from the 6th to the 10th ultimo inclusive, appears by all accounts to have been a highly successful display of grain, fruit and live-stock, which favorably impressed the throngs of visitors, and also paid well financially.

Glenbrook enjoys the repute of being one of the most beautiful places in the mountains. It is a large basin, which seems to have been dropped down there on purpose for a park, and Nevada county folk are very proud of it. From the list of awards, as published, we might guess that the entries of horses and cattle were excellent; and as a matter of fact it is reported that they were the finest ever made in the district, showing great improvement over former seasons. After the stock parade, the noted equestriennes, Misses A. and J. Kemler of Winemucca, gave an exhibition of their skill in horseback riding which greatly delighted the spectators.

The night-racing by electric lights was rather a failure. The lights were too few in number to illuminate the track, nor did the machinery work satisfactorily.

The pavilion exhibits, as a whole, were very highly spoken of, but we can specify only a few of those that received particular notice from local reporters.

H. B. Nichols, Grass Valley, showed Surprise oats, Mammoth Cuban Indian corn, Minnesota sweet corn, cultivated grasses, including Italian rye, red top, red clover, German millet, Hungarian millet, Johnson grass, alfalfa, timothy, common millet, wheat, mesquit; muskmelons, cabbages, Brussels sprouts, stock beets (three varieties), egg plants, California Mammoth squashes (six weeks' growth), summer crook-neck squashes, Black Mexican sweet corn, watermelons (grown in slickens) of the Cuban Queen, Gipsy, Scaly Bark, Black Spanish, and Black Imperial varieties. His buckwheat, grown without irrigation, attracted much attention, and men from Western States, where buckwheat is raised for profit, declared they never had seen better.

S. N. Stranahan of Nevada City made a handsome exhibit of sun-dried fruits, comprising apples, pears, prunes, peaches, purple and Golden Drop plums, all in prime condition. Of green fruit he also exhibited 30 varieties of apples, and eight varieties of pears. He had a Bartlett pear, one of the largest in the pavilion, which grew on a scion that was set out only a year ago.

Mr. Sutton, whose place is near Nevada City, also showed Bartlett pears from trees of one year's growth.

Fifteen seedling cling peaches, from Allison's orchard, averaged a pound each and filled a box.

G. S. S. Getchell of Nevada City had huge White Elephant potatoes, the seed of which was brought from Three Rivers, Michigan.

Mr. Thornton of Grass Valley made a fine display of vegetables, including cabbage, potatoes, beans, carrots, citrons, squashes, pumpkins and peppers.

Charles Barker had black and white walnuts, at which everybody took a look.

J. R. Balch of Rough and Ready showed superior squashes, cucumbers, watermelons and muskmelons.

The elegant display of fruits from Placer county occupied four tables, and consisted of apples, pears, quinces, plums and peaches in great variety; also Tokay, Rose of Peru, Muscat and Black Portugal, Purple Damascus and Zinfandel grapes. The exhibits were mainly from Newcastle.

J. R. Nickerson had mesquit grass, orchard grass, oats, sweet corn, Casaba melons, beans, tomatoes, potatoes, cabbage; and in grasses red top, Italian rye and French rye; and of seeds mesquit, rye and orchard. Also a sack of fine mohair from the Angora goat.

H. J. Baldwin's Bartlett pears had attached to them a card, stating that last year the tree bore worthless fruit. Two grafts were inserted in 1886, which are now 15 feet in length, and bore over 50 pears this season.

J. H. Nile of Pet Hill exhibited Japanese persimmons, three varieties of figs, eight varieties of grapes, strawberries, apples, pears, peaches and almonds. This was one of the collections that always had about it a crowd of admirers.

W. B. Stuart of Ophir Hill exhibited apples, peaches, and pears, raised on the red land without irrigation, and every one interested in fruit culture became enthusiastic on seeing such splendid fruit.

J. M. Hales, also of Ophir Hill, had a superb display of Hungarian prunes, Damson plums, nectarines, Siberian crab apples, blackberries and apples.

A plate of very small apples, scarcely any of them being as big as the end of one's thumb, was labeled "Pride of Chicago Park." Chicago Park is the name given to a town-site between Colfax and Grass Valley, and the tiny fruit, which makes a delicious preserve was found growing wild in that locality.

Obliged to forego further extracts from reports received, we can only refer again to the

list of premiums awarded, as indicating the varied wealth of produce on exhibition.

Shasta County—Redding.

The first fair ever held in Shasta county began at Redding on the 7th of September, and was kept running four days, during which the town was crowded with visitors and \$1300 worth of season tickets were sold. The opening exercises consisted of music by the Millville band, prayer by Rev. N. B. Klink, speeches by D. N. Honn and F. H. Deakin, "a very able address" by Judge C. C. Bush and a poem by Miss M. Tracie.

The fruits and vegetables shown in the pavilion were remarkable both for quality and quantity. W. W. Morley of Oak Ran had nine varieties of plums and prunes, apples, pears, peaches and almonds. F. W. Fish of Stillwater, 27 varieties of apples; pears, plums, peaches, grapes, almonds, raisins, wine, Dent corn, beets, egg plant, peppers, squash, pumpkins, onions, peas, beans, natural grasses, sunflowers, prunes and figs. J. N. Logan's display embraced beans, potatoes, cabbage, turnips, carrots, beets, barley, wheat, corn, squashes, cucumbers, pumpkins, muskmelons, canteloupes, watermelons, plums, prunes, peaches, grapes, figs, apples, pears, tomatoes, red nectarines and white nectarines, besides canned and dried fruit, jellies, pickles, etc. Dr. J. H. Miller, Redding, exhibited plums, apples, pears, quinces, almonds, peaches, banana leaf, oranges, Japanese persimmons and mulberry leaves. W. W. Williams, cotton plants, tobacco plants, squash, peppers, cucumbers, walnuts and rhubarb.

We have named a few prominent exhibitors, but 60 or 70 other persons made entries, more or less extensive, of the products of farm, orchard or vineyard.

The floral display, consisting of both bouquets and potted plants, was varied and lavish in its beauty. The mineral exhibit contained specimens of ores from nearly all the noted mines of Shasta county, and proved interesting even to those who knew little or nothing about mining. Needlework and pictures were not wanting, and the young band added to the visitor's enjoyment.

As to the live-stock on view at the park, we can only refer to the list of awards printed in last week's RURAL. The races were well attended, and the two grand stands fully occupied each day by ladies. According to a local paper, "pool-selling was lively and a great deal of betting on the outside took place. All kinds of chance games were permitted on the ground, and consequently the sporting men were in high glee." It is hoped that this last will be changed for the better another year, under the rules of the "Shasta County Agricultural and Mineral Association," which, on the strength of the signal and pleasing success of the recent fair, has already been organized.

Rohnerville—9th District.

The fair for the Ninth District—Del Norte and Humboldt counties—was held at Rohnerville, Sept. 27th to 30th. The entries of live-stock, up to 6 P. M. of the opening day, included about 80 horses, mostly draft and roadsters, with a sprinkling of all-work, thoroughbred and saddle animals; half a dozen mules; 40-odd cattle—Durham, Holstein, Jersey, Ayrshire, Hereford and graded, the first two predominating; 30 Cotswold and Merino sheep; and a single pair of Poland-China swine. There was also a small display of poultry.

The showing on parade was particularly creditable to the horse-breeders; indeed, it was pronounced better than at any fair before. A ladies' equestrian contest was among the events of the closing day, and although the mercury touched 90°, the spectators were then most numerous.

The display in the pavilion appears to have consisted mainly of fancy-work, drawings and paintings and preserves—the output of fruits, grains and vegetables not having come up to that of former years—a fact which may have been due to the lateness of the harvest. The Eureka Standard, however, gives great praise to the splendid exhibit made by Mr. Hansel of Camp Grant, which included 17 varieties of apples, 7 of peaches and 5 of pears, English and Eastern black walnuts, peanuts, 6 varieties of peppers, sun-dried French prunes, tomatoes, sweet potatoes weighing 2 and 2½ pounds, watermelons weighing 40 pounds, turnips, beets of second crop weighing eight pounds, table beets weighing 15 pounds—sweet, tender and good—and other vegetables in like proportion. Special notice was taken, also, of a side-hill plow, invented by J. H. Senteny of Blackburg, which differs from the ordinary patterns in that it consists of two plows instead of one double share, and is commended as simple and strong in its construction and every way handy.

Tenth District—Yreka.

EDITORS PRESS:—The eighth annual fair of the Mount Shasta district opened on the 28th, and will continue through the week. Union hall serves as a pavilion. There is a very creditable display from Little Shasta valley consisting of a very large watermelon, pease, tomatoes, peaches that would make some of the Lower California fruit blush, grapes, almonds, apples which for flavor cannot be beaten, chestnuts in the burr, potatoes a foot long, 140 pound squash—and all these raised at an elevation of from 2000 to 3000 feet, mostly on alkali soil.

There is not very much poultry on exhibi-

tion, but what there is is good—Bantams, Plymouth Rocks and a few others. A piece of poetry, composed by a child 13 years old, is worth repeating.

Climbing.

Not at a bound,
But round by round,
Up the ladder we're climbing,
Striving to aim at something higher,
Striving to win the heart's desire,
With nobler zeal the soul to inspire,
Up the ladder we're climbing.

Each step we count
The while we mount,
Up the ladder we're climbing,
Ladder of learning, ladder of fame,
Ladder of wealth, it's all the same—
Up the ladder we're climbing.

There is a nice display of Kensington, arasene, tinsel, embroidery and crazy quilts—some very pretty in their craziness.

I. S. Cowles shows what can be done in the portrait line, with pencil and brush. "Fong—Chiuaman" is the signature to an oil-painting of a stagecoach and railroad train.

John Lehnars has a nice display showing what can be done on White sewing machines.

Riley has an attractive show of fancy groceries. Looking from them to the jelly and wines and canned fruit on one side, and to the cakes and pastry on the other, makes one's mouth water. Marble is also among the exhibits, flour from Mt. Shasta mill and other things too numerous to mention.

The attendance is very large. The races are drawing well, and there will be a great crowd at the ball. The hotels are full—so full, in fact, that it is almost impossible to get anything fit to eat. No eggs are to be had; hens are all on the strike.

Taken altogether, the fair is a success.

Yreka, Sept. 30, 1887.

E. P. S.

Santa Barbara County Fair.

EDITORS PRESS:—It was a thing of beauty, if not strictly speaking, a joy forever. There were fair women and doubtless brave men, for Santa Barbarans are not noted for cowardice. There were beautiful flowers and shrubs and plants. There were immense squashes, one of which weighed 201 pounds; a watermelon of 75 pounds; beets longer than my cane; sunflowers as big as a cart-wheel—baby-cart wheel; tall corn and big ears; oranges the size of my double fist; grapes as large as moderate-sized lumps of chalk; fine-looking apples and peaches and blackberries and strawberries, and so forth, and so on, to the end of a very long chapter.

Fruit preserved by the new process looked extremely well and tempting, and indeed so did all the canned goods exhibited. Lompoc and Santa Maria were there with fine collections of fruit, etc. There was an old-fashioned spinning-wheel and a pair of cards, and I could see (in imagination) my good old mother still making the old wheel buzz. There were excellent displays of hardware and cutlery from Hawley & Co., Edwards & Boeseke and Roeder & Ott. Also, furniture and dry goods from various dealers, and many, very many, other attractions too numerous to mention or even remember. And then the band discoursed fine music occasionally—"discoursed," I think, is the right word; they never "play" nowadays, especially since we have got the railroad.

Going outside of the pavilion, we saw big and strong and fine horses; Durham, Devon and Holstein and Jersey cattle, a fine collection of swine, among which I especially noted an Essex sow and her big pigs. There were hens and ducks and pigeons and guinea-pigs, not to mention two little black bears, playful as kittens.

There was a small steam engine constantly working a mower, which did not progress at all, and did not cut any grain. It doubtless had its uses, but I failed to see them.

The race-course attracted much attention, but it had no charms for me, and I did not even go to the track. I did see four or five horsemen go by at great speed, but I did not note nor care who won. I wish this horse racing could be eliminated. It creates an excitement that is unhealthy—that is too near akin to gambling.

Fine and attractive as was the fair, it was hardly up to that of last year, in any one particular. It was not quite up to my expectations, and I came away a little disappointed. It might have been better. We certainly had the material in our county to have equaled, and I think surpassed, that of last year. When I came home I went into my orchard and saw apples larger and finer looking than any I observed at the fair, and yet I, alas, took nothing, thinking that this rather dry year I had nothing on the mesa worth exhibiting. Others, doubtless, thought and acted as I did. But I suspect the main trouble was, that we were all too busy reckoning up our gains by the big real estate boom to give our fair the attention to which it is justly entitled. We will do better next time. . . . I regret exceedingly to hear of the death of John Taylor. One by one the good, staunch writers for the indispensable RURAL PRESS pass over the silent river, to be succeeded, let us hope, by still better.

S. P. SNOW.

Santa Barbara, Sept. 30, 1887.

THERE is to be an irrigation ditch constructed to carry the waters from the flume on the McCloud to the desert and Squaw valley. This will be the means of opening up to settlement and cultivation land that will become valuable.

Fair Awards.

Grass Valley—17th District.

Following are awards at 17th District Fair for products of agricultural and allied industries:

Cattle.

JERSEYS.—Bulls—3 yrs. old, R. Noell's Jersey Duke, 1st; F. N. Wheeler's Judge Ward, 2d; 2 yrs. old, A. D. Sutton's Major, 1st; R. Noell's Glenbrook, 2d; 1 yr. old, F. N. Wheeler's St. Lambert Lad. Cows—R. Noell, all premiums for 3 yrs. old and 2 yrs. old; F. N. Wheeler's 1st and 2d, 1-yr-old Alma Gold Drop and Pogis Lady. Sweepstakes—R. Noell's Jersey Duke and 4 cows.

DURHAM.—Bulls—1 yr. old P. Hall's St. Peter. Calf—F. N. Wheeler's Gov. Garber. Cows—H. B. Nichols' 3-yr-old Forest Rose; P. Hall, 2-yr-old Edith and calf Moss Rose.

AYRSHIRES.—H. B. Nichols', all premiums and sweepstakes.

HOLSTEIN.—Bulls—H. B. Nichols' Tehama, 1st; Dr. W. C. Jones', Tickler, 2d; F. N. Wheeler's Alfred, 3d. Cows—H. B. Nichols', all premiums except F. N. Wheeler's 2-yr-old Nitze, 2d. Sweepstakes—H. B. Nichols' Tehama and 4 cows.

GRADED.—H. B. Nichols', all prizes except R. Noell's 1-yr-old Sally, Jersey, 1st, and C. H. Barker, calf ¾ Jersey, 1st.

Horses.

STANDARD TROTTERS.—Geo. Dickinson's Richard Scott.

ALI WORK.—R. J. Huston, 3-yr-old mare Kitt, 1st; E. Rabb, 3-yr-old mare Dolly, 2d, and gelding St. John, 2d.

ROADSTERS.—A. I. West, 3-yr-old stallion, Gen. Hamilton, 1st; W. Hashagen, 3-yr-old gelding, Duke, 2d; J. Frazer, 1-yr-old stallion, Thomas F., 1st; M. C. Hogan, 1-yr-old gelding, Duroc, 2d, and colt, Mike Wilks, 1st; C. E. Taber, 1-yr-old stallion, Prince, 2d. Mares—M. P. Peaslee, 3-yr-old Lizzie Mac, 1st; M. C. Hogan, 3-yr-old Belle, 2d; E. C. Morgan, 2-yr-old Beatrice, 1st; Dr. W. C. Jones, 1-yr-old Emma C, 1st; Aug. Combe, 1-yr-old Flora, 2d; C. E. Taber, 1-yr-old filly Cora.

DRAFT HORSES.—R. Noell, 4-yr-old mare Jane, 1st, and 2-yr-old Belle, 1st; W. Hashagen, 4-yr-old Napoleon, 1st; P. Hall, 4-yr-old Mollie, 2d, and 3-yr-old Ned, special; Jno. Bree, 3-yr-old Sally, special.

CARRIAGE HORSES.—A. B. MacRae, span Doc and Dan; B. A. Penhall, saddle horse Flora B.

SWEETSTAKES.—M. C. Hogan.

Jacks.

F. N. Wheeler, Black Hawk.

Thoroughbred Sheep.

M. P. Peaslee took all premiums.

Swine.

R. Noell, boar Billy and sow Jessie, 1st; Geo. Seville, boar, 2d; H. Hanson, sow and pigs.

Poultry.

C. Barker, Langshans; Frank Spencer, Brown Leghorns; M. P. Peaslee, Brahmas and Crested ducks; J. Gassaway, Bronze turkeys, Guinea fowls and Plymouth Rocks.

Grain, Vegetables, etc.

M. P. Peaslee, best half bu. barley and wheat. J. R. Nickerson, rye grass seed; C. R. Hill, half bu. oats, do rye, do sweet corn; Sperry & Co., best ex. flour; C. R. Hill, best and greatest var. by one person; H. B. Nichols, Indian corn on stalks, sweet corn, green, watermelons, muskmelons, egg plant, squash (Summer Crook) and cultured grasses; John Mill, onions, 2d, Winter squash; G. S. S. Getchell, 2d potatoes; T. F. Van Slyke, 2d Indian corn; J. H. Campbell, 1st potatoes, stock and table carrots, table beets, 2d greatest var. and 1st vegetables by one person; J. R. Nickerson, 2d muskmelons, 1st cabbage and tomatoes; H. Waters, 2d carrots and 2d stock beets; J. R. Balch, cucumbers and 2d watermelons; D. Bryan, 2d parsnips; M. Thornton, 1st parsnips, 2d stock, squash and display of var. vegetables, by one person; A. D. Sutton, 1st stock beets; H. Hansen, 2d cucumbers; A. F. Perrin, 2d table beets, peanuts and squash; T. R. Angove, Winter squash; L. Weeks, egg plant; D. Dedman, stock of Bamboo; G. Seville, sunflower; Dr. I. W. Hays, 1st hops, over 10 lbs.

Butter and Cheese.

J. R. Nickerson, jar of butter, over 20 lbs.; John Thorpe, 2d cheese; Mrs. H. L. Hatch, 1st cheese.

Fruit.

GREEN.—S. N. Stranahan, Nevada City, best display and largest var. apples and pears; James Greeley, Newcastle, 2d apples; F. R. Balch, Rough and Ready, 2d apples, 3d pears and 3d plums; P. Sutton, Nevada City, 3d apples; J. M. Hales, Grass Valley, 4th apples, best display and largest var. plums and nectarines; Mrs. Mary King, 5th apples and 4th plums; H. J. Baldwin, Grass Valley, 3d pears; W. B. Stuart, Grass Valley, 4th pears; J. L. Kitchie, Newcastle, 5th pears; G. Perkins, Newcastle, best display and largest var. peaches; G. L. Threlkel, Newcastle, 2d and 4th peaches; R. K. Dunstan, Grass Valley, 5th peaches; P. Drunzer, Colfax, 2d plums; Arthur Sims, 5th plums; R. N. Scott, Newcastle, best display and largest var. prunes; J. H. Nile, Pet Hill, 2d prunes and 1st figs; Mrs. T. H. Moore, Grass Valley, 3d prunes; Levi Fisher, strawberries; Dr. I. W. Hays, blackberries.

DRIED FRUITS.—S. N. Stranahan, best ex. dried apples, peaches, pears, plums, prunes, berries, and beans, display dried fruit; Excelsior orchard, Pet Hill, 2d ex. dried peaches.

NUTS.—Orange Ranch, Penryn, ex. almonds; W. C. Pope, ex. English walnuts; C. Barker, ex. California walnuts.

TABLE GRAPES.—J. H. Nile, best and largest var., not less than three bunches, and 2d ex. grapes, not less than three bunches each kind; Thos. N. Payne, Grass Valley, 2d var.; C. T. Adams, Newcastle, best ex. grapes, not less than three bunches each kind; G. D. Kellogg, Nevada City, 3d do; T. N. Paine, best one kind, and best and largest var. wine grapes.

PRESERVES, JELLIES, ETC.—Mrs. Chas. Barker, ex. hermetically sealed fruits and jellies.

WINES AND BRANDIES.—A. B. Driesbach, Indian Springs, all prizes except T. N. Paine, white wine.

AGRICULTURAL NOTES.

CALIFORNIA.

Contra Costa.

GRAPE CROP.—Concord *Sun*, Sept. 24: The yield will not be less than 25,000 tons, several of our vineyardists believing the season's crop will reach 30,000 tons.... The Martini vineyard of 50 acres will average 8 to 10 tons. The 120-acre vineyard of the Mt. Diablo Vineyard Company will average seven tons. Going through the Glen Terry vineyard, near Clayton, we were surprised at the heavily loaded vines on all sides. The pickers had just finished stripping 304 Chasselas Fontainebleau vines, the product weighing 7068 pounds. The vines are planted 7 feet apart, which will make the yield of this choice wine grape fully 8 tons to the acre. Of Burgers, Mr. Terry has 12 acres, which will yield an average of $7\frac{1}{2}$ tons. The vineyard comprises 79 acres, nearly all set with the choicest of wine and raisin grapes, of about 20 varieties.

Del Norte.

TIMBER-LAND BOOM.—Crescent City *Record*: Since the timber boom has struck this vicinity quite a rush has been made for timber claims, and parties can be seen going to the woods every day, map in hand, looking for vacant claims. Last week five applications were filed at the Land Office in Eureka, for the purchase of timber land, by residents of this place.

El Dorado.

DRIED FRUIT.—Placerville *Republican*, Sept. 28: Louis Landecker has been shipping large amounts of dried peaches, pears, plums, and nectarines from this city the past week. Three carloads have already been forwarded and nearly as much more is to be received. Most of the fruit comes from the neighborhood of Coloma.

A CANNERY FOR PLACERVILLE.—*Mountain Democrat*: James Blair, C. F. Irwin, F. F. Baras and Sam Alden have purchased from Judge Blanchard the brick buildings in Upper Town for a fruit cannery. They intend either to organize a company for canning fruits or to offer the property on favorable terms to those who will establish a first-class cannery. Whichever course is taken, we understand a cannery is to be established. The need of this method of handling fruits has been greatly felt this year, and every inducement and encouragement should be given for the successful inauguration of this enterprise.

Fresno.

DISGUSTED JACK-RABBITS.—Fresno *Republican*, Sept. 23: In some portions of this county the jack-rabbits have proven a serious pest the past season, and the damage done to newly planted orchards and vineyards outside the more densely settled localities has in some instances been a source of discouragement to the planters. We have heard of one person who has defeated the army of jacks and saved his tender vines and trees. Edward Roach of Washington Colony lives near the outskirts, and feeling that it would be a hopeless undertaking to try to kill all the rabbits which were swarming in from the uncultivated plains, he concluded to try to make his young vines and trees unpalatable to the hungry but fastidious rabbits. He procured 25 pounds of sulphur and 50 cents worth of asafetida, dissolved both in water, and sprinkled the mixture on the foliage of his newly planted 10-acre raisin vineyard. The result was all that could be desired. Not a leaf in that vineyard was nibbled after the sulphur and asafetida treatment. This simple recipe may be the means of saving many hundreds of dollars to the planters of new orchards and vineyards. Its cheapness makes its general use practicable.

Humboldt.

WOOL PROSPECTS.—Eureka *Standard*, Sept. 17: G. S. Kneeland, one of our largest wool-growers, who has a fine range adjoining Blocksburg, has been in Eureka for two days. He says the outlook for wool-growers is not favorable just now, but he intends to keep his fall clip for better prices. He sold his spring shearing of 18,000 pounds at 23 cents, and thinks he can afford to wait with his fall wool for a better price than is now obtainable. He sold 450 mutton sheep to Mr. Henry of Napa county last week, and got for them \$2.75 per head on the ranch. They were fine mutton and brought the top price.

PRACTICAL FARMING.—Humboldt *Standard*: Wm. Forbes, who resides upon, and owns 80 acres of land on, what is known as the "Island"—being the section of country between the Eel and Salt rivers—has most of his place down to clover. When it is all in grass he will be able to keep 60 cows and raise their increase. At the present time he has on the place 50 cows, 9 yearlings, 1 bull, 4 work horses, 3 colts and 15 hogs, and is raising 40 calves. He has five acres in root-crops—mostly carrots. He pulled and weighed one row, averaged the balance, and the estimate showed 100 tons to the acre. Mr. Forbes sold a two-year-old colt to Mr. Winslow of this city which weighed 1540 pounds. This colt was sired by W. H. E. Smith's horse, Val Jean, and is out of a St. Cloud mare. He took the first premium at the District Fair last year as the best yearling. Mr. Forbes has just put up a new barn. The main building is 40x30 feet, with a 22-foot shed on one side and a 16-foot shed on the other. The barn will be used to

house and feed his cows in winter. He milks his cows ten months in the year. We venture the assertion there is no place which can show better than this outside of California. In Humboldt county there is a large region of territory equally good for grass, and in much of the Eel River valley it is claimed a cow to the acre can be kept and the increase taken care of until a year old.

Inyo.

EASTERN SLOPE FAIR.—*Independent*, Oct. 1: The fair at Bishop Creek opened last Tuesday. The season is too far advanced for a display of fruits other than apples and grapes; out of these samples were shown that might be equalled but not excelled. The largest display of fruit was made by Mr. W. T. C. Elliott of Big Pine. In variety, extent and beauty it would attract attention anywhere. Mrs. Sneden showed two lots of peaches of different varieties that were fine, when the lateness of the season is considered. In vegetables and grain the display was equally creditable. In the neighborhood of Bishop Creek much care has been given to horse-raising, and for quality, if not for quantity, the display of horses was quite equal to anything that could be seen at any other fair in the State. The Norman horses shown by Mr. Rowan and the product from these fine animals, would take rank with the best of their kind anywhere. Mr. Sanger of Alvord showed a lot of draft mares hard to beat. He also showed a thoroughbred Hambletonian stallion that no doubt is one of the finest animals of that famous strain. Many others had fine mares and geldings on exhibition, but no complete list of animals exhibited has been provided.

Lassen.

A SNUG FARM.—*Lassen Mail*, Sept. 28: S. G. Alexander's ranch, four miles from Susanville, on the Alturas road, is nestled in a little valley, hemmed in by lofty mountains on the north and west, while a low bench of rocky hills bound on the south and east. His grain and fruit land contains about 100 acres, while adjoining he has considerable more which he uses for range for his horses and cattle. From 37 acres he has this season cut over 100 tons of hay, and from 33 acres he thrashed over 600 bushels of very fine wheat, oats and rye. The grain only received what water fell from the heavens. About 10 acres in the rear of the dwelling is planted in orchard and garden truck, half and half. Immense pumpkins and squashes lay around. A couple of acres are planted in corn, beets, cabbage, potatoes and sorghum. The juice of the latter Sam converts into vinegar, and he has invented a neat little machine with which he crushes the cane and squeezes out the liquid. He has beets which will weigh 26 lbs., carrots 18 lbs., turnips 24 lbs. He dug up and showed us potatoes as large as a man's head—the largest spuds we have ever seen. The garden is irrigated from living springs west of the house. Mr. Alexander has a thoroughbred Poland-China boar, a splendid specimen of hog flesh, that weighs in the neighborhood of 300 pounds. A couple of pigs sired by the big fellow were born about the middle of last May: the largest weighs 100 pounds. A large number of horses and cattle are now fattening on the stubble. Mr. Alexander has recently completed a cattle barn to be used in the winter for feeding stock and protecting them from the elements.

Los Angeles.

COLD STORAGE.—Los Angeles, Sept. 26: The Fullerton Cold Storage Pork Packing Company has incorporated for the purpose of conducting the business of cold storage, curing and packing meat, manufacturing ice, buying and selling the aforesaid merchandise, and transacting other business auxiliary to said purposes. The principal place of business is Fullerton, Los Angeles Co. The amount of capital stock is \$100,000, of which there has been actually subscribed \$40,000, as follows: H. G. Wilshire, \$12,500; G. H. Amerige, \$5000; W. B. Wilshire, \$12,500; W. H. Wagner, \$5000; E. C. Love, \$5000.

Mendocino.

EDITORS PRESS.—Not seeing much in your valuable paper from this lovely little city and beautiful valley, I write you a few lines. The grain crop in this valley is all thrashed and proves very good. Our fruit crop also is good. Hops are picked and baled; they turned out well, but the price is low. Sheep-shearing is in full blast now, and I hope wool will be in good demand at a fair price. I don't see what is to hinder our county from becoming one of the richest in the State, according to the population, when we have so much to sell. Mendocino's fine redwood, and her wool and hops, horses, cattle and hogs bring in a great deal of money; and the railroad will soon be here, and then we can send out our surplus of grain. We can grow almost anything here. We think we have the nicest climate in the State, and we have less wind in this valley than in any other place I have ever lived in. Since the railroad started for Ukiah, land has been selling for fair prices. There is no Government land in this county to take up, that a man can make a living on; so people need not come here to get homes unless they are ready to pay good prices for land. We have good schools, five or six churches and but few Chinamen.—J. F. Todd, Ukiah, Sept. 30.

HOPS.—*Dispatch and Democrat*, Sept. 30: Anderson valley can produce hops of a superior quality. We have on our table a sample from the yard of Wm. H. Cureton, dried by A. V.

Stanfield, which will be hard to beat. Mr. Cureton's 16 acres yielded nearly a ton to the acre. At the District Fair in Ukiah next month it is expected that every hop-grower will have samples on exhibition, and take a lively interest in showing how far this county excels in the production of the important lupuline plant.

Nevada.

DEER IN CLOVER.—*Grass Valley Tidings*: Many of our foothill farmers who raise clover are complaining about the depredations of deer. The animals go into the fields at night and feed on the clover heads, and have a real good time. At Dr. Jones' farm, Newtown, the deer seem to be very thick; but the Indians there have been successful in getting fresh venison. Deer fattened on clover blooms ought to make good eating when the meat gets the right kind of manipulation over a quick kitchen fire.

San Bernardino.

RAISIN PROSPECTS.—*Valley Echo*, Sept. 29: Mr. Kyle, manager for A. J. & D. C. Twogood, says that so far as reports have come in regarding the raisin crop for 1887, they are very favorable. Those who are now picking found their crop so much heavier than they expected that they had to send in orders for more trays. Etwanda will have an immense crop. They have already bought 6000 trays, and they expect to have 50,000 boxes. The quality of the grapes is all that could be desired.

PROFITABLE YOUNG PEACHES.—San Bernardino *Index*, Oct. 1: S. R. Utter, out in the Highland neighborhood, has $7\frac{1}{2}$ acres in peaches in the third year of their growth. They are not all of the best varieties, but they have furnished him over nine tons already, and there is still some fruit unpicked. He sold for \$30 per ton, not being so situated that he could dry them himself. This is an average of \$36 an acre, but there were some portions that yielded \$60 per acre. The soil is sufficiently damp to require little or no irrigation. Considering how young the trees are, this is a fine showing.

FRUIT YIELD.—*Index*: The peach crop of the East San Bernardino valley is at least 50 per cent more than the estimates, and the fruit is of the best quality. The Redlands, Lugonia and Crafton orange crop promises to be unusually large and exceedingly fine.

San Luis Obispo.

COUNTY FAIR.—Press dispatch, Sept. 24: The San Luis Obispo County Agricultural Association, No. 16, met this afternoon and perfected arrangements for holding a county fair for four days, beginning Oct. 11th. Entries for races close Oct. 8th. Three thousand dollars is offered in prizes. The pavilion is located in Blochman's hall, near the center of the city. One of the features of the fair week will be a polo contest between English and Mexican riders.

SAMPLE VEGETABLES.—S. L. O. *Tribune*, Sept. 23: Arroyo Grande shipped to the Mechanics' Fair a pumpkin grown by Geo. Taylor that weighed 152 pounds and measured seven feet six inches in circumference. This is a table pumpkin and not a squash. There were also six Gloria Mundi pears from J. M. Price's that weighed 53 pounds. J. D. Roberts has shipped two onions to W. H. Maule of Philadelphia, one weighing three pounds seven ounces, measuring 21 inches in circumference, the other weighing five pounds 2½ ounces, measuring 24 inches. He is competing for a \$500 prize.

Santa Clara.

A BIG BIRD BELLIGERENT.—San Jose *Chronicle*, Sept. 27: W. R. Pease, who lives near Mt. Hamilton, had his attention drawn by the cries of the cattle in his corral about five o'clock last Saturday evening, and on going to learn the cause, saw a large eagle trying to fly over the fence with a young calf in his talons. Mr. Pease seized a pitchfork and struck the bird, which let go the calf and attacked him, and he sustained a number of severe blows from the eagle's wings before he succeeded in impaling it on a pitchfork prong. The calf was so badly injured that it had to be killed.

UNUSED TO THUNDER-STORMS.—San Jose *Mercury*, Oct. 1: The thunder and lightning last week stampeded a band of horses on the Murphy ranch, lately purchased by Messrs. Lion & Buckley, and in running pell-mell into an arroyo four valuable horses had their necks broken, two had their legs broken, so that they had to be killed, and six more were seriously injured.

Santa Cruz.

PAYING POTATOES.—Santa Cruz *Sentinel*: A. H. Underwood of Pleasant Flat, above Soquel, raised the present year on one fifth of an acre of land 115 sacks of large potatoes, Burbank seedlings, and 12 sacks of small potatoes of the same variety, which he sold at \$1 per sack for the large and 35 cents for the small potatoes, thus realizing \$119.20. After paying for the seed and labor out of this he had \$99.30 left.

Sonoma.

CANNERY OUTPUT.—Santa Rosa *Cor. Call*, Sept. 29: During the past four months of the cannery's operations goods have been turned out as follows: Peaches, 400,000 cans; grapes, 60,000; blackberries, 80,000; pears, 200,000; plums, 30,000; raspberries, 24,000; apricots, 75,000; corn, 20,000; tomatoes, 80,000. While the establishment has been running the payroll has averaged \$1800 per week for help.

FINE PEARS.—Sonoma *Democrat*, Oct. 1:

Dr. A. F. White has brought to this office large pears of the Sheldon variety, grown in his orchard near this city. They average one pound in weight each. Beautiful specimens of four varieties of pears were shipped to the Mechanics' Fair by Col. M. L. McDonald Tuesday—Japanese Evergreen, Keiffer, Sheldon and Easter-Burre. Three of the Keiffer variety weighed three pounds and a half.

Solano.

A RIO VISTA COLT.—Dixon *Tribune*: Louie Ruble has, we think, the boss colt in Solano county. When he was put on the scales, last week, he tipped the beam at 1286 pounds. This colt was a year old last March. He is of the Norman stock by Ruble's Demollette. This is the kind of stock produced here in the hills. If any one knows of a finer yearling, we want to hear of it.

Sutter.

THE SEASON'S CANNING.—*Sutter Farmer*, Sept. 23: The cannery finished putting up fruit for the season after a very successful run during the entire summer. About 15 hands are still at work labeling, packing and shipping the canned goods. The following is the pack: Apricots received, 150 tons; put up, 6000 cases; peaches, 225 tons, and 10,000 cases; Bartlett pears, 20 tons and 1000 cases; tomatoes, 15 tons and 500 cases; miscellaneous fruits, 50 tons received and 2000 cases put up. The price paid at the cannery ranged from 1½ to 2 cts. per pound, according to the kind of fruit and its condition. The fruit was well graded and sold on its own merits.

DRIED PEACHES FOR CHICAGO.—*Appeal*, Sept. 29: A carload of dried peaches (22,000 pounds) was shipped from Abbott & Phillips' orchard, Sutter county, to Chicago yesterday. The fruit was bought by a member of a Chicago firm in advance of the drying season, and the price has since risen a good deal. Mr. Phillips says he could get 14 cts. per lb. for the lot now, at which rate the carload would be worth \$3080. The carload he sold was pronounced the best that the buyer had seen this year in any section of the State. It takes about seven pounds of fresh fruit to make one of dried. At 14 cts. per lb. for the dried fruit, the peach orchards of this section would yield fully \$100 an acre.

HOG CHOLERA.—What is supposed to be hog cholera has appeared in Sutter county. Animals attacked by the disease succumb in a few hours. If the malady be really hog cholera, stringent precautions should be taken against its spread. The dead bodies should be burned and sick hogs quarantined. The ground occupied by the diseased animals should be burned over, if possible, or at least plowed. A good preventive of hog cholera is said to be as follows: For a herd of 25 head give twice a week of bran about one peck; salt, one quart; wood ashes, one peck; soda, quarter of a pound, and about one tablespoonful of carbolic acid; all mixed well.

Stanislaus.

WALNUTS AND ORANGE TREES.—Modesto *News*, Sept. 23: A fine orange tree full of green fruit has been shipped to the Mechanics' Fair from Vogt's orchard at Knight's Ferry as a sample of what Stanislaus county can do in the orange business. W. H. Finley to-day sent a large sample of English walnuts raised upon his ranch near Modesto, to the Mechanics' Fair to be added to our exhibit. The trees upon which the nuts were grown are fully 10 inches in diameter and of hardy growth, showing that they can be raised here without trouble. Besides the above species, which is quite rare, Mr. Finley has a number of trees of American varieties of walnut, all of which are bearing.

FROM DIFFERENT ZONES.—Modesto *Herald*: R. E. Bangs brought into our office last week two products of his orchard, which flourish side by side in our wonderful climate, though they are natives of different climatic zones. One was a cluster of barberries, which naturally grow only in the colder parts of the North-eastern States and Canada; the other was a bunch of pods from the algarroba tree, a native of Southern Italy and Spain. The pods, when tender, are considered fine eating, and, when dry, are a valuable food for domestic animals. Cattle are very fond of, and fatten rapidly upon, them, owing to the great amount of saccharine matter they contain.

Tulare.

AILING CATTLE.—Visalia *Times*, Sept. 29: An unknown disease is prevalent among the cattle pastured along the borders and north of Tulare lake. It generally attacks the fattest animals, and in a majority of instances results in death. Ground flax-seed is said to be a specific, and sulphur in mild doses is beneficial. In some instances the cattle go blind. The stock can be saved from blindness by putting common table salt in the eye.

COUNTY ITEMS.—*Delta*: Tulare county will make more raisins this fall than during any two years previous. There is a large acreage of vine-lands just coming into bearing that will greatly increase the amount of raisins next year. Geese are coming south in immense flocks and Tulare lake and contiguous bodies of water are said to be alive with them, as well as with migratory ducks and other aquatic game birds. A large amount of alfalfa will be thrashed this year in Tulare county. A larger acreage was allowed to go to seed than had been calculated on, and in some instances the yield has been very heavy.

SELECT READING.

The New National Hymn.

[The following national ode, written by F. Marion Crawford and recited by Prof. Murdock with a chorus of 200 men's voices, was one of the impressive features of the Constitutional Centennial at Philadelphia, Sept. 17th.]

Hail! Freedom! Thy bright crest!
And gleaming shield thrice blest.
Mirror the glories of a world thine own;
Hail, Heaven-born peace! Our sight
Led by thy gentle light
Shows us thy paths with deathless flowers strown.
Peace, daughter of a strife sublime,
Abide with us till strife be lost in endless time.

Chorus—Thy sun is risen and shall not set
Upon the day divine!
Ages of unborn ages yet,
America, are thine!

Her one hand seals with gold
The portals of night's fold,
Her other the broad gates of dawn unbars;
O'er silent wastes of snows,
Crowning her lofty brows,
Gleams higher her diadem of Northern stars;
While clothed in garlands of warm flowers
'Round Freedom's feet the South her wealth of beauty
showers.

Chorus.

Sweet is the toil of peace!
Sweet the years rich increase
To loyal men who lived by Freedom's laws;
And in war's fierce alarms
God gives stout hearts and arms
To freemen sworn to save a rightful cause.
Fear none, trust God, maintain the right,
And triumph in unbroken Union's peerless night.

Chorus.

Welded in war's fierce flame,
Forged on the heart of fame,
The sacred Constitution was ordained;
Tried in the fire of time,
Tempered in woe sublime,
An age has passed and left it yet unstained.
God grant its glories still may shine
While ages fade forgotten in time's slow decline.

Chorus.

Honor the few who shared
Freedom's first fight and dared
To face war's desperate tide at the full flood;
Who fell on hard-won ground,
And into Freedom's wound
Poured the sweet balsam of their brave hearts'
blood.

They fell, but o'er their glorious grave
Floats free the banner they died to save.

Chorus.

In radiance heavenly fair
Floats on the peaceful air
That flag that never stooped from victory's pride;
Those stars that softly gleam,
Those stripes that o'er us stream,
In war's grand agony were sanctified;
A holy standard pure and free,
To light the home of peace or blaze in victory.

Chorus.

Father, whose mighty power
Shields us through life's short hour,
To Thee we pray; bless us and keep us free;
All that is past forgive,
Teach us henceforth to live
That through our country we may honor Thee,
And when this mortal life shall cease,
Take Thou at last our souls to Thine eternal peace.

Joaquin Miller's Open Letters.

[NUMBER 4.]

To the Editor of the New York Herald:

SIR:—In your paper of last week, which has reached me only to-day, you say, "they have something more than a land 'boom' in California; it is a land craze."

Do you think it quite right to say such a thing simply because a few thousand or maybe a few hundred thousand people prefer this kindly coast to the granite and the snows of New York? It is not right; it is a very cruel assertion, as I think I can easily show. Besides, it is far, and very far from the truth.

Let us go back over the ground of events for a few years. For more than a decade your paper and its contemporaries had been continually calling California "the earthquake State." We could not report either a rise or a fall in real estate without having something more than an insult thrown in our teeth about the "instability of our lands." Meantime New York City doubled, trebled, quadrupled in the price and value of realty. California suffered that New York might flourish. That lesser bay, that lesser land, that State which is less than one-third our own, not only in area but in all things that go to the building up of a great commonwealth, seemed to glory in the possible overthrow of its great rival by the Golden Gate.

Finally the earth began to tremble from Maine to Florida. Dishes and glasses knocked and rattled on the tables at Delmonico's, and then we began to hear less about "the terrible earthquakes of California."

After awhile came the awful calamity of Charleston. Half the South seemed shaken

loose; and the people began to land in Southern California as they had not landed since the days of gold.

And now, do you remember, Mr. Editor of the New York Herald, that you actually advised invalids to trust themselves to staid and established Southern Europe rather than to the Southern States? Well, you did, and with a dig in the ribs of this State at the same time. Then came the earthquake at Nice and all along the Italian border over against France!

And then it was that people who love the tranquil weather and warm sweet elements began to look about, and they began to look beyond the columns of a selfish press. A little serious inquiry revealed the truth that *there never had been, in comparison, a single earthquake in California.* The sinking islands off the coast of New Orleans, the sunken city of New Madrid up the Mississippi, the cyclones from Texas to Maine, the wreck of Charleston, the ruin of little cities all along the Mediterra-

this for us is going to go begging for buyers? Is such land high, comparatively? Land is at least ten times higher in England than here. Yet here we raise fruits and cereals at one-tenth the cost. Water seeks and finds its level, sooner or later. No, indeed, Mr. Editor of the New York Herald, there is no "craze" here. The only craze I can make out is the craze of your statement. Land is still dirt cheap here. Let us fancy for a moment that there was in the State of New York a single county where you could every day in the year pluck fruits and flowers and walk in the warm sun and be healthful and happy! Why, all the great and energetic architects of your giant city could not build houses half fast enough to accommodate the coming people. Well, with fine soil, five railroads pouring this way and flooding the land with people, you can easily fancy that they have found that haven of fruit and flowers, and are not going to be at all alarmed at your cry of "craze."

MISSSES' COSTUME.

nean sea—all these things stood up to testify that California was about the quietest place on the whole face of the earth.

And people kept coming and coming and coming; and they are going to continue to come right straight along for the next ten, twenty, thirty years.

Why? Why, because this is the cheapest, healthiest, pleasantest spot on this globe in which to live. I can to-day get a better dinner in San Francisco for 50 cents than I can possibly get in New York for five times that sum. I know New York City well. I have spent much of the last few years there; my family—to join me soon—lives there, and, as I pay the bills, I know exactly what I am saying.

And now let us see about this "craze"—this "land craze," of which you speak so emphatically and so unjustly. Let us see if land is really selling for one-half what it is worth in California at this hour. I think I can show clearly enough that land is still very cheap here, and that any man who buys and holds land in California will not only have a safe and pleasant home, but will more than quadruple his money.

I was dining with George Alfred Townsend, the greatest living correspondent, the other day, and he explained to me that, wishing to have something very nice for his little daughter, last month in London he bought a dish of fruit. And what did it cost? More than \$2! He asserted that a better plate of fruit could be had here in Oakland for ten cents.

Now do you imagine that a soil that can do

But back of all this lies the fact that man began life as a gardener. We have plenty of wealth in the world now. The island of England has gold enough on it to sink it. The great iron boxes of the United States are heaped up and bursting open with silver and gold. There are so many millionaires in America to-day that it is no longer either a distinction or any special recommendation to be reckoned a millionaire.

Well, as said before, man began life as a gardener; and his higher and finer instincts lead him back to some sort of Eden with a precision and a certainty that teaches me above all things the truth of the tender and piteous story of Paradise.

And so it is that with all this heaped-up wealth of the world there are to-day thousands upon thousands of people who are casting about for some sweet and tranquil spot whereon to build an earthly Eden.

It was the fashion for Englishmen for ages to go to Italy. In fact, England had been going for 1500 years right out of the fog of London into the bright sunlight of Italy, until by the help of her poets and her painters the world began to think there were no skies on earth but those of Italy.

Then came the Italian earthquakes. And now, and only now, the world begins to see the blue skies of California. And the world is coming this way. Craze? No, indeed. It is all laid down in the law of demand and supply with the precision of mathematics.

Finally, let us now approach a pretty truth, deal with it frankly, and accept it gladly and tenderly. There is a silent and holy religion over the civilized earth that is seeking expression in forms of beauty. Let us call it the religion of Beauty, for want of a better name.

Fifty years ago there was hardly a park with flowers in the whole world. To-day not a town in the land but has its parks, its public gardens, its outdoor temples, builded to the God of Beauty.

And this love of the beautiful has entered the threshold of every civilized land. It sits by the hearthstone of every perfect home. It is as sacred as the family altar.

Well, this worship of the beautiful, this Temple to Beauty, has here by this greatest sea its extreme devotees. What man of any place or position here in California but has his Garden of Eden at his door? Travel the world over and you will not see as many flowers and as beautiful ones as in this one great State of ours. The gentle and the refined have come here to rest, to see beauty, to get back into Eden so far as they may, to rear an altar under the trees, to silently adore in the old Druid way the serene God of the Beautiful. And so, I repeat, they come, and come, and will continue to come, simply because this is the one spot of the vast earth that offers so much for so little—because this is the cheapest, healthiest, happiest spot that man ever set his foot upon since the expulsion.

Craze? A land craze? Land is cheaper in California at this hour, I repeat again and again, than on any other part of the globe.

JOAQUIN MILLER.

Oakland, Cal., Oct. 3, 1887.

Misses' Costume.

A decidedly French color combination is achieved in this instance with crimson Bengaline silk and dark-green French serge. The four-gored skirt is entirely covered by the kilt, and consequently will usually be made of lining goods. The kilt is laid in uniform plates that are fashionably deep, and flare toward the lower edge, which is finished with a blind-sewed hem. On the back is a simple drapery that falls in two leaf-points nearly to the edge of the kilt; its draping is made by looping at the center, and is bouffant over the tournure. A band joins the plaited top of the drapery and is attached at each end to the belt of the skirt.

The basque has its fronts closed at the left side of the center above the bust, and is cut away so as to leave a wide space between the front edges below. To the cut-away edges are joined lapels of the silk, which curve gracefully at the waist-line, and are decorated with a row of three large ball buttons placed along the upper part of their back edges. A full vest of silk is visible between the cut-away edges, and droops in the picturesque Fedora fashion. Its top is gathered and joined to the lower edge of the overlapping part of the right front, and the vest is caught up on the outside of the front to conceal the seam. It is mounted on a wide front of lining that underlies the right front, the lining portion meeting a narrower front of lining arranged under the left front; and the closing of these parts is made with hooks and loops under the left front. This mode of construction renders permanent the picturesque effect and makes the basque easy to adjust. Single bust-darts taken in the fronts and lining portions, under-arm and side-back gores and a curving center-seam fit the basque, the center-seam being terminated at the top of an underfolded box-plait, which imparts a pretty effect over the tournure. The collar is in the high-standing style, and its ends meet at the throat. The sleeves, which are in coat style, have a long, narrow notch at the back of the wrists, and are finished with cuff facings of the silk.

Other colors in the same materials or any two fabrics preferred may be similarly combined. Frequently three varieties of goods will be associated, silk being used for the vest, velvet for the lapels, collar and cuff-facings, and wool goods for the rest of the costume. Woollens of all varieties are suited to the mode, nun's veiling, serge, cashmere, flannel, camel's-hair and cloth being preferred. Plaid, striped, shot, figured, embroidered or checked goods combine well with plain material, and even in such combinations velvet may be introduced. Braid, velvet or fancy ribbon, passementerie, pipings, cordings, or any simple decoration may be applied to the basque and kilt, if a plain finish be not desired.

Plumage and soft silk trim the jaunty hat of fancy straw.

DO JUSTICE TO YOUR WORKMEN.—The physical comfort of a man who, of his own accord, is industrious, the *Builder* and *Woodworker* says, is in every way a matter which has an actual money value. Those who are disinclined to keep steadily at work should be allowed no pretense of an excuse of unsuitable surroundings. The inference it adds is plain: Do justice to your workmen, and, as a rule, they will do justice to you; at any rate, an injustice done them will surely, sooner or later, be returned with interest.

"CALIFORNIA."—Among the productions of amateur artists, in the gallery at the Mechanics' Fair, we noticed a reduced copy in water colors of Cooper's famous "California," by Mrs. Laura McDonald, daughter of our valued contributor, Mallie Stafford, which betokens considerable skill in handling the pencil and no little painstaking effort.

W. R. Strong & Co.

While at the State Fair we found opportunity to call at the store of W. R. Strong & Co. of Sacramento, the well-known fruit-shippers, seed merchants and nurserymen. The store was a busy, bustling place, as might be expected at the headquarters of a firm which had up to September 17th, the date of our visit, shipped over 420 carloads of fruit and vegetables out of the State. We were interested to note something of the distribution of this fruit, and found that 412 cars, shipped up to September 13th, were distributed as follows:

Cars.	Cars.
Utah.....34	Montana.....17
Wyoming.....16	Colorado.....86
Nebraska.....77	St. Louis.....26
Kansas City.....6	Cincinnati.....4
Chicago.....25	Minneapolis.....42
St. Paul.....26	Boston.....20
New York.....21	Philadelphia.....3
Other points.....9	

We accepted an invitation from Robert Williamson to ride out with him to the Capital nurseries owned by W. R. Strong & Co. and situated on a fine piece of land in a commanding position adjoining the city. This place comprises 130 acres and is only one of several farms owned by the firm. They have, in fact, 250 acres of orchard and nursery in Sacramento and Placer counties, and propose to plant from 80 to 100 acres more this year. They have about 2,000,000 trees and plants, and set about 800,000 buds this year. The stock which will be available for planting this year will include about 180,000 peach and large quantities of other fruits. The trees we noticed in riding along the rows were exceptionally large and vigorous.

The pumping arrangements and the water supply at the Capital nurseries is notable. They have a cemented cistern 12x18 feet and 22 feet deep. From the bottom of this an 8-inch bore descends 116 feet. When the pump is stopped the water rises a certain distance in the cistern; when the pump is working the water sinks to about one foot below the bottom of the cistern, and all the pumping they can do does not lower it beyond that. To test the well for the satisfaction of the city authorities, they ran their engine and pumped for 60 hours continuously without lowering the water more than one foot. As the pump is a large centrifugal driven by a 14-horse power engine, and throws from 650 to 700 gallons per minute, one can see what a vast amount of water the well supplies.

Strong & Co. expect an active trade this winter in nursery stock, seeds, etc. The seed business is a great item with them. They have been in the business a long time and claim to do the largest shipping business in seeds in the State. We were much pleased with all we saw around the establishment as betokening thrift, energy and enterprise.

Japanese Tree Importing Company.

This firm had an exhibit of the Oonsiu orange trees in a prominent position on the main floor of the Pavilion during the State Fair. The trees were quite small but had blooms upon them, and young fruit had been shaken off during the transit. Mr. Baker, the secretary of the company, was very busy during the Fair explaining his exhibit, as people were attracted by the sight of such small trees in bloom. He told our reporter that he found a general disposition among people to plant the trees, and he was in negotiation with some parties who planned to plant largely.

We have received a letter from the president of the company, Mr. Amore, who has been in Japan during the summer selecting stock for shipment to this coast, saying that he expects to arrive in California during the latter part of the present month. He expects to bring with him a portion of a large importation of Oonsiu oranges which the firm will make this year. A considerable amount of the fruit is expected to reach San Francisco by the next steamer, and both trees and fruit can then be seen at the company's office, at 120 Sutter street, San Francisco. They will also have a full stock of bamboo, camellias, camphor and tea plants, peonias, lily bulbs, Japanese seeds, etc., and expect to do an active business during the coming planting season.

"De man wot knows it all is alluz a-makin' change, a-buyn' ob experience." The man who does not think that he "knows it all" about Pumps can find out a great deal about them in *Grimshaw's PUMP CATECHISM*. By mail, postpaid, \$1. Dewey & Co., 220 Market St., S. F., Cal.

HALL'S
SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercerial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

THE NEW MODEL GANG, TWO, THREE OR FOUR FURROWS,

Is better adapted to all kinds of work and conditions of soil than any other plow. Turns a square corner with ease and in fine shape, without raising out of the ground; and has proved itself equal to every emergency, and will do all claimed for it or that could be expected of a plow.

Is more easily handled, is lighter draft, and more readily adjusted than any other Gang.

Its patent lever is used on no other plow, and has no equal for perfect and easy control of the Gang.

The axles are adjustable, as well as the land, for which there is a special lever. The wheels are strong, with wide tires, and the beams are high, obviating all danger of choking.

The bottoms are similar to those used on the celebrated Rock Island Plows, and give the New Model the lightest draft of any Gang in the world.

The New Model is no experiment; it has been thoroughly tested throughout the San Joaquin and Sacramento Valleys, and with the valuable improvements for 1887-88, cannot be approached by any other plow sold on the Coast.

The McSHERRY GRAIN DRILL,

THE BEST,
MOST RELIABLE AND
LEADING DRILL.

WITH ITS UNRIVALED FORCE FEED

It sows all kinds of Grain and Grass Seed, Oats and Barley as well as Wheat, and sows MORE REGULARLY than any other Drill, whether the grain be large or small-sized. IT DOES NOT BUNCH, break or crack the grain.

IT CAN BE REGULATED IN A MOMENT to sow any desired quantity per acre, with CERTAINTY of getting that quantity in the ground.

IT NEVER CHOKES UP in the feeding arrangement, as is the case with Drills regulated by rendering the discharge openings larger or smaller. It sows EQUALLY WELL ON ALL KINDS OF LAND, hilly or level, and it is immaterial whether the horses are driven fast or slow. This Drill must and does sow the same quantity of seed with each revolution of the feed wheels.

IT SOWS ALL THE GRAIN OUT OF THE HOPPER, and with the same evenness and regularity when the last grains are going out as when the hopper is full.

It has High Wheels with Wide Tires, giving great bearing surface on the soil, and enabling the Drill to pass over the loosely pulverized earth lightly.

It has Long Hoes of improved style and shape, with strong, wide, and polished steel points, working well in any soil.

AGRICULTURAL IMPLEMENTS, BUGGIES, CARTS, HARNESS, Etc.

HORTON & KENNEDY'S

FAMOUS ENTERPRISE

Self-Regulating WINDMILL

Is recognized as
THE BEST.

Always gives satisfaction. SIMPLE STRONG and DURABLE in all parts. Solid Wrought-iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable habitted boxes.

Positively Self-Regulating.

With no cone springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

County Exhibits at Mechanics' Fair.

Full Report of a Special Committee.

The following comprehensive report on county exhibits at the fair was presented Tuesday evening by the committee consisting of E. T. Crane, J. P. Hulme, W. J. Tilley, F. B. Norton, J. F. English, A. J. Gove and H. C. Somers:

To the Board of Trustees of the Mechanics' Institute Fair, San Francisco, Cal.—GENTLEMEN: The undersigned committee, appointed by you to examine and award premiums on county exhibits at the fair, now held under your auspices, would say that many of us, being pioneers, could not but contrast the California of to-day with that of '49 and '50, and indeed with many years succeeding those dates. Then the apparently barren and desolate valleys and hills in midsummer were thought to be utterly useless except for the range of wild cattle, and that this country could not nor would not be an agriculture State, and nothing could be successfully grown, unless in a few favored spots where the cereals, vegetables and fruit trees could be irrigated.

Then we had to depend for our flour upon Chili and the Atlantic States, and many of the early pioneers will recollect paying \$40 to \$50 per barrel for the staff of life. Then our Irish potatoes and onions came from New Zealand, and sweet potatoes from the Sandwich islands and other islands of the Pacific; and as to fruit, there was none here only a few trees and vines at the old missions, where the old padres deemed it necessary to constantly irrigate them to produce a crop. The indifferent varieties of pears, which were about the only kind of fruit produced, with the exception of grapes, brought almost fabulous prices.

The hardy pioneer thought of only remaining long enough to make "his pile," thinking that when the placer mining had given out the wild cattle, coyotes and grizzlies roaming over its apparently desolate hills and plains would no more be disturbed by the white man, and that San Francisco (or Yerba Buena) would soon recede to its normal condition of trading in hides and tallow with vessels which occasionally came along, as it had done in the past. But what a change do we witness now from those early days!

Result of Enterprise.

Yankee ingenuity and enterprise solved the problem. It was soon found that agricultural and horticultural ideas of the States east of the Rocky mountains were not adapted to this region. We found that by properly cultivating the soil, and at proper seasons, we needed no irrigation and no summer rains in a large proportion of the State. Indeed, either would be a positive detriment to bringing our crops to the greatest perfection, besides a great inconvenience at the time of the harvest.

California can be said to be less than a quarter of a century old in its agricultural and horticultural development, and it now ranks only second as to its wheat productions to any State in the Union and first in almost everything else in the way of agricultural and horticultural productions. Now there is not a day in the year but what there is a large fleet of vessels on the Pacific and Atlantic oceans laden with wheat and flour for the hungry mouths of Europe. And as to our horticultural productions, we can safely say that there is no part of the world that can compete with us in the growing of all the fruits of the temperate zone, as well as the semi-tropical fruits and all the varieties of vegetables needed for human sustenance. In fact, the fruits and vegetables now on exhibition here from 17 of the counties of the State, which we are called to pass upon and to award premiums, would seem marvelous to our friends east of the Rocky mountains. We will name only a few as specimens of what California soil will produce, and that, too, without irrigation. For instance, corn from Stanislaus and Kern counties, 18 to 20 feet high, with several ears to the stalk, of large size, from 12 to 14 feet from the ground; a sunflower from Contra Costa county nearly 20 feet high, surmounted by a head 54 inches in circumference, filled with plump seeds; a squash from San Luis Obispo county weighing over 200 pounds; an onion weighing nearly 4 pounds; a cabbage weighing 61 pounds; a beet 90 pounds, and sweet and Irish potatoes one of which would be sufficient for the meal of a small family.

California Products.

The redwood forest of Humboldt sending a large display of monstrosity wide lumber, several planks from five to seven feet wide, and one plank of the enormous width of 11 feet 5 inches. We also notice an enormous stick of sawed timber from Puget Sound that is 20 inches square and 151 feet long and as straight as an arrow.

The display of fruit from all the counties is meretricious for so late in the season. And we would particularly notice that each county made a creditable display of citrus fruits, consisting of oranges, lemons, limes, citrons, and also dates. This section of the State is generally known as Northern California, but the fact that the citrus fruit flourishes from San Luis Obispo on the south, to Humboldt on the north, and from San Mateo on the west to Placer and Nevada on the east, is proof conclusive that it is not a very rigorous climate.

Fruit Shipments.

As our fruit-productions are giving us a world-wide notoriety, we appealed to the Southern

Pacific railroad to get the amount shipped East the past season of green, dried and canned fruit, and also of the present season to date. We are sorry they could not furnish the statements to date this season.

East-Bound Through Freight.

At the request of E. T. Crane of San Lorenzo, the following figures of shipments of fruit (in pounds) during 1886 has been obtained:

From	Green Fruit, deciduous.	Dried Fruit.	Canned Fruits.
San Francisco..	525,290	3,269,460	15,233,450
Oakland	43,250	1,590	5,444,620
Los Angeles...	177,080	136,030	520,470
Colton		255,520	84,600
Sacramento...	19,545,480	161,270	2,333,510
San Jose	2,141,730	2,146,880	6,619,640
Stockton	265,350	3,640	22,540
Marysville	60,100	139,580	387,880

Totals.....22,758,080 6,113,070 30,636,710
Raisins—From San Francisco, 1,598,920; from Oakland, 100; from Los Angeles, 6,353,910; from Colton, 1,405,870; from Sacramento, 1,970,860; from Stockton, 1,547,470; from Marysville, 93,670. Total, 12,970,800.

Plain Figures.

Now, as a simple statement of figures showing the number of pounds does not give a full conception at a glance of the magnitude of the business, we will reduce it to carloads, allowing ten tons to each car, to show how long a train of cars was necessary to transport our fruit product from the State the past year.

There would be 1138 cars of green fruit, 305 cars of dried fruit, 648 cars of raisins, 1532 cars of canned fruit—all of which makes a train of almost 23 miles in length.

From information we get from the California Fruit Union and other shippers, we feel confident in saying that the present season will show a shipment of 1500 cars of deciduous fruits, of 20,000 pounds each.

We also append the statement of one of the largest shippers of dried fruit from this State:

SAN FRANCISCO, Sept. 27, 1887.

E. T. Crane, Esq., San Lorenzo, Cal.:—DEAR SIR: Replying to your verbal inquiry of to-day, we would state that the product of California dried fruit this year of all kinds will approximate 13,000,000 pounds, as against about 6,000,000 pounds last year. The output of California raisins this year we estimate at 20,000,000 pounds, as against 13,000,000 pounds last year. Yours truly,

G. W. MEADE, of G. W. Meade & Co.

As to canned fruit, we think it would be within bounds to place it at 50 per cent greater than last year. And this would give 1500 cars of green fruit, 650 cars of dried fruit, 1000 cars of raisins, 2297 cars of canned fruit, making a train 34½ miles in length.

During our apple season, every steamer that leaves this port for Australia, New Zealand, China, Japan and the Sandwich islands takes green apples besides canned fruit. A single steamer has taken over 10,000 boxes of a bushel each on a trip to Australia and New Zealand.

Having given you a brief summary of our fruit interests, we will add that in wine we shall soon stand ahead of all other wine-producing countries, as our wine interests are increasing faster than any other one interest in the State.

The Dried Fruit Trade.

And we would add that in dried fruit we have no competition in any portion of the United States, especially in prunes and apricots. The latter cannot be raised in but a limited portion of the civilized world, but it can here be grown in the greatest profusion, and its dried product, whenever known, will come in direct competition with peeled peaches, and the apricot can be grown as cheaply as peaches and dried at one-fourth of the expense. Although the citrus fruits are now and will continue to be a great source of wealth to this State, yet we believe that the apricot and prune will be a greater source of wealth in the near future.

In silk, from experiments made, and although the industry is yet in its infancy, it will, without doubt, in time be a large one in this State, as it has been proven that our climate and soil is particularly adapted to it.

Then the wool and lumber interests are second to none in the United States.

From the above brief summary of our agricultural interests, each of which has been sufficient to build up prosperous States east of the Rocky mountains, and when you add to this our mineral resources, which have given us notoriety throughout the world, it would seem that we have more of the elements of wealth combined in this State than in the same amount of territory anywhere known.

We have a climate devoid of the extremes of either heat or cold, and it is no wonder that people from all parts of the world are flocking here or are yearning to partake of nature's beneficence with us, and the only wonder is, to the early settlers, that they did not discover the fact sooner.

And now, gentlemen, the task you have delegated to us to decide and award premiums, as between counties and those which have made the best and largest exhibit, is a delicate one, and we cannot but exclaim, as the Kentuckian did when he was praising the great production of his State—whisky—"That it was all good, but some was better than others." And so with us. We find so much to commend in all the exhibits from the various counties that where some excel in some things others may be somewhat deficient, and we also recognize the fact that the exhibits of some of the counties do not, owing to the time of holding the

fair, show to as good advantage as they would under other circumstances, many of their best products being out of season.

The Awards Made.

But we finally came to the conclusion after a patient and careful examination that the district having the best and most varied exhibit, quality being equal, and which is entitled to the first premium, is Sonoma valley, in Sonoma county.

For general excellence and large display we award the second premium to Santa Clara county.

To Napa county we award the third premium. Although she has a display of wine, grapes, fruits, cereals and vegetables that would be deemed commendable to any State as a whole outside of California, we find that she was deficient in some things that the above-mentioned counties exhibited.

We award to Stanislaus county the premium for the fourth best display.

To Napa county the premium for the best display of wines by any county in the State.

To Sonoma county the premium for the best display of wheat in grain and sheaf, not less than three sheaves.

To Sonoma county the premium for the best display of barley in grain and sheaf, not less than three sheaves.

To Sonoma county the premium for the best display of oats in grain and sheaf, not less than three sheaves.

To Sonoma county the premium for the best display of rye in grain and sheaf, not less than three sheaves.

Stanislaus County.

To Stanislaus county the premium for the best display of corn in ear and stalk, excellence and variety considered.

To Sonoma county the premium for the best display of hops, not less than 25 pounds.

To A. Block of Santa Clara county, the premium for the best general display of fruit, by the producer.

To B. L. Watts of Sonoma valley, the premium for the second best general display of fruit, by the producer.

To Santa Clara county the premium for the best display and variety of apples.

To San Luis Obispo county the premium for the second best display and variety of apples.

To Santa Clara county the premium for the best display and variety of pears.

To Solano county the premium for the second best display and variety of pears.

To Placer county the premium for the best display and variety of peaches.

To Solano county the premium for the second best display and variety of peaches.

To Santa Clara county the premium for the best display and variety of plums.

To Santa Clara county the premium for the best display and variety of prunes.

To Placer county the premium for the second best display and variety of plums and prunes.

To Sonoma valley the premium for the best display of citrus fruits.

To Napa county the premium for the second best display and variety of citrus fruits.

To Sonoma valley the premium for the best display of table grapes, variety and excellence considered.

To Solano county the premium for the second best display of table grapes, variety and excellence considered.

To Napa county the premium for the best display and quality of wine grapes.

To Sonoma valley the premium for the second best display and quality of wine grapes.

Dried Fruits.

To George F. Fleming & Co. the premium for the best general display of dried fruits by the producer.

To C. N. Tharsing the premium for the sec-

ond best general display of dried fruits by the producer.

To Napa county the premium for the best display of cultivated nuts by the county, variety and quality considered.

To Solano county the premium for the second best display of cultivated nuts by the county, variety and quality considered.

To J. H. Flickinger of Santa Clara county, the premium for the best display of canned and preserved fruits and vegetables by the factory.

To the Petaluma Packing Company the premium for the second best display of canned and preserved fruits and vegetables at the factory.

We recommend that the board present the following ladies: Mrs. E. O. Smith, Mrs. Wm. Newhall, Mrs. L. J. Watkins, all of Santa Clara county, with silver medals for the variety and excellence of their exhibits of jellies in glass, home-made, as they are so nearly equal in quality and kind that it is impossible to give any preference.

To Mrs. Kate Warfield the premium for the best display of preserved fruits in glass, home-made.

To H. E. Boys of Sonoma valley the premium for the best assortment and quality of pickles, home-made.

Vegetables—To Sonoma valley, the premium for the best general display of vegetables, quality and variety considered.

Dairy produce—To San Mateo county the premium for the best display of cheese.

Honey—To Kern county the premium for the best display of honey.

Wools and Cotton—To Sonoma county the premium for the best display of wool, not less than four fleeces.

To Stanislaus county the premium for the best display of cotton, though less than 50 pounds.

To Santa Clara county the premium for the best display of mohair, not less than ten pounds.

Sonoma Valley Oils.

To George F. Hooper of Sonoma valley the premium for the best sample of olive oil by the producer.

To George F. Hooper of Sonoma valley the premium for the best samples of pickled olives.

We respectfully recommend that San Luis Obispo county have special recognition for the finest quality of apples, and that Mr. Leadham of the same county have a medal for the best quality of apples, although limited in quantity; that Humboldt county be given special recognition for a very fine display of native, polished, rough and manufactured redwood; that Solano, Kern, San Benito, Pajaro valley, Livermore valley, Contra Costa, Sonoma, San Luis Obispo, Humboldt, Placer and San Mateo counties be given special recognition for their very creditable exhibitions; that Nevada county be given special recognition for its fine display of minerals and ores; the same as to Shasta county; that J. H. Drummond and Kate T. Warfield have special recognition for the excellence and variety of their general individual exhibits.

Respectfully submitted, E. T. Crane (chairman), J. P. Hulme, W. J. Tilley, F. B. Norton, J. F. English, A. J. Gove, H. C. Somers, committee. Oct. 1, 1887.

PRINTERS' INK AND FRUIT-MARKETING.—When Mr. Martin began shipping apples from Ashland, the Tidings says, he had some neat labels printed which read thus: "Southern Oregon apples, from L. Martin, Ashland, Oregon." The apples were sent to Portland, whence some of them found their way to Montana. Almost immediately Mr. Martin began to receive inquiries from Montana about these Southern Oregon apples, and already has more orders from Montana than he can fill. Some Californian fruit-growers have had similar experiences, and others may find the hint a profitable one to follow.

A Horse-Power Pumping Apparatus.

Harry D. White of Cottonwood, Shasta Co., has applied for a patent on a novel horse-power and pumping apparatus, cuts of which are shown on this page. A vertical post is placed in the ground and an arm or bar is connected with the post by a loosely turning band, and has journaled on the outer end a wheel, the periphery of which rests on the ground and supports the outer end of the arm. Upon the arm is fixed a post which is slotted on top to receive a lever which is centrally fulcrumed in it. One end of this lever is connected with a crank-pin on the wheel, and the other end with the long arm of an upper lever connected with the plunger of a pump.

On one side of the arm is attached shafts or means for attaching the horses, so that when they travel in a circle around the central post, the arm will turn about the post and the wheel will turn and operate the levers and pump.

Another form of the same appliance is shown in Fig. 2, where the pump itself takes the place of the upright post, and a single lever suffices to give the vertical reciprocating motion to the pump rod. A counter-balance is used which may be adjusted to any desired point upon the vibrating lever.

This device is quite simple both in construction and operation. It will be seen that the

rotary motion of the wheel is converted into a reciprocating motion, and this may be utilized by suitable appliances for any desired purpose. Mr. White, by being addressed Woodland, Yolo Co., Cal., will give any further information concerning this invention.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

PETER Saxe & Son, Lick House, San Francisco, Cal. Importers and Breeders, for past 16 years, of every variety of Cattle, Horses, Sheep and Hogs.

J. MELVIN, Davisville, Cal.

"WOOD WOOL" is the name given to an improved packing material, a new article recently brought out in France, where it is said to have already come into extensive use. It consists of extremely thin and slender shavings of wood, that are comparable to paper cut for packing purposes. It seems to be a kind of improvement on American excelsior. It weighs about 40 to 50 per cent less than the materials generally used for such a purpose, and its beautiful appearance, fineness and extreme cleanliness have brought it into great favor. It was also soon found to be well adapted for the manufacture of mattresses, for the filtration of liquids, stuffing horse collars, etc., the most suitable species of wood being selected for each of these uses. Its elasticity causes it to be considered the best material for bedding, after horse hair, and is, in fact, preferable to any other substance when it is derived from resinous wood, since it does not then absorb moisture. In workshops wood wool is tending to replace cotton waste for cleaning machines, and it has likewise found an application on the rolling-stock of railways for lubricating car axles. While it has the same property that cotton waste has of absorbing oil, its cost is many times less than that material, these various advantages explaining why the use of it has become so extensive in so short a period.

VOLATILE MATTER IN WOOD.—Wood, whether in the form of logs, slabs, shavings or sawdust, contains 75 per cent of its waste in volatile matter—the rest being carbon. If wood in any of the above forms be subjected to destructive distillation in close vessels, the gases and vapors conducted through suitable pipes and cooled, the liquids thus condensed will be found to be equal to about 40 per cent of the wood and composed of a mixture of pyro-lignous acid, tar and water, about 25 per cent being left in the retort in the form of charcoal or carbon; the balance—35 per cent—passing off in incondensable gas. This gas is very inflammable and may be utilized for either illuminating or heating purposes.

CRIMSON STAIN FOR WOOD.—The following is a crimson stain that is frequently used for decorative woods for musical instruments: Ground Brazil wood, one pound; water, three quarts; cochineal, half an ounce; boil the Brazil wood with water an hour, strain, add the cochineal, boil gently for half an hour, when it will be fit for use. This is first applied and then the varnish, consisting of rectified spirits of wine, half a gallon, six ounces of gum sandarac, three ounces of gum mastic and half a pint of turpentine varnish; put the above into a tin can by the stove, frequently shaking till well dissolved; strain and keep for use. If it is harder than is wished, thin with more turpentine varnish.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

A GOOD WORD.—The Lakeport *Avalanche* made a few remarks about us last week, thus: The PACIFIC RURAL PRESS is a friend to our farming community, and it never loses an opportunity to praise where it is deserved. To our farmer friends let us say: Take the RURAL PRESS; it is a farmers' paper adapted to our country, and every farmer in Lake county should have it in his family.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

You cannot afford to make any important purchase without first consulting the Catalogue of Weinstock & Lubin Importers and General Outfitters, Sacramento, Cal. The same goods and styles as kept by the leading merchants of New York, Philadelphia and Chicago. Prices always at the lowest notch, and the same to every one. Goods not according to order may be returned at expense of house, which is a guarantee that every effort will be made to please the first time. Catalogues free.

THE RURAL IN FLORIDA.—One of our Florida subscribers writes: "The RURAL comes as regularly as clockwork and gives the very best of satisfaction. It is a treasure-house of information. Long may it prosper in its mission of educating the people on right lines of thought and practice."

THE Chico Chronicle says: Near Coal canyon is a mammoth fig tree measuring 102 inches in circumference, four feet from the ground. It has four immense branches, each of which exceed 50 inches in circumference.

S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 5, 1887.

Continued fine weather contributed no little in allowing horticulturists to secure their remaining fruits and also to the perfect curing of dried fruits. From all that can be ascertained, farmers are in the market for plows and other implements preparatory to the regular fall and winter work. So far a larger number of implements have been sold than for several years past. The week has been barren of anything of an exciting nature from Europe as regards the wheat markets, although they have been steadily gaining in strength. To-day's cable is as follows:

LIVERPOOL, Oct. 5.—Liverpool spot market, at opening, turn dealer; California wheat, No. 2, spring for prompt shipment, 27s 9d; do. Red Winter for prompt shipment, 28s 3d; cargoes off coast, steady; cargoes on passage, firm; Mark Lane, English and foreign wheat, steady; English and American flour, quiet; French country markets, quieter; wheat and flour in Paris, quiet; weather in England, fair; quantity wheat and flour on passage to U. K., 1,588,000 qrs.; wheat on passage to Continent, 245,000 qrs.

LIVERPOOL, 3:30 P. M.—Wheat—Holders offer freely.

Foreign Review.

LONDON, Oct. 3.—The *Mark Lane Express* in its review of the British grain during the past week says: The demand for seed wheat in the provinces caused an advance in the local markets of 6d to 1s, but only made the price in London firmer. Sales of English wheat for the past week were 75,502 quarters at 28s 5d per quarter, against 60,401 quarters at 30s 3d during the corresponding week last year. Flour was offered freely at low rates. Good Essex 21s per 280 lbs; foreign wheat slow; finest South Russian and American spring rather stronger. Flour is in favor of buyers. Corn is firmer. Linseed declined 3d. There have been 13 arrivals of wheat in cargo. Three cargoes were sold, three withdrawn and four remained. At to-day's market English wheat was steady. There were few transactions in South Russian and Indian at an advance of 6d. Flour is 6d dearer. Corn is against buyers. Barley is a fraction higher. Peas advanced 6d.

Eastern Wheat Markets

NEW YORK, Oct. 4.—82½¢ for cash; 80½¢ for Oct.; 81½¢@81¾¢ for Nov.; 83½¢@83¾¢ for Dec.; 84¾¢ for Jan.; 88½¢ for May.

CHICAGO, Oct. 4.—Wheat firm and higher; cash, 71 7-16¢; Dec., 73 3-16¢; May, 78½¢.

California Products at Chicago.

CHICAGO, Oct. 1.—In consequence of the large supplies of Concord grapes and other home-grown varieties on the market, prices are weak and lower. Tokays and Muscats in double crates being \$2.25 to \$2.50; fancy Natoma Tokays and Muscats \$3 to \$3.25; Emperors, \$2.75 to \$3, and Cornichon \$2.25 to \$2.75.

CHICAGO, Oct. 3.—Receipts of Cal. grapes are liberal and demand good. Tokays, double crts, choice, \$2.50@2.75; Muscats about same. There is a good demand for fall pears, though there is a temporary scarcity, which has prevailed for several days. A few cars have arrived in poor order, owing to the wet and close atmosphere. They bring \$1.75@2.00 per box; quinces, \$1.50@1.75.

Beans—Arrivals of new beans are yet small. Quotations are \$1.50@2.10 per bushel for California, according to condition; 4@4½¢ per lb. for Limas.

California dried fruits rule firm, and all lines are salable, but the market is quiet owing to the small supply. Apricots, sun-dried, bleached, choice, 17@17½¢; do., do., prime, 16@16½¢; Apricots, sun-dried, unbleached, 13@14¢; Peaches, peeled, evaporated, choice, 23½¢@25¢; do., do., good, 20@22¢; Peaches, unpeeled, evaporated, fancy 17@18¢; do., do., choice, 14@16¢; Peaches, unpeeled, sun-dried, 13½¢@15¢; Plums, pitted, new, 13@14¢.

Eastern Wool Markets.

NEW YORK, Oct. 2.—The situation remains unchanged, but holders believe that the lowest point has been reached for all kinds of wool. Among sales were 15,000 lbs. scoured Cal. at 53¢, 3000 lbs. Cal. at 22¢, 20,000 lbs. Territory at 20@25¢.

The tone of the Boston market has improved and holders show less disposition to press sales. Buyers are still more cautious. Among sales were 150,000 lbs. Cal. spring at 17@23¢; 10,000 lbs. Cal. fall at 13½¢; 58,500 lbs. Oregon at 17@18¢; 907,600 lbs. Territory at 15@25¢.

The Philadelphia market is very dull, manufacturers buying only for urgent wants. Territorial wools and fine fleeces are in good supply and move slowly. Among sales were 2000 lbs. Territory, black, at 20¢; 1500 lbs. Territory, bucks, at 11½¢; 4600 lbs. do at 13¢; 2500 lbs. Montana, medium, at 22@24¢; 70,000 lbs. Territory, fine and medium, at 14@24¢.

Eastern Hop Markets.

CHICAGO, Oct. 4.—There is nothing of importance doing. The new crops are coming forward slowly. Pacifics are ruling steady, and for small parcels former prices are obtained, and for Pacifics, new crop, choice, 20@22¢; Pacific, new crop, medium, 17@20¢; Pacifics, 1886, choice, 14@18¢; Pacifics, 1886, medium, 10@14¢; Pacifics, 1885, 5@8¢.

NEW YORK, Oct. 2.—Hops—There are signs of early improvement in the export trade, but prices remain unchanged.

Local Markets.

BARLEY—Continued heavy receipts and only a moderate demand cause a weak market to rule. Large operators are quietly buying, believing that a higher range of values will rule soon. On Call, trading has been free, but at low prices. To-day's sales on Call are as follows:

Morning Session: Buyer season—600 tons, \$1.02½; 300, \$1.02½; 200, \$1.03; 200, \$1.03½. Buyer 1887—100 tons 93¼¢; 100, 93¾¢; 100, 93¾¢; 100, 93¾¢. Afternoon Session: Buyer season—500 tons, \$1.03; 100, \$1.02½ per cbl.

CHEESE—The market is quiet, but very strong under small stocks.

BUTTER—Hot weather lessens the demand for rolls, but increases the call for firkin and pickled. While the former weakened, the latter strengthened.

EGGS—The market has weakened off under more liberal supplies and a strong selling pressure, owing to hot weather.

FLOUR—Retail dealers are slow in stocking up, but as wheat is gaining in strength millers are firmer for the better grades.

WHEAT—The market is stronger for all grades. On Call, trading has been freer in sympathy with an improving market abroad. Sales on Call to-day were as follows:

Morning Session: Buyer 1887—200 tons, \$1.35½. Buyer season—100 tons, \$1.45½; 200, \$1.45½; 500, \$1.45½; 400, \$1.46 per cbl. Afternoon Session: Buyer 1887—200 tons, \$1.35½; 100, \$1.36 per cbl.

[COMMUNICATED.]

Market Information.

Cereals.

The last estimate of the French wheat crop is that of the Paris *Bulletin des Halles*, which puts the total yield at 324,800,000 bu. against 292,000,000 bu. in 1886.

The barley crops of Moravia, Bohemia and Hungary are reported the finest for a good many years. In answer to a question by cable of a London house as to their opinion regarding the future of wheat, the answer was, "General opinion that prices will advance, though English wheat is cheap."

Quantity of barley on passage for the United Kingdom on Sept. 1st is reported at 1,140,000 bu., against 2,460,000 bu. last year.

Beerbohm says: In the United Kingdom the potato crop is estimated to be 25 per cent below an average; in France, 40 per cent; in Germany, 15 per cent; and in Austria-Hungary, 15 per cent. This represents an aggregate deficiency of 10,000,000 to 12,000,000 tons, or 373,000,000 to 444,000,000 bu. With a lessened potato production the consumption of wheat will be so much the greater.

The London *Times* gives the following: Now that the acreage has been ascertained, a statement of the production of the wheat crop may be ventured in figures—to be corrected, if need be, when the Government Produce Returns are published:

ACRES OF WHEAT IN 1887.	
Great Britain.....	2,317,362
Ireland.....	60,222
Islands—say.....	9,416

United Kingdom.....	2,398,000
ESTIMATED YIELD, 1887.	Bushels.
At 30 bu. per acre.....	71,700,000
Deduct 2½ bu. per acre for seed.....	5,842,250

Total.....	66,405,750
Imperial quarters.....	8,800,700

Harvest year.	Sept. 1 to consumption.	Aug. 31. Imp. quarter.	Imp. quarter.	Imp. quarter.
1882-3.....	10,248,000	19,953,000	30,186,000	
1883-4.....	8,124,000	15,816,000	23,940,000	
1884-5.....	9,540,000	18,001,000	27,541,000	
1885-6.....	9,175,000	15,498,000	24,398,000	
1886-7.....	7,266,000	17,395,000	24,651,800	
1887-8.....	8,300,700	17,700,000	26,000,000	

This gives our total growth of the year at 8,300,000 qrs., and if consumption be put at 26,000,000 qrs., seeing that there have been two years of less than the average supply, an importation of 17,750,000 qrs. may be required before the end of August, 1888.

Beerbohm just to hand contains the following: With regard to the figures for the ensuing season, the present indications give the following result:

	Probable requirements qrs.	Probable surplus qrs.
United States and Canada.....	15,000,000	
United Kingdom.....	17,000,000	
France.....	2,000,000	
Belgium.....	2,000,000	
Germany.....	1,000,000	
Holland.....	1,600,000	
Austria-Hungary.....	2,500,000	
Russia and Roumania.....	10,000,000	
Switzerland.....	1,500,000	
Italy.....	4,000,000	
Spain and Portugal.....	1,500,000	
India.....	4,000,000	
Australasia, Chili and Arg. Rep.....	1,500,000

Equal in bu.....	226,000,000	272,000,000

The result of these figures is that the apparent aggregate surplus of the various countries is only about 750,000 qrs. beyond the requirements of the importing countries, and in connection with such figures this difference may well be called a mere *bagatelle*; for it is an incontrovertible fact that the reserve stocks of old wheat in Europe—say, in Russia, Hungary, Germany, France and England—are at an unusually low point. It is difficult to say what reduction in the reserve stocks in these countries is equal to, but in a vague way they may be estimated to be 10 to 15 million qrs. below those of an ordinary year.

The London *Times* gives the United Kingdom at 17,700,000 qrs., or 700,000 qrs. more than Beerbohm. The Produce Exchange reports stocks of grain in city warehouses in tons, October 1st, as follows: September: 1—Wheat, 56,321; barley, 27,761; oats, 701; corn, 788. October 1—Wheat, 54,760; barley, 38,618; oats, 855; corn, 274. Wheat in all Call Board warehouses, October 1st, 242,008 tons, an increase of 6687 tons in September.

Owing to heavy rains in the Northwest States, large quantities of wheat were damaged by rain to such an extent as to make it not desirable for either milling or exporting.

On this coast there is nothing of importance to note. In Oregon, the number of vessels taken for wheat loading is larger than last year at this time. In this State farmers are slow in offering on the market, and in the meanwhile trading is slow. The Rosenfeld and Dresbach contracts are being bought in, and it now looks as if their business will soon be satisfactorily arranged, after which more activity is looked for on Call. Millers are quietly taking all the

choice grades of wheat that is offered at \$1.40@1.45, although they bid less. The impression is that prices will go higher after this month.

Barley is slow, under heavy receipts. The consumption is very large, but the receipts are so heavy as to stifle all speculative movements. Until receipts fall away, prices are not apt to rally, but with a falling off in receipts for a few days, a decided movement for the better would ensue. The advance in bran and middlings has created more inquiry for roll barley.

Corn is firm, notwithstanding buyers trying to force prices down. The short crops at the West and large consumption are the leading causes in producing a better feeling.

Rye and buckwheat are steady, with a stronger tone noted.

Feedstuff.

Bran and middlings, under an increasing demand, are higher and strong at the advance. Roll and ground barley can be bought for less money. Owing to the advance in bran and middlings, there is a better demand.

Hay continues to rule very strong, with the more choice grades sold at a slight advance. Dealers talk the market down, but are compelled to pay well up for choice parcels.

Fruits.

Pears are in good supply, with the more choice fetching full figures.

In apples the market is oversupplied, with only the more choice fetching full figures. Common qualities move slow.

Plums and prunes from Oregon continue to come in, with the more choice fetching good prices.

Quinces continue in oversupply.

Grapes, if choice, good keepers in good demand for more distant orders. The market is oversupplied with poor keepers, for which no reasonable figure is refused, when cleaning up for the day. Canners are still taking Muscats and Tokays.

Wine grapes come in quite freely, but they find ready buyers. It is said that this year there is a decided increase in the consumption in this city, but even with this very heavy receipts are liable to create a glut and low prices.

New crop raisins are arriving, and prices are now so far established as to be quotable. We revise quotations for jobbing lots. The quality, as shown by G. W. Meade & Co., is good, better than the first receipts last year. The demand is free, but mostly from distant points, where supplies for the holidays have to be laid in early.

There is a revived inquiry for dried fruits, owing to the fact, probably, that the large purchasers in the Eastern States have resold. There is some excitement in prunes. The market is tending rapidly upward. Transactions in peaches, the past week, have been upon a larger scale, as there were, also, in other dried fruits. Some kinds, it now looks, are being rapidly concentrated.

Raw peaches have a wide range, with a growing scarcity noted.

Live-Stock.

Free offerings and hot weather have operated still more against beef cattle. The demand is of a hand-to-mouth character, and in selling pressure is met by low bids. In mutton sheep the same condition is reported. Hogs are strongly held, with packers bidding well up. The supply is claimed to be considerably less than last year. In horses there has been an increased inquiry for medium-sized work horses. The demand comes chiefly from the lower counties and is from new settlers. Prices, though, are reported to be unchanged.

BEEF—Extra, 7@7½¢; first grade, grass fed, 6½¢@6¾¢ per lb.; second grade, 5½¢@6¢; third grade, 4½¢@5½¢.

MUTTON—Ewes, 5½¢@6¢; wethers, 6@6½¢.

LAMB—Spring, 7@8¢.

VEAL—Large, 6@7¢; small, 6@8¢.

PORK—Live hogs, 4½¢@4¾¢ for heavy and medium; hard dressed, 6@6½¢ per lb; light, 4½¢@4¾¢; dressed, 6@6½¢; soft hogs, live, 3½¢@4¢. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Onions have ruled fairly steady throughout the week, with an advance paid for choice goods for shipping to more distant points.

Potatoes are in liberal receipt, but then the demand continues good, which keeps prices fairly steady, although at times concessions are made to force a consignment on the market.

Beans are coming in very freely, but owing to the Eastern demands, prices are well maintained, with stocks not accumulated.

Cabbages are moving off quite freely, with choice consignments fetching good prices for the season, to fill distant orders.

Tomatoes, if choice, are freely taken by canners, but off qualities are hard to sell.

In string beans, summer-squash, peppers, etc., the market moves at about as heretofore reported.

Miscellaneous.

Poultry has ruled steady, with the more choice-conditioned placed at an advance on quotations. Game has come in liberally, and sold in buyers' favor, owing chiefly to the hot weather being against their keeping.

Hops have a stronger tone, although buyers are still talking them down. The crop at the East is not up to expectations, while in England and on the continent there is only half of a crop.

Wool is more strongly held, causing buyers to pay a slight advance for the more choice clips. The strength of the market is due to an improvement at the East.

Grass seeds are strongly held, with a better demand reported.

Broom corn, if choice, sells readily at 75¢, but poor is hard to place. The crop is fully up to last year, but at the West it is short about 20 per cent.

We note an improved inquiry for nuts, particularly for almonds, which are exciting attention under a better concentration of supplies. An advance is not at all improbable at an early day.

The tonnage movement compares with last year at this date as follows:

1887.	1886.
On the way.....	343,518
In port, disengaged.....	283,695
In port, engaged.....	74,035
In port, engaged.....	68,326
Totals.....	6489
	61,798

The above gives a carrying capacity as follows:

1887, 680,067 short tons; 1886, 662,126 short tons; showing an increase compared with last year of 17,941 tons.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Oct. 5, 1887.

C. W. Reed & Co.

While at the State Fair, we strolled across the river to Washington and called at the residence of C. W. Reed, the well-known fruit-grower and nurseryman. We found Mr. Reed suffering from temporary indisposition, which led us to be merciful and not interview him to the extent we would have liked, for Mr. Reed's knowledge extends over the whole rise and progress of the fruit interest of the State. He has been shipping fruit East during the season, outside of the Fruit Union, and has therefore paid higher freight rates on his shipments. He has shipped about 100 carloads, if we remember correctly. He maintains the opinion that what is needed in the fruit-shipping business is low freight rates and then a free field for shippers to conduct their own business as they deem best. He believes in united action to this extent and no further.

C. W. Reed & Co. will enter the nursery branch of their year's work this year with a larger stock of trees than usual, comprising about 200,000 trees of a general assortment of fruits, of which a catalogue will soon be issued. They have a number of new varieties now on trial, having obtained them from abroad, but will not distribute them until their merits are fully tested. They have, however, arranged for 100,000 choice budded orange and lemon trees from Florida, believing that the planting of these fruits in favorable situations in the northern portion of the State will prove a profitable industry.

Mr. Reed was not able to show us about his place, and we hope at another time to have opportunity for a look. He has trees planted in 1855 still in good bearing. He has done much progressive work in the reduction of pests in his orchard, and has succeeded well with the use of Paris green in spraying against the codlin moth. We hope to have data of these experiments later.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1). \$0.25
- 2.—World's Cyclopaedia, 794 pages, 1250 illustrations; (exceedingly valuable).50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, as new select. Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per cent. off regular rates.
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by Mallie Stafford.25
- 10.—Life Among the Apaches, 322 pages, stiff cloth.25
- 11.—What Every One Should Know; a cyclopaedia of valuable information; 510 pp.; cloth; (full price \$1).50
- 12.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations.25
- 13.—Needle Work, by Jennie June; 126 pp., 200 illustrations.25
- 14.—Ladies' Fancy Work, by Jennie June; 162 pp., 700 illustrations.25
- 15.—The Way to do Magic; illustrated, 60 pp.10
- 16.—The Taxidermist's Manual; illustrated, 64 pp.10
- 17.—Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present).25

NOTE.—The cash must accompany all orders. Address this office, No. 220 Market St., S. F. Inform your neighbors about our offers and paper. In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe. Send for free circular describing most of these premiums, and any further information desired.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

- FOR WEEK ENDING SEPTEMBER 27, 1887.
- 370,591.—REFRIGERATOR—I. Allegretti, West Berkeley, Cal.
- 370,592.—VENTILATOR—I. Allegretti, West Berkeley, Cal.
- 370,525.—BOOK ATTACHMENT—A. Bieber, Bieber, Cal.
- 370,531.—RAILWAY SWITCH, ETC.—C. S. Drake, S. F.
- 370,391.—WASHING MACHINE—E. D. Hastings, Pataha, W. T.
- 370,625.—CONSTRUCTIONS, AREAS, FLOORS, ETC.—P. H. Jackson, S. F.
- 370,551.—CLEANING MARBLE—E. McCarthy, Sacramento.
- 370,498.—WATER-PROOF BOOT—L. Slessinger, S. F.
- 370,661.—SAW JOINTER—J. H. Sodex, Seattle, W. T.
- 370,512.—GRATE—E. W. Williams, S. F.

Fairs to Come.

- Portland Mechanics' Fair, Oct. 6 to 22.
- North Pacific Domestic and Fat-Stock Assoc., Portland, Or., Oct. 9 to 17.
- Fifth Dist.—Santa Clara and San Mateo—San Jose, Oct. 10 to 15.
- Fifteenth Dist.—Tulare and Kern—Visalia, Oct. 10 to 15.
- Eighteenth Dist.—Alpine, Inyo and Mono—Independence, Oct. 10 to 14.
- Third Dist.—Butte, Colusa and Tehama—Chico, Oct. 11 to 15.
- Twelfth Dist.—Lake and Mendocino—Ukiah, Oct. 11 to 15.
- Fourteenth Dist.—Santa Cruz, Oct. 12 to 15.
- Sixteenth Dist., San Luis Obispo, Oct. 12 to 15.
- Pajaro Valley, Watsonville, Oct. 20 to 22.
- San Diego Co. Horticultural and Agricultural, Oct. 28 to 30.

Wetmore Brothers.

Fruit-growers shipping to this market will be pleased to know that the well-known firm of commission men, Messrs. Wetmore Bros. of 524 and 526 Sansome street, have secured a favorable lease of the fine premises 413, 415 and 417 Washington street, near their old quarters, where they remove Oct. 1st. The location is one of the best in the fruit market; the stores extend through to Merchant street, giving them every facility for conducting their constantly increasing business to the best advantage. We predict for the firm a continuance of the success they have enjoyed in the past, and which their straightforward business methods deserve. We can confidently recommend Messrs. Wetmore Bros. to shippers of fruit, produce, etc., their long acquaintance with and thorough knowledge of their business enabling them to place consignments to the best possible advantage.

JERSEY FANCIERS, whose purses are not deep, but who would like to improve their stock with thoroughbred bulls, should not overlook E. H. Schaeffle's advertisement in another column.

It is the only Life and Accident Insurance Company transacting business in the United States whose stockholders are by law made liable for the debts of the corporation, and whose directors are made responsible for the acts of its officers.

PROFIT. All profits go to its policyholders, none to stockholders, who are limited to the interest earned by the money paid in by them. The Company's investments earn the highest average rate of interest of any Company in the world, and its location is a guarantee that this will be perpetuated, thus assuring the greater dividends to policyholders.

DEATH CLAIMS PAID DURING THE FIRST EIGHT MONTHS OF 1887.

Observe particularly the promptness with which payments follow proofs of deaths. On September 1, 1887, the Company had no unpaid claims on hand.

ACCIDENT INSURANCE —BY THE— DAY, MONTH, YEAR. POLICIES ARE DEFINITE, Non-forfeitable. —AND— Free From Technicalities.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

PROSPECT HILL NURSERIES,
 Dansville, Livingston Co., N. Y.

Worth's Patent Combined Screw and Toggle Lever Wine and Cider Press.

First Premium awarded on Wine Press at Sonoma and Marin Agricultural Fair, Sonoma Agricultural Park Association, Santa Clara Valley Agricultural Society and Mechanics' Institute, S. F.

I desire to call the attention of wine and cider makers to my improved press. The following has a movement of 264 inches, the first revolution of the screw moves the follower 14 ins., the last revolution is but 1 1/2 of an inch, thereby the power increased in the same ratio as the resistance. The platform is 50 inches wide and 10 feet long; is run back and forth under the press on a railroad track.

Has two baskets, by which you can fill the second basket while the first one is under the press, thereby doing double the amount of work that can be done on any screw or lever press in the market that use only one basket, for this reason: While my press is working continuously the other kinds are doing nothing during the time they are emptying and filling their basket.

Printed Testimonials can be had on application of the following parties, who have bought my press: J. B. J. Portal, San Jose; Wm. Pfeiffer, Guberville; Joseph Walker, Windsor; Kate F. Warfield, Glen Ellen; Joseph Drummond, Glen Ellen; Isaac De Turk, Santa Rosa; John Hinkel, San Francisco; J. & F. Muller, Windsor; C. Schiller, Guberville; Lay Clark & Co., Santa Rosa; Yache Freres, Old San Bernardino; J. F. Crank, San Gabriel; James Finlayson, Healdsburg; P. & J. J. Gobbi, Healdsburg; Wm. Allen, San Gabriel; Wm. Metzger, Santa Rosa; J. Lawrence Watson, Glen Ellen; Walter Phillips, Santa Rosa; Geo. West, Stockton; Eli T. Shepard, Glen Ellen; Rancho Wine Co., Rancho, Los Angeles Co.; Downing Fruit & Wine Co., Downey; L. A. Beard, Centerville; Wm. Palmtag, Hollister; A. Burnham & Son, Santa Rosa; Paul O. Burns Wine Co., San Jose; E. Emil Meyer, Santa Cruz Mountains, Wright P. O.; Marshall & Hill, Laguna Station; R. J. Northam, Anaheim.

AMERICAN NEWSPAPER ANNUAL.—It is seven years since N. W. Ayer & Son of Philadelphia, in furtherance of their business as advertising agents, began to publish the American Newspaper Annual. The edition for 1887 was completed only in August, and a copy lies before us. Besides the carefully prepared lists of newspapers and other periodicals issued in the United States and Territories and in the Dominion of Canada, with their circulation, distinctive character, etc., so arranged that the publications of each town, each county, State and geographical section are easily found together, as may be desired, while class journals—agricultural, scientific, religious, medical, etc.—are also grouped by themselves, convenient for reference, this volume contains a surprising amount of compact information as to the natural features, products, population and industries of the States and districts within its scope. We have found previous editions very handy to keep beside us, and with the various tables it contains and the new features introduced into this year's issue, it is calculated to prove useful, not only to advertisers, publishers and editors, but to every one who has anything to do with periodicals beyond reading the local paper or the last magazine.

If Your Lungs are Destroyed
Do not expect that Dr. Pierce's "Golden Medical Discovery" will make new ones for you. It can do much, but not impossibilities. If, however, you have not yet reached the last stages of consumption, there is hope for you. But do not delay, lest you cross the fatal line where help is impossible. The Discovery has arrested the aggravating cough of thousands of consumptives, cured their night-sweats and hectic fevers, and restored them to health and happiness.

Thousands of cures follow the use of Dr. Sage's Catarrh Remedy. 50 cents.

"Close the door gently,
And bide the breath:
I've one of my headaches—
I'm sick unto death."
"Take 'Purgative Pellets,'
They're pleasant and sure;
I've none in my pocket
I'll warrant to cure."

Dr. Pierce's "Pleasant Purgative Pellets" are both preventive and curative.

THE GOTHENBURG SYSTEM, which takes its name from the place where it originated, is a good one. It has been adopted in Sweden and Norway, and no intoxicant can be sold except at a place where good food, coffee and other non-alcoholic drinks are also kept constantly on hand. The dealer is allowed to make a profit on these, but he is stringently prohibited from selling any liquor except at cost. The idea is that dealers will thus endeavor to promote the sale of edibles and non-intoxicating drinks, upon which he does make a profit, and discourage buyers from drinking liquors upon which he makes none. It is said to work like a charm. It would be well to adopt the Gothenburg system all over the land.—*Polly Larkin, in Pet. Courier.*

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

R. G. HUSTON—Butte, Montana.
E. P. SMITH—Siskiyou Co.
SILAS PRUDEN—Colusa Co.
B. R. McPHERSON—Santa Barbara Co.

H. H. BERGER & Co. of this city, the well-known importers of Japanese nursery-stock, have issued their illustrated catalogue and price-list for the fall of 1887. The scene in a bamboo forest in Japan, which fills the first page of the cover, gives the pamphlet a unique and taking aspect. This firm has also bought out the Geo. F. Silvester seed-house, one of the oldest and most reliable on this coast, and will carry a large stock of seeds, native and foreign.

A HUMANE CONTRIVANCE.—The improved harness pad, patented and manufactured by W. R. Empey of San Jose, is specially adapted to the use of milkmen, draymen and others whose business requires a heavy vehicle. It throws the weight on either side of the horse's spine, thus preventing bruises and galls, and enabling sore backs to heal even while the animal keeps on working. The pad may be seen at the Mechanics' Fair in the Santa Clara exhibit. It is highly praised by those who have given it a trial.

Important to Tree Planters.

One hundred and twenty-five thousand Fruit Trees for sale at a bargain, consisting of Apple, Pear, Peach, Apricot, soft and hard-shell Walnuts; also 2000 Fan-Leaf Palms. Sales will be made in lots, or the Nursery and stock will be sold on the most liberal terms as to price and payments, or will be exchanged for real estate. Inquire of J. M. Hixson, Real Estate Agent, 75 N. Spring street, Los Angeles, or address the proprietor, Milton Thomas, P. O. Box 304, Los Angeles, Cal.

Farmers and Viticulturists, Attention!

FERTILIZE! FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOEBE—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

Dr. J. KOEBE, San Francisco.—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 1 pound each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

NEW TRIUMPH FORCE-FEED DRILL.

Feed Set for Small Quantity.

Drills from
one peck to any
quantity per
acre without
change of Gear
Wheels.

DOES NOT
CRACK THE
GRAIN.

IMPROVED OVER ALL OTHERS.

The Best Force-Feed Grain Drill
in the World.

Drills from one peck
to any quantity per acre
without change of Gear
Wheels. DOES NOT
CRACK THE GRAIN.

Feed Set for Large Quantity.

WHY THE TRIUMPH IS THE BEST DRILL.

1. It will sow wheat, rye, oats, barley, buck-wheat, hemp, rice, broom-corn, flax, timothy and clover seed; also beans and corn, in any desired quantities, without change of gear wheels.
2. It has a swinging tube attached to the cup under the hopper, by means of which the tube will accommodate itself to any angle of the hoes, whether straight line or zigzag.
3. It has but three gear wheels, all fastened permanently on the drill, outside of the frame, and covered with a neat cast-iron plate.
4. It is so constructed as to be capable of sowing more different kinds of grain than any other drill.
5. It is a positive force-feed, and will sow more evenly than any other drill.
6. It is evenly balanced, and its tongue rests more lightly on the horses' necks than that of any other drill.
7. It has double shifting bars, by means of which it can be changed from straight line to zigzag, and the reverse, while the drill is in motion and the hoes in the ground.
8. It stops sowing the moment the hoes are raised, and the land measure and seed sower are thrown out of gear.
9. It never bunches the grain; it will sow more evenly and regularly than any other drill, as the speed of the feed-wheels is always the same.

WHY THE TRIUMPH IS THE BEST DRILL.

10. The feed-wheels always have the same position in the cups under the hopper; there is no getting out of order by moving the feed-wheels or changing the speed, as is the case with other drills.
11. It has high wheels, wide tires, long hoes and is less liable to clog.
12. It has an iron land measure attached to the rear of the hopper, and in full view of the operator.
13. It is not liable to get out of order; all gearing being permanent, there is no liability of gears being lost, and it is always ready for use.
14. It can be regulated to any desired quantity while the drill is in motion. No need of shifting gear-wheels, or changing a peck or half peck at a time, as is done by other drills; any quantity can be changed instantly without stopping the drill.
15. The mouth of the feed-cup has nearly twice the capacity of other drills, there being no liability to bridge over or choke up, as is the case with many other drills.
16. It has the best spring hoe in the market and one that has stood the test for years.
17. It has the only perfect adjustable seat attachment, from which the driver has full control of his team and the machine at the same time.
18. It is of the best construction, neatly painted, striped and varnished, and is the most perfect and complete drill in the market.

Government Inquiry on Vine Diseases.

The fitness of a special division of the United States Department of Agriculture for the investigation of obscure diseases of plants, trees and vines, has long been recognized. With the classification and extension of the Government work which has been attained under Commissioner Colman's administration, this has been provided for, and one report relating to fungoid diseases of the vine has been published. This report has been thoroughly studied in this State, and much good has been accomplished in giving our vine-growers more definite ideas of the characteristic appearances of the recognized diseases of the vine. It is true that some, unused to observation of symptoms and indications, have found nearly every disease described in the report where none of them really existed, but in spite of such mistakes the result has been good, because they have been taught to observe. It is highly important that as good work be done toward the popularization of knowledge concerning fungoid diseases as has been accomplished with knowledge of insect pests, and we are glad to note the recent work of the Department of Agriculture as looking toward that end.

We especially refer to this matter this week because the Government expert in this department, Mr. F. Lamson Scribner, is now in this State, having come to study on the spot the mysterious disease which is playing such havoc in some of the vineyards in the neighborhood of Orange and Anaheim, Los Angeles county. We understand that Mr. Scribner could not discover the cause of the trouble from the specimens sent to Washington, and thus he has apparently approved the conclusions reached by Professor Hilgard and his assistants at Berkeley, that the vine, at least when it reached the laboratory, did not disclose any vegetable parasite competent to compass its destruction, but that the cause of the trouble was obscure, and probably existed in the environment. However, Mr. Scribner very properly determined to investigate the matter in the field and has come to California for that purpose. He will spend some time in the State, making examinations of vineyards. Accompanying him is Pierre Viala, Professor of Viticulture in the National School of Agriculture at Montpellier, France, who has been sent to this country by the French Government for the purpose of making a thorough examination of vines with a view to ascertaining what kinds are best adapted to resist phylloxera, and to their exportation to France.

He is also commissioned by his Government to examine and report minutely on the methods of preserving fruits in California. Messrs. Scribner and Viala stopped some time in Texas on their way here, examining vines, and will begin their labors here at once.

Poultry Fair in January.

The California Poultry Association held its regular fall meeting in San Francisco, October 5th. It was decided to have a poultry show

Terrible Fires.

The most disastrous fires in field and forest it has ever been our sorry task to note on the Pacific Coast have been, and up to Tuesday were still raging, in Napa and Sonoma counties. Day after day the atmosphere has been heavy and thick with smoke; night after night the conflagrations' glare has lighted up mountain and valley for miles. Bands of fire-fighters have been out battling strenuously with the advancing flames, but the loss of what patient toil had

The Sultana Grape.

The engraving on this page will serve a double purpose. It may be taken to signify the wonderful productiveness of California soil and to illustrate some of the characteristics of the Sultana grape, for such is the variety of the vine at which the photographer pointed his camera. The Sultana is the grape from which the famous Spanish Seedless Sultana raisins are made. If we remember correctly, it was first brought into prominent notice in this State by

W. B. West of Stockton, and we think Mr. West exhibited the first California Seedless Sultana raisins. One of the earliest to propagate the grape on a considerable scale was R. B. Blowers of Woodland. In his hands the vine demonstrated its immense bearing power. If our memory serves us correctly, some of Mr. Blowers' vines yielded at the rate of 17 tons per acre, though of course the average is much less. This fact, and the probable profit in the production of California Seedless Sultana raisins, led to wide planting of the variety in different parts of the State, so that now the Sultana vines are widely distributed. Perhaps not all the hopes which led to the great planting few years ago have not been realized. Such would seem to be the conclusion from the interesting essay by Executive Viticultural Officer J. H. Wheeler, which we published in

THE SEEDLESS SULTANA VINE IN FRUIT—SCENE IN VINEYARD OF J. F. ONSTOTT, NEAR YUBA CITY.

during or before January, 1888, but so few of the country members were present that the precise time and place were left to be determined at a special meeting called for Saturday evening, November 5th, 7:30 o'clock, at No. 10 Montgomery St., S. F.

The president appointed the following committee to ascertain what advantageous arrangements could be made for holding a show in their respective localities: Oakland—J. McFarling, J. N. Lund, H. R. Bowie. San Jose—O. T. Albee, H. G. Keesling, C. A. Pitkin. Santa Rosa—T. D. Morris of Sonoma.

FOREST TREE SEEDS.—It is announced that the State Board of Forestry is in receipt of seeds of the *Eucalyptus Globulus* (Manua gum) in one-half ounce packages, and the *Eucalyptus Corynocalyx* (sugar gum) in one-ounce packages, which will be distributed on application to Sands W. Forman, Secretary of the Board, at 42 Nevada block, San Francisco.

SHIPMENTS from Fresno now average from three to four carloads of raisins and one carload of dried fruit per day.

earned, if not indeed of human lives, has been past present estimate.

In Los Guilicos valley, near Santa Rosa, especially, the destruction not of timber, pasture and fences only, but of vineyards, barns and dwellings, has been lamentable. The high north wind, which was blowing for several days, at once dried vegetation into tinder and carried the flames over a vast extent of country.

Besides the disasters north of the bay, burnings only less devastating are reported in Santa Clara county, near Wright's, in the mountains west of Woodside, San Mateo county, and in Palomares canyon, near Haywards. In the case last named the fire swept over 15 miles of country and reached the neighborhood of Niles, leaving behind it charcoal and ashes in place of woodland, stubble, grain, buildings and farm utensils. Animals, wild and domestic, perished here and there.

We can only hope that those who have suffered so seriously will not lose courage, but bravely and cheerily set about retrieving their losses; and that these costly lessons will teach carefulness to all who are heedless how they kindle the small beginnings.

the *RURAL* of Aug. 27, 1887. The essay maintains, however, the outlook for Sultana raisins, if prepared as the market demands, and no doubt there will be renewed effort to secure this result.

The engraving shows a Sultana vine in full fruit, as growing in the vineyard of J. F. Onstott, three miles from Yuba City, in Sutter county. Such full fruitage, though characteristic of the Sultana variety, does not belong to it alone. Many of the other varieties also bear heavily and become almost a solid pyramid of fruit. Thus the illustration is characteristically Californian.

The Yosemite commissioners, who went to the valley for the purpose of inspecting the Stoneman house and formally accepting it from the contractor, have returned. They found that the contract had not been fully complied with, and until this is done—which may be November 1st—they will not accept the building in behalf of the people of California.

Work on the Stanford University is progressing rapidly.

THE VETERINARIAN.

Contagious Pleuro-Pneumonia, Etc.

EDITORS PRESS:—Inoculation for pleuro-pneumonia contagiosa—contagious inflammation of the lungs and pleura—has not yet produced positive results. In fact, there are many eminent authorities who state that the ordinary method of inoculation for pleuro-pneumonia contagiosa does not produce the disease. The method consists of taking a piece of diseased lung, and, after having prepared the lymph in the usual manner, this is applied with some friction to the abraded skin of the tail. Judging from a most peculiar letter which I noticed in *Gazette and Stockman*, Alturas, Cal., Sept. 7th, one would suppose that inoculation was the *sine qua non*, and that all we need do to banish diseases from this globe is to inoculate every animal (man included) with the specific virus of each ailment. To speak fearlessly and honestly, the statements made in the above-mentioned letter are wrong and ridiculous. He says: "In this State, however, this fearful disease (pleuro-pneumonia) is not so prevalent as in various other countries." I presume he means "States," as when a man speaks of a country one imagines he refers to a larger expanse. The editor of the *Gazette and Stockman*, in a criticism of its subscriber, says that it "has yet to learn of a single case of pleuro-pneumonia contagiosa ever existing in this portion of the footstool."

I agree with the *Gazette and Stockman* I have never heard of a single case of that disease in the State of California. There are, of course, a very large number of cases of pleuro-pneumonia, i. e., a simple but not contagious inflammation of the lungs and pleura. In other words, ordinary lung fever, complicated with an inflammation of that external glistening membrane of the lungs, termed the pleura. I always do my utmost to avoid strong statements, and seldom allow myself to get excited, but really I must say—if I did not I would be a hypocrite—that this writer in the paper before mentioned knows nothing of the subject at issue. I hope Mr. O'Neil, for that is the name of the gentleman referred to, will not be offended. He must remember that I am not acting on the principle of the Irishman, when asked for whom he would vote, on landing at New York. "Agin the Government, anyway," answered Patrick. I am simply stating facts. Post-mortem appearances of pleuro-pneumonia contagiosa are characterized by patches of inflamed tissue in the lungs, and they have a characteristic marbled appearance, totally different from the appearance of the ordinary inflamed-lung appearance. But this, like so many other matters, cannot be well explained by pen and ink, but must be seen and seen often to be understood. An ounce of practice is worth a pound of theory. Upon applying the ear to the sides of an animal affected with this disease, the "sounds" are diagnostic to a practiced ear. One lung is generally affected much more than the other. It is extremely difficult to explain upon paper the general diagnosis of this contagious inflammation of the lungs and pleura.

Let the Poor Brute Lie Down.

Every particular lameness in a horse has a characteristic gait. Every disease, in all animals, shows particular and peculiar symptoms. And there can be no greater mistake than to suppose, as does a writer in the *Calistogian*, that "in every case the afflicted animals act in a similar way." When the poor animal is suffering intense pain, nature will indicate the easiest and most comfortable position in which to lie. No one but an unthinking person would use mechanical appliances rather than allow him to lie down. Suppose yourself suffering pain from colic, how would you like to be put in stocks to prevent rolling and lying on the stomach? I have seen some people whip a poor horse with colic to prevent him lying down, supposing that he was sure to die if he once was allowed to lie down, even on a comfortable bed of straw. In very many ailments of that most noble animal—the horse—we should do our utmost to encourage him to lie down. Laminitis or fever in the feet—to wit—if he will not lie down on his own account I frequently pull all his legs together, and quietly lay him down on a good bed, thereby much relieving the pain by removing the pressure. He soon finds that this is the easiest posture, and will lie down of his own accord. The general opinion with the public is that the first thing to be done in treating a sick horse is to "keep him on his feet." It is a very good rule to remember that the medical treatment with horses and human beings does not differ much. And if no veterinary surgeon is at hand, let the owner ask himself if my wife or child were suffering from pain and no medical aid at hand, what would I do? And allow me to add, that contact with well-bred sick horses for many years has taught me that horses and dogs possess appreciative powers superior, yes, superior to many human beings.

Progress in the Healing Art.

"For cancer the head of a mad dog, burned and then turned to ashes, and thereon applied, casteth all the venom and the foulness and healeth the maddening bites," so writes a medical authority in Britain, 1712. A Brahman reverentially swallows as medicine a little of

the excrement of the sacred cow. Comparing these ideas of therapeutics and the following letter, which was taken from the *Independent*, we must come to the conclusion that the science of the physician—I mean the properly qualified physician—has acted on the policy of progress onward and upward:

"The progress of the last 50 years has wholly changed the position of the science and the art of the physician. His very name meant nature, and he was so called because his subject for study was the highest one in nature, the study of man. But there was little material for that kind of study which deserves the name of science, and there was so much demand for some one who could relieve human pain and disease that it is not wonderful that the art made attempts even when it had no science to fall back upon. It did come to have observation and experience, and so far as it availed itself of these it had a right to exist. But as an art it had to be empirical just because it had not enough orderly facts out of which to make a science. Now the situation is greatly changed. Almost every department of natural science in its modern accumulations has had much to hand over to the physician. The medical mind became aroused, and soon saw that it too had a body of science within itself waiting for the search of the scalpel and the microscope and capable of being utilized for the purposes of art. It is not all troublesome that this more precise knowledge has narrowed the sphere of drugs and widened that of natural relief and cure. It is the highest of human mechanism and of human skill so to run a machine that is self-repairative that it may have the very best chance to repair itself. That is what the true physician of the present day is studying with potential energy. He does not ignore drugs. He knows that there are limitations as to the degree to which the human organism when out of repair can mend itself; hence there was a time when the physician, finding such a condition, pushed his drugs and other appliances more vigorously. He has more accurately discovered their place and their power, and so when he must employ them, does it all the more effectually. But he has also seen that the occasions for their use are the rare exceptions. The great study now is to know what are the precise preservative and curative powers of the human system, and of each particular person, and how far and in what way they are most available. Also how they can be aided by natural methods, such as by air, food, water, exercise, etc. Hence it is that hygiene is no longer a thing to be patronized. It is radical and essential to the practice of medicine. Many a practitioner past 50 years of age has become a poor practitioner, because he practices just as he was taught, and knows more about *materia medica* than he does about *materia natura*. The profoundest questions now before the medical mind are those of nutrition, of tissue repair, of preservation or renovation by natural processes. Flint and Cross signalized their latest works by insisting upon the charge. Weir Mitchell opens his institution for restorative treatment, mostly along the line of sanitary and dietetic methods. Sargent attempts both prevention and cure by resort to the legitimate ways of body building, as nature conducts it. These are but specimens of hundreds who have caught the advancing light. They know how important and yet how narrow a sphere drugs have on one hand, and also how superficial on the other are many of the plans of alimentation, through pepsin, baby-foods, etc. Sir William Gull does not feel his profession compromised when he states that the Prince of Wales, when sick with typhoid fever, took only two doses of medicine, because he knows there is greater skill in conducting the other lines of treatment in all that relates to the temperature, rest, food, etc., than there can be in mere medication.

"The greatest mortification and embarrassment of the hygienist of the present day is that so many think that sanitation means skill in finding a nuisance rather than deep knowledge of causes which prevent their occurrence. He is the modern physician who, finding results in the form of sickness, knows how to deal with them in full knowledge of the curative resources of the sanitary or real medical art. The time has really come when every family that can afford it should put itself under the care of the physician, with the expectation that he will guide the life in particulars in which every one cannot be expected to have knowledge and so secure vigor and ward off disease. It is now more practicable to get more service out of your medical adviser by his investigations of states of health and means of vigor, than it is merely to depend upon him when sickness has arrived. It is thus that the average of human health can be decidedly raised and so benefit accrue to the family and to the nation. He who thus values his physician, as a consultant, not with the view of a dose, but as one capable of preventing disease, or of one dealing with it, mostly through natural processes, will not fail to secure the greatest advantages of this great art."

ROBERT J. DAWSON,
Veterinary Surgeon.

225 Geary St., S. F., Oct. 4, 1887.

SUCCESS OF ENGLISH CO-OPERATION.—The English co-operatives have a bank whose transactions amount to \$80,000,000 a year. They have 1400 stores and a business of \$150,000,000 a year. Their 900,000 members receive an annual profit of \$15,000,000. Their profits during the past 24 years have been \$50,000,000.

HORTICULTURE.

State Horticultural Society.

The regular monthly meeting was held in the rooms of the State Board of Horticulture, No. 220 Sutter street, on Sept. 30th, President Hilgard in the chair.

Mrs. H. H. Berger of San Francisco was elected a regular member. C. W. Hathaway, San Leandro, was proposed for membership, election to take place next month.

Mr. Lelong, of the committee appointed to draft resolutions concerning the death of Matthew Cooke, reported as follows:

To the Officers and Members of the State Horticultural Society:

We, the committee appointed at the last meeting to draft suitable resolutions in respect to the memory of Matthew Cooke, late member of this society, beg leave to submit the following, and most respectfully recommend their adoption:

WHEREAS, It has pleased Almighty God to remove from our midst a worthy and estimable member; therefore be it

Resolved, That in the death of Matthew Cooke the State Horticultural Society of California has lost a true friend, a faithful member, and a public benefactor.

Resolved, That these resolutions be spread upon the minutes of this society, that a copy be sent to the bereaved family, and that when this meeting shall adjourn it do so out of respect to the memory of the late Matthew Cooke.

W. G. KLEE,
B. M. LELONG,
LEONARD COATES,
Committee.

The resolutions were unanimously adopted.

The Kelsey Plum.

A letter was read from H. E. Van Deman, Chief of the Division of Pomology, U. S. Department of Agriculture, to Prof. Hilgard, in which he spoke very highly of specimens of the Kelsey Japan plum which had been sent to him. They arrived in perfect condition, though sent in a close box by mail.

Mr. Lelong also reported from the Committee on Tariff on Fruits that the committee had no recommendations to make, and referred the subject back to the society for its consideration. Several members thought that the proper time and place for the discussion of the tariff question as relates to our fruit products would be the annual Fruit-Growers' Convention, which will be held in Santa Rosa November 8th, and, on motion of Mr. Lieb of San Jose, the subject was postponed until that occasion. Enough was said, however, by Mr. Moulton of Colusa and others to show the importance of fruit-growers acting together for the protection of their industry from foreign importations.

Mr. Lelong reported that the fruit which had been treated by Mr. Allegretti, and shown at the meeting a month before, had kept in good condition for several days after being exposed to ordinary temperature in his office. Judge Blackwood remarked that some pears which he sent to Mr. Allegretti on the 28th of August, and kept in store for three weeks, did not sell when sent to market in San Francisco. (Mr. Allegretti desires to state in this connection that the fruit which he received was not of marketable quality when it was sent to him.) Mr. Lieb of San Jose said that he had kept cherries for two months, providing they were in good condition when they were put into the storehouse; but fruit that was bruised or over-ripe did not keep so well. He believes that the Allegretti process will be perfectly successful when we understand what fruit to subject to it and how to pick it. Prof. Hilgard spoke of a preservative fluid which he had recommended for specimens to be kept for exhibition at fairs. Some fruit kept well in this liquid; others kept very poorly. It may be in these matters we have much to learn about methods of application and preparation of the fruit.

Calaveras County Fruit.

Mr. J. S. Shearman exhibited to the society a collection of grapes, pomegranates, peaches, apples, etc., which he had brought with him from Calaveras county, desiring to show them because reports had appeared in some of the papers that Calaveras county was not fitted for the production of good fruit. The fruit shown by Mr. Shearman was a sufficient refutation of such statements, for it was specially excellent both in size and quality.

Seedling Apple.

The secretary exhibited a specimen of red apple received from T. Cowles, referred to in the following letter:

Horticultural Society:—I send you a box of apples which I would like to have your opinion upon. They are from a seedling (the seeds were planted by myself six years ago). The tree is quite thorny, but a vigorous grower. The branches droop and are entirely destitute of sharp forks or crotches. It is a prolific, constant bearer, resembling the Red June, but fully two weeks later. The tree is symmetrical and presents a fine appearance when loaded with fruit. Full as it is, not a limb has ever broken. I do not know what kind of an apple the seeds were from. Mrs. Cowles ate it and gave me the seeds to plant. She is dead, and this is her legacy to me, which will explain my interest in its identity. Some of the fruitmen here say that it is the Red June, others that it is not.—T. COWLES, Watsonville.

The fruit was referred to Jas. Shinn and W. W. Smith as a committee for identification, and after examination they reported that it was un-

doubtedly a seedling, and in all probability a seedling of the Red June.

A sample of walnuts was received from John Crofton of Walnut Grove, interesting because they were borne upon English walnut grafts which had been set in California black walnut stock.

Discussion of the stated subject of the day being taken up, the following letter from Felix Gillet of Nevada City was read:

Notes on Nuts.

Edward J. Wickson, Secretary State Horticultural Society.—DEAR SIR: Having found through this year's experience some new and rather important facts concerning the culture of nut trees and the successful raising of nuts of all kinds in this State, and one of the subjects to be discussed at the next meeting of the society being nuts, induced me to lay before the society these notes on the aforesaid subject.

The Walnut.

This year, with its repeated late frosts in the spring, has been a trying one for the walnut, at least in this part of the State. The kind that behaved the worst was the Los Angeles or California common walnut. About this locality it was injured by frost three successive times last spring, while the hardier kinds stood it better, not having put forth so early as the above variety. Up here in the mountains of Nevada county we had two black frosts in the spring, the first one on the 10th of April and the second one on the 11th of May. I must say that it is very unusual to have such heavy frosts so late in the season as we had this year. The frost on the 10th of April did hurt somewhat the *Præparuriens* and other sorts of walnuts that put forth about that time, but the worst of the two frosts was that on the 11th of May, which finished up what had been begun a month before. Those kinds of walnuts that escaped scot free were the following ones, viz., *Franquette*, *Mayette*, *Parisienne* and *Chaberte*, so extensively planted in Europe nowadays in districts where late frosts in the spring are quite frequent; and, of course, the *June Præparuriens*, that does not put forth before the 20th of June. I had the *Franquette*, *Mayette* and *Parisienne* out in full bloom early in June, they having suffered nothing whatever from the frost. This is so much more important from the fact that those three kinds grow very large and beautiful nuts, and it shows, besides, that their culture can be carried on successfully still higher up in the mountains or in districts subject to late frosts in the spring, and the business made a most remunerative one.

About half a mile from my place, which is a little too close to the creek to be entirely safe from frost, and in what may be termed the warm belt that encircles the town of Nevada on the north and west sides, and at a greater elevation, nut trees were not hurt at all by frost. At Mr. Allison's ranch, which lies in that warm belt, and is as fine a spot as can be found in our mountains for the raising of fruit and nuts, large *Languedoc* almonds were perfectly loaded, persimmons breaking down, and two ten-year-old second-generation *Præparuriens* pretty full for their age. Mr. Allison, when he purchased those two trees, five years ago, said that he only wanted to make an experiment and compare this new kind with other ones already planted on his place, but that if he was not so old, he would plant a 30-acre tract above his orchard into such walnuts. Now with those very two trees well loaded with nuts, and in a year that frost proved so dangerous all around, Mr. Allison thinks that he made quite a mistake five years ago in thinking that he was too old to plant that tract of land into walnuts. This may be regarded as an answer to the often put question: How soon will the walnut bear and be remunerative?

The following is an interesting illustration of the action of frost on the walnut in the spring. Mr. George Victor, at North Bloomfield, 13 miles above this city, has on his place a ten-year-old *Præparuriens* walnut which was just putting forth at the time of the frost on the 10th of April. Being absent from home on the night of that frost, Dr. I. Manson, a neighbor, and who thought a great deal of the walnut, got up before sunrise, and, with the aid of a hose and sprinkler, sprayed the tree all up with water. It was then very cold, the water freezing on the tree, from whose limbs hung down long icicles, and when the sun rose bright and warm, the tree had all over it a thick mantle of ice. Well, not a leaf, not a catkin, nothing whatever was hurt by frost, and subsequently the tree bloomed splendidly, having on lots of male and female blossoms (last year that tree, young as it was, yielded a nice little crop of nuts). But May came in with a vengeance, and on the 11th of that month the nuts that were just out in bloom were killed, nobody having had any idea that the frost would be severe enough to do any damage. A propos, I will state here that the walnut proper is very hardy, and is pretty well safe as soon as it attains the size of a good-sized filbert; but if in full bloom at the time of a heavy frost, it will, of course, succumb, like the blossoms of other trees.

Grafting the Walnut.

I have had occasion before this to describe the various ways of grafting the walnut. The mode of grafting that I last described and recommended as highly successful was "sap grafting," and it gave all around the best results. Right in this town on Mr. George Cooper's place, I have had a 30-years-old Los An-

geles walnut barren as could be, grafted into hardier and more prolific kinds by this method, and not a graft missed. As grafting the walnut is being much resorted to in Central and Northern California, both on the black and Los Angeles sorts, I will herein give a brief description of that mode of grafting. I must say that grafting is more apt to succeed on a large walnut tree than on a small one. I had limbs as big as the leg successfully grafted. They should be at least as large as the wrist. The stock should never be split through the center, but sideways, the cleft forming the chord of a segment. On account of the cleft being made to run altogether through the sap, that mode of grafting is called "sap grafting." If it is a large limb, two or even three such clefts are run on two or three sides of the stock, and one to two grafts inserted at the end of each cleft. But in preparing the cion and cutting wedge-like the end to be inserted into the cleft, the pith should never be exposed except on one side. This is almost a condition *sine qua non* of success. The stock should be well ligatured or bound tight with a band of cloth and waxed. The grafts have to be watched through the summer, and either be pinched back or tied up to stakes made fast to the stock itself; if not, their great weight is liable to make them break off. Cions for grafting purposes should be put away in the cellar, the butt in sand, before spring.

Frost Effects and Borers.

A curious effect of the frost on the 11th of May was to make the "borer" (another pest to bother the nurseryman) throw itself like a fury on the walnut. For 17 years that I have been propagating walnut trees, and I have propagated thousands of them, I do not think that I have had a dozen trees during that long period ever attacked by borers; so I was greatly surprised to find this year 50 per cent of the trees infested by that pest, and to tell the truth they did fare badly in the strong sap of the walnut. This is the way I account for that sudden attack of the borer on the walnut: The borer (or flat-headed apple tree borer, to call it by its American name) as it is well known, lays its eggs in preference on the side of trees where sap has been checked or interfered with in some manner; and as that frost on the 11th of May killed the new growth on most all the walnuts, it checked the sap thoroughly, and as just at that time the borer was emerging a perfect insect, it went to work blindly on the walnut, and in doing so made a sad mistake, for I do not think that five per cent of the worms would ever have come out in the perfect state in the spring, if let alone.

The Chestnut.

The chestnut is a very hardy tree, most admirably adapted to this altitude, 2600 feet above the level of the sea. I am informed that the frost on the 11th of May killed all the large chestnuts at Chico, right in the Sacramento valley. Here, in the mountains of Nevada county, chestnuts were not touched at all by the frost, and the trees are well loaded with nuts. This again shows the superiority of mountain land over valley land for chestnut planting. A seedling generally goes to bearing before a grafted tree, but the nuts are not so large. The chestnut degenerates fast from the seed, hence the reason why the finest varieties are solely propagated by grafting. Wherever summers are short and cool, certain varieties will not mature their nuts; in such districts none but precocious kinds should be planted. The kinds best suited to our climate are Combale, Nouzillard and Precoce. The renowned Marron de Lyon I find much inferior to the three above varieties, because it does not bear well, although bearing large nuts when it does bear. A grafted tree does not grow to such large dimensions as a seedling, and is greatly better adapted to orchard form. In one respect a grafted chestnut is similar to the *Præparuriens* walnut, that is, in having a great tendency to spread out instead of shooting up, and having the lower limbs bear very profusely. As to the American chestnut, it does not seem to do well in California. Here large trees of that kind are completely unproductive, while French chestnuts bear very well. Most all the chestnut trees planted in our mountains are seedlings of the French Marron type, the nuts being pronounced as bitter ones. This is a mistake, for the nuts are not bitter, but, unfortunately, almost tasteless; if, however, any of the inner skin which has that bitter principle in it is eaten with the nut, it will make the latter taste bitter. Boiled or roasted the nuts taste well enough, though lacking in sweetness and flavor. This is another advantage in favor of grafted kinds, which are very sweet, besides being uniformly large.

When planting chestnuts in orchard form, the trees should be set out 40 feet apart. Chestnuts do well in cordons around vineyards or orchards, the same as the walnut; in that case they may be set only 30 feet apart.

Pruning the chestnut is perfectly useless and rather injurious to the tree. Like the walnut, it has to be let alone. Nut trees in general require but very little pruning.

When picked right fresh, the chestnut is far from being so sweet as after it has been put for a certain length of time to sweat. Those large French chestnuts or "Marrons" make a splendid stuffing for geese and turkeys, and they come right in good time for the great American Thanksgiving Day. "Turkey and chestnuts" is a dish not to be despised at all. The chestnut should be planted more largely

in the mountains of California, where large tracts of land are so well adapted to its culture.

The Almond.

Two kinds of almonds seem to do well in California, and particularly so in our mountains, viz.: The hard-shell and Languedoc or common soft-shell. As to the Princess or paper-shell, it is a very delicate kind, which does poorly all over the State. I would not advise any one to propagate the almond from the seed, for, like all sorts of nuts, it is too apt to degenerate from the seed, no good results being thus obtained. We see in Europe the crop from seedlings always inferior and fetching less than that of grafted kinds. The most hardy of soft-shell varieties is undoubtedly the Languedoc; it is the best one for our mountains, where every year breaks out the gum among stone fruit trees, including almonds. An immense advantage of the Languedoc over almost all other kinds is that it blooms so much later, quite an important item. I have had always a crop on my Languedocs. This year, while the crop of the Paper-shell was destroyed by frost on the 10th of April, that of the Languedoc came out all right, to be nipped a month later, on the 11th of May. The Languedoc is less subject to gum than the Paper-shell, and it comes in bloom at a much more favorable period. The best almond variety, be it Languedoc or anything else, is that which blooms the latest, the very main requisite, whose nuts separate well from the hull, and which are the largest and whitest; all these requisites in one kind would constitute it the *ne plus ultra* among the almond family. The Languedoc has something else in its favor; it is long-lived, and certainly more so than the Paper-shell and other soft-shell kinds. In Europe, the late-blooming varieties are the only ones planted now, at least in districts subject to frosts, or, worse yet, not sheltered enough against the disastrous and blighting effects of north winds which usually prevail in the latter part of the winter, just when the almond trees are out in bloom. It would be more prudent in California to plant also none but late-blooming kinds.

As a rule, the almond tree cares less about the nature of the soil than it does for a good exposure, well sheltered from the north winds. The hard-shell is more hardy and bears larger crops than soft-shell sorts. In cold soil and where the almond root would not do well or even root, but where the plum root does well, the almond should be grafted on plum stock; otherwise the common hard-shell almond is the best stock for the almond. Sulphur-bleaching gives a bad taste to the almond and injures its keeping qualities.

The Filbert.

Every year confirms my former statement about the Avelines, as being the best kinds of filberts adapted to our soil and climate and being good and regular bearers, if cultivated and trained right; the nut, besides, being delicious. How much is it to be regretted that in our large vineyards, and orchards, too, long rows of filberts, set widely apart, were not made to intersperse grapevines and fruit trees. With grapes cheap as dirt, wine at ruinous prices, and fruit a drug, long rows of filberts and cordons of walnuts all around large vineyards and orchards, would considerably help, with but little outlay, to materially increase, and in some cases double, the revenue of the land.

Filberts to bear well should have plenty air about them, hence the rows should be wide apart, say 100 to 200 feet, with rows of grapevines or fruit trees between. The filbert should be trained as a low standard, branching out at 2½ to 3 feet from the ground. It is easy enough to train a filbert as low standard, but suckers or sprouts, so apt to grow from the foot of the tree, have to be mercilessly taken out, and as soon as the tree has attained a good size they quit growing so thick and fast as when the tree was young. In Arragon in Spain, they utilize irrigation ditches by planting filberts alongside of them; this is a hint to ditch-owners in a State like California, where irrigation ditches or canals are getting to intersperse the country in all directions.

Filberts require a moist soil, and if too dry it should be absolutely irrigated, as early as May and till July. They prefer also a light soil and rather deep; in a clayish, compact, cold soil, they do not do so well, and bear badly. In too poor soil the tree just lives and that's all. Under a too cold climate the nut is apt not to fill. A temperate climate is the best adapted to that pretty little member of the great nut family. The filbert has a kind of predilection for an exposure not too much visited by the sun's rays. The nuts drop off on the ground in the first half of September, perfectly ripe. The best time for planting filberts is the fall or early in the winter.

In some parts of Provence, in France, where filberts have to be irrigated to bear well, strawberries and violets are raised between the rows of filberts, and shipped to the Paris market, 600 miles away. In such land 50 to 60 filberts are planted to the acre. Trees generally come into bearing on the fifth year. Pruning is very little resorted to with filberts and they are long-lived trees if only moderately irrigated. The best mode for propagating the filbert is from layering, suckering and dividing of bushes. From the seed only 70 to 80 per cent may come true. It may very well be grafted on the common hazel of our woods or filbert seedlings. From five to six limbs are sufficient to constitute the top frame of a filbert tree made to

branch out at 30 to 36 inches from the ground. I have upon my own grounds several filbert trees trained as standards, and which branch out fan-like; they are, when so trained, highly ornamental. Filberts should be planted at least 15 feet apart in the row, and the rows from 20 to 25 feet apart; better still, as suggested throughout this paper, as intermediary rows in vineyards and orchards.—FELIX GILLET, Nevada City, Cal.

Discussion.

There was some dissent expressed from Mr. Gillet's remarks, especially in the matter of almonds, although Mr. Gillet was credited with correctness in speaking for his locality. It was the general opinion that there are a great many varieties better than the Languedoc for general cultivation in California. Mr. Coates remarked that in his opinion the simple fact of late blooming does not avail much, because frost does not always come at the same date, and thus blossoms are apt to be cut off successively during the spring. The matter of "gumming" he thought depended largely upon soil. Mr. Gillet's condemnation of seedlings cannot be approved if he intended to cover the idea of selected seedlings, because it is beyond question that the almonds which are succeeding best in most parts of the State at the present time are seedling almonds, originating here. Mr. Wilcox of San Jose said that seedlings which suit the different localities are undoubtedly the best for the California grower. Mr. Shinn expressed himself in a similar way. Concerning filberts, Mr. Coates claimed that they did not bear well with him, and Mr. Shinn stated that the trees did not bear well nor were the nuts as large as those that he had planted.

There was some discussion concerning the origin of the Languedoc variety of almond, and whether the Languedoc spoken of by Mr. Gillet was the same as usually called the Languedoc in this State. Mr. Hatch, who saw Mr. Gillet's Languedocs at the Sacramento Citrus Fair last January, considered them identical. He said that he had been told by the late Mr. G. G. Briggs that the Languedoc in California was a seedling of the real Languedoc, and Mr. Smith and Mr. Shinn claimed that the original Languedoc trees (from which buds have been used in this State) were imported from Prince of Long Island as early as 1857, and were undoubtedly from imported stock. Mr. Hatch, in answer to a question, stated that his seedlings which he is planting so largely do not gum. He also gave an outline of his experience in originating his famous varieties and how their produce compares in amount and in market value with the Languedoc. A similar statement was printed in the RURAL PRESS of April 9, 1887, to which the reader is referred.

Seedling Fruits in California.

Speaking of seedling almonds, the discussion naturally drifted to the consideration of seedling fruits in general for California. Mr. Smith recommended that still more work should be done toward the obtaining of still better seedlings of different kinds of fruit. He thought possibly even better almonds could be obtained than those which Mr. Hatch had succeeded in raising from his seeds. He thought in this work of raising seedlings we could probably make much progress and continually get better and better fruits, and those specially adapted to California conditions. He was trying to secure a good yellow peach; a good yellow, free-stone peach, which would ripen just before the Early Crawford. He has used the St. John pits crossed with the Early Crawfords. The St. John ripens at just the right time, but is too small. Mr. Shinn also spoke in favor of California seedlings, especially of peaches. For seedling cling peaches he had settled upon three which seemed to him very satisfactory—the Sellers cling, Nichols cling and the McKevitt cling. Discussion followed on other varieties of peaches. Mr. Smith recommended Reeve's Favorite as ripening just before the Susquehanna, but Mr. Shinn said in his locality it curled badly. Mary's Choice was recommended as ripening immediately after the Early Crawford and the Foster. The Henrietta or Levi's Late was exhibited by Mr. Shinn and it was stated that this peach had sold in Chicago this year as high as \$3.50 per box.

White Adriatic Figs.

W. C. West of Fancher Creek Nursery, Fresno, exhibited a sample box of White Adriatic figs, nicely dried and packed. The sample was very large and handsome, and was generally admired. Mr. West stated that he had dried them without dipping or any preparation. He says they must be picked at the right time—that is, when the fig drops over on the stem—and then is sun-dried for a day or two, and finally put into the sweat-boxes. Sweating the figs makes the skin tender. Mr. West stated that he had secured, by personal visit to Smyrna, the true Smyrna fig of commerce, and now has a number of trees growing in Fresno. He did not desire to say anything more about them till he could show the fruit, and then he would be ready to state all that he had learned during his five months' visit on the Mediterranean.

Nomination of Officers.

As the next meeting will be the annual meeting, according to the constitution, nominations for officers had to be made at the September meeting. Upon motion, the officers during the past year were renominated, as follows: President, E. W. Hilgard; vice-president, A. T. Hatch; secretary, E. J. Wickson; treasurer, R.

J. Trumbull. Directors—I. A. Wilcox, Leonard Coates, F. C. De Long, W. C. Blackwood and D. Lubin.

Subject for Next Meeting.

As the time did not suffice for the discussion of table grapes, that subject was laid over until the October meeting. Also, so much interest was manifested in seedling fruits for California that that subject was also appointed for the October meeting. Upon motion, the society adjourned.

THE STOCK YARD.

Animal Secretions Affected by Food, Etc.

EDITORS PRESS:—The quality and character of milk, manufactured or secreted by all animals, of course, depends altogether upon the food supplied. If dairymen feed grains to their cows and very little grass, the result must necessarily be that the milk lacks its natural peculiarities. An excess of soft food produces milk in great quantity but of poor quality. This is well known to all practical men. The fact that all animal secretions and excretions are materially affected by the material taken into the stomach is well shown—if necessary to prove so evident a statement—by the flavor the meat of turkeys derives by these birds having been supplied with walnuts a short time prior to killing; also the eggs of birds are influenced in flavor in accordance with the aliment supplied, personally. I can always tell whether a certain egg was laid by a fowl fed upon the natural country food, or kept in a cooped-up pen and not allowed to follow its natural instincts. It is noteworthy in treating of this subject to call attention to the matter of all animals possessing a characteristic odor in their secretions. How very different in smell is the milk of the cow and the mare! A man well versed in these details can at once recognize each excretion. As a practical instance of the effect of food upon the flavor of milk may be cited: The turnip flavor produced in that secretion of cows during the early part of the season for those roots. Also, any medicine that an animal may be taking can be readily recognized in the milk, and it is very necessary to remember this matter, as in giving an ordinary dose of aloes, for instance, the young animal may be so much affected, *through the milk*, as to cause its death by diarrhea. Medical men are well alive to this, as is shown by their recommending consumptive mothers not to suckle their offspring, but to feed them, either by means of the ordinary feeding-bottle or a foster mother.

Some people think that so long as milk is not watered, after it leaves the cow, all is well; but I guess it will be clearly seen, by what has been said, that adulteration may take place prior to this. One good method of testing the quality of milk is by means of that instrument which shows, by a properly arranged chart, the specific gravity of the fluid. It must be evident that the less the specific gravity the poorer is the quality. Cows transmit to their offspring their ability to give milk in quantity and quality, hence the benefit which comes from breeding only from such animals as produce it in abundance and of good quality.

ROBERT J. DAWSON,
Veterinary Surgeon.

225 Geary St., S. F., Oct. 3, 1887.

Consolidated Cattle-Growers' Association.

EDITORS PRESS:—The basis of representation at the forthcoming annual meeting of the Consolidated Cattle-Growers' Association, to be held at the Gillis Opera-house, Kansas City, Mo., beginning its sessions at 2 P. M., Monday, October 31st next, will be the same as heretofore, viz.: All associations holding membership in the consolidated organization will be entitled to send one delegate for every 10 of their members, paid for at the rate of \$5 for each delegate so sent. All general live-stock or cattle-growers' associations not holding membership, the Governors of all States and Territories, all State boards of agriculture and State live-stock sanitary boards are entitled to send two delegates each without payment. All agricultural colleges and agricultural experiment stations and all live-stock and agricultural publications are entitled to send one delegate each without payment. Invitations have been sent out to all parties entitled to send delegates under this plan, so far as it has been possible to obtain proper postoffice addresses, and it is believed that the field has been quite thoroughly covered. However, lest some may not have been reached in this manner, you are respectfully requested to publish the basis of representation as set forth above, with the request that all associations or other parties entitled to representation in the convention who may not have received formal invitations, appoint delegates without further notice, sending their representatives to the meeting with properly certified credentials.

You will also please accept this as an invitation to your own journal as per plan above outlined. Trusting that we shall have your hearty co-operation in endeavoring to make this meeting a successful and profitable one, we have the honor to remain—D. W. SMITH, President; ALVIN H. SANDERS, Secretary.

Chicago, Oct. 1st.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The State Grange.

(Continued from our last.)

The session of the State Grange opened promptly on Tuesday morning, an unusually large number of representatives and visiting members being present. Most of the officers were in attendance, and work commenced at once.

The hall provided by the Santa Rosa Grange was commodious and most handsomely furnished and tastefully decorated, the word "Welcome" appearing in evergreens upon the left, and the significant motto on the right, "We Work in Unity." The latter words were beautifully wrought and observed in Faith, Hope and Charity with fidelity throughout the session. A handsome orange tree, fronting the altar, filled the hall with its grateful perfume. A Grange plow, made of choice roses and rare flowers, and placed upon the wall by Sister Cannon, attracted much attention and remained to delight the eye during the session. Potted plants and many other ingenious decorations abounded in the hall, all worthy of special mention.

Tuesday evening the hall was crowded with Patrons, much interest being taken in the delivery of the address of welcome by Worthy Steward E. W. Davis, Master of Santa Rosa Grange. His address was able and eloquent, and we regret that no report of it was secured.

Brother Davis was followed by Brother W. W. Greer, Worthy Master of Sacramento Grange, who gave the following response:

Response to Address of Welcome.

Worthy Master, Officers and Members of the California State Grange: To me has been assigned a pleasant duty—that of responding to this generous welcome from the members of Santa Rosa Grange through their able and eloquent representative, Bro. Davis.

But, Worthy Master, fully appreciating the honor you have conferred upon me, I feel that this is a privilege that should have fallen on some more eloquent and talented member than myself—some one whose conspicuous ability would have reflected more credit upon your good judgment; some one who could have done justice to this occasion. For it is hard for me to transport myself in a few short hours from the haunts of business and its corresponding cares to the rostrum, and address so active and intelligent a body as the Patrons of California here assembled.

On behalf of the Patrons of Husbandry of the California State Grange, I desire to express to you, Bro. Davis, our sincerest thanks and heartfelt gratitude for these glowing words of welcome.

We appreciate your welcome because we know it comes from the bottom of a Granger's heart. We know that you voice the sentiment common to every member in your Grange, and, brothers and sisters of Santa Rosa Grange, we feel that we are welcome in your midst; we feel that our stay in your beautiful city of roses will be a delightful one.

This is the second time the State Grange has convened within the confines of Santa Rosa; the second time we have enjoyed the hospitalities of Santa Rosa Grange. From present appearances, this will be a session productive of much good, and one long to be remembered in the annals of our Order, and when the end of the week draws nigh and the time for adjourning is at hand, there is not a member within the sound of my voice to-night but who will say that his stay has been a delightful one, and who will go away feeling benefited and improved by the session's work.

As I stand here this evening and glance around this hall over this assemblage of people coming here from all portions of the State, representing the culture and refinement of the great commonwealth, I feel prouder than ever that I am a Granger, prouder than ever that my name stands enrolled as a member of the Patrons of Husbandry of California, an Order having for its object the advancement and improvement of the agricultural classes; and it brings more forcibly to my mind the fact that agriculture is no longer in the hands of the lowly and uneducated, but in the hands of a cultured and refined class. Agriculture is fast rising in dignity and importance. We have lived to see the day when there is more learning in agriculture than any of the so-called learned professions. We have lived to see a day when it required no persuasion to have men follow these pursuits and make them see their beauty and their charms.

One word more and I will close. During the past year our Grange ship has been well manned. She has been skillfully guided over the rough billows and brought safely into port. Under the paternal guidance of Worthy Master William Johnston we have finished a season of fruitfulness for our Order. Nobly he performed his part, faithfully has he kept every promise made to us. He has served us ably and well, and when he comes to lay down the mantle of his office so nobly worn for the past two years well may we apply to him that welcome plaudit, "Well done, good and faithful servant."

And now, brothers and sisters, as we have an Order that we all love, that we all respect, that

we are all proud of, let us do all that we can for its advancement and improvement.

Let us make the next two years a season of work. Let us put forth an energy, determination and will never before displayed in our Order. Let us unite as one individual and pray that our Order may be strengthened and enlarged, that we may become a power in the land. May the doctrines of our Order be introduced into our politics, and may members from our midst continue to be called upon to grace the legislative halls of our Capitol and be invited to wield the executive and judicial powers of our State.

And to you especially, the gray-haired and venerable sons of our Order, you who were the founders of our Order in this State, you who have ever watched over us with a father's protecting care, I appeal to you especially, to forever stand by our glorious organization, and by your superior knowledge and by your presence give dignity and weight to our meetings.

And to you, mothers, you who have done so much for our Order, you who have influenced your sons and daughters to become members, on your responsibility depends greatly our success or failure. I appeal to you as mothers to extend to us a guiding and helping hand. Encourage us by your watchfulness, for he whose mother's eye is upon him is scarcely liable to go astray.

And to you, the younger sisters and brothers of my own age, you who are to become the future matrons and sires of our Order, I appeal to you to ever honor us with your presence, and by your beauty, intelligence and wit make bright our fireside, that many may be attracted within our circle. Introduce into every household in the land the noble precepts of our Order, and cease not your untiring efforts until you have succeeded in establishing as sentinels an unbroken line of Granges from San Diego to Siskiyou and from the Sierras to the sea.

Brother Greer is one of the youngest Masters in the State, and his address was very ably delivered and received with much applause; his effort, as well as that of Brother Davis, being highly commended. The Worthy Master then pronounced his Annual Address in a very clear and impressive manner. He was frequently interrupted with great applause.

The most interesting and demonstrative occasion during the session was the discussion of the woman-suffrage resolutions which were introduced by Brother A. P. Roache of Watsonville Grange, being similar to those he offered at a previous session. Each speaker was confined to five minutes; all were very earnest, and seemed to be able to express a great deal of fervent argument on their side of the question in the short space of time allowed. Brother Caples championed the negative side of the question, and we believe few Patrons, if any, will live long enough to forget the spectacle presented by him in his extraordinary efforts on his side of the question. The sisters seemed to be slow to commence the discussion on their part—Mrs. N. A. Sanders of San Jose being the first of their number to speak, and she delivered her remarks in a plain, quiet and impressive manner. The sisters were no less eloquent in their own cause than the brothers who spoke upon both sides during the debate. Sister Cross, Worthy Ceres, was strongly argumentative in her remarks. Sister Merrill of Stockton gave one of the most eloquent, strong and ringing speeches that it has ever been our fortune to listen to, and it would have done credit to any man or woman in the most able of assemblages of this or any other country. Nearly every speaker did remarkably well.

The ayes and noes were called and all the delegates seemed pleased to put their names on record, for or against the resolutions. It proved about the most unanimous vote of importance that ever passed the State Grange. The discussion of itself was of so animated, eloquent and interesting a character that few who heard it would have missed it on any account. The expressions and occurrences evidenced that the Patrons of Husbandry are a liberal-minded, progressive spirited and noble hearted body. We have no doubt that many felt well paid on this occasion for their attendance at the State Grange.

A good deal of interest was manifested in the proposition to raise the per capita dues of the Subordinate Granges to the State Grange from 10 cents to 20 cents per quarter, which, after thorough discussion, was carried. This will cause the Subordinate Granges to pay the small sum of 40 cents per member per annum in addition to the former dues. They in most cases will not regret the raising of the dues in the Subordinate Granges. We understand the amendment will not take effect until the 1st of January, and therefore will be in force but nine months before the next annual session, after which a change can be made according to the practical experience of the membership throughout the jurisdiction.

Another question which elicited a good deal of interest was the vote adopting an amendment to the Constitution submitted by the National Grange, providing for a representation of Pomona Granges in the State Grange on the same terms and conditions as Subordinate Granges, and a subsequent vote providing that Pomona Granges in the State Grange of California should be so represented, both of which propositions were adopted.

The new officers were installed in an able manner by Past Master Wm. Johnston, assisted by District Lecturer J. D. Huffman of Lodi, on Saturday afternoon, just previous to the close of the session. Able and appropriate

addresses were made by each Patron, when called upon in turn. At the close of these exercises, the most touching and affecting remarks were made upon the assuming by Worthy Master Overhiser of his responsible position as guardian over the high interests of the State Grange for the two ensuing years, and the retiring of his predecessor, Worthy Master Johnston. There were very few eyes and hearts present that were not kindly and deeply affected.

Past Master Steele then addressed the following words of welcome to Brother Johnston on the occasion of his vacating the Master's chair, and entering the honored ranks of the Past Masters of the State Grange of California:

Brother Johnston:—You were elected to the highest position in the gift of the State Grange, and have filled the position with dignity and honor. You have surrendered the authority confided to you at the close of the term, retaining the confidence that elevated you to that position. This entitles you to a place in the sacred circle of Past Masters of the State Grange of California—a circle made sacred by the fraternal affection that unites them—and by an unfaltering determination to live the principles of our Order.

Brother Johnston, I bid you a hearty welcome to our Circle.

Brother Johnston responded as follows:

Worthy Past Masters: I thank you for this very kind reception. It is second only to the very flattering manner in which I was elected Master of this Grange two years ago. I am very thankful to be by you considered worthy of being received into the grandest body of Past Masters in the United States, and I pledge to you all the ability I have to at all times and under all circumstances to guide, cultivate, foster and advance the interests of the tillers of the soil and Worthy Master. As one of the Past Masters I join in pledging our support in carrying out and putting in practice all the principles of our noble Order.

Worthy Past Master Steele then advanced and addressed Worthy Master Overhiser as follows:

Worthy Master, Brother Overhiser:—I rejoice to see you occupying the highest position in the gift of Patrons of Husbandry in California. We know you have received this high official position as a reward of merit. We have labored with you and have noted your devotion to our cause. We have confidence in you, and you can rely upon the cordial support of the Past Masters which you have so feelingly invoked.

Bro. Overhiser feelingly responded. He entered the ranks as a charter member of Stockton Grange in 1873. He held the honorable position of Overseer and Master of that Grange, being its second Master. His first position in the State Grange was the responsible one of Gatekeeper, and as he expressed it, "unaccountably to myself I have been advanced to the honorable positions of Lecturer, Overseer and finally Master."

"The last-named position I accept with many misgivings, and were it not for the assurance I feel of the kindly and able assistance of the Worthy Past Masters who have preceded me, should feel loath to assume its great responsibilities, and, in those oft-repeated words, beg you not to view me with a critic's eye, but pass my imperfections by."

Brother Flint, Worthy State Lecturer, also spoke heartily welcome to Brother Johnston, and also to Worthy Master Overhiser. His words, like the soul that uttered them, were noble and strong, and eloquently expressed. After he had taken his seat, Brother S. T. Coulter, Past Master, approached Brother Johnston, and clasping his hand, said:

My Brother: I, too (the youngest Past Master of this State Grange), welcome you to the sacred circle of Past Masters.

When, two years ago, it was my high pleasure to install you into the exalted office of Master of this State Grange, I reminded you that there was not a dollar in it for you, but that it afforded you an opportunity to win for yourself imperishable honor, by the pursuit of the course which I then believed you would pursue. And now, it gives me great pleasure to tender you my most hearty congratulations on the use you have made of that opportunity.

Brother Coulter then turned to the Master, and, grasping his hand, said:

Worthy Master: It gives me abundant pleasure to greet you by that title, in this exalted office, and to reassure you that you will have the undivided and hearty support and assistance of the Past Masters during your term of office in every noble and laudable effort.

Brother Johnston, the youngest Past Master, pledged Bro. Overhiser his hearty support in well-timed words. These scenes of congratulation on the part of the loved and revered Past Masters have always formed some of the grandest moments of the entire sessions of our State Grange gatherings.

Worthy Master Overhiser is well known as one of the most sincere and enthusiastic workers in the American Grange cause. He is well supported in his work by Sister Overhiser and a corps of officers of well-tried fidelity and ability.

Thursday evening proved one of the rare meetings of the session. The question of locating the next meeting of the State Grange came up first, a cordial invitation to visit Oakland in 1888 being extended by the Master of Temescal Grange. This was followed by equally cordial invitations to visit Santa Rosa, Tulare, Lodi, Fresno, Beckwith valley, Placerville and several other localities. The discussion proved a very lively one, bringing out much good-natured argument. When the balloting commenced, and had proceeded in a measure, Oakland seemed destined to be the winner by a large majority, until Tulare, with a good deal of hilarity, became the popular competitor of Oakland, and on the second ballot carried off the prize with a great deal of hearty good-will in its favor. Quite a number afterward expressed

some forebodings as to the wisdom of going to so extreme a point on the outer circle of the Grange field. This caused a more thorough discussion, and we afterward heard hints of an extra railroad to be completed to Tulare before the next meeting. Among the possible attractions may be an excursion to Tulare lake, the largest body of fresh water in the State of California, situated seven or eight miles west of Tulare; also, upon returning, an excursion to Fresno to visit that wonderfully progressive city and its beautiful environments, including several of the most successful fruit colonies in the State. Tulare is a large and rapidly-growing town, and seems destined soon to become next to Fresno in population and importance in Central Southern California.

The quartet choir of Sebastopol Grange, so well and favorably known in Sonoma county, were present for the first time on this occasion. Their soul-inspiring music became at once a notable feature of the evening. Too much cannot be said in their favor.

Memorial resolutions of respect were presented upon the death of D. Wyatt Aiken of the National Grange from South Carolina, whose death occurred during the last year. Brother Past Master Steele gave a glowing tribute to his memory. He was followed by all the other Past Masters present who had met Brother Aiken, and had felt his warm and hearty greetings at the National Grange. This was followed by the adoption of the memorial resolutions on the death of A. D. Nelson, one of the most earnest, honest, kindly, great and noble-hearted Patrons that ever valiantly served in forwarding the great cause of our noble Order in this State. No Patron has lived and moved among us who was more sincerely loved and honored for his great devotion and sincerity as the admirer and lover of the Patrons of Husbandry and the lowly and noble of all humanity. Peace be to his ashes! His influence remains with the State Grange, and with every brother and sister who has met him, and none can doubt that the spirit and good influence of Brother Nelson will long be felt in the future good works of our Order. Resolutions of respect were also adopted to the memory of Mrs. G. H. Ashley of Woodbridge Grange, Sister Heller, charter member and Past Matron of Eden Grange, O. S. Claves of Merced Grange. These ceremonies embraced the most eloquent of tributes from several brothers.

The resolutions were adopted by a rising vote of all the members present, and the silence and stillness of great earnestness were exceedingly impressive. No "Lodge of Sorrow" ever held could have been more spiritual or more deeply felt. Appropriate hymns and other music were performed by the Sebastopol choir, which added greatly to the impressiveness of the occasion.

The Feast of Pomona was one of the most bountifully supplied, handsomely decorated and well conducted that has ever been held. This feature of the State Grange sessions of California, we are inclined to think, surpasses those of all other States. Pomona and her court were stationed upon an elevated platform overlooking the immense rows of tables loaded with the handsome and luscious fruits of the Sonoma valley. Pomona, among other decorations, wore a sash formed of rare, highly colored and beautiful specimens of Pomona's gift, in imitation of the badge of the Order. Her coronet was made of different kinds of fine small fruits, grapes, cherries, etc., all combined harmoniously. Her wand was ornamented with the richest clusters of delicious grapes, both beautiful, substantial and graceful in appearance. Flora was similarly decorated with chaste and lovely flowers. Ceres wore specimens of our rich and golden grains. A very eloquent and original appeal for equal rights for the sexes was, by request, delivered by Worthy Pomona, who in her commanding position led the exercises of the occasion in a remarkably graceful and able manner. Worthy Master Johnston's address to the Patrons and their guests, of the beautiful City of Roses and Valley of Sonoma, was very appropriate. The brass band which accompanied the procession from the hall to the pavilion afforded excellent music for the young dancers, who made the occasion a happy one to themselves and the observing multitude present who participated upon this remarkable occasion. Probably over a thousand Patrons and invited guests were present at the pavilion.

This State Grange was undoubtedly the most generally harmonious of any yet held, and marks a very promising step in advance in the workings of the Order in this Western Grange field. The work of the session was carried on with greater precision and better progress than often happens in our large assemblies, and the generous praise elicited by Worthy Master Johnston for his promptness, ability and impartiality in ruling was well merited, and, we believe, highly appreciated by all present.

The literary exercises, all in all, were very creditable to the actors who so kindly and generously gave their time, talent and attention to the entertainment of their guests. The literary exercises were well supported by the musical efforts of the Sebastopol choir. Sister Roxy Dennis, Brother Hancock and others well assisted in the singing. The literary contributions will appear in our columns hereafter. Lieut. Maxfield's article on the "Causes and Distribution of Ruins, and the Meteorological Features of this Coast," was able and well received. Its publication, with the other valuable contributions of the session, will enrich the final published report of the annual session,

which it is safe to predict will prove one of the most valuable and interesting publications of the kind which has ever emanated from any State Grange.

The universal praise passed upon Santa Rosa Grange, which was assisted by Bennett Valley and Sebastopol Granges, and its untiring Master, officers and members during the session, was richly deserved. The quiet and unostentatious work of the brothers and sisters was noticeable upon every hand during the entire session.

On Friday Bro. Geo. W. Hack called upon Bros. Toomey and Krull of Enterprise Grange, Sacramento, to give the signal of distress for Bro. Geo. Wilson, P. M. of that Grange, and his wife, both of whom have been sick and disabled for some time. Their story was a brief one, which ended in a three-minute recess, during which a purse of \$64.08 was made up for them from willing hearts and hands present. During this praiseworthy exercise, and under the spur of the moment, Bro. Chas. Wood, secretary of the California Grangers' Business Association, and P. M. of Danville Grange, gave a happy account of a surprise picnic which occurred at his delightful home over a year ago, which he had, in his native modesty, so long kept from notice in the Grange press. We now have final promise of the data for mentioning this characteristic and unique Grange gathering.

It is a pleasure to state that although there were no days set apart for excursions, or any sessions devoted otherwise than to the work of the Order, three sessions a day being held, from Tuesday morning at 10 o'clock until 3 o'clock on Saturday afternoon, there was no cessation of interest or entertainment in the proceedings, and this grand gathering of 1887 will long be remembered with profit and pleasure by those present. Among the greatest regrets of the occasion was the absence of those who could not be present and participate. The absence of Brother Past Master Spilman, who was absent from illness of himself and wife; of Brother Past Master Webster, who was detained by official business in connection with a newly organized society of San Luis Obispo Co., and wife, and others equally well known, was often remarked. These absent members will read the reports of this session with unfeigned interest, and we hope they will be moved to write their thoughts and yet give to the Patrons throughout the State some of the good things which might have been enjoyed from their noble and faithful minds had they been present. All will long to hear from them, and hope to greet them, with many other Patrons, at our next session, who were so much missed at this one. There is a strong hope that before another year rolls around, the roll-call of the Patrons of Husbandry of California will be greatly increased. The brothers and sisters of the Order departed from the altar of the State Grange with more earnest feelings and with stronger determination to go forward with their righteous work and to labor with a will that knows no defeat, to accomplish the grand work that fills their noble hearts, and ready and willing hands to perform. Patrons, let us all be true to ourselves, to our cause and to the welfare of those who must follow in our footsteps.

In Future Issues,

We shall continue the report of the proceedings, as we have opportunity to prepare them, our time the present week having been much occupied in other duties consequent upon changes in the Patron and State Secretary's office. We hope to receive correspondence and interesting items from many of the able representatives and visitors present, who can thus greatly favor those unable to attend the session. We invite all hands to begin work at once for the future, and especially for a still larger and better gathering at Tulare, and make your paper one of the most ready and useful instruments for insuring so desirable an object.

A Sensible Address.

Toward the close of his address at the opening of the Santa Barbara Fair, Mr. C. P. Low, president of the Agricultural Association, said:

"The day of jubilee has come and gone, real estate has been laid so low by the rain of last week. I had almost forgotten the boom. At one time it looked as though agriculture had received its doom and that the whole of this portion of the State would be laid out in town sites and cut up into corner lots. Most of the summer real estate has been too high for comfort. We have snuffed it into our nostrils; looked at it with tears in our eyes; carried it home on our clothing, and the good housewives have had to sweep it out of their houses by the bushel. It was fortunate that the rain came before a norther.

"I cannot say anything good of the boom. I believe it has set us back in the agricultural advance. Farmers have been expecting to sell their lands and become suddenly rich, and have given more thought to speculation and less to raising that which is necessary for the real wealth of the State. I think the fair shows it in the small display of vegetables and fruit.

"The directors have endeavored to have all things work smoothly and have given the refreshment table to the ladies of the W. O. T. U. to manage. They have forbidden the sale of intoxicating liquors on the grounds, and if there is any one seen intoxicated they must remember that we have not the power to search people, and we cannot prevent some from carrying it

with them any more than the W. C. T. U. can prevent the numerous saloons that have been established the past year on our streets.

"We also prohibited pool-selling, but circumstances under which the directors were powerless, prevented us from carrying out our rules before another six months are out. Trusting that the people will be satisfied with this and give us credit for the will to do what is right and proper, I declare the sixth annual fair opened in due order."

During the delivery of the address the speaker was attentively listened to and frequently applauded, and at the conclusion the applause was hearty and long continued.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

The position of Henry George and his followers is that of communist, who begin by making the land common property, taking it also without compensation, which is but the first step toward taking every other kind of property. A few weeks since, at the political convention that nominated this communist for a high political office in the State, not a single American flag was seen in the decorations of the hall, while the red flag of the commune was conspicuous on all sides. A few items showing how his doctrines are received by others, will perhaps throw more light upon this old enemy in a new guise.

THE FARMER who can now sell his property, in case he desires to move, for \$10,000 would then be able to command only from \$1200 to \$2000, the State having confiscated from 80 to 90 per cent of the capital value of his land. Remaining on his land, under the new system he would be burdened with town and city taxes, and be made a renter on his own property after being deprived of eight-tenths or more of its value. Cottage and shop-owners in the cities and towns would not fare much better. In Cook county, for instance, there are 25,000 or 30,000 wage-working families that own cottages and lots on which they pay taxes of from \$20 to \$50, but under the rental-value single-tax system they would be assessed from \$60 to \$200. Permitted to retain their houses on condition of paying three or four times the present tax, they would be deprived entirely of the capital value of their lots; and if they desired to move these families would find from \$1000 to \$3000 worth of their property confiscated by the State. Nothing short of war will ever compel either city or country real-estate owners to submit to the George scheme. — *Chicago Tribune*.

HENRY GEORGE is trying to persuade the Socialists not to insist on admission to the new labor party, as he desires to throw out a bait for the farmers. He fears that the presence of Socialists in the new organization will frighten the horny-handed agriculturists, leaving it without followers in the country districts. Mr. George need not lie awake nights devising means to keep the followers of Most out of his new party in order to induce the farmers to join it. His own land doctrines will slam the doors in the face of the farmers more effectually than the presence of a dozen Mosts. The farmers believe in the righteousness of private ownership in land, and they are not anxious to assume the entire burden of taxation, either. Mr. George will have to bait his hook with something more attractive than his cranky land doctrines if he expects to catch the farmers. — *Philadelphia Times*.

PROF. DWIGHT, of Columbia College, N. Y., says of Henry George's theory: "Without private property in land no man can have an assured birth-place or burial-place. No tree can be planted that he can call his own, nor can any dwelling be erected that will give him assured shelter."

It will be possible to find hundreds, yes, thousands, of city workers who are willing to blindly follow any glib-tongued leader who can offer a plausible cure for poverty. Let this leader go before men who have property interests to represent the results of frugality, temperance and industry, and he strikes an entirely new class of hearers. They will take nothing for granted, and they have something to do besides worshipping a brilliant leader. This is a poor country for a one-man party.

"In most places, where Granges have existed, impartial critics are ready to give testimony in its favor. No one can object to its social and educational features, and its business features, which caused so much trouble, are so simplified that but little, if any, friction is observed. What, then, is there to hinder the reorganization of the Grange? Practically nothing. A little personal effort, some instructions, and, perhaps, some visits from the Deputies or Master of the State Grange, and the harness is on, ready for work." — *A. Messer*.

"When a deed is done for freedom, through the broad earth's aching breast
Runs a thrill of joy prophetic, trembling on from east to west."

Officers of the State Grange.

The following are the officers of the California State Grange elected at Santa Rosa, Oct. 6th, to serve for the next two years:

W. L. Overhiser of Stockton, Worthy Master.
E. W. Davis of Santa Rosa, Overseer.
Daniel Flint of Sacramento, Lecturer.
Rev. Simon Goodenough of Santa Clara, Chaplain.
A. P. Roache of Watsonville, Steward.
W. W. Greer of Sacramento, Assistant Steward.
C. A. Hull of Sacramento, Gatekeeper.
A. T. Dewey of Oakland, Secretary.
I. C. Steele of Pescadero, Treasurer.
Miss M. B. Johnston of Richland, Pomona.
Miss R. Newkom of Yuba City, Flora.
Miss Mary J. Carter of Fresno, Ceres.
Miss Frankie Stevens of Sacramento, Lady Assistant Steward.
William Johnston of Richland, member of Executive Committee.

Exhibits for the National Grange.

Worthy Master Overhiser wishes us to state that specimens of all agricultural products suitable for exhibition at the National Grange are solicited for that purpose, the National Grange having provided space for exhibits from all parts of the Union.

Pomona and subordinate Granges, boards of trade and all firms and individuals are solicited to send on as fine and complete samples as possible, such as vegetables, nuts, dried and preserved fruits, etc., and other products of the soil. Pamphlets and other printed matter suitable for free circulation on such occasions will be received and well cared for.

Send by express, addressed W. L. Overhiser, care National Grange, Lansing, Michigan, in time to be received by the 15th of November. Give full description in letter by mail. Also be particular to give proper description and the name and address of the contributor, and *prepay* all charges.

A TRIBUTE FROM AN OUTSIDER.—Portland *Rural Spirit*, Sept. 30: The editor of this journal is not a member of any Grange. This matters not; we recognize the fact that co-operation is the basis of all successful business. The business of the agriculturist is paramount to all others. Therefore, co-operation is essentially necessary, and we know of no way whereby the agricultural can so easily unite as through the Grange organization.

BRO. JOHN DURLEY, a valued member of North Butte Grange, has died recently. His late associates, in their resolutions of respect and sympathy, speak of him as one of upright, honorable life and unassuming ways and a true Patron.

Probable Shortage of Lemons.

The cholera in its ravages in the Mediterranean region is seriously injuring the export traffic in semi-tropical fruits. Last year the raisin industry was affected, and it is now telegraphed from New York that the usual supply of Sicily lemons may be cut off. The report is that advices from Sicily state that the cities of Palermo and Messina are depopulated in consequence of the cholera, and as vessels coming from there would probably undergo long quarantine, there is likely to be a suspension of traffic between Sicily and other ports. The new crop usually comes to hand the last of October, but there are some in the trade who predict no fruit from Sicily will be shipped until toward the close of the year. In the mean time trade will be forced to operate only in Malaga goods, but the quantity of these is so small that an early disappearance of stock is predicted. The crop usually runs to about 100,000 boxes. To-day there are afloat for this country 24,000 boxes, thus leaving only 76,000 boxes as the supply to meet the entire wants of Europe and America.

These facts may affect the value of our improved lemons by increasing their value here. Our product is too small to cut much of a figure in shipment, but if the cutting off of the Sicily fruit will teach Californians that it is affectation for them to purchase Sicily fruit, it will produce a good effect and encourage our growers to give more attention to the several good varieties which are now to be had here. We have not begun to do as much as we can in this State in lemon-growing.

FORESTRY CONGRESS.—We have received a "preliminary newspaper report" of the meetings of the Forestry Congress held in Springfield, Ill., September 14th and following days. The report contains the essays read at the Congress and brief outlines of the discussions. There is also a draft of a bill to be introduced at the next session of Congress, to be entitled "A Bill for the Protection and Administration of the Forests on the Public Domain." It is quite a long document, and, after regulating the entry and occupation of timber lands, provides for sales of Government timber in lots of 25,000 acres at a time by sealed bids. It provides for the appointment of a Forestry Commissioner and four assistant commissioners, and appropriates \$500,000 to carry the law into effect. The report contains also Mr. Joaquin Miller's paper, which was published in the *RURAL*. Mr. Miller's contribution was received with marks of appreciation, and a resolution was adopted regretting that Mr. Miller was not able to attend in person, and thanking him for his essay and for his interest in forestry.

THE Chico *Enterprise* opposes the holding of a citrus fair at Oroville for Butte county products, and says: If the products of Butte county are to be exhibited anywhere for the benefit of the county, let them be exhibited in Sacramento, San Francisco or Chicago.

TRUCKEE millmen complain that it is difficult to get cars to transport lumber, and orders are coming in faster than can be filled. There will be but very little lumber to be carried over this fall.

THE Southern Pacific and the San Joaquin Valley railroads are building parallel lines half a mile apart in the San Joaquin valley.

YUBA and Sutter counties are preparing for a vigorous war of extermination upon what remains of hydraulic mining this winter.

Close of the Agricultural Fair at Stockton.

EDITORS PRESS:—Saturday, the 8th inst., was the closing day of the fair of the Agricultural District No. 2, at Stockton. Although the weather was exceedingly warm, the attendance was good, but poor, almost, in comparison to the immense crowds that visited the new pavilion on other days in the past week. A number of visitors from San Francisco arrived on the boat and spent the day in the new building, returning in the evening and expressing themselves much pleased with their trip.

The building in which the fair is held has but recently been completed, and supplies a long-felt want to the inhabitants of the San Joaquin valley. It has cost upward of \$50,000, and is by far the finest and handsomest building of the kind erected within the past few years by any of the district agricultural societies. It is conveniently situated, on Washington Square, almost in the heart of the city, and street cars pass the door.

The interior is finished in two kinds of wood, in alternating dark and light stripes, while the light is exceptionally good, coming through large windows in groups of two and three, often softened by panes of stained glass.

Among the exhibits are several odd features that illustrate very nicely the interests and industries of the San Joaquin valley. One, a log cabin made of watermelons, chinked with moss and large enough to admit a dozen persons with ease, represents one of the leading products of Lodi, the watermelon country. Another house built of sacks of flour is exhibited by the large flour-mills of Stockton.

Among the interesting displays was the Stockton Nursery's exhibit, which occupied the conservatory on the ground floor. Potted ferns and rare, fragrant plants made it a bower of cool, delicious greenness, while on a bed of moss the proprietor's name, E. C. Clowes, was each day arranged in different colored flowers. On Saturday it was made of red and pink geraniums, which produced very prettily the effect of shaded letters.

The Houser combined harvester made of straw was a wonderful piece of skill and attracted a great deal of attention. It was so peculiarly suited to represent the interests of the great grain-growing valley that it possessed an attraction aside from its unique design and ingenious workmanship. The wheels of the harvester were painted dark steel color and iron, while the woodwork remained the natural color of the straw.

The fruit of the San Joaquin valley is proverbially excellent, and the display at the fair almost surpassed expectations. The exhibits of preserves and jellies were magnificent and the fresh fruit wonderful in size and fine appearance. John Elliott's exhibit was awarded the first premium, and it seemed deserving of the honor, for the display of fine, large, rosy apples, splendid blooming clusters of grapes and other fruits, drew forth exclamations of astonishment from old residents as well as strangers.

Carriages and farming implements occupied a prominent place among the exhibits and made an excellent showing of the progress in the farming districts of the State.

Very appropriate to an agricultural fair was the favorite rural paper. The *PACIFIC RURAL PRESS* occupied a corner to itself, and added the final thing necessary to make a fair devoted to agricultural interests, complete. Indeed, the remark was made more than once on the final day, even by strangers, who expressed themselves equally surprised to find such a large, fine periodical devoted to the development of rural pursuits and interests.

The art department was well filled. Norton Bush exhibited two or three of his "tropic land" pictures that were very beautiful, and a local artist, Oxley Miller, contributed largely to the collection of fine paintings. Two or three of his productions—one a very large picture of a mountain lake, that showed much skill and study—were decorated on the final day with blue ribbons in token of awarded premiums. Several well-known San Francisco artists added much to make the art department attractive. The curiosities were a prominent feature of the fair, and were extremely interesting to lovers of such things. The display of old fans promised an attractive field for the study of fine point lace, yellow with age, and quaint designs in carving and painting.

Among the relics entered were the following that were peculiarly interesting: Mrs. H. M. Fanning's old crockery—a bread dish in the collection being 150 years old; Mrs. Sargent's old-fashioned clock, over 100 years old; Mrs. Tower's fringe of a flag from the Battle of the Wilderness; Mrs. Judge Creanor's bedstead, used in 1780; Mrs. Thresher's old-fashioned mantilla; Mrs. B. S. Clowes' old hand-made bedclothes; Mrs. Laura De Force Gordon's history of Rome—263 years old, and several Indian relics; and Miss Bates' old crockery. There were many other curiosities equally interesting, and altogether they formed no inconsiderable attraction to the fair.

The efforts to make the fair this year surpass all past records seemed eminently successful, and those who so ably assisted no doubt feel amply repaid for their time and labor by the praise that echoed from all sides.

MAY BLOSSOM.

The Mountain Quail.

Oh! mountain quail with crested head,
Oh! pretty quail with white-tinged eyes,
For you a bounteous feast is spread,
By Him who jeweled all the skies:
You flit across the road so lone,
To ambush that each brooding knows,
And in a shrill, staccato tone,
Pipe out your call to frighten foes.

Mount Raymond like a Titan looms,
And shoulders morning's gauzy light,
While in his cloister crypt there glooms
Great miracles of silver bright!
Huge neighboring mountains fold away,
In scalloped curves along the air;
Where in gum woods the grizzlies stray
Or turtive lions build their lair.

Our California skies are blue
As are the violets in her grass,
Where by her seas the gray gulfs mew,
Or fawns through her weird forests pass:
There lizards slide across the rocks,
In canyon cups that drink the sun!
Or doves the fairy echo mock,
Where dripping springs refreshing run.

Sweet quail! Your nerves are aye unstrung,
You start, and poise your turbaned head,
And flutter o'er your reckless young,
As if life was one throe of dread;
You choose the bushes' tented shade,
Whose green pagodas o'er you bend;
You stand half rustling, half afraid,
And make no earthly thing your friend!

The pink azalias scent the air,
The sweet wild lilacs plume the road,
While ferns with tangled maiden-hair
Hang o'er the water-snake's abode!
Bright rainbow insects sail across
The pond's green breast like winged flowers:
By boulders dotted o'er with moss,
The horned kine dream out the hours.

His bait the swarthy Indian throws
Into the stream with conscious pride,
Where lively trout in glittering rows
Dart like bright arrows through the tide:
He lifts his treasure to the sun,
That wriggling, sparkling, gasps and dies,
Nor heeds this luscious atom won,
Has suffered all death's agonies!

But you, oh pretty, graceful quail,
With mother-love chirp o'er your brood;
And dread imagined foes assail,
With sharp glance peering thro' the wood;
So like a tender parent heart,
That fears the future for her child,
Lest as life's shadows meet and part,
She be from duty's path beguiled.

Oh! graceful quail, your crested head
May drop all sudden to the dust,
By kingbird, or by hunter's lead,
That ends your all of earthly trust;
But human spirits can look up,
And feel God's aid is ever nigh,
And though we drain affliction's cup,
We look for sweeter draughts on high!

Jean B. Washburn, in L. A. Times.

A Chat with a Naturalist.

Written for the Rural Press by FANNIE H. AVERY.

"Do you see that man just going out?" said a Kearny-street storekeeper to me the other day.

"Yes," said I, turning in time to catch a fleeting glimpse of a tall masculine figure as its owner went through the doorway.

"Well, he is 73 years old, but he doesn't look over 50, and there are few men of the latter age that I've seen present a fresher or more vigorous appearance. He lives out of doors a great deal; travels over the country collecting insects, ferns, shells, etc., to sell. That is how he makes his living."

"I would like to meet him and talk with him," I said, having in view the writing up of a sketch that perhaps might be interesting, for people are always wanting to know of anything new others are doing.

"That can be easily arranged." Accordingly it was arranged, and a few days later I made the acquaintance of G. W. Dunn, naturalist, and was invited to go and see a collection he had of various things.

Having been interested in natural history studies for some years, what I saw when I visited his sanctum was of absorbing interest to me.

Boxes upon boxes of beetles he showed me—large beetles and small ones, ugly and handsome beetles, beautifully tinted, plain-colored and black ones; beetles with short antennae, beetles with long ones; in short, beetles of all kinds, arranged on pins in rows in the neatest manner, and looking as natural as if alive. Then there were boxes of other insects, some familiar, some strange, of all shapes and sizes, a box of Orthoptera of many varieties and some boxes of mixed species.

I looked with wonder and admiration at them

all, my brain thronging with thoughts that would not have presented themselves had I not been familiar with the works of Darwin, Wallace, Bates, Forbes and other naturalists.

We talked awhile about evolution, adaptation of creatures to their surroundings, protective coloring, etc.; Mr. Dunn witnessing that concealment is often accomplished by resemblance to environments.

He had many specimens of rare and beautiful ferns that had been pressed and arranged on paper. These he finds a ready sale for, as indeed for nearly everything he collects.

During the interview he brought forth an ordinary-sized cobblestone.

"There doesn't seem to be anything remarkable about this, does there?" he said. "Yet I can sell it at any time for a good price. The fact is, I've become attached to it and don't like to part with it."

As he finished, he opened the stone, dividing it into halves, and I saw the perfect and beautiful fossil remains of a fan-shaped shell. I gazed upon it with awe, as if it were something sacred. And sacred it was to me, a mute but eloquent memento of unknown, untold ages. I could well understand why he cherished it so. He had picked up this singular and handsome fossil on the Columbia river.

He informed me that he almost always goes afoot in his journeys, which are quite extensive, and must give him an excellent idea of the geography of the country. California, Oregon, Arizona, the two Mexicos—these are the fields he travels over in search of whatever enters into his line of business.

"I live almost altogether out of doors," he said, "and am never so happy as when in the woods collecting. Sometimes I don't see a person for three weeks at a time. My health is splendid; my time agreeably and profitably filled. Idleness I know only by name; for when I've been out a number of months collecting, and come back, I have all my things to arrange and classify, and sell. I make a good living and wouldn't exchange my occupation for any other in the world. There's nothing I enjoy better than being out in the open air. It would be impossible for me to live indoors as most folks do."

As he sat talking I could hardly realize that this man was 73 years of age. True, his hair and beard were white as snow, but no wrinkles furrowed his face; it was young and fresh. His hand was steady and strong, his form—he is a six-footer—erect and stalwart.

"I will live a good many years yet," he told me. He has followed his calling for 20 years, and is a pioneer, having come here in '49.

As I conversed with him I thought of many naturalists I had read about; among others of my favorite Thoreau, who, in very desperation at the gyves civilization placed on him, went and lived awhile alone in Waldenwoods, where Emerson and other rare spirits used to visit him; and from his sojourn there gave to the world, as one of America's finest critics has said, one of the few books that will bear an annual perusal—"Walden."

Mr. Dunn told me an amusing anecdote in regard to what some folks he comes across think of his calling. He was stopping one night at a house in a small town, the walls of which were so thin that what was said in one room could easily be heard in others. He had left the sitting-room where several were playing poker, and smoking, by the light of a dim candle, this scene not presenting any allurements to this lover of nature. From his own apartment he thus heard himself discussed:

"Wonder if we can get that old fellow to play?" said one.

"Guess not," replied another. "He's no sporting man. He's round here looking for bugs. I think he's a little lunny."

I asked Mr. Dunn if he had ever encountered any Indians in the lower country, and he related the following incident:

One afternoon he was out in the woods near Chihuahua, waving his net about for insects, when suddenly looking up, he saw an Apache standing near viewing his proceedings with the greatest interest. He went quietly on with his work, and after a little managed to get away, the Indian not molesting him or addressing him. That night several white men in the same vicinity were killed, but he was unharmed. The Apaches no doubt thought him crazy. They believe an insane person to be under the special protection of the Great Spirit, and consequently sacred, and so never harm any one they think out of his mind. His net saved his life.

I must not forget to mention that I saw several large tarantulas in spirits. Great, formidable-looking creatures they were with their thick, furry bodies. I had always supposed their bite very dangerous, but Mr. Dunn informed me that it altogether depended on the state of health of the person bitten. If one were quite well the result would not be as serious as if one's system were out of order. Tarantulas are not much seen about towns in the countries where they are found. During a two-years' residence in Arizona I saw but one, and that was when I was crossing the Pinal mountains.

Mr. Dunn had disposed of most of the acquisitions of his last trip when I saw him, but what I did see convinced me that indispensable as books on natural history are, and intense as is the pleasure and instruction they afford, seeing a thing is better than reading about it.

San Francisco.

[Original—By S. M. H.]

The Age of Obedient Mothers.

"You see," she said with a smile as Maud's strong arm assisted her into the carriage, "you see, my dear, that I have come to the age of obedient mothers. And Maud's saucy face as she triumphantly slammed the carriage door and waved us a gay farewell, assured me that the frail little woman beside me found it a blessed "age," when the questions of every-day life were settled by this strong, bright girl, who quietly had decided that mother was to take a drive instead of staying at home to darn stockings.

I think I never knew a girl who enjoyed life more thoroughly than Maud. Her social life was full of gayety and attraction. I have often heard her mother say:

"Oh, John and I play Darby and Joan now in the evenings; Maud has so many engagements."

And yet, before Maud went out for an evening's pleasure, she somehow had found time to see the cook and had made arrangements for breakfast, so that mother need have no anxiety upon that score; she had lighted father's lamp and left the evening paper where he could find it, and the new magazine ready to his hand.

Maud's training had been, perhaps, exceptional. Her mother had been for years an invalid, and as soon as Maud was old enough, she had been only too glad to dismiss the housekeeper and assume the charge of the household. From her earliest childhood she had been taught to feel that her father's home comforts, her brother's pleasure and her mother's peace of mind depended in no small degree upon her, and the feeling of responsibility that so early fell upon her shoulders did her no harm.

Some time since there appeared in the *Century Magazine* an article by Frank Stockton, called "The Training of Parents," humorously describing the way in which young America invites old America to take a back seat and listen to his callow wisdom before he is well out of long dresses.

I read the article with some amusement, and laughed my laugh over it. But the laugh died away in a rather pathetic realization of the justice of the author's sarcasm.

Mothers, particularly in this country, come all too soon to the age of obedience, and in most cases the daughter's sway is not of the fostering kind which our Maud bestows upon her mother.

How often do we see Margaret Sr. weary and heavy laden with the care of the house, the domestic economies, and the anxieties of the entire family. The elasticity, health and activity which once made these matters light are slowly departing, as her years advance—and yet, the same untiring love which nursed Marguerite through the measles and scarlet fever, toils patiently on, that the idol of her heart may enjoy her youth.

And Marguerite? She is like the lilies of the field. Careless, happy, innocently selfish, courted, petted, indulged. Her slightest whim receives consideration and Margaret quietly sinks into insignificance before this beautiful darling, who makes her a willing slave.

Marguerite is by no means essentially selfish. When her turn comes, she too will patiently lose her roses, watching through weary days and nights beside the sick-bed of another little Marguerite, and in time will uncomplainingly come to the age of obedient mothers.

In the old Norse mythology even the gods had their twilight, and to a certain extent this age of obedience is as inevitable as the advance of years. But, dear patient mothers, is it not possible that in the economy of nature, youth, rather than middle age, should bear the burden and heat of the day? Is it kind to John to wear yourself out with matters which have all too long claimed your anxious care? Is it justice to Marguerite to let her grow up with the idea that she has no particular responsibilities in the home life, and that all the troublesome little details may be safely left to mamma, who knows so much more than she does about such matters? Will not the inevitable cares and trials of her future life fall with more crushing weight upon shoulders which have not been trained to burden-bearing?

And now, a word to Marguerite. My child, God may give you many gifts in life, but He can give you but one mother. She is the most precious of all His gifts, and when she is gone you will realize this in some measure. You can never love her as she loves you. You can never have the opportunity of ministering to her as she has ministered to you; but now, when perhaps the dear face is more careworn than it used to be, and the precious life frailer than in years gone by, you can, in your strong, young activity, be watchful that gray hairs do not come too fast, and that care does not prematurely bring the "twilight of the gods."

[Original—By M. B. D.]

The Legend of the Blue Plate.

We sat at tea, this dear old lady and myself. She had come in just for an informal little visit, she said, and while I listened to her intelligent flow of conversation, she loved to talk to me of her treasured long-ago experiences, I spread my little tea-table with my best Japanese-ware, and poured into our cups the steaming beverage, Japan's most delicate tea. I remember just as a sunbeam stole through the window and gleamed like a halo upon her silvery hair, she brushed the crumbs from her plate and asked if I had ever heard the legend of its pictures. It was an extremely old-fashioned piece of Japanese-ware, and I had supposed the story of its quaint design lost in the mists of centuries; and whether this was true, and the tale she told some modern fable, or whether a ray of truth gave the story such a thrilling flavor, I will leave it to the reader to decide.

Her gentle old voice went out like the mellow ring of an ancient lute, adding another charm which I cannot portray.

"The border," she said, "is a double circle of the Mikado's sacred emblems; and you see here to the right is a portion of his garden, with its foreign trees and luxuriant plants clustering about the dainty villa, which was built for his favorite daughter, a Princess so beautiful and gentle that he deemed her too lovely for any Prince in his whole Empire. Every day he sent to her charming palace and asked what he should bring as a gift to please her, so that she might never grow weary of her father's house. But as the gentle Princess had almost reached her most glorious bloom of beauty, she became capricious and asked for the most extravagant gifts, even impossible things, which made the eyes of the Mikado misty with regret, for fear he could no longer make his favorite child happy; and besides, cruel war threatened his Empire since he had taxed it so heavily.

"One day two doves fluttered above the green branches of a great tree-fern, and the Princess ran out to see them, when they perched upon her shoulders. Under the wings of one she found a letter which she supposed to be from the Mikado, telling her his whole heart; and beneath the wings of the other a most exquisite ring, said to possess the magic of contentment. She answered the letter, saying that she would wear the ring, and pine no longer, and the doves flew away. But the next morning, while yet the great, red moon hung above the sea, a strange galley floated over the lake in her garden, and steered boldly for the palace. The Mikado had already risen to walk about his daughter's favorite grounds, and stood amazed to see such a strange sight. Before he could order that the strangers should be put to death instantly, together with all their relations, for such an unheard-of intrusion, his daughter came lightly along the path, and clasping her beautiful arms about his neck, exclaimed: 'O father, I am perfectly content with your charming gift; and thinking to make him content also, she slipped it upon his finger. Now the Mikado, being perfectly happy, said nothing when the galley neared the boat-house, and allowed the Princess to precede him over the bridge, followed by their servant, to welcome the strangers. At this moment the artist portrays them, taking the incident as the most important in their history, and does not forget to picture the doves fluttering above their heads. Of course the galley bore a great Prince, who had sent the doves to gain the unapproachable Princess, and the Mikado, being so agreeably surprised by his boldness and splendor, accepted his suit, and so they all were happy.

"The minor circle on the plate represents the ring of contentment, with its magic device; and whoever eats from it will always be delighted with the refreshment it offers."

"Surely, I am, my dear," she finished with a smile, and her eyes beaming upon me, "and so the legend holds true even to this day does it not?"

"ANOTHER mine gone to the wall," said a gentleman standing on the sidewalk to a friend, as a lawyer who is interested in iron mining-stock was passing. "What mine is that?" asked the lawyer. "Kalsomine," answered the old joker, as he dodged behind a cigar sign, while the lawyer went off, looking over his shoulder, mad enough to fight. —*Peck's Milwaukee Sun.*

"WHAT is the matter?" asked a lawyer of his coachman. "The horses are running away, sir." "Can't you pull them up?" "I'm afraid not." "Then," said the lawyer, after judicial delay, "run them into something cheap."

[Original—By S. C. B.]

Home.

How many of us have built fairy castles, and beautified them in every possible way human ingenuity could devise; erected the shrine of our idolatry and bowed thereto, realizing great bliss in the creations of our fertile brain; then, in an ecstatic moment, witnessed calmly their ruins, only to be again rebuilt and annihilated. Life is full of such wasted products, full of profit and loss, waste and repair; glorious with aspirations, yet never fully perfected. Beyond—there lie more fields for the mental conflict, more warfare with right and wrong, more wasted energy, more desolation. Among these ruins—a home (joyous, beautiful and happy once) lies now rent asunder; each timber (representing a large family) sundered from its parent foundation, cast upon the highways of intemperance and vice, with characters weatherbeaten, rent and useless. This dismembered family for years have been the subject of attack from an insect that bores into and destroys every joint and sinew; this insect works quietly but surely through all the houses of our land. Look well to it, and see that it enters not your doors and devastates your beautiful homes. Its first visit is “5 cents a glass” only! Then follows a train of ills, misfortune, mental and moral wrecks, poverty, sickness, disease and death; our palace beautiful—our home is gone; dear loved ones, where are they?

Of all sacred words *home* leads us, keeps us as a castle, secure as a fortress from attacks, the most endearing spot of earth. “Home is where the heart is;” though it rest in the woodman’s cabin or the shepherd’s hut, if love is anchored there, the heart finds comfort, the soul grows, the family altar is the daily reunion of devoted ones who renew affection over and over, as the heart is renewed by its daily fuel. There is a subtle spirit blending those two ideas, heart and home, fashions accordingly, reminding of Whittier’s “Maud Muller,” when

“Her narrowed kitchen walls
Stretched away into stately halls;
The wearied wheel to a spinnet turned,
The tallow candle and astral burned—
God pity them both, and pity us all,
Who vainly the dreams of youth recall,”

To me that poem always lacked completion, viz.: The realization of homes in each other’s hearts; life is too short to spend in wasted desires, with the possibilities at hand. A land of homes is the measure of a nation’s greatness, a constant inspiration for a higher life, for nobler attainments; a surety for virtue, a panacea for crime. How many fallen women might have been saved a life of sin and shame through the surroundings of a Christian home! How thankful we, whose lives have “fallen in pleasant places,” that we are not the victims of such misfortune. Mothers! weary with your household cares and noisy little feet, did you ever feel “glad to get rid of them”? These words slipped from a good mother’s lips in my hearing to-day, but I little thought she meant it, as she hurried them off to school. They may bring headache yet through the company they seek, through the habits acquired from under your eyes.

She loveth best who longest holds her little ones at home. When Howard Payne wrote “Sweet Home” it was his sublime ideal, an inspiration that at times comes to us all, seemingly to mock our hearts’ desires—he penniless, hungry, homeless, with soul demanding home, hence arouse expression. Let us make our surroundings good, pure and beautiful, that not one shall be estranged for amusements elsewhere, not proper nor conducive to moral and mental growth. Music, songs, games, readings aloud, parlor entertainment, friendly gatherings, little surprises for birthday and legal holidays, family reunions, are a few of the many ways suggestive of methods to renew aged hearts and keep youthful ones at home; daily expressions of smiles, words and acts to brighten the sorrowed and lighten the saddened hearts. Unselfishness is a potent factor at home; thoughtless and unkind words mar memory’s picture all day, and the river of Love flows not smoothly over the rough stones of anger, faultfinding, disputes and hatred. Patient, constant endeavor, actuated by a desire to give all we have and are for those we love, brings the blessing—a happy home.

A LITTLE boy in East Nashville heard his sister say that Adam was the first man, and when he was asked who the first woman was, replied “Adam’s mother.”—*Nashville American.*

“I SEE that bacteria have been discovered in Hudson river ice,” observed Fangle. “Ah!” replied his wife; “that will be another excuse for raising the price, I suppose.”

YOUNG FOLKS’ COLUMN.

The Story of a Rag Doll.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

Sallie was a large rag doll which Aunt Lindy, Mabel’s colored nurse, had made for her. Sallie was not a beauty like the French lady papa had brought from Paris, and she had peculiarities it was impossible for that fashionable miss to overlook. In the first place, her face was always dirty. No wonder. She had never had it washed in all her life. Then she only had make-believe hair—crooked ink lines traced on each side of her flat head. It was out of the question to think of combing such hair as that!

Then again—and this was horrid—she had but one dress, and she could not take it off because it was sewed on! The dress was made of scarlet merino and tied with a yellow sash. Aunt Lindy thought it lovely, and so did Mabel, but the French doll had better taste than to like it, so she stared contemptuously up her pretty blue eyes and turned up her little bisque nose at poor Sallie.

“What queer hands!” she thought, looking complacently at her own nice kid fingers. “She can never wear shoes on those lumpy feet, they’ve got no toes.”

But for all this, Mabel loved Sallie. Sallie slept with her and ate with her and went out riding every afternoon with mamma and herself. The world would have seemed a lonely place to Mabel if she had lost her shabby old doll.

The house Mabel lived in was a large one, and the garden occupied half a block. There was a conservatory with all sorts of beautiful foreign plants—Japanese lilies and tropical ferns, and odd little orange trees from China, with oranges on them about the size of marbles. Mabel liked to play in there; she used to imagine the flowers told her stories of the countries they had lived in before mamma brought them.

One day Mabel and Sallie were watching William, the gardener, trim the plants. Clip, clip, clip, went his large shears. “It must hurt them,” said Mabel; but William said no; it did them good. Suddenly in the doorway of the glass house stood a funny-looking woman with a red handkerchief on her head and a brown baby strapped across her back. The baby was winking and blinking over her shoulder and trying to stuff all of his dirty fist into his little mouth.

“I’m a gipsy,” said the woman, “ez tells fortunes.”

“Gipsy indade!” exclaimed William, incredulously; “we’ve nothing for beggars. Clear out!” And the woman moved off with a heavy scowl on her dark face.

Now, Mabel had heard of gipsies, how they lived in the woods in tents and sang wonderful songs; so in her eagerness to see more of the woman she ran out to the front gate to look after her.

“I say, ma’am, can you tell my fortune?” cried Mabel. “Do you live in the woods, and are there any fairies there?”

The woman turned back. “If you’ll come with me, my little leddy, I’ll show you the fairy queen. She lives not far from me, I calkerlate.” And without giving the child time for a second thought she pulled her through the open gate and hurried off down the street with her.

The gardener was old and absent-minded. He went on clip, clip, clipping with his shears for at least an hour, nor did it occur to him to think of Miss Mabel until he heard her mother calling: “Mabel! Mabel! Where’s Mabel?”

Meantime poor, tearful Mabel was dragged along by the woman with the baby, up this street and down that, and into this alley, until, at last, they stopped before a dilapidated building in a dirty lane. The woman pushed open the door, pulled her victim up two flights of rickety stairs into a small, barely furnished room, lighted by one little window which was quite high from the floor. Two children, brown, like the baby, were crying in a corner.

“Hush up, brats!” said the woman; then to Mabel: “Mebbe there ain’t no fairies here, but them fine clocs o’ yourn ‘ll fetch somethin’ for the brats’ supper, I calkerlate; and them fine folks o’ yourn ‘ll be givin’ somethin’ to git you back agin, I calkerlate. Thet there doll o’ yourn ain’t so pretty but what you may keep it. ‘Twouldn’t fetch nothin’ from the ragman, I calkerlate.”

So poor Mabel, divested of her nice clothes and shuddering in an old calico dress that was too large for her, pressed the faithful Sallie to her little heart and thought she should die of grief and loneliness.

The woman who had stolen Mabel was not a gipsy, though she was almost dark enough to have been an Indian. She lived in this miserable place with her three children, and gathered a few pennies each day by begging and pretending to tell fortunes gipsy fashion. She thought she would keep Mabel for awhile until her parents should begin to despair of finding her, and then she would try in some way to realize a large sum of money by offering to return her.

One afternoon, about a week after this, the woman, who had been on a long tramp that morning, sat dozing over a miserable fire where something was cooking in an iron pot. The three brown children were playing in their cor-

ner, and Mabel, with Sallie in her arms, had crept close to the window and was looking down into the street. She could see but a little bit of it because her head scarcely reached to the window-sill. But there—yes, surely, there just opposite the house stood papa and Mabel’s older sister Clara! An officer was with them. They were looking for her. Oh, if they only could see her. She did not dare make a sound. The woman would wake up and kill her, perhaps. Hush! She would hold up Sallie, high, high as she could possibly reach.

“Papa!” cried Clara, “what is that red thing up there in that window? I think—I do believe it is Sallie! I can see her distinctly now. It is Sallie, papa. No other doll ever had such legs.”

Mabel, from her position at the window, saw the three figures dart across the narrow street. In another moment she heard them coming up the stairs; a little more and she was in her own dear papa’s arms—safe, safe!

The woman woke up to find herself in the officer’s charge. “It ain’t the first time, I calkerlate,” she remarked with great composure as he led her off.

Mabel never parted from Sallie. When she was too old to play dolls any longer, when the French body had been broken into 100 fragments (pride goes before a fall), Sallie was laid tenderly away in a bureau drawer among perfumed ribbons and laces; and whenever Mabel looks at her dear old favorite she says: “I shall always love you, Sallie. But for you I might still be at the mercy of that dreadful woman.”

Alameda.

A Knowing Hen.

MY DEAR LITTLE FRIENDS:—I have something to tell you about a knowing old hen. My chamber window is covered with white rose vines, thickly matted. A calico hen is in the habit of roosting in them, directly opposite my window. About dawn, one can distinguish her form outlined against the sky. I see no reason why she prefers this place, as there is an abundance of room in the comfortable chicken-house. One Friday, having to go to the city on the early train, the good landlady had called me time and again. But I would open my eyes only to go to sleep again. The girl had awakened me for the third time, when suddenly that calico hen pecked on the glass and clucked, clucked very fast and loud, in a very coaxing way, then she cackled as if to inform me that I might be late for the train by my laziness. Presently she flew down, giving me the example. I took the hint, and arrived at the train in due time. Pretty good hen, that?

GOOD HEALTH.

Management of Constipation.

The majority of cases of constipation are readily cured by the proper regulation of diet and regimen. Respecting the management of cases of simple constipation, Dr. Andrew Clark, an eminent English physician, instructs his patients as follows: 1. On rising or retiring, sip slowly from a quarter to a half-pint of water, cold or hot.

2. On rising take a cold or tepid sponge-bath, followed by a brisk general rubbing.

3. Clothe warm and loose; have no constriction at the waist.

4. Careful attention should be paid to diet. Avoid pickles, spices, curries, salted or otherwise preserved provisions, pies, pastry, cheese, dried fruits, nuts, and all coarse, hard, and indigestible food taken with a view of moving the bowels, strong tea, and much hot liquid of any kind, with meals.

5. Walk at least half an hour twice a day.

6. Avoid sitting or working long in such a position as will compress or constrict the bowels.

7. Solicit the action of the bowels every day after breakfast, and be patient in soliciting. If unsuccessful the first day, continue the daily soliciting at the appointed time only. On the fourth day assistance may be taken. The simplest and best will be an enema of equal parts of olive oil and water.

If the use of all these means fail to establish the habit of daily or of alternate daily action of the bowels, artificial helps may be necessary. The object is to coax or persuade the bowels to act after the manner of nature, by the production of a moderate and more or less solid-formed discharge. On waking in the morning try massage of the abdomen from right to left along the colon, and a dessert-spoonful of the best olive oil may be taken at the greater meals of the day.

SLEEP A PREVENTIVE OF HEADACHE.—A scientific writer says: “Sleep, if taken at the right moment, will prevent an attack of nervous headache. If the subjects of such headaches will watch the symptoms of its coming, they can notice that it begins with a feeling of weariness or heaviness. This is the time a sleep of an hour, or even two, as nature guides, will effectually prevent the headache. If not taken just then it will be too late, for, after the attack is fairly under way, it is impossible to

get sleep till far into the night, perhaps so common in these days for doctors to have their patients waked to take medicine if they are asleep when the hour comes round, that the people have learned the lesson pretty well, and they generally know that sleep is better for the sick than medicine. But it is not so well known that sleep is a wonderful preventive of disease—better than tonic regulators and stimulants.”

DANGEROUS DRINKS.—The Philadelphia News is authority for the following: “A bartender plaintively bewailed the necessity of having to rub congealed drops of sticky beer off the bar. ‘But if I let them remain,’ said he, in the tone of one seeking compassion, ‘they rot the wood.’ ‘They rot the wood, do they?’ fiercely repeated a beer-bibbler. ‘Then, what in the name of common sense does beer do to my stomach?’ Replied the manipulator of drinks: ‘It is beyond me to tell. Let me show you something.’ He placed a piece of raw meat on the counter, and dropped upon it a small measure of an imported ginger-ale. In five minutes the meat had parted into little pieces, as though hacked by a dull knife.”

PNEUMONIA EXPLAINED.—It is generally supposed that pneumonia is due to the accidental penetration of specific microbes into the system, but the observations of M. Jaccoud, a French student of the subject, show that the disease really results from the development under favorable conditions of microbic germs permanently present in the system. A chief condition of such development is a sudden chill, which explains the frequent coincidence of lung affections with abrupt changes of temperature.

DOMESTIC ECONOMY.

Hams and Bacon.

EDITORS PRESS:—Will some of your readers kindly inform me, through your columns, as to the best way of curing hams and bacon?—BACHELOR.

We have given a number of recipes. Who will describe methods they know to be good?

BLANC MANGE.—Make a cake with a cup of sugar, a cup of sweet milk, one well-beaten egg, a little salt, two teaspoonfuls of cream tartar and one of soda (or two heaping teaspoonfuls of baking powder) sifted in two cups of flour, beat all together a few minutes and pour batter in a square tin one-half inch thick (no thicker); make a custard by heating four cupfuls of milk in a pail set in a kettle of hot water; when boiling hot pour a cupful on three eggs beaten with one cup or little more of sugar and three teaspoonfuls of cornstarch, pour altogether and cook till it thickens; when cool, flavor. When you serve it, cut the cake in small squares, sprinkle sugar over, lay on a teaspoonful of jelly and then lay them on saucers filled with the custard.

CREAM SOUP.—Break fine the bones of a chicken from which the meat has been cut. Skin first, by pouring boiling water over, when skin can readily be removed. Cover with one quart cold water and simmer three hours; then strain, and return liquid to kettle. Add to it two chopped onions, three grated potatoes, one-half turnip grated, salt and pepper to season, and one-half teacupful soaked raw rice. Boil until rice is very soft, then strain and return to kettle. Bring to a boil, then add one quart of rich milk, one tablespoonful of cornstarch stirred with three tablespoonfuls of butter until smooth. Simmer five minutes and serve very hot.

POT ROASTED BEEF.—Take a piece of cheap beef, say from the round, boil two hours in about enough of water to almost cover it; season with pepper and salt. When the water is almost boiled away, turn the meat often, to keep it from sticking to the bottom of the pot. At last the water will all be evaporated, and then let the meat brown a little; take it out and add to the hot fat flour and water; this will make a rich brown gravy. It is best to have a tablespoonful of flour mixed with a quart of water ready to pour in as soon as the meat is removed, so as not to have the fat scorched. Pork, veal or mutton is equally nice cooked in this manner.

BREAD GRIDDLE CAKES.—Soak a small bowl of bread over night in milk. In the morning mix half a cupful of flour into which is put one and one-half teaspoonfuls of baking powder with one quart of milk, three well-beaten eggs and a little salt. Beat up the bread with this batter until it is very light and fry a delicate brown. The batter should be thick.

LEMON CREAMS.—Pare two lemons thin, pour over one-half pint of boiling water and let stand all night. Squeeze the juice of the lemons on one-half pound of sugar next morning, beat three eggs well, take out the peel and mix the water with other ingredients, strain through a sieve, then stir over a brisk fire till thick as cream; pour hot in the glasses.

BREAD PUDDING.—One quart of milk, one pint bread crumbs, the yolks of three eggs, one cup of sugar, a small piece of butter; flavor to taste; bake 20 minutes; when cool, spread jelly over it; beat to a froth the reserved whites of eggs; mix with one tablespoonful of sugar; pile on top of the jelly and set in a hot oven until slightly browned.

The Week.

The prevailing activity of the week has been atmospheric. A hot norther of unusual duration and force has reached nearly all parts of the State, whipping off considerable late fruit, shriveling tender vegetation, licking the last trifle of moisture from the summer-dried soil, and the last vestige of good humor from the people. At the south the wind brought swift compensation, for south of the Sierra Madre mountains refreshing showers have fallen, at some points attended by hail-stones, but no damage is reported by them. Its hasty coming caught some raisins uncovered, and thus occasioned some injury. Up to our writing on Wednesday afternoon, no rain has fallen in the central and northern parts of the State, but the signs are for a downfall.

During the swift, dry wind, very serious field fires have swept over considerable areas in several counties. Beside the loss of dry feed there has been great destruction of hay and straw, and, in some cases, fences, farm buildings and dwellings have been destroyed, bringing hardship to a number of individuals, who have seen the products of their industry swept away. To all such the warmest sympathy will go out, and we doubt not neighborly aid will be promptly

extended to the sufferers. All wise haste should be made to introduce cultivated strips wherever possible over our wide areas that these raging conflagrations may not find material upon which to grow so great.

Humiliation.

While the great mass of our people is laboring for the progress of the State in industry, culture and morality, while we are holding up to the admiration of the world our products, our resources and our grand opportunity for home-seekers in a rich and genial land, there come to light facts which cause the Californian to bow his head with shame. For the moment, at least, we feel that California has special interest in the old hymn, "Where every prospect pleases and only man is vile."

The facts to which we allude are being spread out *ad nauseam* from day to day on the pages of the daily newspapers of San Francisco. For a long time it has been known that the great political parties in this city have been ruled by bosses of the most unscrupulous and corrupt type. Many efforts have been made to shake them off by running independent candidates, etc., but "the machine" generally triumphed. Honorable people sincerely deplored the result, proclaimed the safety of the State and the republic in an honest ballot-box, and then resumed the transaction of their business, with the soothing reflection that some one had to have the offices anyhow, and perhaps one set of candidates was as good as the other. Very few people had any idea that anything but ordinary official stealing was going on, and that corruption of the ballot-box consisted in buying enough whisky-soaked human cattle to carry an election, and it was claimed that both parties did more or less of that.

Such was probably the common opinion on the evil of bossism, and, aside from spasmodic efforts just before elections, the bosses were accepted as in some sense a necessary evil. Within the last few weeks, however, facts have come to light which show that, in one party at least, the rule of the boss has extended to an extent of abominable corruption, which has made a regular trade of protecting the most outrageous criminals from arrest and sharing their plunder, of thwarting justice by seating corrupt judges, packing juries with perjurers and thieves; of doing a regular business in straw bail bonds, of bribing witnesses, jurors and other officials—in short, so contriving our executive and judicial system that a criminal who had money could almost surely buy his freedom from justice for a certain sum. It is wonderful, past comprehension, how a boss working by such filthy methods could secure the service of some men that he did to carry out his behests—men whose adherence gave him political respectability and influence. We imagine there are many men, now that the cloak is drawn from the boss and his evil work, who would give half they possess to blot out the memory of the past. If there is any sense left in the community, those parties who have affiliated with this corrupt ruler are politically dead.

And it seems that not here alone has our great boss become infamous. Is it not humiliating to read, as we do in Tuesday's telegrams from New York City, that Inspector Byrnes, the celebrated head of the detectives of the metropolis, who has done such excellent service in bringing colossal thieves to justice, should have felt compelled to lecture a California political leader in this fashion:

This is the first time I have met you, Buckley, and I am glad to have had this talk. I do not know much about politics in San Francisco, but I do know something about crimes and criminals. I want to tell you now, with just as much impressiveness as I can bring to my command, that if you make associates and friends of men who outrage the laws and who make crime their great purpose in life, you will suffer for it just as sure as fate. The man never lived who could associate with criminals without having to pay a big price for it.

Why did Inspector Byrnes speak thus to the Californian? Simply because while he was in New York he was guest and companion of the most notorious criminals of the city, and was therefore looked upon by Byrnes as a dangerous character. And yet this man has been ruling our politics, dictating to conventions, to Governors, and even attempting to dictate to the President of the United States. Fortunately for the whole country, probably the President shared something of Inspector Byrnes' knowl-

edge of the man, for his commendations availed but little at the White House.

Such are a few of the many infamous things which are coming to light about the corruption of our public affairs. Fortunately, the exposure will speed the cure. The vile sore is being fully opened and will be washed clean. It fills one with shame to think that such things could exist in an enlightened community, but there is comfort in the reflection that San Francisco is only going through the experience of other large cities and will have a share also in the municipal reform which is one of the brighter signs of the times.

The "Sagebrush State."

Nevada has come to be popularly known and spoken of as the "Sagebrush State." Though applied to her in derision, such appellation is not altogether a misnomer. She has more acres of sageland with more sage to the acre than any other country we wot of. The brush grows everywhere and in many places to a large size, resembling on some of the rich bottoms a dwarf tree. So common is the shrub that some have thought the wild artemisia should have been incorporated into Nevada's coat of arms. If, however, the accounts of the Nevada State Fair, now being held at Reno, are not as they come to us greatly exaggerated, it will be found that such general acceptance of the wild sage as the emblem of sterility involves some mistake. The products of the soil displayed at this fair would do no discredit to States noted for their agricultural resources. There are on exhibition there horses and neat cattle, hardly inferior to any to be seen elsewhere, with fruits, vegetables and grains of which California herself need not be ashamed, these being all raised in Nevada.

In the early history of that State, mining and stock-raising engaged almost wholly the attention of the inhabitants, nor was it then supposed that the grazing resources of the country were at all extensive. Before the discovery of the Comstock mines some of the cattle-men of California had begun to drive their herds over the Sierra. But their feeding-grounds were then confined to the valleys, which alone it was thought contained any herbage suitable for the subsistence of stock. These valleys, commencing on the north and proceeding south, consisted of Honey lake, Long, Washoe and Carson, with the Truckee meadows, a grassy plain of great extent lying on either side of Truckee river, below the present town of Reno. The grass in these valleys, being mostly of the bunch species, afforded both summer and winter pasturage. Some hay was made for the horses, but, as a rule, the neat cattle were left to shift for themselves through the winter.

Later on it came to be discovered that the sage barrens, besides the bunch grasses growing sparsely there, afforded other kinds of herbage suitable for winter feeding, the most valuable of these being the white sage and the grease wood, both very nutritious. Browsing on the latter, cattle will, where it is abundant, keep in good condition all winter, even though the snow be quite deep. The finding of so much pasturage outside the valleys and away from the bottom lands along the rivers gave a great impetus to stock-raising east of the Sierra, this, next to mining, being now the leading interest of Nevada. Owing to the healthfulness of the climate and the sweet and nutritious properties of the herbage, both the beef and the mutton produced in that State are of marked excellence. The Washoe potatoes are also noted for their good qualities, many tons of them being sent yearly to California. Washoe oats brings everywhere an extra price on account of its great weight. The wheat is also heavy and makes excellent flour. More than a thousand horses raised in Nevada find every year a market in this State, besides a much larger number disposed of elsewhere.

According to the last report of the Surveyor-General of Nevada, the State consists of 50,000 square miles of mountain ranges, and 41,000 square miles of what are classed as deserts, the remainder, 21,000 square miles, being rich farming lands, capable of producing with irrigation good crops of grass, grain and vegetables, as well as most kinds of fruit. In this connection it is interesting to observe that latterly it has been found that less water is required to grow these crops than was formerly the case, the quantity having diminished year by year as the

cultivation of the land has increased. Good crops are now being raised in favorable localities without artificial irrigation, this being due to an increment of the summer rains on the Rocky mountain sides, and on the sandy deserts where 10 or 12 years ago not a blade of grass was to be seen, there is now good feed. The same has happened on the easterly side of the Sierra, from which the timber has been cut off. Here also the grasses are springing up thickly, where before all was barren. From the changes that are going on great hopes are entertained of the agricultural future of Nevada, which some of its more sanguine friends believe will yet become a great grain-growing State, not only so, but a few there are who predict that the time will come when the hop and the grape will be successfully grown on these sagebrush lands, and hop-raising and viticulture be here pursued as profitable industries. That this may so turn out is not improbable, both the hop and the grape having been matured in this State and elsewhere in the region formerly known as the Great Utah Basin. Among the cereals, corn and buckwheat are hazardous crops, the long time they require for maturing exposing them to be injured by the early frosts.

What will greatly tend to promote here every branch of agriculture, stock-raising included, is the facility with which water can be obtained by artesian boring. Most of the wells sunk by this method, some of them out on the barren deserts, have proved successful, many of them yielding copiously at moderate depths. Issuing from nearly all the mountain ranges of Nevada are numerous streams of water, some of them of considerable size. Many thousand acres of land can be irrigated by these streams when they come to be utilized for that purpose. Through recourse to dams and reservoirs, the capabilities of this water can be greatly increased. In the home markets created by the mines, the cattlemen and the cultivators of the soil enjoy here another great advantage, the markets being close at hand, while the prices realized are apt to be good.

The gold and silver mines, of which there are an infinite number scattered over the State, are yielding now at the rate of \$10,000,000 per annum, the prospect being that this amount will undergo steady increment for some years to come. In the Eureka district large quantities of lead are turned out every year. Considerable values in salt, soda and borax are also realized annually from the salines of Nevada. She has valuable deposits of iron, copper and sulphur, though none of these are being worked at present. This is the only country west of of the Rocky mountains that is now producing nickel in any quantity. The above, though the leading, by no means embrace all the valuable mineral products of Nevada, than which few countries have been more highly endowed with natural wealth.

Despite her sage plains and her sandy deserts, of which latter she has all too much, Nevada is to-day a tolerably prosperous State, with a very encouraging future before her. As with most other sections of the arid interior, the ideas that have generally obtained in regard to their agricultural value have been altogether misleading. They are not the barren regions they were represented to be by their early explorers, who, having traversed them hastily and under conditions of extreme hardship and discomfort, got naturally very unfavorable impressions of what they saw. Already the "Great American Desert" has been expunged from the maps, and it will not be long till this, like the gorgons of ancient travelers and the deadly upas tree of Java, will be relegated wholly to the realms of the mythical.

ARIZONA ADVANCEMENT.—We had a call during the week from Mr. G. W. Ingalls of Phoenix, Arizona, who has been visiting San Francisco to look up irrigation appliances and other matter relating to the development of the Territory. Mr. Ingalls is thoroughly in earnest in his work, believes in the future of Arizona, and rejoices that the country is beginning to receive the attention it deserves.

A CORRECTION.—Our old subscriber, R. L. Watt of Sonoma, says it was he to whom the premium for second best general display of fruit by the producer was awarded at the Mechanics' Fair. The name was not printed quite correctly last week.

The Suffolk Horse.

We have some good Suffolk-Punch horses in this State, and the breed deserves more attention. We are making great progress in our horse-breeding in general, as we have often remarked, and we are glad to see all the good breeds find advocates and promoters. The upper Pacific Coast is also moving forward in the breeding of the noble animal, and we are glad to give space to a portrait of a handsome animal, owned by Edmund Croft of Newaukum, Washington Territory. Mr. Croft has bred Suffolk horses for some time, and has imported them from the studs of his relatives and friends in Suffolk, England. His brother-in-law bred Cupbearer 3d, a most noted horse of this breed. Mr. Croft claims that the Suffolks do excellently all along the Pacific Coast, as they do in New Zealand and Australia, which have a climate similar to ours.

The horse shown in the engraving is Suffolk Prince, 1485, of the Suffolk Stud-Book. He is a grand specimen of a Suffolk Punch stallion, was foaled in 1882, and was bred by R. Garrett of Carlton Hall, Saxmundham, Suffolk, England, who had a world-renowned reputation for horses of this breed. Suffolk Prince is a beautiful golden chestnut color, stands 16½ hands high, and weighs 1800 pounds, has good feet and legs, with splendid action. His sire is R. Garrett's noted horse, Cupbearer 3rd, 566 S. S. B.; dam, Butley Moggy 329 S. S. B., and dam's sire Wilson's Briton 1303 S. S. B. Mr. Croft imported two mares at the same time with Suffolk Prince, and has succeeded in rearing some fine young stock.

As the Suffolk horses are likely to command increasing attention on this coast, we shall select from the Suffolk Stud-Book some points concerning their characteristics and record which we believe will interest many readers of the *RURAL*. In height the Suffolk horse varies from 15½ h. to 16½ h. on short, flat legs, with short, strong pasterns, free from much long hair; hard, clean legs, with bone of compact quality being desired, rather than soft, large legs. Shoulders very long, lying rather forward to suit draught purposes. Hind quarters long, heavy, well and close coupled with loin and back, having the legs well under the horse. Girth should be large and flanks well dropped. If the forehead is a little low it is not objected to, provided the neck is strong, and head well formed and carried with spirit. In all other respects he should be, as in other breeds, long, low and wide.

The recognized color is chestnut. Bays were very prevalent some years ago, but the presence of that color can, in nearly every case, be traced to the introduction of extraneous blood.

For power of endurance, constitution and longevity, the Suffolk horse has long been famous. As far back as 1813, Arthur Young, writing of the county of Essex, says: "The Suffolk breed of horses are favorites in Essex. Mr. Wright of Rockford Hall has 17, and, to show the healthy hardiness of the breed, remarked that in ten years he has neither changed nor added one to these teams, except a stallion."

Julian's Boxer (755) traveled 25 seasons. At one of the early shows of the Suffolk Agricultural Association, a mare was exhibited with a sucking filly by her side, the united ages of which amounted to 41 years. The filly was, however, we should add, then two years old; but the most reliable evidence was given which conclusively proved that at the time she was foaled her dam was 37 years old. The mare which bred Webb's Rising Star (1266), the first-prize horse at Leeds in 1861, was 22 years old when the horse was foaled. The dam of Loft's Cupbearer (842), a mare owned by the Rev. O. Reynolds of Debach, was one

of 16 foals which he bred from her dam in 16 successive years.

For long hours without food and short rations when they get it, the Suffolks are especially noted. The iron constitution of these deep-ribbed hardy animals, and their habits of life engendered from one generation to another, have insured them to what in this respect would have killed another breed.

In temper they are docile in the extreme. Occasionally a stallion may turn savage, but as a rule their disposition is exceptionally quiet.

No breed of horses has been put to such a variety of purposes as the Suffolks. The sister isle takes him readily to cross the light-bred mares for general use; some excellent specimens may be seen in the vans and drays of London. The Continental States use them for artillery horses; some of the cleverest cobs in existence are bred from light, active mares of the Suffolk breed. Many excellent hunters in the field, and still more in the show-yard, have been the produce of pure Suffolk mares and a thoroughbred stallion. The Suffolk horse is exported to Canada, the United States, to South America

the Suffolk horse, smart between the shafts in harvest; quick at the ends of the plow; a fast walker on the harrows after the drill, and a stanch slave at the collar, be it flour, timber or chalk behind him, is unsurpassed by any breed of horses in England or Scotland either.

AMERICAN WHEAT.—During the last two years the laboratory of the United States Department of Agriculture has made analyses of a great number of samples of American wheat from all parts of the country, and grown under various conditions of climate, soil and culture. These analyses show that American wheat contains less albumen than foreign, about the same per cent of ash, more oil and less vegetable fiber. The smaller water it contains is, no doubt, due to the drier climate. These are all decided advantages in the qualities of American wheat as compared with that of the growth of other countries.

THE GAS TREATMENT FOR SCALES.—According to the *Pomona Progress*, W. G. Klee, State Inspector of Fruit Pests, in a lecture in

SUFFOLK PUNCH STALLION, PRINCE, 1485, OWNED BY EDMUND CROFT, NEWAUKUM, W. T.

and Australia; to Spain, France, Germany, Sweden and Russia, and some have been bought for the banks of the Nile, in each and all of which localities he seems to flourish.

The Suffolk horse is an excellent mover, with a smart, quick step, a true balance all around on the trot and a capital walker. The ultra-high, racking, showy action, now so popular with modern Shire-breds, is rather guarded against than cultivated among the breeders in Suffolk. A horse weighing a ton, bending his knee up to his throat-latch and striking the granite with his feet like a sledge-hammer, is not an exhibition the Suffolk farmer has any delight in. He has a notion, right or wrong, that therein are combined two elements totally different in their application. A horse heavy enough for the largest dray is seldom called upon to exhibit his 12-miles-an-hour feat in actual service; and one that is to work a railway delivery van quick on the legs, and moving well up to seven or eight miles an hour, should not weigh 20 cwt. This extraordinary high, fast-trotting action, if in every-day use in London, would wear the best of legs and feet completely up in a few months.

The Suffolk horse is an agricultural horse, and is bred for agricultural purposes; the dray horse—the modern Shirebred—although used on the farm is raised as an article of agricultural produce. The two animals have their proper spheres: on the docks of Liverpool; at the siding on the railway; or the heavy drays in London, the larger edition of the "English cart horse" is in his place. For all purposes of agriculture,

Pomona had this to say of the gas treatment for scales (which has been fully described in *University Bulletins* already published in the *RURAL*): "The gas remedy is probably the best, but it must be used with caution and experience, as the hydrocyanic acid is a deadly poison. It is unsafe to handle or even to inhale the gas. It is expensive, and an apparatus and tent for applying it would best be bought by a company or a neighborhood. It kills all kinds of scales and does not injure the fruit or tree." This statement from a casual newspaper report would not bind Mr. Klee in all respects, perhaps, but we know from other sources that his general opinion of the gas treatment is very favorable.

SANDERS' SAMPLES.—We have received from Sanders, Fresno county, two specimens of local products, the first being a remarkably fine head of durra, which was one of 10 heads grown from a single seed, with no summer irrigation, by J. A. McCreary, and the other a pair of handsome "nest-egg" gourds, from Jeanne Carr, Sanders, which might well beguile the eye with their resemblance to genuine "hen fruit."

THE WALLA WALLA VALLEY CONSOLIDATED AGRICULTURAL SOCIETY'S FAIR, held the last week in September, appears to have been quite successful, in a representative sense as well as financially. The association is urged, however, to secure more ample pavilion accommodations, and to bring the inducements for making fine agricultural exhibits up to those offered the owners of fast horses.

The Butter Dispute at Portland.

The issue over California butter in Portland, to which we have alluded in the two preceding issues of the *RURAL*, has not turned out as satisfactorily as we wished. The California butter was, in fact, vindicated, but for a mishap of some kind, which is most unfortunate, the matter took such a shape that the jury disagreed and a new trial must be had.

The testimony of Prof. Rising of the University of the purity of the sample, sent down under seal from Portland, was indisputable and seemed to be fully accepted; but while the trial was in progress, a doubt arose as to whether the butter analyzed by Prof. Rising was the same as that examined by the chemists employed by the Oregon Dairy Commissioner. For a long time, we understand, the Commissioner refused to present his specimen in court, but finally did so, upon advice of his counsel that it would be fatal to his case not to produce it. When it was brought forward, it was seen to be different butter from that in the can sent to California for analysis. The result was that

a doubt arose as to whether the testimony on the two sides of the case applied to the same butter, and on this rock of doubt the jury was divided, half on each side, and no verdict was reached. This will require a retrial of the case.

It was agreed by stipulation that Prof. Rising should take with him a sample of the butter submitted by the Dairy Commissioner, and should send his certificate north as to its character. It was also agreed that his testimony in the previous case should be admitted in the new trial. The matter now therefore rests upon the result of the analysis of the new sample. If Prof. Rising finds that also pure, the case will probably be dismissed. If he finds it adulterated, the question will then turn upon whether what the Dairy Commissioner had was really California butter or not, and the jury will have to determine that point upon the evidence they may have.

The authenticity of the sample first sent to Professor Rising seems clear enough. At the time the Dairy Commissioner took butter from the California boxes, the commission merchant sent rolls at once from the same boxes and

had them sealed up in tin cans and handed them over to other parties to keep, in case any question should arise concerning the purity of the material. These sealed cans were held by disinterested parties until they were opened for analysis by the chemists. The testimony that these were the facts seemed conclusive. On the other hand, the Dairy Commissioner testified that he took the butter and kept it in his cellar until he handed it over to the Portland chemists which he employed. Thus it becomes a question to determine if the analysis should show one pure and the other adulterated, which butter the merchant was really selling.

More than this; it was shown on the trial that the butter analyzed by Prof. Rising was an authentic as well as a pure article. It was traced back, through the Portland receiver, to the shippers in San Francisco and thence back to the Californian who made it, the dairyman himself testifying on the trial and identifying his brand as it appeared on the rolls, etc. The case in this aspect was perfectly clear and indisputable.

The matter will now rest until the result of the analysis of the second sample is finished. As we have said, if that, too, is pure, that will be the end of the matter and the whole affair will result, as we have anticipated from the start, in a "great cry and little wool." We are sorry for the shape the case has assumed. We expected a quick and clear demonstration of the purity of our California butter, as it is entitled to have. Now we shall have to await the result with as much patience as possible.

THE FIELD.

The Palouse Wheat Lands.

Frank Wilkeson sends from Spokane Falls to the N. Y. Times a long but very readable letter about a trip which he has lately made through a wheat-producing region that lies in the Walla Walla valley, along the base of the Blue mountains, and along the high lands which lie in the Palouse River basin, covering an area of about 5,000,000 acres. Having heard so much relative to the productiveness of this land, which has been divided between the Union Pacific, the Northern Pacific and the Oregon Railway and Navigation Companies, he says: I visited Walla Walla, Dayton, Prescott, Farmington, Garfield and Colfax, all of which towns are, I think, situated on the lines of the O. R. & N. Company. In addition, I went to the end of the track which the N. P. corporation is building into the Territory, claimed by the Oregon Co., and over which those corporations are at present fighting in the courts and persuading their employees to fight, club in hand, in the field. Never before have I seen such enormous crops of small grain grow. The physical configuration is roughly rolling. The ravines are deep and narrow. The hills are high and steep. The soil is a dark, almost black, loam, and it lies on a white subsoil composed of fine decomposed volcanic rock.

A Yield of 60 Bushels

Of plump wheat is not uncommon; this under very favorable conditions and on small areas of thoroughly tilled upland. Frequently large areas of thoroughly cultivated upland produce 50 bushels of plump wheat per acre. Under the ordinary cultivation which is in vogue in the region, the land produces 40 bushels of wheat per acre. As a class, the farmers with whom I talked did not impress me as being skillful and industrious. Very many of the farms were weed-grown. There were no fallowed fields as there should be in a wheat-producing region. Volunteer crops, a sure sign of lazy, shiftless farming, were common throughout the region. These volunteer crops yielded immensely in some cases. I saw near Dayton one field of volunteer wheat which thrashed 40 bushels per acre. Close to this field and a little higher up on the hill was a crop of second volunteer (that is the third crop from one plowing and sowing), which, I judged from the stubble, would yield 20 bushels. So sure is the growth of wheat plants to perfect maturity in this country, that the farmers sow in the fall if they feel like so doing, and the fall-sown wheat is the most productive; but if they have not plowed their land, they shrug their shoulders to express indifference, and carelessly wait till spring before they cast their seed-grain on the ground, or they trust to a volunteer crop. It is the most shiftless farming I have ever seen.

The yield of wheat per acre is enormous, but the most remarkable fact to me is the aridness of the whole region. The dust lay thick on all the roads. The stubble ground was as dry as an oven. I was assured by reputable men that not a drop of rain had fallen in the region since the middle of May, and harvesting began in August. Other men told me that there had been frequent local showers this summer for the first time in years, but that they could not see that the rain had beneficially affected the crops. Be this as it may, I saw green wheat which was in the milk, and which had been sown for hay, growing vigorously on light soil which was dry, absolutely dry, as deep as I could kick a hole. I looked amazed at that crop and pulled up handfuls of stalks. They were full of sap, and the wheat was in the milk. My agricultural knowledge was at fault. I should have said that hardy cactus might live through the hot summer if deeply rooted on that land, and here was a heavy crop growing, apparently.

Relishing the Heat and Drought.

The land is no more fit to raise wheat on, apparently, than the interior of a brick-kiln, but the crop was there and growing. There were many fields of cut grain in which the wheat stood in shocks. Other fields were waving in billows waiting for the lazy reapers to tend to their cases. In other fields the wheat was stacked, and poorly stacked, as though the owners never expected rain to fall again. In still other fields the thrashed grain sacked for export, lay piled in tiers, and the ground was dry deep down.

I saw gardens in which almost all kinds of vegetables were growing to perfect maturity, and on which no rain had fallen for months, as green as any market garden on Long Island. The small flint corn, which New York farmers mistakenly imagine to be corn, grew rank and green on these sun-burned, arid uplands, and on the unplowed hillsides rank, yellow topped bunch grass grew and waved in the brisk wind. Where do the plants draw moisture from to sustain their lives and mature enormous quantities of grain? No man can answer that question. The facts of the discovery of the value of these lands are, as near as I could gather them, that a few farmers, who then tilled irrigated land, plowed a few acres of light upland soil and sowed wheat on them. They were afraid to thrust their plow points into the summits of the hills where the land was presumably the most arid, and selected hillsides for their ex-

periments. The wheat gathered from these small experimental farms largely exceeded in quantity that gathered from equal areas of irrigated bottom-land, and the grade was higher. Instantly, almost, these progressive farmers thrust their plows into the summits of the highest hills, and on that ground they again sowed wheat.

The Yield of the Summits

Far exceeded the yield of equal areas of side-hill land, and the agricultural truth was established in the arid basin lying north of the Blue mountains and between the Cascade and Rocky ranges, that the higher the land, the larger the yield and the better the quality of the grain.

What are the objections to settlers entering this wheat region? I answer:

(1.) The extortionate charges the railroad corporations which operate in the region make for their services. These charges are settler-improverishingly high, as the squalid homes and mortgaged farms clearly prove.

(2.) Fuel and lumber, two essential articles of farm life, are costly.

(3.) The pet directors who falsely serve these corporations have been allowed, when the treasury ran low, to buy the corporation's arable lands at nominal figures, and these lands are now held firmly by them for speculative purposes. It would have been a better business policy for these powerful corporations to give their lands to actual settlers, rather than to speculators. For instance, 100 acres of land in the Red river country should produce year after year 3200 bushels of No. 1 hard wheat. The freight the grower would have to pay on that amount of grain to transport it to Duluth would be about \$480 annually. In the Palouse region 160 acres should, if properly cultivated, yield 6400 bushels of wheat per year, on which the freight charges from the grower to Tacoma would be \$900 annually. And that is a larger sum by far than the speculators paid for the land.

(4.) The grain exported from the Pacific Coast ports has to be sacked. A ship that carries grain in bulk southward across the equator cannot be insured, as the grain is almost sure to heat.

(5.) The Palouse country is broken. The hills are steep and deeply cut by ravines. Rolling over this uneven surface racks and tears the lightly built American harvesting machinery to pieces rapidly, which entails heavy expense on the farmer.

The Palouse region can easily be made to average 40 bushels of wheat per acre. Large tracts have averaged 50 bushels per acre.

Under intelligent management Palouse farmers can produce wheat, if the yield is 40 bushels per acre, for about 13 cents per bushel; if the yield is 45 bushels per acre the cost will be a little under 12 cents per bushel; if the yield should be 50 bushels per acre, and under intelligent management it will be, the cost per bushel will be about 10½ cents. And under free trade and a liberal railroad policy wheat can be laid down at Tacoma on the salt, deep water of Puget Sound, and at a profit to the grower, for 20 cents per bushel.

I sleep content to-night. I have seen an American region which I know will destroy the industry of wheat-raising in India, and that the English, who sought to destroy our wheat-growing industry by opening the Punjab and cultivating those fertile fields with ill-paid slavish labor, will come to financial disaster, just as their older brothers did when the slaveholders' rebellion was smashed by balls from Union guns. I have seen the region. If the railroad corporations treat it honestly and fairly, those farmers will ship, or can ship, 200,000,000 bushels of 20 or 25 cent wheat, laid at Tacoma.

Stack Your Straw.

The Delta gives some timely counsel about straw which may apply in other countries than Tulare. It says:

Farmers who have had their grain thrashed should save their straw and stack it. A few stacks in an alfalfa field that is used for pasturage are good to prevent bloat in cattle in the spring. Have it so that it may be accessible at all times. Should the rains be light during the winter, straw will be valuable for stock next year. It never does any harm to provide for a rainy day, and if it be found afterward that it will be unnecessary to save the straw, the stacks may be burned. In large grainfields it may be necessary to burn the immense amount of straw, which is put to no use, but those who have stock frequently destroy it when it is very valuable to them for feed.

In the same line are the following remarks of the Visalia Times:

A diversity of opinion exists among cattle-raisers as to the value of alfalfa pasturage—that is, where the feed consists exclusively of alfalfa. It is argued by a number of cattle-raisers that such feed is the cause of disease among stock; that it is a butter-producing grass; that it ruins the breeding qualities of cows and heifers, and is only good for fattening stock for the beef market. All stock-growers acknowledge that a few acres of salt grass inclosed in an alfalfa pasture is of great value to the stock, no matter for what purpose they are raised. Many farmers now stack their wheat and barley straw in their alfalfa pastures and find it of great advantage in fattening

their stock, increasing the milk and butter production of their dairy cows, and in every way being an advantage to their health and growing qualities. It is noticed, too, that both horses and cattle will leave alfalfa for days at a time to feed on straw stacks thus placed in the pasture.

THE STATE.

The River System of California.

There is not in the world another country having such a system of rivers as that of California. Whether regard be had to the regularity and frequency with which they occur, the amount of motive-power they furnish or the facilities they afford for irrigation, this system is without an example elsewhere on the face of the globe. In both the origin and the arrangement of these streams nature seems to have anticipated the future wants of the State. Having with few exceptions their sources in the Sierra Nevada stretching along the eastern border of the State, the tributaries of these rivers, after a fall of several thousand feet, gather and form the main streams, which, traversing the foothill region and the broad plains further down, flow into the two great drainage trunks, the San Joaquin and the Sacramento, which in turn empty their accumulated waters into a succession of bays, through which they finally reach the ocean. By means of this hydrographic system the water shed of nearly two-thirds of the State is drained. Outside it are only a few inconsiderable streams, not more than two or three of which can justly be called rivers. Between these principal streams occur many creeks, large and small, some of the larger carrying great volumes of water in the wet season, when also every water-course in the State is much swollen.

Lying between the basins of the San Joaquin and the Sacramento is the Coast Range, a long, irregular chain of mountains, divided throughout nearly its entire length into two, and in some places into three, summits. Being comparatively low, these mountains fail to arrest more than a small portion of the moisture carried inland by the air currents from the ocean; what moisture is so arrested being precipitated on the westerly side of this range. As a consequence, its easterly slope, with a strip of country along its base, has few running streams—none of any size—this constituting what may be termed the arid region of Central California.

Commencing on the north, the first large river met with is the Klamath, the only stream in California that, rising in the eastern part of the State, flows across nearly its entire breadth and empties directly into the ocean. The Klamath does not have its main sources in the Sierra Nevada, but in a series of lakes lying to the west of these mountains. While it is, therefore, nowhere very precipitous, its aggregate fall is considerable, it being a very long river. The next stream encountered coming south is McCloud river, which, rising about the southeasterly base of Mount Shasta, after running due south 65 miles, falls into the main Sacramento. The latter above this point takes the name of Pitt river, a large stream having its origin in a group of broken mountains to the east.

Proceeding 80 miles in the same direction, having crossed a great many streams coming in from the Coast Range on the west and more and larger ones coming in from the Sierra Nevada on the east, we arrive at Feather river, the Rio de los Plumas of the Spaniards. This, like nearly all the principal rivers in this system, consists of three main branches, denominated in all cases the north, the middle and the south fork respectively. The Feather, below the junction of its main confluent, is a large stream, being navigable for small steamers to Marysville, 30 miles above its mouth. At Marysville the Yuba, a smaller stream, enters the Feather. Ten miles further on, we cross Bear river, hardly more than a large creek, while 40 miles still further south brings us to the American river, laid down on the Spanish maps as the Rio de los Americanos. Hereafter it will be found as we go south that all the rivers encountered retain, with one or two exceptions, their early Spanish names.

After passing the American we arrive successively at the following rivers, none of the creeks, of which there are many, being mentioned: The Cosumnes, Mokelumne, Calaveras, Stanislaus, Tuolumne, Merced, Fresno, San Joaquin, Kings', Tulare, White and Kern, which brings us to the southern terminus of both the San Joaquin valley and the Sierra Nevada mountains, though a division of the Coast Range may be said to continue on somewhat further toward the south.

Here, in traveling a linear distance of 450 miles, we encounter no less than 30 rivers, this being apart from the creeks, of which 100 might perhaps be fairly counted in, the larger forks of the principal streams being included. During the wet season and the early summer, when the snow is melting on the mountains, the volume of water carried by these streams is very great, the flow of some of the larger rivers being nearly equal to that of the Hudson.

There are about these mountain streams a number of peculiarities, some of which it may be well to notice. In the first place, they never fail to afford a large supply of water, the precipitation on the Sierra Nevada always being sufficient to insure such result, however dry

the season elsewhere in the State. The snow-fall on these mountains, though greater some winters than others, is always heavy, varying with altitude from 10 to 40 feet. Being shaded by the tall forest growths, this snow melts slowly, not wholly disappearing below the timber line till nearly midsummer. Above that line there is a vast extent of perennial snow-fields, the higher peaks of the Sierra serving as great water preserves later in the season. In these immense bodies of perpetual snow, Central California is forever made safe against the occurrence of any stringent water famine. These mountains were not raised to such imperial heights without a purpose. Nature, foreseeing that this portion of the Pacific Coast would be subjected to a long, dry summer, lifted them to such height that they might receive and for a long time retain, this snow and thus guard against intolerable drouth by increasing the supply and prolonging the water season. To render still more effective this wise provision, the slopes of these mountains further down, where the snowfall was less, were planted with stately forests. And so, this part of California will always have water to drink, water for driving machinery and water for irrigation, as well as for every other needed purpose.

But what good all this water, had it not been given head sufficient to carry it on to the places where required for consumption and use? But this too, having been foreseen, has been arranged for. These mountain streams before they reach the plains have made a descent of several thousand feet, enough to carry them on the highest divides between the rivers, over the foothills and plains, and even over the Coast Range to the west, thereby insuring to San Francisco and other cities about the bay water in any quantity and of the best kind, should they ever have to look to the Sierra for a supply.

Nature in her wise husbandry has worked many strange things for California. A month of continuous dry weather on the Atlantic side of the continent causes much suffering and loss, two months of such weather bringing universal distress and widespread ruin. Six months of uninterrupted drouth in this State causes here no inconvenience, and, of later years, no serious loss, and this, even though the preceding winter may have been an exceptionally dry one. Most of the smaller streams, it is true, dry up, and all the larger ones reach a low stage. The springs show diminished flow and some of the shallow wells fail entirely. But the artesian wells and most other deep sources of supply are so little affected that no such thing as a general dearth of water can occur in this State. That water should here be so plentiful near the surface all through these long, dry seasons is explained in part by the peculiar geological formation of our mountain slopes, which consist of benches or terraces at the base of which the water flowing out comes to the surface at irregular intervals, instead of sinking as in flat countries to great depths, and making its escape through deep-lying channels. Again, animated creation suffers here but little from these protracted seasons of drouth, because it is constitutionally adapted to this condition of things, this being especially true of plant-life. With us, the tap-root at the very commencement of its existence begins to go down in search of moisture, whereas in wet countries the roots instinctively spread out near the surface. The dry season is our winter when nature rests but does not die, except where growth has reached maturity and life has fulfilled its purpose.

A RABBIT DAY.—In view of the rate at which the festive jack multiplies in the southern portion of the San Joaquin valley, the Delta suggests the appointing of a "rabbit day" or a "rabbit week," at the season when farmers have most leisure, and making a special business of slaughtering the pests in the three counties of Fresno, Tulare and Kern. It might cost a considerable amount of money to do so, but it would be a paying investment and probably a much more speedy and effective way of ridding the country of rabbits than offering a bounty for scalps.

GLEASON, the horse-tamer, says that the word "Whoa" should never be spoken to a horse unless it is desired that he stop still. A lad near Albany, N. Y., knows what sound advice this is. He was on a mowing machine and fell in front of the knives. As he fell he shouted "Whoa" to his horses and they stopped. The cutting-knife of the machine was resting on top of the boy's foot when he was taken up. Had the horses taken a single step more, the lad's foot would have been mangled.

GRAIN and spuds in Manitoba outrun all estimates this year, and if statistical reports are trustworthy, in many districts the Canadian Pacific railway will be utterly inadequate to move the crop. A dispatch from Winnipeg states that the yield of wheat has been 35 bushels to the acre in many places, and the average will be about 30 bushels. This would make 10,000,000 bushels available for export, if it could be moved; 1,000,000 bushels of potatoes also can be had for export.

A CONSULAR report gives the following ruling prices for live-stock in Honduras, Central America: For cows, from \$7 to \$10; steers, average, \$8; 2 years old, \$3 to \$4; 3 years old, \$4 to \$6; hogs, \$3 to \$6; goats, \$1 to \$2; cargo or pack animals (mules or horses), from \$35 to \$50; saddle mules, from \$60 to \$150; saddle horses, from \$20 to \$60; mares, from \$6 to \$10.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

BELOW AND ABOVE GROUND.—Haywards *Journal*, Oct. 8: The potatoes raised around Alvarado this year are remarkably fine. Samples shown us by Tony Lee Saturday weighed from 3 to 5½ pounds each. They were Burbank seedlings, the finest potatoes in the market. E. J. De Merritt, residing on the edge of Castro valley, brought us some fine grapes Saturday, of the Black Hamburg and Alexander varieties. His vines are only three years old, and the average weight to each vine this year was at least 20 pounds.

Colusa.

SQUIRRELS IN LEVEES.—Colusa *Sun*, Oct. 8: Walking up the levee just north of town a few days ago in what is known as the "Hagar bend," we noticed squirrel-holes in the levee from crown to base, in shameful abundance. We cannot conceive why people whose land is protected from overflow by a given piece of levee, allow the same to go to ruin all summer, and perhaps never think of it until the water is pouring through it as if it were a sieve, or until the flood has opened a gap 100 yards wide. If ever an ounce of prevention is worth a pound of cure, it is attending to levees in proper time. Here now is a half-mile or more of well-built levee, that a few dollars expended from time to time during the summer in squirrel poison would keep absolutely solid and render the lands protected by it entirely free from danger of overflow. Now many dollars will be required in killing these pests, and in digging out the holes they have burrowed; or if this be not thoroughly done many more dollars will be required in repairing breaks that are sure to follow neglect, besides the damage to property otherwise likely to result from an extensive overflow.

Contra Costa.

FINE HORSES.—Martinez *Item*: G. T. Wilds of Walnut Creek represented that section of the county by a fine display of stock during the county fair. The blood mares Rosa, Queen and Fanny, and standard-bred Dolly and colt, attracted a deal of attention. The most attractive showing, though, was his span of black matched work-horses, whose combined weight is 2990 pounds.

FLOURISHING OLIVE.—Antioch *Ledger*: On the ranch of John Garcia, near Willow Pass, is an olive tree 14 years old, not less than 30 feet in height, the trunk measuring 44 inches in circumference. It is now laden with a well-developed crop of young olives and has borne annually for several years.

Humboldt.

SUCCESS OF THE FAIR.—Dispatch from Rohnerville, Oct. 5: The directors of the Ninth District Agricultural Society met this morning to settle up the business connected with the last annual fair. The fair was a success financially, and will pay off an indebtedness of \$400, which has been standing for two years, and leave about \$400 over. The directors decided to give larger premiums and better purses at the next fair.

A PRIZE DURHAM.—S. S. Loveren sold his thoroughbred bull calf, Second Duke of Mad River, which took first premium at the District Fair, to Edmundson Bros. of Pacific Township. They paid \$200 for the calf, which was only five months old, and we think he was well worth the money, as he is the best Shorthorn calf of his age we have seen.

BEARS NEAR EUREKA.—Standard: It will, no doubt, surprise many citizens of Eureka to learn that a large bear was killed day before yesterday within 2½ miles of the courthouse. Mr. A. C. McArthur, who lives near the Russ claim, having noticed bear signs thereabout for some time, took some dogs and had no difficulty in starting bruin from his hiding-place. Instead of one there proved to be two large black bears. They soon took to a tree, and Mr. McArthur shot one dead and wounded the second, but did not succeed in killing it. The one killed weighed 200 pounds dressed, and was very fat. It measured over six feet in length.

Los Angeles.

NEW CANNING PROJECT.—Times, Oct. 5: A meeting for the organization and incorporation of a canning company was held last evening at the Board of Trade rooms. Among the prominent merchants present were Messrs. Porter Bros., E. Germain, R. A. Ling, Seymour & Johnson, H. Jevne, C. E. Day, S. J. Mathes, S. J. Peck, G. W. Tubbs and B. S. Hayes. Several short speeches were made, in which the crying need of such an enterprise was spoken of. Finally it was decided to form a joint-stock company, under the name and title of "The Merchants' Canning Company of Los Angeles, Cal.," and the amount of capital stock fixed at \$150,000. Articles of incorporation are to be drawn up and reported on at a meeting to be called in the near future. The intention of this new company is to put up none but sound fruit and vegetables and trust to the quality of their goods rather than to a showy label for their popularity and sale when placed upon the market.

POMONA'S HORTICULTURAL COMMISSIONER deserves a great deal of credit for detecting and returning a carload of trees shipped into Pomona this last week, which were infested with white scale. By a great deal of hard work the

Horticultural Society here have succeeded in exterminating the pest in this vicinity, and great care is taken that it shall not again be introduced.

Modoc.

WOODS IN FLAMES.—Adin *Argus*: During the entire week the mountain east and north of us has been ablaze. The distance is about five miles from town. The fire extends over the side of the mountain in almost a solid sheet for miles. The sight at night is grand, but causes much comment on the carelessness, or perhaps intentional outrage, of unknown originators. A severe penalty is attached to the crime of setting forest fires, and if a few persons setting these fires were compelled to suffer the penalty, it would improve the general state of affairs. These may have originated by the carelessness of hunters, but when the parties realize the damage caused by their thoughtlessness, as they may now plainly, they will undoubtedly see in the future that no spark remains to cause such destruction to the forests.

Napa.

ORANGE TREES.—St. Helena *Independent*: Geo. H. Beach has in his orange orchard some young trees which bloomed early in the spring. On account of their age the buds were about all plucked; but the trees were not to be fooled that way and are now blooming the second time. Mr. Beach has five orange trees 12 or 13 years old which are heavily laden with fruit and will present a beautiful appearance next winter. He has Navels, St. Michaels and Mediterranean Sweets.

Nevada.

PAWPAWS.—Grass Valley *Tidings*: A sample of this fruit, which we have heard called "Missouri bananas," comes to us from H. Clendenen's garden on Randolph Flat, near Grass Valley. The pawpaw grows only on rich soil, and indeed pawpaw trees in their native groves are always signs of good land. Wherefore we see that Nevada county has the good soil and the promotive climate.

San Bernardino.

ORANGE-TREE MARKET.—Citrograph, Oct. 8: Orange trees are in big demand for the coming season's planting and are high in price, \$2 each being asked for choice budded Navels. Trees are not scarce, there being hundreds of thousands ready, but the demand seems to run up into the millions. The acreage planted the coming season promises to be the largest ever made. This makes our home supply, large as it is, inadequate to the needs of the market, and hundreds of thousands of young trees will be imported from Florida and other places to supply the enormous demand. The call is mostly for Washington Navels, although a number of other varieties will be put out.

San Diego.

OSTRICH FARM.—San Diego *Sun*: Eight miles from Fallbrook is a bit of Africa dropped down between the hills. At least it requires but a small stretch of the imagination to think of the ostrich-ranch as a patch of the dark continent. A little valley encircled by barren hills, a herd of ostriches feeding, the old adobe where the incubators are kept, pomegranate trees and passion vines climbing over the low house, all make up a picture very unlike the conventional type of American landscapes. The birds seem to take kindly to their adopted home. There are about 40 kept at the ranch at present. The old birds are placed in pairs in their several pens, and only the young are allowed to wander over the grounds. One pair has a nest hollowed out in the ground and are patiently sitting on a dozen eggs, the male bird taking charge 19 hours out of the 24.

DAIRYING AT SOUTH CHOLLAS.—Cor. National City *Record*: The Duncans, of the dairy farm below us, have fine arrangements for feeding and milking cows, well worth a visit. They use alfalfa hay, bran middlings, oil-cake and meal for feed. Each cow knows her stall and places her head between the bars. They have been using loose hay brought clear from San Pasqual on wagons, but are now going to use baled hay from the upper country, which costs no more and is easier to handle.

Santa Barbara.

SANTA MARIA APPLES.—Times, Oct. 8: This week several fine varieties of apples and other fruit have been placed on Jos. Kaiser's display table from the following ranches: J. H. Rice, west of town, two varieties; J. M. Goode, pears, and apples of the bellflower and English russet variety; Isaac Fesler, the bellflower and a large red variety, a single apple measuring in circumference 13½ inches, grown down near the river where it is very sandy; sample of grapes from G. W. Battle's place, four miles east of town. But speak of a variety of apples from one ranch—we were shown by Mr. Kaiser 16 varieties from N. H. Wood's ranch in Cat Canyon; truly it should now be called "apple variety canyon."

Santa Clara.

FRUIT SHIPMENTS.—San Jose *Times*, Oct. 9: The warehouses at the S. P. R. R. depot are full to overflowing with grain, and the fruit shipments are enormous. Ten carloads of green and dried fruits were sent East yesterday and three carloads canned fruits to S. F. The cars averaged 12 tons of fruit each, or 156 tons. We learned that yesterday's shipments were only an average of what has been sent daily for three months. The above figures do not include any of the green fruit sent to supply the S. F. markets, as all of this is sent by the Narrow Gauge, the latter road having its entrance on

the water front where the fruit men are located. Fruit shipping will continue as lively as it is at present until about the first of December.

Santa Cruz.

SUN-DRIED PEACHES.—Santa Cruz *Sentinel*, Oct. 8: We have some sun-dried peaches prepared by a new process by Hon. Anson Miller of Highland. The peach is taken at the best stage of ripeness, and by an easy manipulation with hot water deprived of its skin. The pit is taken out and the meat subjected to bleaching by means of sulphur. Then it is placed on a tray and exposed to the sun. In about four days it is sufficiently cured. There is no need of building expensive driers. Judge Miller, we understand, has prepared and sold about \$500 worth of these sun-dried peaches the present season. They are so clean and bright, and of such excellent flavor, that the judge had no difficulty in selling them in preference to kiln-dried fruit. The specimens we have examined retain the best flavor of the peach. The sulphur is said to prevent decay or fermentation and attacks of insects, and yet there is no smell nor taste of sulphur.

Sonoma.

EXPORTING MERINOS.—Petaluma *Argus*, Oct. 8: John Lawler shipped to A. P. Moore at Santa Rosa island 150 merino bucks. Mr. Moore has the island now covered with sheep, but will use this new importation to grade up his flock. These rams are of the most approved stock and were raised by E. Denman on his Two Rock ranch and by Wilfred Page on the Cotate ranch.

BIG CARP.—Index-Tribune, Oct. 8: Sonoma creek near Vollmar's hotel is swarming with carp. On Tuesday last one weighing 13 pounds was speared with a pitchfork on one of the riffles of the creek, while another weighing 11 pounds was caught in the same manner.

Sutter.

A GREAT CORN CROP.—Farmer, Oct. 7: Jacob Doty was over from the Sacramento river on Wednesday. He tells us that the corn crop on the Sacramento river in his vicinity is simply immense. Stalks are from 10 to 15 feet in height and maintain from two to five ears of large, well-filled corn to the stalk.

AN EIGHTEEN-OUNCE LEMON.—M. E. Sanborn, District Attorney of Sutter county, placed on exhibition at the Immigration Bureau in Marysville last Wednesday an enormous lemon grown in his yard in Yuba City. Mr. Sanborn could not name the variety, but from its appearance we judge it is a Sicily seedling. They are like those of W. G. Murphy's, their rind exceedingly juicy and fine flavored. The one on exhibition measures 14½ inches one way and 11½ the other in circumference, and weighed 18 ounces.

Stanislaus.

COTTON.—Modesto *News*: V. E. Bangs sent to the Mechanics' Fair a sample of cotton grown in his garden. Good judges pronounce this sample of good length of fiber and excellent quality. The experiment was made by Mr. Bangs without the aid of irrigation, and in our judgment fully demonstrates that cotton may be successfully raised in Stanislaus county.

FOR IRRIGATION.—Modesto *Chronicle*, Oct. 10: An election was held Saturday in the Turlock irrigating district to decide whether or not \$600,000 in bonds should be issued to build an irrigating ditch. Full returns from the entire district have just been received, and the result is a victory beyond the most sanguine expectations of the friends of irrigation. The total vote cast in the five precincts was 188. For bonds, 176; against, 12. The land-owners in the Turlock district are jubilant. Nearly 200,000 acres of as fine land as there is in the San Joaquin valley are in the Turlock irrigating district.

Tehama.

APPLES KEPT A YEAR.—Red Bluff *Sentinel*, Oct. 8: Wm. Harbert of Digger creek, who owns a ranch about 25 miles northwest of Red Bluff, sent a couple of "Wine Sap" apples to this office a few days ago that were grown in 1886, picked and laid away in his house to see how long they would keep. He has kept them over 11 months, and although they are shriveled and not more than half as large as they were when picked, they are sound and well preserved. In some parts of the Eastern States, these apples are called "Romanite," and in other places the "Father Abram." Their keeping qualities are superior to any we have ever seen or heard of.

Ventura.

LOCAL SPECIMENS.—Democrat, Oct. 6: Mr. W. B. Baker of Satcoy left at this office one day last week a box of grapes and apples produced on his farm which, for size and excellence of flavor, are not easily surpassed. The apples were of the Rainbow and Gloria Mundi varieties. The Rainbows consisted of a cluster of 19 well-grown apples. The Gloria Mundi, four in number, were exceedingly fine specimens of that large variety. A Chinaman dug 1350 pounds of potatoes in town last Sunday from about one-third of an acre of ground.

Tulare.

A WOMAN WHEAT-GROWER.—Traver *Cor.* Los Angeles *Express*: Widow Crow is farming 3000 acres. She averaged nine sacks to the acre, amounting to about 2000 tons. She sold at \$31 a ton and banked \$60,000 for her crop. She has taken a partner for convenience and that gives her a superintendent in the field; but she remains the boss, bank and brain of

the enterprise. She owns one combined harvester, which will cut, thrash and sack 30 acres a day. When her crop was ready for the sickle she started her machine, hired four more and the five went marching around her golden fields—20 men and 120 horses cutting, thrashing and sacking 150 acres of wheat each day. It kept five of the men busy sewing up the sacks of grain as they came from the separator; five drove each a 24 horse team, five tended each a sickle, and the other five attended each to a separator. In a minute the standing grain is in the sack ready for transportation.

Yolo.

SEEDTIME AND HARVEST.—Democrat, Oct. 6: Farmers generally throughout Yolo county are making preparations for the fall rains. Summer-fallow seeding is concluded in most places, and many farmers have the volunteer seeding far advanced. Clover is raised in abundance around Woodland, where water can be easily had for irrigating purposes. The second crop is now being converted into hay, and immense quantities are being hauled into the city.

COYOTE SCALPS.—At the request of parties residing in Capay valley, and owning sheep and stock that have been annoyed by coyotes for some time, the Board of Supervisors has passed an ordinance allowing a bounty on the scalps of those animals. Parties presenting scalps and asking a bounty, however, must swear that the coyotes were killed after the passage of the ordinance.

MULE MARKET.—John Kelso has had agents in this county the past few days buying mules to work on the railroad that is being built between Cloverdale and Ukiah. Among those bought is an excellent span of bays from O. F. Woods, near this place, which weighed 1500 pounds each. The price paid was \$500 cash down—very cheap for such mules.

ARIZONA.

HORSES IN THE SALT RIVER VALLEY.—Phoenix *Arizona*: The number of fine horses noticeable on our streets is matter upon which strangers comment. The range is from the heavy farm and dray horse to the neat-built thoroughbred roadsters and standard trotters, and the larger portion are products of this valley. During the last four years the famed stables of Kentucky, Illinois and other popular breeding-places have been drawn upon as the basis for our horses. The climate has proven very congenial to the production of the noble animal, the nutritious alfalfa pastures here tending to a perfect growth and development, and it is pretty well assured that Maricopa county will become noted as a breeding-place. The military has drawn heavily on our stock for cavalry uses during the past year, and work horses have been taken to Pinal, Southern Arizona, and mules to Southern California from our pastures for use on public works.

NEVADA.

LINCOLN COUNTY.—Pioche *Cor. Bee*: South-eastern Nevada, instead of being a desert, is proving its adaptability to human habitation by the production of choice apples, pears, apricots, almonds, as good grapes as you can grow in California, and the best potatoes in the world. In the Muddy and Virgin River valleys cotton has been successfully grown for years. About 30,000 grapevines and 3000 almond trees have recently been planted in addition to those which have for years been fruitful, and an experiment with oranges is now in progress. This (Lincoln) county is about 100 miles wide and perhaps 275 miles in length; and, although there is much unwatered land, that which is and that which can be irrigated will in time support more people than now inhabit the whole State. The soil is very rich. I have seen at Hiko weeping willow trees 75 feet in height that were planted only 15 years ago. I have ridden in the Muddy valley through wild sunflowers growing so densely that a horseman could not ride through them except by the beaten path, and whose bright heads waved 18 feet above the ground. Still, the county contains but a handful of inhabitants, scattered here and there. The reason is our almost complete isolation from the world, the nearest railway being 100 miles from this point.

WASHINGTON TERRITORY.

HOPS FOR JAPAN.—Dispatch from Seattle, Oct. 5: Some time since Ezra Meeker of White River valley sent samples of Washington hops to Yokohama, Japan, and a few days ago he received a trial order for 20 bales to be shipped to that city. This is the first order for Washington hops ever received from Japan. Hop-growers feel that the order is significant of a new departure in the disposition of a large portion of the crop and also an escape, in a measure, from the domination of New York buyers.

LAKE COUNTY.—Handsome in typography and illustrated with pleasing views in the pamphlet on Lake county, its climate, attractions and resources, by Beakbane & Hertalet of Lower Lake. It does credit to the *Clear Lake Press*, whose imprint it bears.

THE DAIRY INTERESTS OF THE UNITED STATES represent an investment of more than \$3,000,000,000, nearly five times as much as the entire bank capital of the country, which is \$671,000,000. The number of milch cows is estimated at 21,000,000.

DEVELOPMENT MATTERS.

(Original Contribution.)

Lessons of the Fair.

It speaks to the credit of the fair and to the taste of the people that the place has been filled so constantly with those who desire to see our own productions, not the display of foreign importations that have heretofore been on exhibition. Home should be stamped on every table, California hung in letters of gold on every product of soil or mind that we may claim as belonging to this Golden State—golden in more than the metal from the mines. Where on the face of the earth will we find a land to compare with it? What mines of wealth are in the soil! Walk down to the tables and mark the product of orchard and field; for size, variety, and length of season, where can they be equaled?

Step to the section marked Kern, and see what 8000 square miles of our State can produce. The land has been principally used for stock-raising, and the fine cheeses give evidence of their excellent dairies, while the luxuriant fleeces prove the value of their sheep; but while they have been busy with the pastures they have been proving there is more in the soil than food for cattle, as is shown by the variety of fruits of mammoth size. They claim to have cultivated experimentally every production of the temperate and semi-tropic zones; they have all varieties of nuts, cotton, flax, tea and coffee, immense hanging clusters of hops that would make an Englishman's eyes dance, and the India rami plant standing next a case in which are specimens of the woven cloth. At the other end of the table are cornstalks 22 feet high, bearing 12 full ears; then there is wheat grown without irrigation, 4000 feet above the level of the sea; near by is some fine, clear salt from a lake at the same elevation; and nature does not stop here, but with her bountiful hand touches the rocks and quarries, and they bring forth metals and building stones. Borax and porcelain clay is also found.

Yet though this country may claim a greater variety, others may excel in some particular. Napa boasts of 400 varieties of grapes, that it has 80,000 acres devoted to their cultivation, and that in the year 1886, about 5,000,000 gallons of wine were made, which should prove that they have the favored home of the vine, in the sunny slopes facing the south and east where it can catch the first rays of the morning sun, and the last, as he goes behind the western hills.

Solano has festooned her display with vines, and filled her tables with luscious fresh fruits and a profusion of sun-dried ones that look as though his highness had kissed them gently, touching them lightly that their beauty might not be marred, leaving the impress of the pit with the deep coloring in the center; but with all their beauty they find no market here. Why should they, when Santa Clara furnishes strawberries nine months of the year, and San Mateo gives us Lawton blackberries three inches in circumference in January, placed on the table with grapes just picked from the vines in another county?

Sonoma displays a huge pyramid illustrating the vintage, surrounded by tables of fruits and vegetables to prove that nature has not neglected the coast range of mountains. We were visiting in that coast range about 15 miles from San Francisco, two summers since, and the morning we left, went out to gather flowers before breakfast. Just in front of the house we saw the footprints of his majesty, the bear, who had strolled down to call on his friend, the deer, to inquire how many years more he would be allowed to walk unmolested near our homes, and how long he would have to growl over our indifference at our great inheritance.

Now let us go further north and here is Placer with two very suggestive pictures—one, the miners washing out the gold; the other, the miner with his wife sitting quietly under their fig tree, surrounded by cultivated fields, proving that where mining was the principal source of wealth a few years since, a new era has dawned, and that land which was only thought fit for mining is more profitable for fruit; that the plow will turn up more gold than the pick. The county shows fruit already ripened beyond the eatable stage, and thence in regular gradations up the mountain-sides to an altitude of 4000 feet, peaches, grapes, apples and pears that are not yet ripe enough for exhibition. They claim that the country of the fig in Asia Minor is exactly similar to the lower foothills of Placer, the elevation being from 400

to 2000 feet. Then, too, Placer's climate is its stock in trade—the air laden with piney, resinous odors soothes the diseased lungs of consumptives, and asthmatics who have been benefited nowhere else have found relief in the foothills which are above the fogs, and have summer skies that excel those of Italy. In winter a person can pick oranges at any of the towns from Rocklin to Auburn, and in a few hours' travel he may enjoy a sleigh-ride at Dutch Flat or Cisco. Here, too, is an almost inexhaustible supply of timber; less than 10 miles on each side of the railroad stand forests yet untouched by the ax, containing white, yellow, and sugar-pine, spruce, fir and cedar, whose height is 15 to 300 feet.

Here is Inyo in the east that claims that every known mineral is found in their lofty county of the Sierras, and shows to different kinds of marble. The marble is marvelous for its purity and excellence, and the deposits are boundless in extent, being enough to supply the world and make our own city a second Rome. While the rocks give Italian marble, the ground brought forth the mammoth apples that are by its side.

Then Humboldt in the far north shows with pride her redwood. But not satisfied with that says we shipped last year 1,594,925 pounds of wool; and look at the tempting grapes and apples and think you'll not starve on sawdust and salt pork. Now, lastly, glance at San Luis Obispo's immense vegetables, potatoes and onions averaging 3 pounds; cabbage, 90 pounds; squashes over 200, and then think surely the giants of "those days" might have lived in Arroyo Grande. Imagine a giant handling a wild strawberry—no, there must have been gigantic fruits and vegetables as well as gigantic men in those days. Now, here in a case by itself, is a shrub growing wild in many parts of the State, that the discoverer claims is destined to revolutionize the silk trade. The native silkworm feeds on this shrub, thrives in the open air without care and spins a web outrivalling in strength and value that of the worm to whom we have given so much care for ages. If this prove true, what a source of revenue shall we have.

Over some counties is hung "no irrigation," but if that be needed, if the sun shines so brightly that rain will not come from the clouds, here are Californians, nursed in our colleges, skilled in knowledge to blast rocks, tunnel through mountains, ditch the valleys, and bring water to feed the thirsty land and make it obey the Maker's command to bring forth abundantly.

But the subject is inexhaustible, we have scarcely told what we are doing—what the future has in store for us, who can tell? The rocky hillsides that a few years ago were considered only fit for grazing, have proved to be the home of the olive, and when Californians realize that the product of the orange grove is worth several times that of the vineyard, they may agree with the Italians that "the olive tree is a mine of gold," and think if they have not been casting "pearls before swine," they have been feeding gold to cattle. But if we said more would not our statements be considered Munchausen—would we be believed if we said that roses were 12 inches in diameter, that immense figs and peaches were lying so thick under the trees that the ground could not be seen? If Californians will scarcely believe our statements, what shall we do to convince the outside world of the wonders of this glorious land? We can send the soil to be analyzed, but can we send a volume of the health-giving, invigorating air, can we send the sunlight that warms without the aid of artificial heat, and so heats the soil that it forces luxuriant growth?

In 1848 the gold fever started on the shores of the Atlantic and spread backward to the Rockies, and our fathers started to hunt for gold on these shores—started, crowded in small sailing vessels with a fare of salt pork and hardtack, carrying their beds with them—and landed here, after a six months' voyage, with pick and frying-pan, their only means of subsistence, hung on their shoulder—landed on a sandy shore, with a few adobe houses scattered here and there.

In 1888 let us send a return ball, glowing with fever heat, back over the Rockies, "land ho" stamped on it in golden letters. Let it touch every town and village, with every bound gaining new force, till it reaches the Atlantic and floats gently over until it is washed ashore on staid old England, and the Englishman unbends from his dignity, sniffs, turns it with his cane, and says: "What have we here? Bears and civilization? A-h-a! I think I'll take my gun and go and see what this can be." We bid you welcome. Our forefathers, in their independence, threw your tea into the Atlantic. Come and see the possibilities that in our repletion we may throw not only

your importations, but those of southern Europe also, into the Pacific.

And to our own we say come—come with your wives and your little ones—that your wives may renew their youth and your little ones thrive and grow ruddy in their childhood; and in their youth, their physical education fully ripened by the daily baths of sunlight, enter the schools ready to receive them and the college whose doors will be open for them to enter. Come with your capital to build mills and factories; come with your brains to run them; come with your hands to labor in the field, to care for the cattle on a thousand hills and to lead the sheep to pastures green; come believing there is scarcely a foot of soil from the tops of the mountains to the sands of the sea that will not repay you for your care. Come, not as did your fathers, creeping in the doldrums till the wind came, but flying by rail on a six-days' journey, fed on the delicacies of the seasons, lulled to sleep on downy beds; and as you enter, make a bow to California, who has given another proof of her ability to produce big hearts as well as big fruits and vegetables. Again has she asserted herself as queen of the realm. Was there ever a country where a private citizen furnished free passage to her settlers? California leads again. Will not that help settle the Chinese question? Replace the Chinese with our own and the difficulty is solved. Once more we say, come; our doors are open; we are waiting to greet you.

WHERE TO BUY PIANOS!

Each Piano on our list is SELECTED for PARTICULAR MERIT, and every one the Best of its class. DECKER BROS., the Artist's Piano.

MASON & HAMLIN, Improved Method of Stringing.

IVERS & POND, Eighty in constant use in the New England Conservatory of Music.

BEHR BROS., Patent Cylinder Top.

BOARDMAN & GRAY, Celebrated for Tone and Durability.

THE FISCHER, the Old Favorite.

APOLLO, and other German Pianos.

WE BUY FOR CASH and "Take our Pick."

We can suit all purses and tastes.

We guarantee every instrument, backing it with a guarantee, if necessary, of \$50,000.

Particular attention given to orders by mail.

KOHLER & CHASE,

No. 139 POST ST., SAN FRANCISCO.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 188 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0.25
- 2.—World's Encyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the Rural Press, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 10.—March of Empire, by Mallie Stafford.....25
- 11.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.).....25
- 15.—European Vines Described, 63 pages.....05
- 16.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
- 23.—Architecture Simplified, 60 pages.....05
- 24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, \$1.00.....50
- 25.—Ropp's Easy Calculator, cloth, 80 pp.....25
- 26.—How to Tell the Age of a Horse.....05
- 27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, \$3).....1.00
- 28.—What Every One Should Know; a cyclopedia of valuable information; 510 pp.; cloth; (full price \$1).....50
- 29.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations.....25
- 30.—Needle Work, by Jennie June; 126 pp., 200 illustrations.....25
- 31.—Ladies' Fancy Work, by Jennie June; 152 pp., 700 illustrations.....25
- 32.—The Way to do Magic; illustrated, 60 pp.....10
- 33.—The Taxidermist's Manual; illustrated, 64 pp.....10

Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present).....25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper.

In writing correspondence, items of information, or on other business, please use a separate sheet.

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

BOUND VOLUMES.—Back files of this paper bound in substantial cloth binding with leather back, containing six months' numbers in each, indexed, can be had at this office at \$4 per volume.

SHORT-HAND.

The Mechanical Spinning of Flax.

[Translated from the French by M. N. M.]

The following from a paper by F. Kuchurzewski in the *Revue Scientifique* upon Philippe de Girard, the inventor of flax-spinning by machinery, and his 20 years' residence in Poland, where he became celebrated by the name of Girardow, explains the series of manipulations by which flax is made to pass from the moment of its severance, until the time in which, under the form of thread, it reaches the loom of the weaver, and he shows that the present processes conform to those which the inventor discovered. Having severed the flax, they begin to rot it by macerating it in water, or spreading it out in the air, to subject it to the action of the sun and rain, or of the dew. The stalk of the flax is formed in a series of muscular tubes, united by a resinous-gummy material, and enveloped in a kind of *ecorce* (skin). The object of the rotting is to dissolve this resinous-gummy part and to detach from the skin the central fibers, in order to facilitate their separation. Being dry and prepared by the rotting to be easily broken, the flax is brought for that operation under the brake, which crushes the stalk and separates the fibers. The *battage* (beating) disentangles the skin from the particles of bark which it might still contain. These operations to obtain the product for spinning are replaced in countries in which the culture of flax is conducted on a great scale, by breaking it between iron cylinders and stripping it by means of the *espade* (tewing beetle). There is another purification before spinning, which consists in combing the flax (hackling) by hand or machinery in order to disunite the bits as much as possible, without breaking the filaments; to make them supple without straining them; to detach them from each other so as to facilitate their gliding at contact, and to arrange them as parallel as possible.

In This Way Are Separated

The pure fibers of the flax called *long brins* (long staple) first, from the foreign bodies which the filamentous matter yet contains, and then from the *tres courts brins* (short staple), intermixed throughout, and which constitute the tow. The operations of spinning, properly speaking, begin upon the *table a etaler* (stretching-out table), annexed to the first *etireuse* (drawing frame). Behind the machine a table is placed, on a level with it, and divided into four parts, upon which goes an endless cloth. Some handfuls of flax are placed upon this cloth so as to get four uniform *rubans* (ribbons) which engage in the rollers behind the drawer. This machine has moreover another pair of rollers in front which move with more speed, the result being that the ribbon is drawn between these two pairs of rollers, which, by reason of the particular length of each bit of flax, should be sufficiently distant from each other not to break them. The ribbons are supported between the two pairs of drawing rollers by means of combs or gills composed of needles fixed in copper sockets. The gills move forward at the same time as the ribbon, all of them combing it, and it is this invention, allowing the deglutinating and removal of its adherent properties, which led to the solution of the problem of the mechanical spinning of flax. Each ribbon as it reaches the front roller is detached from that roller by

What is Called the Paralleiseur.

The purpose of which is to unite the four ribbons into one, in order to give it a more uniform bulk throughout its length. Turned out in this manner from the first *etireuse*, the ribbons are still further spun out by two or three other machines like the first but without the movable table. Being sufficiently drawn out, they pass to the spindle bench, where they undergo a new *etirage* (drawing out) and a last necessary combing, after which they are lightly twisted and rolled up on the wooden bobbins placed upon spindles.

The product thus obtained then goes to the spinning-mill. Spinning by machinery, the same as spinning by hand, has a double operation—to draw out and to twist. The flax is usually put in warm water before transferring it to the drawing cylinders of the spinning-mill. It is in this manner that the pure flax is treated. In regard to the tow, first of all it is combed upon a card, from which it comes out in the form of a ribbon that is also changed into thread by the same process as the ribbon of pure flax. Before Girard's time the machinery for drawing out flax in England, as in France, did not differ from machines for drawing out cotton. The ribbon of flax stretched between two pairs of cylinders rested only upon the surface of a drum, and the undirected fibers of flax, losing their reciprocal parallelism, got entangled and intermixed to the point of again becoming tow.

In Applying Blindly to Flax

The machinery for spinning cotton, it was proved that the very pronounced difference which exists in the vegetable structure of these two products of nature, had not been taken into account. The experienced lack of success had no other cause. During the first years of our century the spinning of flax was generally done by hand, with the distaff and spindle, or, as in the remotest antiquity, with the more recent but improved wheel, similar to that of which the design is found in the manuscripts of Leonardo da Vinci. In the meantime, the

spinning of flax condemned to the slowness of merely manual labor, was threatened with inevitable ruin by the rapid development of cotton-spinning machinery. It was, however, saved by a favorable circumstance. Napoleon, having declared war with England, saw himself obliged to conduct the struggle upon the field of national industry. The attempted competition in the domain of the cotton industry had failed, inasmuch as the blockade of the ports of the Continent by the English, impeded France in importing the raw material. It was necessary then to counteract this by promoting the flax industry, as the raw material might be had upon the spot, and so to say, at hand. Napoleon immediately comprehended the matter, and on May 12, 1810, he signed the famous decree which

Promised a Million of Francs

As a recompense to the discoverer of the best machine for spinning flax. The morning of the day on which the *Moniteur* that contained the imperial decree reached Lourmain, the father of Girard, while breakfasting with his three sons, said to Philippe (at the same time showing to him the article in the official journal), "Philippe, here is a piece of business for thee." That same evening the young engineer shut himself in his room in order to study the question, and the next morning on reappearing in the midst of the family, he embraced his father, exclaiming several times, "The million is mine! The million is ours!" The certainty which he felt of obtaining that magnificent reward gave him much pleasure, all the greater, too, because the fortune of his family, which had been seriously impaired during the Revolution, had not ceased to diminish, in consequence of miscarried and unfruitful enterprises; to which must be added the expense of the inventions of Philippe, that brought little or no remuneration. In this way the basis of the flax-spinning machine was discovered in a few hours. The genius of the young mechanic was all at once directed to the road which he should take in this great work. Instead of stopping with the idle discussion of what had been done before, or seeking to apply the cotton-spinning machinery to flax-spinning, he reflected upon the manual operations of the spinster, and then studied the nature of the textile filaments of flax. From these considerations

He Deduced Two Conclusions

Which still constitute the foundation of the flax-spinning machine. The first was that a ribbon of filaments of flax could be drawn out by two pairs of drawing cylinders, between which it is supported by means of a row of small combs placed upon an endless movable base and destined at the same time to maintain the parallelism of the filaments upon all the length of the ribbon. The second conclusion, which permits the drawing of the flax to the utmost limits of tenuity, resulted from a discovery made by Girard, with the microscope, that each filament of flax is composed of several elementary fibrils, five or six meters long, and which are united by a glutinous substance. The filaments being immersed in warm water, the gluten softens, the filaments become more elastic, and are more easily drawn out; and, by reason of the weakness of their coherence, the fibrils glide upon each other with perfect ease. From filaments drawn in this way, by means of the warm water, a much slighter thread is obtained than even the filaments themselves, which are united to form it by the *torsion* (twist). Now, to satisfy ourselves that these two deductions constitute the basis—indeed, the essence of the present processes of our spinning machines—and that from them they have their origin, one need only compare them with the short account given above. In this way, the drawing of the ribbon upon all the series of drawing machines has been rendered possible only by the employment of combs, which even now continue to be the only means of maintaining upon the table an equal distribution of the filaments, without disordering the parallelism, whatever may be the length of the ribbon. In this part of the operation, there has been introduced since the time of Girard, only a single important improvement—that of moving the combs by means of the Archimedean screw, instead of the endless chains. By this means the needles of the gills enter and leave the ribbons without inclining, and preserve always a direction perpendicular to that of the ribbon. These two great principles of the flax-spinning machine were clearly set forth by Girard, in his application for a patent for the invention, which he addressed to the Minister one month after the publication of the imperial decree of June, 1810.

MAN'S INSIGNIFICANCE.—Somehow, when a man's mind becomes really engaged—say like that of Baron Humboldt—and he is able to place in focus more and more of the cosmos of which he forms a part, the things he at the outset of his life regards as the largest get smaller and smaller, till at last that first immense and overwhelming important thing, himself, becomes so insignificant that it is only through a process of mental microscopy he can discern his little float swim or wiggle across the field of view. How big is a man, anyway? Well, he is smaller than an elephant, and an elephant is smaller than a mountain, and a mountain is smaller than the world, and the world is a mustard seed compared with the sun, and the sun itself is a mere mote in the dust-cloud of spheres that stretches out through the universe beyond the reach of thought.

Sale of Shorthorns and Herefords.

We wish to call attention to the advertisement of Shorthorn cattle for sale by Robert Ashburner, which will be sold at the same time and place as about 30 head of imported Herefords of the famous James Kay stock, the cattle belonging to Williams & Vaughan of Sacramento. The sale being held the day after Mr. J. B. Haggin's sale of horses, will afford people from a distance the opportunity of attending the two sales, with but little extra time or expense. The sale catalogue of Shorthorns contains the pedigrees of 12 young bulls, being all that are in the Baden farm herd that are six months old or over—the four stud bulls excepted.

This will be a good opportunity for any one who wants a young bull for improving his herd in size, substance and quality, and as milking qualities have been cultivated ever since the foundation of the herd—about 20 years ago—those wishing bulls of Shorthorn milking families should not miss the opportunity of attending the sale.

The catalogue contains portraits of the cows Yellow Rose and Garland, which will give those who have not seen the herd a good idea of the kind of cows bred and kept at Baden.

Yellow Rose, well known to many of our readers, by reputation at least, is the dam of two of the bulls now in use, viz.: Baden Duke, nearly 10 years old, and Grand Prince of Baden Second, the sire of four of the young bulls to be offered, there being two by Baden Duke, he being by imported Kirklevington Duke Second (34,364); Grand Prince of Baden Second being by imported Grand Prince of Lightburne (36,730), the sire of some of the best cows in the Baden farm herd. Two of the yearling bulls are by Baron of St. Lawrence, 37,610, a bull bred by N. M. Curtis of Ogdensburg, N. Y., and of the celebrated Princess family, which has always had a great reputation as a milking family of Shorthorns.

In cows, there are three of the Frantic family, descended from imported Frantic by Mr. Bates' Duke of York 4th (10,167). The herd now contains some 25 head of cows and heifers of this family, which has always held its own in milking qualities, combined with the general style and quality peculiar to Bates' Shorthorns in particular. Four of the young bulls are of this Frantic family, and, as there are no others of the family on this coast, excepting a few descended from the Baden herd, they should—the females particularly—be looked after by any one wishing to establish a herd of good, useful Shorthorns. The other females are of three different but old-established families now in the herd at Baden.

The Herefords.

The Hereford cattle which will be sold by Vaughan & Williams are the herd which we have noticed several times of late and which are quite fully described in the advertisement in this issue of the *RURAL*. The cattle are from the best English sources and were shown during the State Fair at Sacramento, attracting much attention. The Herefords are gaining ground on this coast, and are well worthy the attention of the stock-grower. The signal victories won by the Herefords at the Chicago fat-stock show last year show that they are bound to make a good mark on American soil. Vaughan & Williams will also sell the pair of Welsh ponies which were so much admired in the stock parades during the State Fair.

Killip & Co., the well-known auctioneers, will conduct the sales.

Great Sale of Horses.

The auction sale of horses—racers, roadsters, draft and saddle animals—now the property of J. B. Haggin, advertised to take place on the 25th at the R. R. stables, Turk and Steiner streets, S. F., is likely to be largely attended. Mr. Haggin's stock is so famous throughout the country that the mere announcement should be enough to draw a crowd. The offering made this year is varied enough to suit all tastes and needs. The production of good horses is now one of our very best agricultural industries, and the time is past when a thoroughly good animal can be had at a low price. Mr. Haggin's sale should be a grand rally of horse-breeders, horse-users and horse-lovers. The advertisement gives time and place. Killip & Co. will give the oration.

LIQUID GRAFTING WAX.—The so-called "French Mastic," so long known as "Lefort's Liquid Grafting Wax," is made by melting one pound of common rosin over a gentle fire and stirring in one ounce of beef tallow. Take from the fire, and when it has partially cooled, mix in eight ounces of alcohol. If this cools it off too rapidly, it must again be placed over the fire; but great care must be used to keep the alcohol from taking fire. When well incorporated and cool, put it in tin cases or glass bottles and keep well covered or corked. It is stated that this, until quite lately, was kept a secret, while the mastic was imported from France.

FAIRS are in progress this week at Chico, San Jose, Los Angeles, Ukiah, Santa Cruz, Visalia, San Luis Obispo and Independence, for the 3d, 5th, 6th, 12th, 14th, 15th, 16th and 18th Agricultural Districts respectively.

THE

PACIFIC RURAL PRESS.

All branches of Farming, including the keeping and breeding of Horses, Cattle, Sheep, Swine, Bees, Poultry, etc.; Garden, Fruit, Vine, Grain, and Hop Culture; Reliable Market Reports, with other important departments devoted to the Grange, Home Circle, News, etc.

It is the Leading Agricultural Home Newspaper and standard authority on all branches of California Agriculture.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FARMERS AND FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes: "The greatest praise that could be bestowed on the *RURAL PRESS* at the late Fruit-Growers' Convention, and which shows, undoubtedly, the well-deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

It is a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest. It is handsomely printed and illustrated. It is a 20-page weekly, and is furnished, postage paid, for \$3 per year in advance. Single copies, 10 cents, prepaid.

What Others Say of the "Rural Press."

PROUD OF THE *RURAL*.—We feel proud of the *RURAL PRESS*. It is a paper that we are not ashamed to send to our friends in the East. Every farmer on the Pacific Coast should take it, and it is a valuable paper for any one to read. We appreciate your efforts. Long may you live to bless our cause.—James Blood, Santa Barbara Co.

INVALUABLE.—I congratulate you on the general excellence of the *RURAL PRESS*, and consider it simply invaluable to all residents of the Pacific Coast.—Frederick C. Sheldon, M. D., Los Angeles Co.

THE *RURAL BEST OF ALL*.—I take from four to six papers but if I could take but one, I should unhesitatingly choose the *PACIFIC RURAL PRESS*.—J. M. Asher, San Diego Co.

Established 1870. Yearly subscription \$3. [Thirteen and one-half months are allowed new subscribers and old subscribers paying \$3, strictly in advance.]

[In Preparation.]

The California Fruit Grower.

A manual of methods and practices in Tree Propagation, Planting, Cultivation, and Pruning, which have yielded greatest success; with Lists of Varieties of Fruit best adapted to the different districts of the State. By our editorial associate, EDWARD J. WICKSON, Secretary California State Horticultural Society, etc.

The needs of a multitude of new-comers and the disposition among many old residents, who have followed other pursuits, to plant orchards and vineyards, has created a wide demand for a condensed and yet comprehensive treatise upon California fruit growing. While it is not the expectation of the publishers to produce at once a perfect work on this important interest, in so new a field it is believed that a book may be prepared that shall contain a large fund of useful information, relating to all branches of fruit growing, and thus serve as a trustworthy guide to the novice, and of suggestive value even to those of large experience. A better book may be the outgrowth of the present effort when time shall bring more permanent features and a fuller understanding of the industry. Just at present what is most needed is a straightforward, practical description of the methods which have so far been proved to yield the best results in every branch of fruit growing from the propagation of the tree onward to the marketing of the product. It is expected that this book will be so plain and practical in its character that anyone (of ordinary ability) may successfully plant and grow any of the common orchard trees, even if he or she has had no previous experience in horticulture.

The obvious necessity for such a work arises from the fact that California conditions are peculiar and practices must be especially adapted to conform to them. For this reason none of the many excellent Eastern books on fruit growing are of use to the California fruit-grower. He needs to know the results of the experience of the most successful California orchardists as a guide to his own operations, and this is what the book now in preparation will furnish him. Published by

DEWEY & CO.,

Proprietors PACIFIC RURAL PRESS,
No. 220 Market St., S. F.

THE Santa Rosa Democrat says: Considerable doubt is finding expression among the fruit-growers concerning the winter apple-crop. It is feared the crop will fall much below the average, by reason of the premature development of the fruit. The crop has arrived at maturity, so it is stated, nearly a month earlier than usual, and owing to that fact the fruit is of inferior quality.

THE people of Paso Robles are setting a good example by organizing and raising funds to improve the roads in that vicinity. Such enterprise will bear fruit in the increased growth and business of the town.

THE Board of Supervisors of Santa Barbara have fixed the saloon licenses at amounts ranging from \$80 to \$100 per quarter and the license on billiard tables at \$5 per quarter.

American Steam Engines.

It seems to be universally conceded that the work done by prominent American steam engine and locomotive builders is thoroughly honest, and contrasts more than favorably with the same kind of work performed by any other nation. This is true whether of large engines made only upon orders, or of the smaller sizes held in stock. A man may buy now, as at any time, such kind of an engine as his ability permits or his inclination prompts, and he will find material difference in the same type of engine by different builders; but 19 times out of 20 he will get good honest work and material.

Another feature of the steam engine trade in this country is the remarkably low prices prevailing. Steam engines, says a cotemporary, were never before sold for so little money. Manufacturers have improved their facilities, frequently under the spur of competition, and have apparently given buyers the entire benefit of their improvements. Any one who has not had occasion to price steam engines during the past 10 or 15 years would be surprised, upon going to the market for one, at the smallness of the price quoted. It is probably true that prices are too low for the best interests of everybody; but it seems to be a fact that quality has been improved as prices have fallen. This may be, in part, accounted for from the fact that very many more parts are now made in duplicate than formerly, and when work is made in this way, it seems to be true that it is almost invariably better done. But aside from this, there has grown up among steam engine builders a most commendable pride in the quality of their products. It is much to their credit, if not always to their profit, and is doing much to build up a foreign market for this class of work.

A BIG ANT STORY.—The most dreaded insect invader is the white ant, writes Charles Frederick Holder in *St. Nicholas* for June. In Africa, their houses are dome-shaped mounds often 18 feet high. These insects erect pyramids 1000 times higher than themselves. The ants on their travels so conceal their approach that their presence is not suspected until the damage is done. They usually tunnel into any object which they attack, often reducing it to a mere shell. In this way they have been known to ascend within the leg of a table, devour the contents of a box upon it, and descend through a tunnel bored in another leg, all in one night. An officer of the English army while calling upon some ladies in Ceylon was startled by a rumbling sound. The ladies started with affright, and the next instant they stood with only the sky above them; the roof had fallen in and lay all about, leaving them miraculously unharmed. The ants had made their way up through the beams, hollowing them out until a great part of the frame-work of the house was ready to fall at the slightest shock.

Being entirely vegetable, no particular care is required while using Dr. Pierce's "Pleasant Purgative Pellets." They operate without disturbance to the constitution, diet, or occupation. For sick-headache, constipation, impure blood, dizziness, sour eructations from the stomach, bad taste in mouth, bilious attacks, pain in region of kidneys, internal fever, bloated feeling about stomach, rush of blood to the head, take Dr. Pierce's "Pellets." By druggists.

"As is the bad bit with an envious worm," so is many a youth cut down by the gnawing worm consumption. But it can be made to release its hold and stop its gnawing. Dr. Pierce's "Golden Medical Discovery" will, if taken in time, effect permanent cures, not only in consumption, but in all cases of chronic throat, bronchial and lung diseases.

"Good deeds," once said the celebrated Richter, "ring clear through Heaven like a bell." One of the best deeds is to alleviate human sufferings. "Last fall my daughter was in decline," says Mrs. Mary Hinson, of Montrose, Kansas, "and everybody thought she was going into consumption. I got her a bottle of Dr. R. V. Pierce's Favorite Prescription, and it cured her." Such facts as the above need no comment.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

UTILIZING THE CACTUS PLANT.—In Mexico a company is being formed to utilize the cactus plant. The oil will be used as a lubricant, the leaf for paper, fiber for cordage and the fruit for eating, the latter being so juicy that some years ago, during a severe drought, thousands of cattle were saved by eating this fruit.

THE EGG AND ITS SHELL.—After an egg has been laid a day or more, the shell comes off easily when boiled. If the contents of an egg adhere to the shell after boiling, it is a sign the egg is fresh.

ENTERPRISE

Self-Regulating

WINDMILL

Is recognized as

THE BEST.

Always gives satisfaction. SIMPLE STRONG and DURABLE in all parts. Solid Wrought-iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes.

Positively Self-Regulating.

With no cone springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 12, 1887.

There was continued fine weather up to Tuesday, when many sections reported rains, which it is feared have done some damage in the raisin districts. In the grain belts rains are wanted so as to start the plow. It is claimed that not more than one-half of the usual number of acres is summer-fallowed. In the foreign markets wheat has ruled strong and fairly steady. To-day's cablegrams are as follows:

LIVERPOOL, Oct. 12.—Wheat quiet but steady. California spot lots, 6s 3/4d to 6s 3/4d; off coast, 3s; just shipped, 3s 6d; nearly due, 3s 9d; cargoes off coast, quiet but steady; on passage, hardly any demand; Mark Lane wheat, quiet; English country markets, quiet; French rather easier; wheat on passage to continent, 208,000 qrs.; wheat and flour on passage to U. K., 1,552,000 qrs.; wheat and flour in Paris, quiet; weather in England, some snow.

Foreign Review.

LONDON, Oct. 10.—The *Mark Lane Express* in its review of the British grain trade says: Under inquiries seed wheats in the provinces are 6d@1s dearer. In London wheat for consumption is no dearer. Sales of English wheat for the past week were 70,509 quarters at 28s 7d per quarter, against 67,481 quarters at 30s 3d during the corresponding week last year. Country flour was stronger; prices rose 61. Foreign wheat dearer; quantities arriving deaden trade. Flour steady. Corn stronger. Prices of linseed advanced 2d. At to-day's market English wheat was steady, but inactive. Prices of foreign wheat against buyers. Flour firm. Corn 6d dearer. Malting barleys 3d higher. Peas 6d@1s dearer. Oats advanced 3d.

Crop Reports.

WASHINGTON, Oct. 10.—The statistical report of the Department of Agriculture makes an increase of only one-half of 1 per cent in the condition of corn. The past month has been very generally favorable, but the status of a large part of the crop was fixed at the date of the previous report. The general average of the condition is 72.8, instead of 72.3. The average of the seven surplus States is 64.9, instead of 64.2 in Sept., a lower condition than has ever been reported, except in 1881, when the average was nearly seven points lower and the average yield 18.6 bu. The indication is now for a yield of a small fraction over 20 bu. per acre. The exact area, exclusive of that cut for fodder as not worth harvesting, is not yet determined. The slight uncertainty regarding it may cause a variation in the final record of 1 or 2 per cent from 1,500,000,000 bushels.

The test of thrashing has not materially enlarged the average rate of the wheat yield, which appears to be about 11.8 bu., or .4 of a bu. less than last year. The increase of acreage, which is large in Dakota, will make partial compensation, and bring the product to nearly or quite 450,000,000 bu. The rate of yield in New York is 16.7 bu.; Pennsylvania, 10.5; Ohio, 12.4; Michigan, 13.3; Indiana, 15.5; Illinois, 15.8; Wisconsin, 10.3; Minnesota, 9.5; Iowa, 10; Mississippi, 17; Kansas, 9.6; Nebraska, 10.7; Dakota, 10.5; California, 13.8. In the principal States of the central valley region, the State averages range from 25 to 30 bu.

The barley yield is nearly 20 per cent less than a medium yield, or about 2.7 bu. per acre. New York, 20.3; Michigan, 19.5; Wisconsin, 18.5; Minnesota, 19; Iowa, 19; California, 20.5. The yield of rye is 11.5 bu. per acre, and the product about 24,000,000 bu.

There has been a drop in the condition of buckwheat from 89 to nearly 77. The condition of potatoes declined from 67.3 to 61.5, partly from the appearance of rot in the Atlantic States.

The yield of oats is slightly below an average of about 25 bu. per acre. The product is fully 600,000,000 bu.

California Products at Chicago.

CHICAGO, Oct. 11.—Fancy lines of home-grown grapes are about out of market, and this causes more demand for California grapes. California peaches and pears are also in fair request, prices ruling steady. Pears of all kinds, p-r box, \$2@2.25; peaches, \$1.25@1.75. Grapes sold at \$2.25@2.50 for double crates of Muscats and Tokays. Quinces quiet, with no special change to note. They bring \$1.50@1.75 per box.

California dried fruits are ruling rather quiet. The trade has become fairly supplied and the demand is light. There has also been more fruit than it was first supposed there would be. Quotations are: Peaches, sun-dried, in sacks, per lb, 13¢@14¢; do, evaporated, unpeeled, in sacks, per lb, 16¢@16½¢; do, do, peeled, in sacks per lb, 27¢; apricots, sun-dried, in sacks per lb, 13¢; do, evaporated, do, 15¢@17¢; plums, pitted, in sacks, per lb, 13¢@14¢; nectarines, according to quality, sacks, per lb, 15¢@18¢; raisins, loose Muscats, per bx, \$2; London layers, \$2.20.

California strained honey, 12¢@12½¢. Beans continue steady and firm. They are in very good request, and arrivals, as yet, are small. California beans, according to quality, \$1.75@2.10; California lima beans, 3¢@4¢ @ lb.

Eastern Wool Markets.

NEW YORK, Oct. 9.—Wool—Among holders of domestic fleecings the feeling is becoming more confident. No important advance in prices is expected, but a larger outlet is looked for. Buyers are more frequently in the market and less shading in prices is done. Among sales were 4000 lbs. scoured California at 55¢; 2000 lbs. spring California at 18¢@20 and 2000 lbs. Eastern Oregon at 21¢@22¢.

The Philadelphia market shows slight improvement. The supply of Territory wools is abundant with the market still in buyers' favor. Among sales were 11,000 lbs. Territory bucks at 12¢@13¢; 10,000 lbs. Territory fine at 16¢; 27,000 lbs. Montana fine medium at 23¢.

The Boston market is more active, manufacturers showing more interest. Sales of Territory wool are large, generally at 57½ to 58¢ for scoured, but much

of it on the basis of 55¢. Among the sales were 975,000 lbs. Territory at 17¢@25¢.

PHILADELPHIA, Oct. 11.—The wool market is quiet. Eastern Oregon, 15¢@20¢; Valley Oregon, 22¢@27¢; New Mexican and Colorado, 14¢@20¢.

Eastern Hop Markets.

NEW YORK, Oct. 9.—Brewers buy sparingly, but the market is firm on strictly first-class goods. Coast crop of 1886, best, 12¢@14¢; same common to good, 9¢@12¢; 1885, good to prime, 6¢@8¢.

CHICAGO, Oct. 11.—Hops are ruling quiet and rather dull, with no changes in the general state of the market. The arrivals are as yet small and the demand meager, for brewers are said to have some old stock on hand and their wants are limited at present. The quotations are: Pacific, new crop, choice, 20¢; do, medium, 15¢@18¢; Pacific, 1886, choice, 12¢@14¢; do, medium, 9¢@10¢; Pacific, 1885, 5¢.

NEW YORK, Oct. 12.—New Pacific Coast hops are arriving in this market. It is reported that California hops make relatively better showing than the Oregon or Washington Territory crop.

Eastern Wheat Markets.

NEW YORK, Oct. 12.—83¢ for cash, 81¢ for Oct., 81½¢@81¾¢ for Nov., 82¢@83¢ for Dec. and 88½¢@88¾¢ for May.

CHICAGO, Oct. 12.—69½¢ for cash, 69½¢ for Oct., 70¢ for Nov., 72½¢ for Dec., 72½¢ for Jan. and 77 11-16 for May.

Dried Fruit at New York.

NEW YORK, Oct. 9.—Prices for California raisins are unchanged, but holders of New Valencias, layers, will probably ask 10 cents or more.

Local Markets.

BAGS—The market is very strong, but quiet at 7½ to 8½¢ for Calcutta.

BARLEY—Continued heavy receipts with stocks accumulating have caused options on Call to go still lower, under heavy sales. The sales on Call to-day were as follows:

Buyer season—200 tons, 95½¢; 800, 95½¢-400, 95½¢; 200, 95½¢. Seller 1887—100 tons, 81¢. Buyer 1887—100 tons, 87¢; 100, 86½¢; 200, 86½¢; 300, 86½¢. Old contract—200, 86½¢ @ ctl.

BUTTER—Hot weather the past few days caused fresh rolls to shade off, but there was a good demand for pickled and firkin, which are going out of stock, with the more choice grades in the lightest supply. If the cooler weather of yesterday continues, fresh roll will do better.

CHEESE—The market is strong at another slight advance.

EGGS—The market is weak and in buyers' favor, under free receipts and only a moderate demand.

FLOUR—Cutting by agents of outside brands continues the order of the day, but leading brands are strongly held.

WHEAT—The market on Call has been very active the past week, with slight but attractive fluctuations. The closing to-day was steady. At to-day's Call the sales were as follows:

Seller season—700 tons, \$1.43½; 100, \$1.43½; 500, \$1.43½. Seller 1887—100 tons, \$1.27. Seller 1887—100 tons, \$1.33½; 100, \$1.33. December—100 tons, \$1.32 @ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

The latest estimates of the world's wheat requirements and surplus are given by the New York Produce Exchange Reporter, which, for the sake of comparison, are herewith given. The Reporter says: Having looked the ground pretty carefully over, the Reporter ventures the following estimates of the world's wheat supply and demand for the harvest year of 1887-88, and in the general interests of the breadstuffs trade places those of its contemporaries alongside. With regard to these estimates, and all others of a similar nature, it is to be remarked that they are at the best mere approximations, such as our latest and most reliable advices enable us to make, that later information may require more or less alteration in the figures, and that in any event they do not furnish any sure guide to the future course and state of the markets.

PRESUMED FOREIGN REQUIREMENTS.

Appar't deficiency in world's supply 70,650,000 24,000,000

W. J. Harris' estimate was among the first. It was published in the *Mark Lane Express*. H. Kains-Jackson's followed a short time afterward, and appeared in Dornbusch's *Evening List*, while the Reporter's was only published October 1st, after fuller and more complete returns had been received. The large requirements made by the latter paper were probably based on the following remarks from an editorial in the Reporter on the subject: The United Kingdom's average wheat crop from 1876 to

1885 was 81,452,364 bushels. It is to be noted that oats and all kinds of pulse crops are very short in yield both here and in Europe, and with the shortage in potatoes and vegetables cannot fail to impart greater strength to wheat. The shortage in these crops seems to be overlooked by the trade, for they do not appear to attach much importance to the loss, while on reflection they admit that their places will have to be filled by some other food, but the great shortage in the corn crop in this country exceeds the deficiency in all other cereals, and the question naturally arises, how is this great deficit to be made good? We answer by drawing on the next cheapest food obtainable. The cheapest food now in use is wheat flour, this especially true of the lowest grades, and being cheaper than Indian meal, they are quite certain to be in active request for feeding live-stock.

The Eastern wheat market, as also our wheat market, fails to respond to the strong statistical situation, taking the New York and Chicago Call Board sales and it seems that most dealers in options keep their eyes fixed on wheat in sight and the export call for it from day to day, not taking into consideration outside conditions that are certain to influence values later on in a large degree, viz: the great shortage in the corn, rye, oats and potato crops. The last named crop is so deficient at the East and in Europe that the loss of it cannot fail to exert a most telling influence ere mid-winter.

Of the available export surplus of wheat in the United States on July 1, 1886 (about 115,000,000 bu.), 43,586,830 exported up to September 24th. The remaining exportable surplus September 24th is, therefore, about 71,500,000 bu. (of which 15,000,000 bu. will be wanted for the West Indies and East Indies, South and Central Americas and the British North American colonies), leaving about 56,500,000 bu. available for export to Europe, from both coasts, during nine months, about 1,450,000 bu. wheat and flour weekly until July 1, 1888.

On this coast wheat in Oregon and Washington Territory is being marketed quite freely at current rates, but in this State holders are firm, and will not part with their holdings except at an advance on present prices. This necessarily restricts trading and causes a stagnant market. In the meantime the tonnage on the way and in port is increasing quite rapidly, so that lower charters must obtain soon.

In barley the market has continued to sag, until prices have reached figures that make it more profitable to hold than to sell. The decline is due to heavy receipts and stocks accumulating, notwithstanding the large consumption. Brewers are not disposed to stock up heavily with the market in its present condition. The consumption is large.

Corn continues to drag, with buyers offish. Choice grades are not offering on the market, but off grades are in good supply. The very great reduction in the crop estimate of this country causes dealers to look forward for a stronger and more active market before the year closes.

Oats are accumulating, with dealers bidding down, owing to free receipts and barley low and heavy at the lower prices.

Rye is steady, with a strong tone reported. Buckwheat is fairly active in a small way.

Fruits.

The hot weather of the past fortnight is said to have made late apples ripen too soon. The market for apples holds steady, with an increasing demand as other fruits go out. For defective, buyers bid down, but for choice, free from worms, good prices are obtainable.

Pears are in fair supply, with a steady call reported at unchanged quotations.

Peaches are going out, with prices taking a wide range according to quality.

Berries are in light supply, as the excessive heat has been against them. Quotations are more or less nominal.

Quinces are in lighter receipt, but prices do not show any material change.

In grapes, receipts of wine are free, but then buyers stand ready to take all received. The consumption this season is larger than last year, which keeps prices well up.

In table grapes the market shows quite a range, owing to the differences in the keeping quality. Grapes well ripened are forced on the market at the best prices obtainable, as buyers confine their purchases to those that will keep well either in the store or to ship up North. Receipts continue free, with an active demand still ruling.

In raisins the New York market continues firm, with weak and uncertain market here. Large operators who have formerly held the bulk of the pack are biding their time and refuse to operate largely. Large quantities of raisins will undoubtedly come on the market later on. It is feared that the damage in Spain is more than discounted by the prices in New York, and many buyers are refusing to buy heavily, fearing that the usual dump will come in late November and December. This has prevented the spirited operation of former years. We estimate the following holdings of raisins already bought:

Wm. T. Coleman & Co.	135,000
G. W. Meade & Co.	150,000
H. M. Newhall & Co.	100,000
D. L. Beck & Sons.	50,000
J. K. Armsby & Co.	60,000
Total.	495,000

In the hands of brokers and small dealers, 55,000 boxes. Unsold in the hands of producers, 500,000 boxes.

Dried apricots are showing a little more strength. Dried prunes are very strong. Dried peaches, evaporated, are weaker.

Live-Stock.

Beef cattle continue to be offered in excess of the demand, which keeps prices low. The consumption is light, owing to the warm weather and liberal supplies of fruits. Mutton sheep are barely steady. The offerings do not appear so large. Small calves are wanted and fetch good prices. Hogs are steady at full prices, with sellers able to obtain a slight advance for a round lot of choice. The supply to come forward is said not to be equal to last year's. Horses are in good inquiry, particularly genuine utility animals, roadsters and matched spans. For work horses of fairly good size, there is a good demand.

BEEF—Extra, 7¢@7½¢; first grade, grass fed,

6¢@6½¢ per lb.; second grade, 5¢@6¢; third grade, 4½¢@5½¢.

MUTTON—Ewes, 5¢@6¢; wethers, 6¢@6½¢.

LAMB—Spring, 7¢@8¢.

VEAL—Large, 6¢@7¢; small, 6¢@8¢.

PORK—Live hogs, 4¢@4½¢ for heavy and medium; dressed, 6¢@6½¢ per lb; light, 4¢@4½¢; dressed, 6¢@6½¢; soft hogs, live, 3¢@4¢. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Feedstuff.

Bran and middlings have moved up again, with a strong closing at the advance. The consumption is very large, as is the shipping demand.

Ground barley can be bought for less money, and in consequence is in good demand.

Hay has been advanced under strong holding, light receipts and an increasing demand. Even on our higher quotations sales have been made at an advance. The consumption, owing to poor pasture, is very large.

Vegetables.

Choice good-keeping onions are in demand, and for which an advance is paid to fill distant orders. Soft onions are hard to place, except to night-by trade, and then lower prices must be accepted.

Potatoes have ruled fairly steady throughout the week. Receipts are free, but then the demand is large, which keeps the market well balanced. The supply in country is said to be large, but owing to low prices will not be marketed yet. It is claimed that a better market can be looked for after this month.

Cabbages are very strong at full prices, with the more choice hard heads selling at a slight advance.

In other vegetables the market is essentially unchanged, prices being governed from day to day by the receipts and demand.

Miscellaneous.

Poultry has come in freely the past week, but prices for the more choice-conditioned kept well up.

Beans are in free receipt, and go out on orders chiefly from the East, nearly as soon as received. The market holds strong.

Hops have been more inquired for, with the better grades taken at a slight advance.

Wools have a strong tone in sympathy with an improved market at the East. Choice desirable clips are readily placed, but defective are slow of sale.

The tonnage movement compares with last year at this date as follows:

On the way.	1887.	1886.
In port, disengaged.	336,445	260,540
In port, engaged.	94,960	78,033
	6,480	87,197

Totals. 437,885 425,770

The above gives a carrying capacity as follows: 1887, 680,067 short tons; 1886, 662,126 short tons; showing an increase compared with last year of 17,941 tons.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

- FOR THE WEEK ENDING OCTOBER 4, 1887.
- 370,922.—PORTABLE CENTRIFUGAL FOUNTAIN—W. N. Best, Los Angeles, Cal.
- 371,029.—ARCHED BRIDGE—P. Britvich, Los Angeles, Cal.
- 370,861.—POTATO-MASHER—G. M. Drum, Los Alamos, Cal.
- 371,140.—WASHING MACHINE—Wm. J. Hunt, Los Angeles, Cal.
- 371,073.—CAR COUPLING—C. M. Jones, Fresno, Cal.
- 371,143.—PIPE WRENCH—Egbert Judson, S. F.
- 371,076.—HYDRAULIC ENGINE—S. N. Knight, Sutter Creek, Cal.
- 370,802.—STERN TUBE-BUSHING FOR PROPELLER SHAFTS—J. Menzes, S. F.
- 370,974.—MILK BOILER—C. D. Salfeld, S. F.
- 371,013.—PACKING PLATE FOR RAISINS—T. C. White, Fresno, Cal.
- NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

- CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation).
- CATALOGUE OF EUROPEAN VINES.—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.
- ORANGE GROWING IN CALIFORNIA.—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.
- SILK GROWERS' MANUAL.—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.
- FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.
- THE AGRICULTURAL FEATURES OF CALIFORNIA.—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, \$1. This book is the best general review of California soils, climate and productions in existence.
- NILES' STOCK AND POULTRY BOOK.—Pamphlet, giving directions applicable to poultry growing in this State; 120 pages, post-paid for 50 cents.
- KENDALL'S TREATISE ON THE HORSE AND DISEASES.—Post-paid for 25 cents.
- ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, five cents.
- A VALUABLE PATENT.—George Westinghouse, Jr., inventor of the air brake, is worth \$9,000,000. "This is, perhaps, the largest fortune ever made out of wind," says the Atlanta Constitution.

QUITE a large number of cabins have recently been erected by pre-emption and homestead claimants on the plain southeast of Sumner.

EXPLANATION.—Cl. for clear; Cy. cloudy; Fr. fair; Fy. foggy; — indicates too small to measure. Temperature. Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

Odor of Fresh Blood.

Marvelous Curative Powers in Pulmonary Troubles.

Although consumption is as common and fatal a complaint in South America as in any other portion of the globe, says the New York Mail, there is a class of persons resident in that country among whom the dread scourge is said never to have appeared. These are the inhabitants of the saladeros—a place where cattle are slaughtered and dressed, and where sometimes the manufacture of beef extract is carried on. A gentleman recently returned from the Argentine Republic, in talking of the subject with a reporter, said: "In former years, cattle in my country, that is, South America, were slaughtered simply for their hides, bones and tallow, which were articles of export. The meat, except such as the butchers in the different cities chose to carry away, was stacked out on the plains and was eaten up by quicklime. The places where the work of killing the cattle was and is carried on were and are still known as saladeros. They are large inclosed spaces in the open country, generally some distance remote from other habitations. The people employed in the business live within the inclosure and form a little colony by themselves. "From 5000 to 10,000 head of cattle are slaughtered in these saladeros every day. Necessarily there is a constant odor of fresh blood, which, to those unaccustomed to it, is decidedly unpleasant. Consumption, however, has never been known among persons who live in these saladeros, and, strange as it may appear, persons who were so affected and through some circumstances or another went into one of these places to live, have speedily recovered. At first the medical men of the country reasoned that their diagnoses were in error, but as the result was the same time after time, they came to look upon the matter in a different light, and now declare that a residence in a saladero will heal an ulcerated lung and entirely destroy the germs of consumption. The process is slow, however, and a consumptive must be patient and content to live in one of these places a considerable time."

FOR PAINTING FOR FLOORS.—Some months ago the floors of many Austrian garrisons were painted with tar, and the results have proved so uniformly advantageous that the method is becoming greatly extended in its application. The collection of dust in cracks is thus prevented, and a consequent diminution in irritative diseases of the eye has been noted. Cleanliness of the rooms has been greatly facilitated and parasites are almost completely excluded. The coating of tar is inexpensive, requires renewal but once a year, and presents but one disadvantage, namely, its somber color.

ORANGE CULTURE IN CALIFORNIA.

A Timely Treatise.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued, will be found of wide usefulness. "Orange Culture in California" was written by Thomas A. Garey, of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties etc., etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address, DEWEY & CO., Publishers "Pacific Rural Press," 220 Market St., S. F.

A Treatise on the Horse and his Diseases

By E. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages for the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address. DEWEY & CO., 220 Market St., S. F.

GAME OF CHECKERS.

Game of Nine Penny Morris. Game of Fox and Goose. The River Puzzle. The Great Triple Prize Puzzle. And many other interesting puzzles. All for only a few cents. CAPITAL CARD CO., Columbus, O.

KILLIP & CO., Auctioneer.

Engraving Improvements.

The Dewey Engraving Company has lately issued a proof sheet, giving an idea of the remarkable work it is now prepared to produce by methods combining all the advanced ideas in the arts of engraving and photography. The company makes engravings from photographs, drawings and original designs, for book, card or job printing. Also fac-simile printing plates of letters and legal documents, portraits and maps, and fine pictorial engravings.

The company has for sale over 3000 engravings, many of which are fine and picturesque illustrations, including historical scenes and views of this coast and other parts of the world, and portraits of notable men, of which enterprising publishers will doubtless soon avail themselves. Proof sheet No. 1 contains 40 engravings, and proof sheet No. 2, just issued, about 20 more. Copies may be obtained, with further information, by addressing DEWEY ENGRAVING CO., 220 Market St., S. F.

August, 1887.

Steam Engine Catechism.

A SERIES OF DIRECT PRACTICAL ANSWERS TO DIRECT PRACTICAL QUESTIONS—MAINLY INTERESTED FOR YOUNG ENGINEERS AND FOR EXAMINATION QUESTIONS.

ROBERT GRIMSHAW, M. E.

This book is intended to answer not only "such direct questions as have been asked by both theoretical and practical men," but "questions chosen with the view of saving the reader a long search after some point, and enabling him to get directly at the information desired." Formulas and mathematical gymnastics are avoided. While the book is not written for professional men, it is technically correct and up to date. Published in two parts. Price of each part, \$1, postpaid.

Part II of the STEAM ENGINE CATECHISM contains answers to further practical inquiries received since the issue of the first volume. Sold by

DEWEY & CO., 220 Market St., S. F.

California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. MUSHROOM CULTURE is to be prosecuted on a large scale in the abandoned cement tunnels of a cement company at La Salle, Ill., and a supply of spawn or seed is expected from France. The company interested at first proposed to put in beds sufficient to ship 100 bushels of mushrooms to Chicago every day. These fungi are very prolific, and, if desired, two crops can be raised every 24 hours by simply clipping off the heads. Mushrooms sell for 30 cents per pound.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary, the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases has felt it his duty to make it known to his suffering fellow-men. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

"PAPER AND PRESS," which has now entered on its fifth volume, is devoted to matters pertaining to paper and printing, and the field of supplies for printers and publishers. It is characterized by the choicest of paper, elegant typography and beautiful, artistic specimens of the results reached by different engraving processes. W. M. Patton, Philadelphia, issues it monthly at \$2 per annum. It is a superb publication, fit to ornament a parlor table.

TENS OF THOUSANDS of people everywhere on the coast deal by mail with Weinstein & Lubin, 400-410 K Street, Sacramento, Cal.; a clear indication that their goods and prices are worth knowing about. The new Fall Catalogue just issued (free) tells all about the new things in Dry Goods, Clothing, Household Supplies, etc., and is much the finest book ever issued by this firm. Send for a copy by postal card, or otherwise, and see what California enterprise is doing.

Important to Tree Planters.

One hundred and twenty-five thousand Fruit Trees for sale at a bargain, consisting of Apple, Pear, Peach, Apricot, soft and hard-shell Walnuts; also 2000 Fan-Leaf Palms. Farmers and Viticulturists, Attention!

FERTILIZE! FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOEHLER—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

DR. J. KOEHLER, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1/2 pound to 1 pound each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

FARMERS, ATTENTION! HAVANA PRESS DRILL!

THE ONLY DRILL MADE THAT WILL NOT CRACK THE GRAIN.

8 Runner, 8-inch.....\$110 00
14 Runner, 7 inch..... 165 00
16-Runner, 7½-inch..... 200 00

WORKS TO PERFECTION!

Light Draft! Good Time! Best
Work! No Clogging or Chok-
ing Up! Ride or Drive!

ARE YOU AN OLD FOGY?

Do you use the HAVANA PRESS DRILL to put in your Grain? If not, why?
READ THIS:

DIXON, October 5, 1887.

MESSRS. TRUMAN, ISHAM & HOOKER—GENTLEMEN: We have just started the 16-Shoe HAVANA PRESS DRILL, and after closely examining it and giving close attention to the principles on which it is constructed, we have arrived at the conclusion that it is and does all you claim. We find it sows the grain uniformly in depth and covers it completely, and with the use of the wheels in the rear it is our judgment that the land sown with the HAVANA DRILL will yield more per acre than if sown by any broadcast method, because it is sown in a vastly superior manner. Yours very truly,
L. E. McMAHON & SONS.

We receive new Testimonials every day.

We are Agents for David Bradley's Celebrated Garden City Clipper Plows, Harrows and Cultivators. Send for prices and description of our GARDEN CITY GANG PLOWS. Prices Reduced. Best Gang Plow in the market. We are Agents for the Champion Cider Mills—cheapest and best in the world. Address

TRUMAN, ISHAM & HOOKER, San Francisco, Cal.

POINTS OF SUPERIORITY.

1. It deposits the grain more evenly in the soil and as deep as required.
2. It secures a more thorough and even covering for the grain. The runners can be pressed in the ground to the proper depth by the operator. The grain is carried to the bottom of the opening made by the runners. A wheel follows each runner of this Drill and PRESSES the soil on the grain, *planting it*.
3. It presses or rolls the ground over the seed, where the ground ought to be rolled, leaving the space between the rows unrolled, as a protection to the growing crop.
4. All good seed planted grows. The soil is pressed on all the grain alike, moisture arises and germination ensues.
5. It takes less seed per acre. More of it grows. The stand is therefore more uniform.
6. It leaves a deeper and better defined trench or furrow over the seed. The plant is thus protected from winds, holds snow longer, stands more severe cold, and will winter better.
7. It is more easily operated, only requiring one hand and team. Is not obstructed by trash or subject to many delays and vexations attending the use of fluke drills in trashy ground.
8. It can be worked on trashy or rough ground where no fluke drill will work. The shape of the runners has

been made a special study, and they will cut through or pass quickly over all trash or obstruction.
9. It is THE BEST, THEREFORE THE CHEAPEST. More than enough is saved in seeding 100 acres of wheat to reduce the price below that of other drills; besides, there is an annual yield in favor of its use of from two to eight bushels per acre.

BEST DRILL IN THE MARKET.

Opens the ground for the reception of the seed with a runner, and covers it with a wheel, *planting it*. Does better work and takes less seed per acre than any other kind of drill. Can be worked in trashy and on grounds where other kinds will not. Has the best adjustable force-feed in the market, a feed especially adapted to drilling OATS AND BARLEY, WHEAT AND RYE, FLAX AND MILLET. A perfect feed, that will work equally as well in all kinds of grain as the best in the market. Fall seeding stands a severe winter better, spring crops get a more prompt and vigorous growth. The average yield per acre is three to five bushels more of wheat and rye, and five to ten bushels more of oats, than with the old style drill. Is the cheapest, because it saves and returns more for the investment.

No Farmer can afford to be without one.

LA DOW JOINTED PULVERIZING HARROW.

SUPERIOR TO ALL OTHERS, BECAUSE IT IS

Simple, Durable and Flexible.

THOUSANDS IN USE GIVING ENTIRE SATISFACTION.

POINTS OF SUPERIORITY:

It will do better work.
It is much easier for the team.
It is easier to manage.
It has a lever to change the angle.
It is not heavy on the horses' necks.
It has no side draft.
It leaves no ridge at the center.
It has a wrought iron frame.

Its chilled bearings cause it to wear longer and work easier.
It is easy to ride.
It conforms to uneven surfaces perfectly.
It can be made rigid if desired.
It has self-feeding oil cups.
Best Disc Harrow in the world.

PRICE LIST.

No. 16 cuts 10 feet, for 4 horses, has 18 16-inch discs, with weight boxes..... 100 00
No. 17 cuts 15 feet, for 4 horses, has 24 16-inch discs, without weight boxes..... 150 00

THE PEERLESS GANG PLOW.

LIGHT DRAFT, STRONG and DURABLE.

The Only Steel Beam Gang Walking Plows which will not Clog in Heavy Stubble or Weedy Land.

They have HIGH BEAMS, WIDE TIRES, WROUGHT IRON CARRYING WHEELS, and are so constructed that there is ample space under the Beams and between the bottoms to allow the stubble or weeds to pass through and not clog. These Plows are made by the BENICIA AGRICULTURAL WORKS, BENICIA, CAL., and are the only STEEL BEAM BENCH GANG PLOWS which have been successful.

REASONS WHY THE PEERLESS STEEL BEAM GANGS ARE BEST:

1. By means of a draft rod, the draft is applied to the second beam, close to the Plow, instead of at end of beam, which brings the draft close to the point of resistance and by this means the Plow is carried on the wheels.
2. The regulating levers are securely attached to the STEEL AXLES, each one being independent of the other, thus enabling the driver to adjust the Plow to the inequality of the land, which is a great improvement over any other walking wheeled Plow.
3. The hubs and boxes of carrying wheels are detachable and can easily be replaced.
4. The Peerless is the only Gang which can be instantly changed from a four to a three-Gang Plow on account of our improved detachable Beam.
5. The Peerless Gang is made of the best material to be had. Shares have only two bolts which requires but half the time to change shares when necessary to get them sharpened.
6. The Peerless is no experiment. It is home made, home tried, has given satisfaction, and will continue to be the farmers' friend.

PRICE LIST:

No. 1, 3-Gang, 8-inch,	\$75 00
No. 2, 3 " 10 "	80 00
No. 3, 4 " 8 "	80 00
No. 4, 4 " 10 "	90 00

Do not buy until you see the Peerless. Write us for testimonials.

Hornless Cattle.

Dehorning cattle is progressing to some extent in this State. We hear of one of our old dairy farmers on the coast side of San Mateo county, who has sawn the horns from his old bulls and uses the machine for eradicating the horn growth on the calves. We hope to have at some future time more definite accounts of his operations and his conclusions. At present we understand that he is satisfied the practice is of advantage and he feels much safer and surer of the lives of his cowboys now that the bulls are tamed by the loss of their weapons. The dehorning even of full-grown bulls does not seem to put them to long discomfort.

If it is really to be an advantage to have our cattle with horns, we have always been inclined to advise greater attention to the hornless breeds. Although the hornless bull has no formidable sharp arms, it does not follow that they cannot kill, for the hornless animal, if vicious, has a very effective way of meeting an adversary or his keeper; but we believe it is conceded that on the whole the hornless breeds are more peaceable, and less likely to injure each other than the horned. Although the consciousness of the loss of his horns may "cow down" a bull who is used to having them, it cannot be argued that a bull who has never had them will be thus depressed.

There is a difference in disposition among hornless breeds as among those armed with these appendages. We believe the Red Polled cattle, of which we give a fine specimen on this page, are conceded to be of very kind and mild disposition. This is the experience of Gen. L. F. Ross of Iowa City, Iowa, who is one of the leading breeders of the Red Polls in this country, and the owner of the cow shown in the engraving. We have written at considerable length of the Red Polls in previous issues of the PRESS and need not enlarge upon its adaptations at this time. It is claimed that this breed is most admirably adapted for the general purpose breed. For dairy uses they are excellent and furnish a large quantity of rich milk. Their beef qualities have not been fairly tested in the competition of the fat-stock show rings, but it is known that in the land of their nativity they are highly regarded for this quality. In color they are a handsome red. They are destitute of horns, which peculiarity they transmit invariably to the half-blood. Gen. L.

F. Ross, the owner of the cow shown in the engraving, is the pioneer in this part of the world in bringing them to public notice, and is enthusiastic in their behalf. He has received his second importation this year, and his herd now numbers over 50 head of pure bred and more than that number of grades. His exhibits at the great fairs of the West this year are much praised by our exchanges. We hope a colony from the herd may be secured by some

The Great Animal Displays.

All Californians who are in the East during the ten days from November 8th to 18th, should not fail to visit the great animal displays in Chicago. This will be the tenth year since the establishment of fat-stock shows and the exhibitions have already become famous all over the world, and the results of the careful tests which are made in the competition be-

and the United States. This year's display will be the Third Annual American Dairy Show. The extent of the display of dairy products and appliances, as well as the uniform excellence of the butter and cheese exhibited, attests the enterprise and skill of the dairymen residing in the wide extent of territory represented annually at this show. All interested will have an excellent opportunity for the examination of the most approved appliances and obtaining information concerning the methods adopted by the practical and successful dairymen of the country.

The south half of the Exposition building has been admirably arranged for the Second Annual American Horse Show, and all the space has been secured by the leading horsemen of the country. There will be a large and attractive exhibit of the various breeds of riding, driving and draft horses, which will be shown to the best advantage in the large ring provided for that purpose in the Exposition building.

The entire gallery of the great Exposition building has been set apart for the American poultry show. This gallery is nearly 2000 feet in circumference and about 30 feet wide, and will be occupied with the grandest display of pure bred poultry ever exhibited in this or

any other country. Enough birds have been promised to warrant the belief that more than 4000 specimens will be exhibited at the coming poultry show.

All the displays are held in the grand exposition building, which is amply commodious for the purposes. Thus the fairs are beyond reach of weather, and it is a most fortunate combination which allows the breeder or lover of animals to see such a variety of animal life at once. The dairy show gives a chance to display the actual achievements of the dairy breeds. The premium animals in the dead-meat classes are slaughtered and their carcasses exposed for examination, thus giving opportunity to judge of beef qualities of breeds especially bred for the shambles. During the fair also are held usually the annual meetings of all the breeders' associations, and a most excellent opportunity is given not only for seeing such an array of stock, but for making the acquaintance of the men who are acting leading parts in the progress of improved cattle in this country. We hope there will be quite a California delegation present.

LABOR of all kinds is scarce all over the coast. Unskilled labor is as hard to procure as skilled.

RED POLLED COW FLOSS 2d 1523, IMPORTED AND OWNED BY GEN. L. F. ROSS, OF IOWA CITY, IOWA.

California farmer. We need good representatives of all breeds on this coast.

THE WEATHER SERVICE.—General Greely, Chief Signal Officer, in his annual reports, calls attention to the need of improved methods of signaling in the army, and thinks carrier-pigeons should be trained for carrying intelligence from war vessels, etc. Concerning weather forecasts, he hopes, during the ensuing year, to make arrangements which, in addition to providing the Northwest with more accurate warnings of cold waves, etc., will furnish the great centers of population special predictions. The general percentages of successful indications during the year have been: Weather, 74.75; wind, 69.1; temperature, 74.4; general average, 73.9. One thousand five hundred and ten storm signals were ordered, of which 68.5 per cent have been verified.

FAT-STOCK SHOW.—The third annual exhibition of the Northwest Domestic and Fat-stock Association opened at Portland Monday, and is to last through the week. The display of stock is large and fine. The Dairy Association of the State makes an excellent showing of butter.

tween individual animals and breeds are scrutinized everywhere. In view of the immense animal interests of the United States and the wonderful success which has been attained in handling all the famous breeds of the world, it is only natural that the fat-stock shows at Chicago should stand beside those at Smithfield in the world's estimation.

Hon. Charles F. Mills, secretary of the Illinois State Board of Agriculture, under whose auspices the great Chicago displays are held, sends us a prospectus of coming events, from which we glean information that will be read with interest by all. First of all there is the fat-stock show, but besides there are dairy, horse and poultry exhibitions in progress at the same time. The American Fat-Stock Show has for its object the encouragement of the most economical production of the best quality of meat. The large premiums offered and the emulation among breeders and feeders attract in large numbers each succeeding year to the American Fat-Stock Show the choicest specimens of meat-producing animals to be found on either continent. The live-stock entered for competition at this show most creditably represents the best breeders of England, Scotland,

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

The Twenty-Sixth District.

EDITORS PRESS:—The child is born and is already a giant! Yesterday closed the first fair for the new Twenty-Sixth District, and never was a more successful first fair held—from all sides come commendations and expressions of surprise at the varied products of this district, comprising the counties of Amador and Calaveras.

Our people are enthusiastic and gratified at the large attendance and interest taken by prominent men. President Shippee made us a visit and a speech of highest praise on the opening night, and expressed his astonishment at the resources of this hitherto comparatively unknown section. Senator Caminetti, the creator of the district, made the inaugural address, followed by Hon. J. A. Eagon of Jackson. Hon. Jud. C. Brusie, an Ione boy, Judge Armstrong of Sacramento and J. H. Miller of the *Record Union*, gave addresses on the following evenings.

This district has a mile regulation track within a picturesque park, embosomed among the foothills, and has the indorsement of horse-men as a fast and already perfect track although no winter rain has yet moistened its surface. It has a substantial grand stand, a large array of boxed and open stalls which were all filled, as well as pens for swine, sheep and poultry.

The pavilion was a tent 100 feet in diameter, attached to a frame building on adjoining premises, and was full of the varied products of this region.

This fair has aroused our people from their lethargy, and struck the keynote for rapid progress in the future. Considering how richly nature has endowed this district, we wonder that it is not better known and more densely populated, and the price of its lands enhanced.

Commencing at the western border and coursing its full length north and south, it has first a stratum of pottery-clay of great value, which is the chief source of supply for works in Oakland and Sacramento. The pottery industry alone has built cities in other portions of our country, and this clay being of a character suitable for white granite ware, there seems no reason why a similar result may not be expected here at some future day.

Next is the coal belt, known under the name of Ione coal land, on which are located two actively working mines. After the coal comes the vein of copper, from which thousands of dollars worth have been shipped, though the industry is just now stagnant on account of the low price of its product.

Parallel with the foregoing lies the great mother quartz lode, on which are located the richest gold quartz mines in the world and from which samples showing more gold than quartz were on exhibition at our fair, more notably those from the Grover and the Ginochio mines. This great lead has furnished the main support of this district in the past and created Plymouth, Drytown, Amador City, Sutter Creek, Jackson, in Amador county, and Mokelumne Hill, San Andreas, Altaville, Murphy's, Sheep Ranch and numerous other towns in Calaveras.

Above the quartz comes the great timber belt containing the finest trees of the Sierra range and a future of great wealth, among them being the noted Big Trees of Calaveras. Inclosed in the summit timber recesses are never-failing reservoirs of water, which, if available in Southern California, would be worth millions upon millions of money, and is worth as much prospectively to this district, where, with its aid, the varied cereal and pomological productions flourish unexcelled.

The foothill region has long been noted for the superiority of its fruits, which, owing to the long, dry maturing season, ripen to fullest and finest flavor. Nowhere in the world will the grape do better, and in this section will doubtless be found, in time to come, the noted vineyards of this coast.

One line of railroad terminates at Ione and another at Valley Springs in Calaveras county; a third is projected to transverse the district north and south.

Fruits shipped through the Fruit Union this season to Chicago, Philadelphia and Boston, have received the highest commendation, and evaporated products which have been scattered through the different markets have brought the highest price.

The peach here has its home, likewise the French prune, which develops the finest flavor. Pears, apples, cherries and apricots also flourish, and, from the exhibits from various localities, I may add the orange as well. We have the finest of climates, but, by reason of the sparsity of population, the hill lands are held at small, nominal valuations.

To a thinking observer, it would appear that with all these natural advantages there can be nothing to retard the growth of this district, and we look for the bound that will set us the 20 years ahead, which we are accused by the speakers from abroad of being behind our sister districts.

We intend to represent ourselves at the next State Fair, and expect the Baby Giant to take an advanced rank with her sisters of the commonwealth.

G. W.
Ione, Oct. 9, 1887.

More About the Stockton Fair.

[Written for the RURAL PRESS by Mrs. W. D. A.]

A. Hueppers, stationer, large exhibit of Stockton Paper Mills' goods; printing, letter, ledger, grades of wrapping-paper, bags and boxes of paper. S. F. Chronicle with its immense roll of printing paper, forms, etc. Now, Geo. West has a table, below his wine, of standard and rare varieties of wine grapes, faultless in color and cluster. Thos. Yost, a table with fine figs, quinces and the largest Italian chestnuts. Mrs. Isabel Reed, the finest jellies in the hall—apple jelly clear as water; also choice house-plants.

Upstairs, Taber & Co. fine photos of several of the dredging machines. South and east wall, "Cone Carr," large collection of crayons. T. J. Lewis, six landscapes. Companion piece of "Silver Lake, El Dorado Co." won the \$100 prize at Sacramento. "Yosemite Valley," Mary Lewis, age 18, grand in sublimity of nature, light and shadow. "Off Cape Mendocino," by C. Von Parbraund, a wild stretch of shore, foam-dashed rocks and masterful ship riding away. Twenty-four, by different authors, six by S. M. Brooks, true to nature's form and warmth of bloom. The gem of the art collection is "The New Vintage," by Edwin Deakin, holding gold medal and \$100, a masterpiece for which he has been offered \$2500. The "Mountaineer" (H. Poschen) attracts most attention, as, holding his awl, he drowsily pushes his needle through the broken bridge, while his supper-pot boils briskly, the firelight revealing the logs of his strong cabin, dog lying near and saddle, his rude cupboard and skins from the hunt. Mrs. Allard and pupils show a fine collection of crayons and paintings. Mrs. Smart, Dutch Flat, "A Vermont Sunset," grand in mountain light and autumn richness. A corner, guarded by a large, knotted rope above, a pole held by links of chain supports a curtain of deepening blue bordered and fringed with gunny; displays with the careless grace of a fine esthetic eye, landscape portraits in crayon and charcoal, crayons and a perfect branch, in oil, of rich magnolia blossoms and cluster of purple grapes with their bloom on white bolting silk—all the work of Miss N. Littlehale, Stockton, only 17, but an artist of great promise. Oxley Miller's collection is beautiful beyond description. Lurid flames leap up the spars of the dismantled ship in "The Close of the Combat," and, by their light, her crew row away from the grandly swaying ship. Finest is a group of bare, rocky heights; at their base a waterfall broadens into a peaceful stream, mountain, guarded, soft with verdure, dark with firs, behind which may lurk the wild game, and from a jutting crag looks forth a buck and doe. Here L. Wulff shows fine wallpapers, frames and artists' goods. J. P. Spooner has a large array of photos, black crayons and finely finished portraits. Hattie Keep has paintings in copy of great merit; F. W. Larabee, crayons and water-color portraits; Walter Steves, object and portrait paintings in oil, crayons in charcoal, remarkable for expressiveness. "Death of Cleopatra," "Scene in Venice," "Portrait of Sister," all worthy of premium. Young, raised near Stockton on a farm, he was sent to the art school in San Francisco four years, then two years in Europe—has been back two months; paints from life and nature. Dr. Todd has a collection from Europe very fine "Sadome"—copy and sweet faced Madame Le Brun—most life-like in the gallery. Three very large paintings from Commercial hotel, by Ebert. Landscapes, flowers and stuffed birds by Miss Hahn from that hotel, all very natural; 11 large photos, Hodson, Sacramento. P. C. Lethier, neat show druggist's goods. Native Daughters, elegant ice-cream parlors. Splendid display by White and the Domestic sewing machine. Excellent photos and crayons by Monaca Bros. Mary L. Woods, very complete herbarium. I. D. Holden, fine show druggist's goods; A. C. Gall, beautiful candies; charming articles from Mrs. Dohrman's thorough kindergarten school.

"Old Curiosity Shop," southeast corner, shows things ancient and modern; cup and pewter platter brought over in the Mayflower, Bible 1683, clock 112 years old; dress goods, cocoon fiber, Sandwich island paper sheets, pitcher found in '49 on Merced river beside a dead man, cut out of a tree; splendid case of Syrian, Algerian and Persian embroidery, and gorgeous velvet table-spread worked and fringed with gold, and ancient lamp. Mrs. Grattan has a lovely booth. Miss Grattan, elegant painting on china and shells, waterlilies on bolting silk; Mrs. T. W. Newell, sensible and excellent knitting; Mrs. W. Daggett, crochet and macramé-work; Miss Vanderberg, tasteful fancy articles; Mrs. Waterhouse, 83 braided mats; Mrs. J. McCall has a large show of rugs drawn of yarn or rags, tasteful in color, even and strong as Persian. She rapidly works them in with a hook or needle. Mrs. J. R. Williams has a large show of fancy articles, bric-a-brac, likewise Miss Althea Hickman. A dress made by hand, Miss Andrews, 15, deserves great praise. A stand of California woods made of 1900 pieces is shown by R. Reno, Stockton. W. Van Vlear exhibits case of guns from 150 years to the present. H. T. Donance, large show harness, robes, etc., first-class. A. Easton, richest carpets and furniture from his popular store.

Pacific Spring Mattress Co., San Francisco, exhibit Clark's Improved Folding Bed. (They employ 70 men and hair from California cattle). Crandall Spring—a secretary of maple and California ash, lovely cherry, oil finish, fold up a perfect bed. Pacific Electric Belt Co. show galvanic belt articles.

St. Mary's College, work of pupils and very fine case of philosophical instruments. Hull & Stewart, creditable school supplies. Stockton Business College has a fine exhibit of that admirably conducted school. San Joaquin College, Woodbridge, shows fine mineral cabinet, books, apparatus, creditable in a high degree. Sacramento business makes a fine show.

Mrs. W. J. Belding, noted for her public spirit, makes a fine show of merchandise from one of the oldest and best stores of Stockton. The whole southeast corner of the gallery is dazzling with needlework, knitting, paper flowers, painted mirrors, everything!

Mrs. M. H. Ober, S. F., exhibits healthful ladies' wear. Mrs. Netz, easel of seven kinds of grain. Alberti shows fine Weber pianos, Estey organs; also Ramaciatto exhibits Spencer pianos.

Saturday Evening, Oct. 8, 1887.—The building again is brilliant with flowers and beautiful girls, alight with joy, as the floral march is repeated under Mrs. C. Dohrman. Flowers, fruit and vegetables on ornaments. Banners of satin with clusters of flowers, sprays and mottoes are borne—one carried a big floral parasol. A Lodi young lady, an illuminated watermelon. She and her lantern were charming. The floral march was planned and carried out by Miss Hattie West, and the sylvan retreat and live-oak tree by Miss Alice Ashley of the floral committee. The president and directors have spared no pains to make the fair a success and to give each exhibitor his due. It has been a decided success—now the bell is ringing to close the splendor of labor and art till another year. Visitors praise our hotels and the coolness of the pavilion.

HORTICULTURE.

The Florida Orange Interest.

EDITORS PRESS:—The "orange belt" of this State is divided, with considerable distinctness, into two sections—one in which seedling trees prevail, the other in which budded trees are most numerous. These two sections lie, speaking in a general way, on the two slopes of the peninsula; the budded trees on the Atlantic Slope, the seedlings on the Gulf Slope. The explanation of this fact is curious, and shows how great an influence, for good or evil, one man may sometimes exert on a young community whose institutions are still in a plastic condition.

Soon after the war Colonel L. A. Hardee established near Jacksonville the Honeymoon nursery, from which he sold tens of thousands of orange trees. He was an ardent believer in sweet seedlings. In addition to what he sold outright, he furnished a great many to small nurserymen and growers to be grown and sold on shares. That also made them advocates of seedlings. He was an officer of the railroad line from Fernandina to Cedar Keys (since incorporated into the extensive F. R. & N. system), and he naturally extended his tree-selling operations along the line of this railroad; hence the preponderance of seedling trees to-day along this route, and extending southward through Gainesville and Ocala to Orlando, where the seedling current meets and is thrown back by the column of budded trees ascending the St. John's river. This column of budded stock was and is carried forward mostly by men from the north. The eastern, or budded half of the peninsula, therefore represents northern progressiveness and thrift, while the seedling area on the western or Gulf Slope stands for southern ideas and systems.

It is hardly necessary to say to your California readers that, while the seedling trees have their points of undoubted superiority, chief of which are their greater hardiness, size and longevity, on the whole they are not to be chosen by the beginner with which to found a grove, unless it may be in a very few exceptional cases. Further, it goes without saying that the influence of Col. Hardee has been a detriment to Florida, and especially to the Gulf Slope of it.

A very intelligent gentleman, an old university friend of mine, and until recently the editor-in-chief of the *New York Railroad Gazette*, a trained observer and writer, last winter and spring made a tour of many thousands of miles through Florida and California. From Sacramento he wrote me that he thought in five years the orange crop of Florida would be 10 times as great as at present, and that the problem for the growers would then be how to realize a quarter of a cent apiece for their oranges. He also thinks that the output of California will be immensely increased in that time, though not so much as that of Florida, because there are not so many young trees in sight in your State. By that time, he adds, "I do not feel at all certain that California can sell oranges east of the Mississippi." Still, I suppose, if the growers of your State could be assured of undisputed control of the territory west of the Mississippi for their oranges, they would be satisfied. He says: "The best Florida oranges are very much superior to the best I have

anywhere found in California, but I think the average in California is higher, because there are fewer seedlings here, a very large percentage of the fruit being Navel, which are of an excellent quality and seedless."

The California pole seems to be knocking the persimmons just now, so far as immigrants and land sales are concerned. Florida has been asleep, lying on her oars, as it were. Our subtropical exposition at Jacksonville this winter is fondly looked to by many to recall the "missing tourists," but they will not come unless a great deal more money is expended in advertising in the North than is now being expended. The railroads leading south, and whose lines lie outside this State, have formally and officially challenged the Florida roads to meet them in this matter, engaging to expend as much money as the latter will in advertising the attractions of Florida over and above the routine advertising of their lines. Indeed, they not only challenge the Florida roads, but the hotels, real estate men, etc., also. If the Florida people and corporations do not rise to the height of this opportunity, they will deserve to see the State fall even further behind in the race with California than it is now.

Some lemons and "dropped" oranges from South Florida have already gone North in small lots, but the oranges at least have damaged the market far more than the worth of the consignments. Not an orange should be cut in the peninsula before November 15, and better not before December 1. The earliest oranges strike a bare market and fetch \$4 or \$5 a (bushel) box; but November fruit is too sour for anybody; it sets the Northern teeth on edge, and damages the good name of Florida oranges.

Perhaps your readers might like to see an estimate of this year's orange crop in Florida. I shall not venture one myself; but neighbors of mine, recently returned from South Florida, say the crop down there will be light, and very rusty. That is the case here, though most of the groves in this country are too young to be made an element in any calculations of the yield.

Following suit after your State, we are talking a good deal about cold storage for our oranges, to hold them for next spring. The citizens of Waldo, 20 miles south of us, are erecting a building 60x100 feet (if I remember correctly) for this purpose. For my part, I do not take much stock in cold storage in Florida with artificial ice. Our true policy, it seems to me, is to store in the fall in the North, where, if the buildings are properly managed, little or no ice will be required and very little expenditure of any kind. There are firms who offer us this accommodation for a nominal expense—some, indeed, gratuitously, saving and excepting their commission.

S. POWERS.
Lawley, Bradford Co., Fla.

Citrus Fruit Sales in New York.

The *New York Mail* of Oct. 8th says that the official bulletin of the Minister of Agriculture and Commerce of the Italian Government, containing an elaborate report on the rapid increase of the production of oranges and lemons in this country, and the effect on the market for Italian fruit, has just been received. The report says that the California orange is superior to the Italian fruit. It is preferred for its aroma, taste and color. The Florida orange and also that of Louisiana is much sweeter and finer flavored than any foreign fruit. The report then states that in about three or four years this country will grow all the oranges she can consume, and not many years later the same will be true of lemons. The attention of the commercial world is called to the gradual coming to an end of the grape and raisin importations from Spain to this country, and this is cited as a warning to prepare for the time when the United States will supply all her own wants.

A *Mail* reporter called on Mr. Contencin, of the firm of Frederick S. Robinson & Co. of New York City, and learned that the enormous prices obtained for oranges and lemons at the close of the Civil war set the Italian producers wild, and encouraged them to largely increase the cultivation of these fruits, at the expense of other products. These prices also induced orange and lemon tree planting in Florida, Louisiana and California. "The boom in oranges," said Mr. Contencin, "resulted in much wild speculation in Florida, and many thousands of trees were set out in soil not suitable, and of course they will not bear."

"The capacity of Americans for consuming oranges and lemons seems to be unlimited," said one of the leading importers of these fruits to the reporter. "The oranges and lemons produced in Florida and California, and even the West Indies, do not as yet begin to satisfy the demand. The main supply comes from the Mediterranean, and is brought by steamer to this city, Boston, Philadelphia and New Orleans. The fruit comes from the ports of Palermo and Messina, on the Island of Sicily, and Sorrento, Catania and Naples, in Italy. There are over 100 steamers now engaged in the traffic, and each one carries on an average of 20,000 boxes each trip. The regular lines of steamers are specially constructed so that the cargo is well ventilated, but the tramp steamers have not these provisions, and occasionally a whole cargo arrives in such condition that it is a practical loss. The shippers are almost entirely Italians, and their shrewdness is shown by their sending their sons over here a few

years ago to take clerkships in commission-houses and learn the business. The sons are now in business for themselves, and the green-fruit trade is gradually but surely being monopolized by Italians. During the busy season there is usually a steamer arriving every day, and some days two or three of them. The fruit arrives every month in the year, the smallest quantity during the winter months and the largest in the early summer. In one month last summer the receipts were 500,000 boxes of oranges and lemons, and the total receipts this year will reach 2,250,000 boxes at this port alone, and the other ports will take 1,000,000 more."

"How is such a quantity of perishable fruit sold?"

"By auction. That is the only way. When a steamer leaves the other side the shippers send by cable the marks and number of boxes in each lot to the commission-houses, who are the consignees here. A catalogue is made out in advance, and when the steamer arrives the sale is announced. Skilled longshoremen unload the fruit and pile it in separate tiers of each line or mark. Several boxes of each line are opened for inspection, and the jobbers arrive, examine it thoroughly and note the condition and quality of the fruit on the margin of the catalogues for reference at the sale."

A red flag hanging in front of a large building in Broad street indicates that a sale is taking place. A fruit auction brings together a remarkable gathering of men. On an inclosed platform is the auctioneer and half a dozen clerks. Throughout the room are 300 buyers. They are brokers who buy for out-of-town purchasers, jobbers who buy for the city trade and for shipping to interior points, and peddlers who sell the fruit in the streets. By the side of men whose checks for \$100,000 are good are men who carry their whole capital in their pockets and are obliged to pay for the fruit before delivery.

The sale goes off with lightning rapidity. The auctioneer, with a voice in moments of excitement like a foghorn, and at other times as mild as that of a child, reads his customers like a book. He works them up to the highest point, and knows the instant that they have done. He sells 15,000 boxes an hour, and it is all the buyers and the half-dozen clerks can do to follow him. The auction business has outgrown the present facilities, and a fine new building is now being constructed. It occupies two lots, fronting on State and Bridge streets, and will be finished in November.

After the sale the buyers send nearly 250 trucks to the wharf, and haul away their fruit. Within two days of the arrival of a steamer the fruit is generally unloaded, sold and removed. Sometimes the receivers hold the vessel for a day or two waiting for better prices, but this is very risky, owing to the perishable nature of the fruit, and the fact that the brokers know the reason of the delay, and will not be influenced by it.

THE BOTANIST.

Kern County Plants and Trees.

The following schedule of indigenous plants will contain only those that are most common, or such as have at least striking and peculiar parts. It will be, in giving the useful, cultivated varieties, the aim to indicate the character of the region in an agricultural view.

Aside from the large cultivation of wheat for home use and exportation, that of corn to a limited extent and that of oats and barley chiefly for a stock feed; few others of the small grains are grown at all. All the grains are cut at an immature stage for hay, as wheat, barley, oats (wild and tame). For the same purpose or for grazing there are, for the most part, the clovers and numerous other native grasses.

The native clovers found in this county and the adjacent region are above 20 in number, and alone form an interesting and extensive botanical study. There may be added to these general classes sweet clover, burr clover, the poas, cheat vetch, blue joint, alfilerilla, several varieties of setaria, agrostis and numerous other grasses.

This county is not rich in the abundance or quality of the native forest trees. In making this list it has been a question sometimes where to draw the line between trees and shrubs. Some of what might be called shrubs in less favored climates grow to trees here. We will only give those most commonly seen in this and adjoining counties.

The white oak differs from the Eastern white oak; grows on open spaces, timber useful; is a large tree, and has a long acorn.

The liveoak is evergreen; low and spreading like an apple tree; timber hard, crooked in grain and valuable in ship-building. Acorns small.

Canyon liveoak is a valuable tree, with tough fibred growth.

The chestnut oak furnishes tanbark of the best quality. It is scarce; an evergreen.

Fulvous oak is a newly discovered species; a pretty little tree with wide-spreading top.

California chestnut, generally shrubby, but sometimes grows 50 feet high.

The western chinquapin is an evergreen shrub; grows in the Sierra Nevadas. Bears an edible fruit,

Hazelnut, eight to ten feet high, bears an abundance of nuts.

Buckeye, horse chestnut, a handsome and ornamental tree.

Big-leaved maple, 40 to 90 feet high; wood soft but valuable.

Box elder, 50 to 60 feet high.

Madrono; handsome evergreen; 50 feet high; wood hard and valuable.

Manzanita, 6 to 12 feet high; berries abundant; edible; wood very hard and red; grows very unshapely.

Azalea; 10 to 15 feet high, flowering all the year, giving fragrance and beauty to the woods; a species of calycanthus, without fragrance, is found in the canyons, and the "California lilac," of which there are many species, is a beautiful evergreen shrub, growing about ten feet high, with clusters of lilac-like flowers, of various shades of blue, violet and red, according to the species. The tree produces a multitude of little twigs, and a dense foliage, and may be trimmed into almost any shape.

Elder grows to be quite a tree, 10 to 30 feet high, and often a foot or two in diameter. Another variety is a shrub four to eight feet high, but growing with the habit of a tree, on dry hills, with pines and manzanitas. Still another grows from eight to ten feet high.

Of the composite, only one or two assume anything like the proportions of a tree.

Sycamore, 50 to 100 feet high; wood valuable; receives a good polish.

Wild currant, 6 to 10 feet high; has beautiful fuchsia-like flowers; another variety grows to be a small tree, 12 feet high; beautiful flowers.

Dogwood, 20 feet high; resembles the flowering dogwood of the East, but is more showy. It is quite common on banks of mountain streams. Another variety grows 10 or 15 feet high.

Alder buckthorn, 10 to 20 feet high, forming thickets, wood soft, like alder. The fruit contains a seed like the coffee-grain, hence is called wild coffee, and the seeds have been used as coffee, but the plant is quite different from the coffee plant.

California lilac, 6 to 18 feet high; borders of forest; wood hard; makes good fuel; flowers fragrant and handsome. Another variety resembles this, but is not quite as large; 6 to 10 feet high; still another variety is hardly a tree, but a large straggling shrub.

Tree lupine, 4 to 10 feet high, with a variety of fragrant flowers.

Wild cherry; an evergreen; 15 to 40 feet high.

Oso berry, 2 to 15 feet high.

Photinia, 4 to 20 feet high, with beautiful red berries, ripening in December.

Chaparral, 8 to 20 feet high; grows in dense masses on the sides of mountains.

Bigelow's willow, 10 to 15 feet high; common.

Smooth willow, a handsome tree, especially when in bloom; 20 to 40 feet high.

Sitka willow has a beautiful silky leaf underneath; 10 to 15 feet high. Another variety grows from 8 to 20 feet high.

Cottonwood, large trees along the creeks; probably two or three species, as yet not fully decided. Among them is the Balm of Gilead.

Poison oak, from a small shrub to quite a large tree. A great pest on account of its poisonous qualities.

Bay tree or mountain laurel; valuable for cabinet and furniture work; beautiful for inside finish of houses; 30 to 100 feet high.

Another variety is occasionally six inches in diameter, and could be classed with trees.

Leatherwood, a bush 6 to 10 feet in height.

Bayberry or wax myrtle, 15 to 20 feet high; evergreen.

Yellow pine, valuable timber, reaching 100 feet in height.

Sugar pine, the most valuable of all the pine kind.

Nutmeg tree, a valuable timber; nuts edible; grows 80 feet high.

White cedar, grows 100 feet high.

Knotty pine; a handsome little tree, 40 to 60 feet high.

Douglas spruce, next to the sugar pine in size and value for lumber.

Western yellow pine, quite common; large size.

Nut pine, the resin has excellent medical qualities.

Kern county has no indigenous elms, hickory, beech, birch, persimmon, mulberry, sassafras, locust, catalpa nor magnolia trees. We have willows and cottonwood, which differ little in appearance from those of the Mississippi valley.

There are wild grapes, blackberries, gooseberries, huckleberries, raspberries, salmonberries and strawberries. The raspberry grows wild, but never in the great quantities in which the blackberry was found. The latter, for a great many years, was quite a source of revenue to the Indian squaws, who gathered and sold them to the whites. There are a few left yet, but the great bulk of the vines have had to give place to products of greater value.

Liliorhiza lanceolata is among the earliest spring flowers. Has a rather unpleasant odor.

There is a wild hemp growing upon the low lands, from which the Indians used to make fish nets and rope.—*Bakersfield Gazette*.

RASPING THE HOOFF.—Says an experienced blacksmith: "More horses' feet are ruined by rasping the hoof than by any other cause."

This outside coating is impervious to water and does not evaporate. When broken into by rasping, the moisture of the foot evaporates, leaving the hoofs dry and brittle.

THE DAIRY.

Cows Slipping Their Calves.

This is one of the most serious of dairy ills, and it has been a problem in dairy circles for a generation or longer. Investigations held by State authority in New York some years ago only yielded negative results. We find floating in our exchanges, without proper indication of its source, a report of French investigations which will be read with interest, and, if true, will, no doubt, come forward ere long in more authoritative form. The account is, that for the past two years the French Government has employed one of its most eminent pathologists, Prof. Nocard, in a series of exhaustive investigations on this disease.

The following is a summary of conclusions concerning his investigations:

M. Nocard asks these questions: 1. Is it a disease of a pregnant cow? 2. Is it a local affection of the genital organs of the mother? 3. Is it a disease of the fetus or of the envelopes which envelop it?

The first hypothesis, he says, must be discarded. The condition of the cow is not affected. She preserves her health; her urine, her milk remain normal, and a post-mortem examination discovers no injury whatever. The second hypothesis deserves more attention, and in dealing with it, M. Nocard inscribes upon the head of his program:

1st. The post-mortem examination of cows soon about to abort.

2d. The post-mortem examination of cows upon the point of aborting.

3d. The post-mortem examination of cows having aborted the previous year, and not having since been impregnated.

The following are some of the experiments, as compiled by a writer. A Nivernaise cow, aged 2½, gave premature birth to a fine calf of about five months. Her health was good, but she was killed the same day at Nevers. Some of her blood, milk, and urine was saved, and the viscera was found normal. An incision in the uterus discovered some flakes of yellow muco-purulent matter. Cotyledons adhered to the placenta; around some pedicles was yellowish pus-like matter, similar to that which drains from the vagina after abortion. By pressure a few purulent drops also drained from the cotyledon, and by scraping the part a milky-like juice was seen. A small quantity of the milk, the blood, and the cotyledon pulp, as well as the pus-like matter, was shown in some "bouillon" or fowl and veal, and in some tubes of peptogelatin, probably after the system of M. Pasteur. The pus-like juice and the uterine mucus were examined by means of a microscope. The pus-like matter presented a large number of micrococci, together with some bacilli; in the cotyledon juice were bacilli almost to the exclusion of micrococci, while the juice obtained by scraping gave both organisms in about equal quantities. After 48 hours, the "bouillon" sown with cotyledon juice had cultivated almost a state of purity, the bacilli above mentioned. That which had received the pus produced both organisms, while the blood and milk showed no organisms at all, and the uterine mucus presented no especial alternations. A cow numbered "7" presented the same results as the cow mentioned above. No. 8 cow which had aborted many months before, and which had refused to take the male, was killed for the butcher. Her viscera and uterus were normal; a scraping of the mucus membrane of the uterus was slightly acid, and swarmed with microbes.

The uterus of aborting cows always contains micro-organisms, whereas that of a healthy beast does not contain any, nor is the uterine liquid acid. In all the cases of experiments and post-mortems greatest precaution was taken to avoid the introduction of foreign organisms or germs. M. Nocard draws the following conclusions, which a contemporary prints:

1. In aborting cows there exists, between the mucous membrane of the uterus and foetal envelopes, micro-organisms which are not found in pregnant cows which have previously borne calves, and coming from a district where abortion is unknown.

2. These micro-organisms do not appear to exercise any injurious action upon the mucous membrane of the cow during gestation or after abortion.

3. Abortion repeated in the same animal is explained, if the influence of the microbe is admitted, by its persistence in the uterine cavity until the moment when it can exercise this action upon a new fetus or upon its envelopes.

4. Consecutive sterility is also explained by the acid relation of the uterine liquid, in which the microbes perpetuate themselves, the spermatozoa not being able to preserve their vitality in acid media.

Lastly, the third hypothesis. "Does abortion result from disease of a fetus or its envelopes?" To answer this question M. Nocard made two series of post-mortem examinations. In the first series he dealt with abortive calves born "likely to live," and in the second place with those "not likely to live." In the first series the blood, spleen, kidneys, liver and lymphatic gave negative results, neither organ presenting any trace of micro-organisms. In the second series the same results were obtained with regard to the blood, bile, urine, serum, liver, etc. The digestive organs, not

having been used and not having, consequently, received any micro-organisms from the exterior, yet contained numerous microbes of various species, either in the intestinal liquid or in mucous membrane. This discovery is of considerable importance, for the digestive canal of a normal fetus which has never breathed or drunk does not show any trace of microbes at all. Their presence, then, may be considered as an incontestable sign of the epizootic nature of abortion, and it also explains the diarrhea which causes the death of calves and the rapid putrefaction of the fetus. Most breeders have noticed the strange and continued bellowing which aborted calves make before they die, and M. Roux, chief of Pasteur's laboratory, believes that he will be able to prove an analogy between this symptom and the cry of a dog affected with rabies; but to prove this it will be necessary to search for the initial cause of the microbe.

In two other experiments upon 12 and 8 calves respectively, the positive results obtained were further sustained.

POULTRY YARD.

Seasonable Hints.

Don't neglect the gravel box. Half a meal, well digested, is better than a feast without teeth.

"Kill two birds with one stone." Prune your apricot trees now, and feed the green branches to the poultry and pets.

Keep the roosting-places of the chicks clean, feed only as much soft feed or scraps as they will eat up clean. Keep the drinking vessels filled with pure water, and clean them every day, and you will not be bothered with gapes.

The heat of summer is past; the fowls have about all completed molting, and are laying. The roosts, yards, nest-boxes, and, in fact, everything connected with the poultry yards should have a thorough overhauling before the heavy winds set in. Brush crude petroleum over roosts and into cracks where lice find refuge. Sprinkle the floors with carbolized water, clean up all filth about the yards, and fill up all holes where water may stand, so as to thoroughly drain the yards.

Early hatched pullets are now laying, and will continue to shell out all winter if well managed. Remember, that pullets are still growing besides producing eggs, and require more food than old hens. Yard them separately, for if allowed to run together the old stock will become too fat or the pullets too lean.

If the cockerels are all kept in one inclosure they will grow up without becoming quarrelsome, and are altogether easier to manage. The culls may be taken out and sold or eaten, but a cockerel should never be returned to a yard after being out for even a day, as there will very likely be war in camp.

October is a good month to hatch chicks, provided that the breeding stock is in good health, and the chicks may be protected from the winter rains. If the above conditions are present, the chicks will thrive, and all culls may be sold in January at a good price. Fall hatched chicks are much to be preferred to summer hatches, as they hatch better and are much easier to care for with a little extra preparation.

Douglas' Mixture seems to stand the test of time remarkably well. One of the best breeders on this coast informs us that he knows of nothing to equal it as a tonic during the molting season. He gives it to his fowls twice or three times each week, mixed with their soft food. It is easily prepared as follows: Dissolve eight ounces of copperas in one gallon of water, and add one-half fluid ounce of sulphuric acid, keep in an earthenware or glass vessel, and use as wanted.

Alfalfa and apricot leaves make first-class green food for poultry, and, in fact, any of the domestic animals or pets. Alfalfa is cheaper and easier to raise than any "garden truck" that we know of, and is green the year round, while the apricot prunings (cut any time after the fruit is off) come at a time when other green feed is exceptionally scarce. Give them a trial and report.

Light and active hens make the best mothers, quite a number of poultry writers to the contrary notwithstanding; while sitting they are less liable to break the eggs by their weight, and after the chicks are hatched they will "rustle" around and find insect food for the brood, at the same time giving them exercise, which to all young growing things means health and growth.

Do not discard good mothers on account of their age. When you find a hen that raises you one or two fine broods in a season, no matter of what breed she is, try her another season, and if she still continues to serve you faithfully in this direction, even though she is the veriest scrub, mark her in some way and keep her on, year after year, until she either dies of old age or disgraces herself in some unpardonable manner. We have now a little hen that is a cross of a Houdan on the dung-hill fowl, then crossed again on the P. Rock. She is small in size, P. R. in color, but has the Houdan "top-knot," or crest. She is over seven years old, yet she is as spry as a pullet, and will fight any hen on the place—if not accustomed to being with them—and no hen on the place has laid any better, set any steadier, or reared a larger brood of healthy, hearty chicks than she.—*California Cackler*.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The State Grange.

(Continued from our last.)

We continue to give more of the important official reports and a condensed resume of the annual proceedings of the California State Grange held at Santa Rosa Oct. 4th to 8th.

Lecturer's Report.

When Sir Isaac Newton, the astronomer, scholar and philosopher, was about to wind up his affairs on earth, he said to those around him, "I know not what the world may think of my labors, but to myself it seems that I have been but a child playing on the seashore, now finding one pebble more polished and now some shell more agreeably variegated than another, while the immense ocean of truth extended itself unexplored before me."

Newton is dead, but the majestic orbs of heaven still move on in obedience to the great law which he discovered in the falling of an apple.

If a man of Newton's research, culture and application should give voice to such thoughts, what shall we say of ourselves who have scarcely made an attempt to add to the world's storehouse of knowledge.

There are persons who ridicule all superficial knowledge, and think that nothing is worth having unless it is profound and goes to the bottom or roots of all research. There is a saying that it is better to know something of everything than everything of something.

I believe it is generally conceded that this age is more given to specialties than former ones, and it more particularly applies to mechanics and agriculture. A diversity of crops on one farm in this country does not seem to be tolerated.

The tendency seems to be, large holdings, large crops and large profits.

If there is any one person that needs a liberal education, it is the farmer. He should know something of everything. In his calling and contact with the world there arises many a problem which requires skill and tact to solve.

He should be somewhat of a botanist, so that when he passes through his fields he may distinguish his friends from his enemies.

He should know something of chemistry that he may know the kind of crops or trees adapted to various soils.

He should have a smattering of veterinary science that he may relieve the distress of his animals and provide for their comfort.

He should understand physiology and hygiene that he may know what the human frame will endure and administer a preventive as well as cure.

In fact, a progressive farmer should be a man of great resources. Chemical changes are going on about him all the time, some of which he can control and guide.

A farmer that is interested in his calling has but a few idle moments. He should trace things from cause to effect and from effect to cause.

When a person follows some of these suggestions that I have enumerated, if he is not already a member, he can consider he is a proper person to make application to become a member of our Order.

I have never heard a good reason given yet why every farmer should not become a live member of the Order. If a person wishes to become a progressive and intelligent farmer, and be numbered among the prominent persons of the land, he must put forth personal effort.

It is very seldom the wealthy divide with the poor or the intelligent with the ignorant. If we wish to occupy front seats we must procure them by early application.

When these reasons seem so plain to me why every farmer should join the Grange, and still that apathy exists, it leads me to ask why are these things so?

Have the members and officers of the Subordinate and State Granges discharged their duties, and made such progress, by precept and example, that others, seeing our good works, shall be desirous of joining us?

I can say for one that I have put forth some effort, but have come far short of accomplishing my purpose.

I fully believe that from my close intimacy with some of the members of the Order, there are brothers and sisters that are fully as devoted to this Order as they are to the Christian religion, and will make as much sacrifice for its success.

If each member will do that, no Order that ever existed can surpass it for numbers and usefulness.

No person that has watched the rise and progress of the Grange, and has made himself familiar with our Declaration of Purposes, can say but what it is one of the grandest Orders ever instituted by the human mind. How can we sit idle and dream our lives away when such opportunities present themselves?

Have we no hope or care for the future generations?

Shall we not gladly give them the benefits of our experience that they may take up the good fight that we have begun, and carry it on and on to a successful future?

Who knows but that after we have passed away that we may be permitted to cast our spiritual eyes on the affairs of this world and mark the progress of coming generations. We may be transformed or transmuted to unknown forms of destiny.

The poet says there is no death:

There is no death; the stars go down to shine upon a brighter shore;
And in heaven's bright, jeweled crown they shine forevermore.

There is no death; the dust we tread shall change beneath the summer showers
To golden grain or mellow fruit or rainbow-tinted flowers.

There is no death; the leaves shall fall, the flowers shall fade and pass away;
They only wait, through wintry hours, the coming of the May.

Do not remain idle or passive; there is no eloquence in either. Let your silver tones ring out in the valley and the hills. Wave your mighty arms

aloft, and speak out in thunder tones to the dormant and listless.

As my official term is about to close, I would bespeak for my successor that same kindness that has ever characterized the members toward me. Ever thoughtful of the shortcomings of humanity, the members have always been ready to make proper allowance in my case.

I had the pleasure last spring of going down to the southern part of the State with State Deputy Overhiser, and assisting at the reorganizing and instituting of several Granges.

The county picnics are growing into one of the most pleasant and conspicuous features of our Order, and if they continue to increase at the same ratio for the next few years, they will develop into a State picnic or reunion only second to some of the large gatherings of a similar nature on the other side of the Mississippi.

I had the pleasure of attending three picnics last spring in three successive days. The one at Beach's Grove, below Sacramento, was attended by all classes and professions. The amusements were games and sociability, and were without literary exercises. The attendance was immense, and the expressions were, whence came so many teams?

The gathering at Clements, San Joaquin Co., was a grand affair. It took place in a grove of oaks, where ample preparations were made, with seats and tables, an elevated platform for dancing and literary exercises. Several of the State officers were there by request, and in giving vent to their eloquence, it reminded one of a windmill oration.

The next gathering was at Danville, Contra Costa county, and it was a success in every particular. Their hall was most beautifully and tastefully decorated by the fair hands that seemed especially created to handle these delicate creations, that were "born to blush unseen, and waste their fragrance on the desert air." Literary exercises were the order of the day. The State officials had become so enthused they could not be shaken off, and the consequence was a second edition or repetition of the scene at Clements the day before.

I believe a great deal of good can be accomplished by a live Deputy and Lecturer. Persons should be selected for their peculiar fitness for these positions. A fund should be provided, so that they may go into the fields where not especially invited and make an aggressive assault upon the community where Granges do not exist.

And now, fellow-Patrons, I only propose to separate from you in an official capacity. The rewards of a Patron seem too great in the contemplation of a movement like this. To retrograde would seem suicidal and cowardly; to remain idle and motionless, would indicate vacillation and failure; to wrap the buoyant hopes of youth about us and go onward and upward, would be the greatest blessing to the struggling farmer, and will be compounding in benefits to the future generations.

When the sun grows dim above me, and the long, dark rays cast their flickering glances about me; when hope and joy, once the cynosure of all young hearts, has fled, and gives way to more substantial things; when these limbs shall totter with age, and rely upon a staff for support; when my eyes shall fail to behold the beauties about me; when my form shall be bent with the weight of years and my voice grows faint and feeble, may my mind be clear to the last moment, and, looking at the retrospect of my life, may I be able to exclaim, if only in whispering tones, the delights and honors that I have received in an official capacity in the State Grange.

DANIEL FLINT, State Lecturer.

Overseer's Report.

Worthy Master, Officers and Members of California State Grange:—At the last session of our State Grange, I was called on for a report, as Overseer. My impression had been that such a report was not expected, consequently I was unprepared. The Worthy Master assured me I was wrong. I have since examined all proceedings of the State and National Granges within my reach, and thus far have been unable to find an Overseer's report.

Our Ritual thus defines the duties of this office: "The Overseer is to see that the orders of the Master are transmitted to the laborers, and in his absence take his place." The latter there has been no occasion for doing, as the Master has always been prompt and in his place. And not receiving any orders as Overseer, from the Master, during the interval between the last and present meetings of this Grange, I have no Overseer's report to make at this time, but will give you a condensed report of my work as Agent and Collector of the Patron; also as General Deputy of the State Grange, with power to organize new Granges and reorganize dormant ones.

Through the solicitation of Brothers I. C. Siele, Logan and Chester, I was induced to take the field in the interest of the Patron, and at their suggestion the Worthy Master appointed me General Deputy of the State Grange of California.

About the first of last February I commenced my labors. Since that time I have devoted 41 days to the work, and traveled over 2000 miles, organized three new Granges and reorganized one dormant Grange and set them to work, besides visiting many others in different parts of the State. I have collected on back subscriptions, due the Patron, \$147, and have obtained 30 new subscribers, one taking five copies.

I have found many persons receiving the Patron who informed me they had not subscribed for it and knew not why it was sent them, but supposed it was by some friend. Some few paid, but most of them ordered it stopped and refused to pay. I found another class of subscribers in arrears, who informed me they neglected to pay, as no bill had been sent nor agent called on them for money, many living remote from any place where a postal or express money order could be obtained.

I found some, who go to San Francisco occasionally, who tell me they intend to call at the office when in the city, but invariably they forget it. I am fully satisfied that we cannot make our organ a success, nor increase our membership in the Order, without Lecturers being put in the field and each of them empowered to organize new Granges and reorganize dormant ones.

There should also be a number of agents in the field to collect for the Patron and solicit new subscribers and advertisements. Without something of this kind being done I fear we will not succeed with our organ, and without it our Grange will be like a ship at sea without a rudder.

I will also state that I have been assisted in my

work by the Worthy Lecturer, Brother Flint, and also by Past Lecturer Pilkington, and by many others.

I have been kindly received by the members of all the Granges I have visited, for which I tender my sincere thanks. I have found many members of dormant Granges who seem to be anxious to again start their Granges, and I have no doubt that nearly all would reorganize if the proper course is pursued by this Grange. I believe that 50 Granges can be added to our list between this and the next annual meeting, if sufficient funds are raised to meet contingent expenses. To do this I am satisfied that the dues of the State Grange will have to be increased, as I am fully convinced that those who have been donating from their private means have become discouraged, and will cease to do so any more.

In justice to our Worthy Brothers, Steele, Logan and Chester, I will state that they each placed in the Grangers' Bank \$100 to my credit, to be drawn for expenses in this work.

Respectfully submitted,

WM. L. OVERHISER,
Deputy California State Grange.

Miscellaneous Mention.

Brother Past Master Coulter will accept our acknowledgments for a pleasant ride about the handsome suburbs of Santa Rosa. It was an additional enjoyment to be accompanied by Brother and Sister Frisbie of Yuba City. The occasion was also a pleasing reminder of a similar ride tendered Brother Webster and our "better halves" by Brother and Sister Frisbie, while attending the eighth annual session in 1880. Santa Rosa and its environments have wonderfully advanced within that time, but the hearty greetings and faithful friendship of the Patrons of Husbandry remain as kind and true as of yore. It was also a great pleasure to the writer, (now the only member of the State Grange who was present at its organization in Napa in 1873, and has since attended every session of the State Grange) to meet Bro. Nelson Carr and wife and Brother Geo. Davis at Santa Rosa, who were the only ones found present at Santa Rosa in 1887 that were charter members of the State Grange.

One of the pleasing scenes notable in the State Grange was the reading of the celebrated poem by Bryant, "The Flood of Years," by Mrs. Dr. Strentzel, one of the oldest and most faithful of California Patrons. She was thus the first to commence the literary entertainment of the session, and her reading was well received.

No fraternal body could be more justly proud of any members or officers than was the State Grange of their talented and graceful Pomona, Mrs. A. P. Roache. No Grange officer ever performed her duties in a more praiseworthy manner than has Sister Roache during the two sessions of her official career. She will long be remembered for the kindly and graceful manner in which she has presided in her leading and important position.

We shall continue our mention of State Grange proceedings in future numbers, and hope yet to hear from more correspondents who were present from different sections of the State.

(To be continued.)

The Pomona Feast, P. of H.

On the evening of the 4th day of the late session the fifth degree was conferred on a class of noble-looking Patrons seeking knowledge found only in Pomona's court.

The Feast of Pomona is always a happy and enjoyable feature of the fifth degree. It is a part that each member attending the State Grange usually has the privilege of inviting a friend outside our mystic circle to come and see some of the enjoyable things of the Order of Patrons of Husbandry.

It is really a great undertaking to describe the hall with its flood of decorations. A hasty glance through this large hall showed six tables at least 100 feet in length that were simply loaded with the fat of the land. The artistic taste displayed in the arrangement was elegant. The mammoth fruit in great abundance, so daintily arranged with a profusion of lovely flowers and handsomely decorated cakes nearly covering the tablecloths, which were of web flapping, which was very appropriate and effective, making the whole a wonder to behold. So great was the handiwork of the committee appointed by the Pomona Grange of Sonoma county to take charge that they must have been well satisfied with their toilsome efforts. When the secret portion of this evening's work was completed, and arrangements were made for the march from the hall of work to the hall of feasting, a splendid brass band was outside waiting to escort the Grange to the feast. The Patrons of California have great reason and no doubt congratulate the Patrons of Sonoma county on the grand success of entertaining the State Grange. On the 5th day the officers were installed and the Grange closed. Surely this was one of the most pleasant, profitable and harmonious sessions of the State Grange it has been my pleasure to attend. E. S. J.

Santa Rosa, Oct. 9, 1887.

BEGINNING OF STATE GRANGES.—Dr. Trimble, Secretary of the National Grange, has gleaned from the records of his office and printed in tabular form a number of facts relative to the organizing of State Granges. The names of the several States, dates of organization and names of first Masters and Secretaries are embraced in this document, which will interest many members of the Order.

Attend to the Matter.

As noticed in another local in this paper, samples of all agricultural products are solicited to be sent to the National Grange. The exhibit made last year through the efforts of Past Master Wm. Johnston and wife, although small, created a great deal of interest in the National Grange. Much correspondence was elicited from all parts of the U. S., in regard to the opportunities for purchasing land and settling in California, as a result of this initial exhibit of 1886. We recommend that each Grange discuss this subject at its next meeting. We also advise every locality to make up choice exhibit, and by subscription or otherwise—if no other means of transportation offers—see that it is properly packed and expressed to the National Grange in good season. No one wishes California, which last year took the lead in this matter, to be found wanting at this, the very next session of the National Grange.

Worthy Master Overhiser, one of our first pioneer farmers, is an earnest and active worker in all such official duties and undertakings, and will see that each exhibit is properly cared for and receives the attention its merits claim; also that California does not suffer for want of a proper setting forth by his voice.

Monument to Dr. Chandler.

A handsome monument has lately been erected in Yuba City cemetery over the grave of the late Dr. S. R. Chandler. It is described as being of marble, square, but tapering toward the top, and surrounded by a fruit-shaped ball. As the stem widens downward there are a sheaf of wheat and a sickle cut in the marble. Then follow the words:

Native of Ohio. S. R. Chandler. Died July 17, 1886, Aged 72 Years.

The shaft is about two feet square at its base, and rests on a hewn granite foundation about three feet square. The whole structure is about ten feet in height from the ground.

The Sutter Farmer says that the work, which was done at the instance of R. C. Kells, is both artistic and substantial, and adds: "Enduring as is this monument, the good accomplished by the Doctor to Sutter county in particular and to the whole State generally in demonstrating the possibilities of our soil and climate as regards agriculture and horticulture, will live beyond marble and granite. He is eminently worthy of such a monument, and it is gratifying to know that his worth has been thus commemorated."

Degree of Ceres.

The following official notice has been issued by the annalist of the National Grange, P. of H.:
514 F ST., WASHINGTON, D. C., Oct. 6, 1887.
[OFFICIAL.]

The Assembly of the Degree of Ceres will be held in Lansing, Michigan, during the Session of the National Grange.

Candidates for this, the Seventh Degree, are hereby notified to file their applications with the Annalist. The application should have, in full, the name of the applicant, the names of the town, county, and State in which the candidate now resides, and the time when and place where the applicant received the Sixth (6th) Degree. The application must be accompanied by the fee of \$2.

By order of the Worthy Priest Archon.

JOHN TRIMBLE, Annalist.

Celebrate the 4th of December.

The members of Temescal Grange who attended the State Grange reported and discussed the action of the State Grange at the meeting on Saturday last. The manner in which the Woman Suffrage question was finally carried in the State Grange seemed to meet with universal favor. A good deal of interest was manifested in debating other subjects relating to the session. On motion, Bro. Renwick and wife and Sister Dewey were appointed a committee to confer with Eden Grange in regard to holding a joint meeting commemorative of the birthday of the Order of P. of H. on the 4th of December next. A good attendance was present. The next meeting will occur on Saturday evening, Oct. 22d, when work in the second degree is expected.

THE GRANGERS' ASSOCIATION, whose warehouses are located below Port Costa, appears to be doing a large and thriving business. The Martinez Item says that they have this season built an extension to their wharves and warehouses of 625 feet in length by 50 feet in width. Now they are building an extension of 300 feet in length by 200 in width, which will make the whole length 935 feet, with an average width of 200 feet, with a storage capacity of all of 450,000 tons. A railroad track 1000 feet in length passes on the inside of the warerooms, while on the outside or water front one of 1500 feet is being built. One ship is being loaded at present, but from the amount of grain in store it will be lively there soon. At present there are about 50 men permanently employed, with an extra 50 loading ships.

As the Government lights our coast for the protection of mariners and the benefit of commerce, so it should give to the tillers of the soil the lights of practical science and experience.—President Garfield.

Grange Work and Progress.

(Prepared Weekly by M. WHITEHEAD, National Lecturer.)

From different sections of the country we occasionally hear of new organizations for farmers. Sometimes they take one form and name, then another. They flourish for a time, then pass away. They do not seem to have depth of root; the tie that binds is too loose; they accomplish local good—sometimes a State is benefited; but the great agricultural population of the nation, as a whole, is not reached by them. The Grange has done all that can possibly be done in any other or new organization, and it has accomplished more than all others put together through its action upon matters of national importance. It has stood the test of time, has lived, and flourishes years after others that started later have passed away. Americans—American farmers are no exception to the rule—seem to like change; they leave the old for the new. But if we farmers are always the "rolling stone," always changing base, always experimenting, we will never be completely organized, never all ready to act together, and will never accomplish those things that can only be brought about by a complete organization of our class, local, State and National. This organization we believe is best found in the Grange, in proof of which we point to its age, its achievements and its present growth and prosperity.

That farmers are generally feeling the necessity of an organization, and are ready for it, is proven by the various forms of united effort that are springing up here and there. It is for Patrons to see to it that the claims of the Grange, above others, are kept before their neighbors. A farmers' club is far better than no organization, but what unity of action exists between the farmers' clubs of even one State? How can they all act together upon some important measure, for or against farmers, that may be before Congress? A Grange can do everything that can be done by a farmers' club in local matters; and, besides, can handle State and National questions of importance and act on them. Members of the Grange should be very favorable and friendly to farmers' clubs and other local societies. They are all preparing the farmer for the Grange. They are the stepping-stones to the best and most successful farmers' organization the world has ever known.

Concentration is the secret of strength in politics, in war, in trade; in short, in all management of human affairs.—*Emerson.*

That those engaged in business, trades and in all professions and callings believe this, is proven by the organizations they all have and through which they concentrate their efforts. Farmers have been slow to see the power of concentration in their own behalf, but they are uniting now better than ever before. The Grange welcomes them and will help them.

I noticed not long since, some one writing about the Grange, said that it had "passed its mushroom days." So we think, and we are warranted in this thought by the sure and steady progress of the Order for the last three years, and the increased and increasing growth during the present year shows very clearly that the more the farmers think and read about it, and the more they see and know of it, and the better they understand its principles and purposes, the more readily they lay aside their prejudices against it, and the more thoroughly are they convinced that it is the greatest of the farmers' organizations; greatest in age, greatest in experience, greatest in influence, greatest in the perfectness of its system of work, and greatest numerically, and these facts account for the thousands of our best educated, best informed men and women turning into the Grange as the farmer's most reliable friend.—*W. L. Richardson.*

The brightest jewel in its crown is what the Order has done for women.

It is the first secret Order that ever admitted women to a full and free participation in its secrets, its benefits, and its honors.

In former times, and even now, where the benign influence of the Grange has not been felt, the lot of the wife and daughter of the farmer is more deplorable than that of the farmer and his son. While the farmer occasionally met his fellows at the store or the mill, or spent a social day with them at court or election, the poor wife was left at home to perform the monotonous drudgery of her daily rounds, with little of joy in the present or hope in the future.

I refrain from drawing the picture more in detail—many of you know that it could not be exaggerated.

You know that the Grange came to woman as a savior, and that its enunciation was to her full of "glad tidings of great joy." To Patrons I need not enlarge upon the advantages and pleasures that have come to our sisters through the Grange. I saw the first few sisters take their seats in the National Grange abashed by the novelty of their position. I have seen them subsequently participating in the important work of the sessions with as intelligent a comprehension of their duties, as prompt, careful and conscientious in the discharge thereof, as the most zealous of their brothers. They have always been among the most faithful and conservative members of the Order. They, too, have been educated in the school of the Grange. The future hopes of the Order rest upon the

present farmers' sons and daughters. From them must its ranks be recruited, and through them must it be maintained and made *esto perpetua*. In the words of the late D. Wyatt Aiken: "The Grange did not ask the farmer to send his wife and daughter to the Grange, but invited, yes, urged him to bring them."—*John Trimble, Sec. National Grange.*

The rising tide of prosperity has brought another new Grange paper, the *Missouri Patron*. It starts off well and is full of the true spirit of fraternity. It says: "The interests of the farmers of Maine and Pennsylvania are identical with those of the farmers of Missouri and Texas. Bad laws executed by bad men, rapacious railway and other monopolies, and oppressive business system, are alike hurtful to the farmers of all sections, and their interests are to be benefited alike by the election of honest and capable men to office, the overthrow of monopolies, the substitution of the intricate and oppressive competitive business system by the simple, fair and efficient co-operative plan, and above all by the general spread of Grange light. Our political, business and industrial systems are so broad and diversified that no class of our people can be materially benefited by local or State organizations only, and no class of any importance would restrict itself to such organizations. The merchants, the railway monopolists, the liquor dealers, all have their National organizations, and it is these that enable them to concentrate their strength and move with resistless power for the accomplishment of their objects. The farmers, of all classes, need a National organization, and the Grange, wisely and patriotically used, comes up fully to the demands of such an organization."

Progress.

The Patrons of Rhode Island are active, energetic members of the Order, and show by their deeds that they believe they have a good thing in the Grange, and want their fellow-farmers all over the State to share with them in the benefits of the Order.

Osborn's Corners Grange, No. 1079, Ohio, has a new hall ready for dedication.

Henry Whitener Grange, No. 260, North Carolina, has been reorganized, and two others in the same county have taken up the work again within a week.

Deputy Earl Oooley has instituted East Central Pomona Grange, Connecticut, with 144 charter members. Twelve subordinate Granges are included.

The display of stock of all kinds at the State Grange Fair, held at Tilton, New Hampshire, was the largest and finest ever shown in the State.

SAN JOSE GRANGE.—This Grange held an animated meeting on Saturday last. The transactions of the State Grange session were discussed with much interest, and for the most part, with a good deal of satisfaction. This progressive and leading Grange is striving to do more effective work, and after consultation, determined to change the hour of meeting from 10 A. M. to 1:30 P. M. It is proposed to open promptly at the newly-appointed hour and transact business without any unnecessary loss of time, and adjourn in order that the members may reach their homes in good season. We presume this will make the meetings brisk, more enjoyable, and more largely attended than under the old arrangement. We should like to hear from Patrons whose Granges meet in the forenoon, and those who meet in the afternoon, and have them discuss in our columns the advantages claimed for their respective hours of meeting.

There is a field for five or six more Granges in Santa Clara county, and we hope some action will be taken to cultivate the field by San Jose Grange, and that ere long some of the State officials, or deputies, will be called for to assist in the work in that rich agricultural section of California.

THE BOYS AND THE FARM.—Some of our agricultural papers are again discussing the old questions that are so often talked over in farmers' homes. "How to keep the boys on the farm," "Why do the boys leave the farm?" etc. Some recommend one thing and some another as a remedy for the exodus of the brightest and best. Some feel sure that less work and more play will do it; others that a better education will make the farm more attractive; others claim that education takes them from the farm. The true solution of the problem is to make the farm pay. Bright American boys are full of enterprise; it is in the very air they breathe; they want an occupation that will bring them dollars and cents, a home, home comforts, all the necessities and some of the luxuries of life as well. The facts prove, the census proves, that agriculture of late years does not pay anything like other callings, in proportion to the labor performed. The farm and the farmer are bearing unjust and unequal burdens; the business is discriminated against in taxes, in transportation and in laws. The boys see and feel all this; the more they are educated the more plainly they see it and understand it; and they act accordingly. Even rats, it is said, will desert a sinking ship. The Grange proposes to secure more equal laws, more equal burdens, and, therefore, to make the farm pay better. Then the question of the boys leaving the farm will be solved.—*Mortimer Whitehead.*

The Debris Wrong.

The Little Giant has not given up his harmful business, and the farmers of the Sacramento valley have had to choose between succumbing to his inroads of devastation, and pushing on to utter victory their righteous war against his pernicious industry. They wisely choose the latter, and their doings in Yuba county, since the 1st of the current month, go to show their earnestness.

On the 5th instant, the Board of Supervisors at Marysville audited claims against the county for her half of expenses incurred in anti-debris litigation, to the amount of \$11,000.

On the 10th the directors of the Anti-Debris Association adopted the following resolution, introduced by E. S. Woodruff, the famous champion of the valley interests:

Resolved, That the president of the Anti-Debris Association is hereby requested to extend to Senators Stanford and Hearst and the representatives in the lower house of Congress an invitation on behalf of this association to visit Marysville and see for themselves the destruction caused by hydraulic mining, as shown in the condition of the rivers at present.

On the 11th the supervisors of Yuba county adopted the following preamble and resolution:

WHEREAS, It is manifest to this Board that injunctions issued by the courts in the cases in which the county of Yuba is a party in name or interest, prohibiting the discharge into the channels of the Yuba and Bear rivers of tailings and debris from the mines operated by the hydraulic process, are being willfully and unlawfully disregarded and violated whenever there is a prospect of immunity from detection and conviction, notwithstanding the efforts made and expenses incurred by this board to prevent such unlawful acts. Now, therefore, to the end that the laws may be enforced and the decrees of the court obeyed, it is by this board

Resolved, That a reward of \$500 is hereby ordered and decreed to be paid to any person or persons furnishing, in open court, legal evidence sufficient to convict any of the following named mining and water companies: James Arnett mine at Brandy City; Cleveland Sierra Mining Co. at Scales' Diggings; Fairplay at Scales; Pioneer Gold Mining Co., Graves Flat; Eureka Lake and Yuba Canal Co.; Liberty Hill Consolidated Mining and Water Co.; Omega Gold Mining and Ditch Co.; North Bloomfield Gold Mining Co.; Mining property belonging to the estate of John Hickey; Sierra Union Water and Mining Co., Slate creek; Kingdon mine, Poverty Hill; South Feather Water and Mining Co., and the South Yuba Water and Mining Co., of a violation of the injunctions aforesaid, such sum to become due and payable by Yuba county, upon conviction of any of the above-named companies. The person furnishing said evidence, sufficient to convict, also to furnish the necessary affidavits to commence the contempt proceedings.

This resolution to go into effect from and after the 1st day of November, 1887.

On the other hand, it would appear from information gathered by the *Bee* last week, that the hydraulic miners of the mountains, particularly in Plumas county, are making ready to work their mines next spring for all they are worth, as soon as the snow melts. They assert that they will run their monitors and turn their slickens valleyward, though they have to meet even officers of the law with rifle-bullets. Of course, such lawlessness can lead only to final defeat, but meanwhile exciting times may be looked for, if the *Bee* is not mistaken.

Exhibits for the National Grange.

Worthy Master Overhiser wishes us to state that specimens of all agricultural products suitable for exhibition at the National Grange are solicited for that purpose, the National Grange having provided space for exhibits from all parts of the Union.

Pomona and subordinate Granges, boards of trade and all firms and individuals are solicited to send on as fine and complete samples as possible, such as vegetables, nuts, dried and preserved fruits, etc., and other products of the soil. Pamphlets and other printed matter suitable for free circulation on such occasions will be received and well cared for.

Send by express, addressed W. L. Overhiser, care National Grange, Lansing, Michigan, in time to be received by the 15th of November. Give full description in letter by mail. Also be particular to give proper description and the name and address of the contributor, and *prepay* all charges.

SACRAMENTO POMONA GRANGE will hold a regular meeting Saturday, Oct. 29th, at 1 o'clock, in Grangers' hall, Tenth and K Sts. All members are requested to attend. The fifth degree will be conferred. All Patrons who have taken the fifth degree are cordially invited.

SOUTH SUTTER GRANGE will celebrate a Harvest Feast on Saturday, Oct. 22d. Yuba City Grangers are cordially invited in a communication to the secretary, and the *Farmer* urges them to go with full assurance that they will be most loyally treated. —Grange convenes at 10 A. M.

CORRECTION.—Mrs. Ashley writes that the length of the wheat-pictured harvester, described in her "Glimpses at Stockton Fair" a fortnight since, was 18 feet 10 inches, instead of only eight feet as therein stated.

THE *Merced Express* says: Coyotes are destroying numerous small swine at the ranches near the San Joaquin. Coyotes seem to increase in numbers lately, and to be posted on poison.

Green Valley, Sonoma County

EDITORS PRESS:—Farmers here will soon be ready for Thanksgiving, at least the crops will soon be all harvested. Late potatoes turn out a good crop; corn is being husked. Huntley's drier is running full blast. The driers of Harbison, Winkler, Lappum and others have quit buying fruit for the season. J. Hunt keeps his Improved Alden drier going day and night. He employs about 30 hands and has to refuse apples for a week or two at a time in order to work off the tons of apples which collect at his drier. Lots of apples are hauled from here to the driers in Santa Rosa.

Hops.

The hop crop is harvested and mostly pressed. The Purrington yard produced about 500 bales. Talmadge, Hensel and Ross have each done nearly as well. Ridenhour, Allen, Solomon, Brain and the small yards report a good crop. The price offered at present is about 13 cents. A few carloads engaged at 20 cents have been delivered, and other growers wish they had accepted a fair price when it was offered them.

Only one hophouse burnt in this valley for the season, together with the crop of about 50 acres. "Insurance, 15 cents per pound."

Hop-growers who had made contracts with Chinese got their hops all picked for about \$1.15 to \$1.30 per 100 pounds; but those who depended on their neighbors and other whites had to pay as high as two cents per pound and then leave half their hops unpicked.

When a Chinaman wants to quit, the boss simply says: "You no moh pick, me no pay," and the Mongolian picketh; but a man who would refuse to pay our wives and daughters when they want to jump a job would not be tolerated in a civilized community. White folks don't work for wages; they only work to help people along at the rate of so much per day; and if you don't treat them right they quit. "Faith, mum, and is you the woman as wanted to git a lady to hlep'er do the washin'?"

Wine.

The ruby stream is again flowing at the wineries. There is a light crop here of most varieties of grapes. Korbell & Bros., who have a 200-acre vineyard at the beginning of the redwoods, are nearly through. Marshall & Hill employ about 60 men at their winery and vineyards; the Rosebud and Hofstetter wineries are hard at it. Martin Feusier & Co. claim to buy more grapes at their Sebastopol winery this year than all the other wineries in this valley together. All our grape-growers who work up their own grapes are busy, while tons and tons of grapes are hauled to the four wineries in Santa Rosa and shipped to San Francisco. The price paid for Zinfandels is \$14 per ton, others in proportion according to quality.

Two or three years ago I. De Turk, who makes nearly a half million gallons of wine yearly at Santa Rosa, said that he could not use Green valley grapes separately, as they did not contain sugar enough. We hear from L. C. Cnopuis, who started the first winery here, that since A. D. 1881, he has had but one lot of Zinfadel grapes come in that tested as low as 23 per cent of sugar, while the average is from 24 to 27. White grapes test from 18 to 25, according to variety, while Missions in some seasons, when there is a cold fall, contain as low as 15 per cent of sugar, but the average for them is 18 to 24.

In the report of Mr. De Turk for 1887 to the Board of State Viticultural Commissioners we read: "Rather a new district had recently been developed, known as Green valley, lying as it does on the lower part of the Russian river, adjacent and among the Redwood country west of Santa Rosa, where there are some of the finest and most promising young vineyards of the State. This country bids fair to have in the near future a reputation second to none other in the country." Thanks. Mr. De Turk, here is our *IRA*.

Green Valley, Oct. 17.

The Pears Which Were Lost.

EDITORS PRESS:—In yours of October 15th inst., Mr. Allegretti is reported to have said the pears I sent him for treatment by his cold-storage process were not of marketable quality when I sent them. In that he is mistaken. They were freshly picked and sorted. Of those sent him for treatment there was not one soft or yellow pear in the whole lot. The fact of the matter, I mistrust, is this: I think he had not room to store them when I sent them, and they were permitted to remain out of storage till he could make room for them, and thus ripened under atmospheric exposure. I have handled fruit too long and too much of it not to know when it is in proper condition for shipment and marketing. If Mr. Allegretti's process is what he claims for it, there is no way to account for my pears becoming over-ripe after delivering them on the car at Haywards except that he did not do his duty by not putting them immediately in storage when received.

My experiment with his process was rather a costly one for me. The pears were a total loss to me, and for freight, storage and package I am out in money about \$90.

WM. C. BLACKWOOD.

Haywards, Oct. 18th.

Love's Sacrifice.

[Written for the RURAL PRESS by M. B. D.]

The maid who trimmed the lighthouse lamp
That beamed above the harbor bar,
To show love's ship the seething reef
Of danger 'neath its golden star;
The fishers' wives who bravely launched
Their frail boat on the stormy surge,
To save the doomed ones homeward bound,
Yet tossing o'er d'ath's cruel verge.

These have been sung upon the harps
Touched by the poet's finger-tips,
In strains melodious and rich
As ever breathed from singer's lips.
Than these heroic deeds, oh me,
Love's sacrifice can well be more;
Though treasured not as rarest gems
Within the poet's rhythmic lore.

The mother watching all day long
The mazy ways of little feet,
Who toils with tireless hands and brain
O'er tasks that never are complete;
Keeping through endless years of care
The cheerful fireside pure and blessed,
And joyfully inviting there
The weary toiler home to rest.

Oh! soft the note of lullaby,
That comes with evening's tender light,
Yet dearer is the sleepless eye,
The gentle hand, the voiceless sigh,
That watches through the lingering night
To soothe the throbbing brow of pain;
And these heroic deeds inspire
The harps of angels with the strain
That echoes from the heavenly choir.

Pluck for me, radiant muse of song,
A plume from out your purple wing,
That I may write a golden rhyme
That half portrays this glorious thing:
A woman's love, which cannot be
Compared or measured, a device
Of strange enchantment, changing earth
To border lands of Paradise.

Let Us Have Peace.

[Original.—By EDWARD BERWICK, Hon. Secretary International Arbitration and Peace Federation.]

Wars are not of divine origin. You cannot have an immutable Deity at once God of Battles and Prince of Peace. Choose you this day whom you will serve! Just so long as the origin of wars is impiously imputed to the All-Beneficent Author of Peace and Lover of Concord, just so long will war be regarded as justifiable and inevitable. History teaches us that wars arise from motives as purely personal, as miserably mean, murderous and mercenary, as those which impel ordinary individuals to transgression and crime.

Not only is the cost of war to be estimated in dollars and cents, though that is appalling enough. I trust that all hold human life and happiness in higher esteem than untold Comstock bonanzas. Think what the reputation of one eminent military commander costs the world! It is computed that to inscribe a single name—Julius Caesar—on the historic record, there were brutally sacrificed 3,000,000 human lives; 800 towns and hamlets were devoted to destruction, while the furies of flame and famine devastated half the known world. The amount of human misery and suffering represented in that short statement words fail to picture, mind to conceive.

Now, before glancing at the cash argument, I should like to combat one or two fallacies regarding the effect of war on the world's markets. I've been told that without war the world would stagnate. As though individuals stagnated when they ceased breaking each other's heads! The one nation that has stagnated since the days of Abraham is the accursed race of Ishmael, of which every man's hand is against his fellow.

If the history of the American people for the last 20 years be a history of stagnation, heaven send us a millennium of such stagnation! Rest assured the green pastures of prosperity are perennial only by the side of the still waters of Peace!

Then I've heard it said, "I want war. I'd give \$200 to see war break out in Europe to-day. It would make business brisk, and markets buoyant." Now, as a farmer, I want to see business brisk. I want markets buoyant; but I do not want a 20-per-cent inflation to-day, and a 40-per-cent depression to-morrow. That's what war would do for us. I'll tell you why: Common sense and political economy (which is merely common sense sublimed) combine to tell us that enhanced wealth and increased consumption produce buoyancy of market. Shatter a million coat and hat-wearing bipeds with your shells and torpedoes, close a million bread-eaters' mouths with your grape-shot and bullets, and what happens then to your wheat, your cotton and your wool? Is the demand likely to be greater or less? Moreover, it is productive, not destructive

energy that adds to the world's wealth. And the world's wealth is being wasted to the tune of \$900,000,000 annually in European countries alone on warlike preparations, with armies and navies, on what is ironically called a peace-footing.

Wars are unnecessary and ineffectual. A title resting on force is always liable to be annulled by force. Two hundred years ago Archbishop Fenelon wrote thus to the Duke of Burgundy: "A treaty of peace that is made from necessity, because one party is the stronger, is like that made with a robber whose pistol is at your head." No one expects such compacts to be effectual. Not only territorial wars, but religious wars, have proved utterly ineffectual. You can't reach unity through strife. Force can never persuade men; it can only make hypocrites.

In the Netherlands, under the viceroyalty of the Duke of Alva, 40,000 persons perished for their opinions at the hands of the common hangman. Myriads on myriads more were slain in siege and sack and stricken field. What was the result? As ever, the blood of the martyrs was the seed of the church. His Most Catholic Majesty learnt that not all the terrors of his Holy Inquisition, not all his legions of Spanish musketeers, could shake the faith of those sturdy Netherlands, who kept alight and held aloft the sacred lamp of liberty in the dark night of Romish bigotry and Spanish oppression. The independence of Holland is to-day a standing monument of the ineffectuality of wars waged for religion.

As to the wars of ambition, you are all familiar with the stories of the world-conquerors—of Alexander, of Cæsar, of Napoleon. You know their successes, their failures, their greatnesses, their littlenesses and the ultimate utter collapse of their most cherished schemes. Ineffectual is the one word applicable to all their reckless waste of human life, their selfish, cruel callousness to human anguish.

Take even the last notable European war—the Franco-Prussian—entered upon by Napoleon III with "a light heart"; yes, those are his own words—with "a light heart" (*cœur léger*), to seat his dynasty more firmly on the imperial throne of France. How did that eventuate but in his own utter rejection by his nation, and the miserable, untimely butchery of his heir by outer barbarians in a howling wilderness? What would you more ineffectual?

If, then, wars be thus ruinously expensive, absolutely unnecessary and constantly ineffectual, is it not most obvious common-sense to seek some other method of settling international disputes? Possibly some will refer us to what is known as diplomacy. When I say briefly that diplomacy is a fraud, history bears me out amply. Diplomacy is a compound of affectation, bombast, chicane and duplicity! Sincerity and earnestness have no part therein! Truth, justice and righteousness know it not! "An ambassador," said Sir H. Wotton, one of Queen Elizabeth's diplomats, "is one sent to lie abroad for the good of his country." Sir H. Wotton's mistress was one of the most skillful in an age of skillful diplomats. She prided herself on having hoodwinked or outwitted every statesman in Europe by her shameless mendacity. In the profusion and recklessness of her lies, Elizabeth was without a peer in Christendom.

Her rival, Mary Queen of Scots, made a very good second in the race. "Whatever craft, falsehood or deceit (wrote an English envoy) is in all the subtle brains of Scotland is either fresh in this woman's memory or she can fetch it out with a wet finger." What diplomacy was in the golden days of good Queen Bess, such it remains to-day—a solemn humbug, a veil of bombastic ceremony vainly affecting to hide the hideousness of national treachery and criminality!

There can be no lasting peace until diplomacy is dethroned by justice, and it is to effect this desired end that the society on whose behalf I write exists. The first president of the International Arbitration and Peace Federation was that Earl of Shaftesbury whose career of philanthropy endeared him to the Christian world. This was his opinion of the I. A. and P. F.: "I know," said he, "of no society which is doing a greater good than yours." You have heard the old adage, "In the time of peace prepare for war." It is on this very adage that our society is founded. Not in the time of peace spoil for a fight, but prepare for war. Our society holds that the best possible preparation for war, the only rational preparation, is to prepare to avoid it! Here again we have for our warrant another common-sense maxim, "An ounce of prevention is worth a pound of cure." It is the ounce of political prevention our society offers. We call it "world federation."

There are various forces in nature to which, in their ordinary state of diffusion, we pay but little regard. There is the mysterious force which made possible the colonization of America! So all-pervading that it guides the tempest-tossed mariner on every beaconless ocean. Potent in its diffused state to impart motion to tons of iron; yet of its presence our senses give us no cognizance. Concentrate this unseen and unfelt force and you obtain a power irresistible to rend and tear, to smite and slay!

There is another well-known force equally diffused, equally unfelt and equally irresistible and overwhelming. I allude to the force of gravitation. Competent alike to cover earth's wintry bosom with autumn-painted leaves or to hurl headlong unnumbered myriads to a living tomb in the deadly earthquake chasm.

Our society recognizes in public opinion a moral force similar in character. Present everywhere in a diffused state, and while diffused but of small potency! Concentrate public opinion, and you obtain a power that for good or evil is irresistible.

Our efforts, then, must be united, and they must be of a practical character. As Americans we are called a practical people. I take it that means we are full of device, full of energy. If one plan fails, we don't sit down and suck our thumbs, and wait for some one to show us how. We try, and we try again, and again and again. For us, as for Richelieu, there's no such word as "fail!" I'm speaking now of things material and mechanical, where our national success is so immense, because we are such a practical people.

Now, I'm convinced that success in this peace question is just as possible if we would make it a practical and personal matter. But we don't. I'll tell you just exactly how we behave. We go to church on Sunday, and with pious faces pray to the Author of Peace to "send peace in our time." Perhaps we should be more truthful if we said "peace in our neighborhood." Having left the matter in such good hands, not one in a thousand during the week gives to the cause of peace so much as one earnest thought. That's not being practical. As business men and women we don't act so. I notice in business we all believe the old Latin proverb, that "Hard work is the best of prayers." If any one wants to start a circus, or stock his ranch with cattle, how does he pray? His prayer is that of the old hymn beginning:

"Prayer is the soul's sincere desire,
Uttered or unexpressed."

And how does he manifest his soul's sincere desire? Does he go on his knees, and drone out, "O Thou to whom belong all the beasts of the forest, and whose are the cattle upon a thousand hills, grant me wild beasts for my circus, or Shortorns for my herd?"

No. His soul's sincere desire is shown by his getting to work, with all his brain and muscle, and cash, to trap his own wild beasts and breed his own cattle. Now, our society wants just this kind of prayer from every one here to-night. We want each one to make it really their soul's sincere desire. We are persuaded that such prayer avails much. If all the young men would pray thus for peace, they would make an immense impression on future history. It would be the California brand to all time.

This is Prof. Seeley's definition of "federation": "Federation is, in one word, the calling into existence an organ of discussion and legislation for affairs common to the whole empire, and this in such a way as not to interfere with the liberty and self-government of any of its parts." This definition was given in connection with the idea of what is known as "imperial federation in the British empire." Of this there has been much talk lately, and possibly it may be the precursor of "world federation." I have followed its career with much interest. It is under the patronage of the Prince of Wales and the Duke of Cambridge, but has sketched out at present no very hopeful program. It finds advocates among military men, and its aim, a union of all British colonies for defensive purposes, appears plausible. But this plausibility thinly conceals a most mischievous idea. Nothing less than the extension to the whole of the New World of the ruinous and insensate military system of Europe. One of its chief advocates, speaking before the Prince of Wales and the English commander-in-chief, naively stated that with civil arrangements he had nothing to do. Naval and military defense was the gallant lecturer's one idea. The trouble is, the British notion of a defensive system is so notoriously elastic. The annexation of Burmah, the bombardment of Alexandria, the massacre in the Soudan, the invasion of Afghanistan, are all purely defensive measures! Poor mother Britannia was in such imminent jeopardy from the Soudanese that young Australia had to come to the rescue! It requires no keen prophetic insight to predict that a federation for such purely defensive purposes must become the curse of the world. Our society therefore puts forward its counter-proposal of world-federation. In Prof. Seeley's definition read whole world instead of whole empire and you realize our society's aim.

And common sense tells us we must come to this. "Chemists," as Prof. Hilgard writes me, "are doing a large share of our work in making war daily more and more unpleasant." "Unpleasant" is, under the circumstances, rather a mild term. With the new invention of dynamite shells, it is almost now in order for a war vessel to arrive in the night outside the peninsula, 11 miles away, and thence project into San Francisco just five dynamite shells, each warranted to devastate a square mile of territory. In the morning, San Francisco would not have one stone left upon another, nor one Christian young man to tell the tale. Now I think for such a "happy dispatch," unpleasant is a decidedly mild epithet. Perhaps such a possibility might have one good effect. It might induce country boys to stay on the farm!

Well, what are you going to do about it? There is a proposal before Congress to spend \$126,000,000 in providing ironclads and ports to protect 11 American ports. That will give a chance for a few fat contracts! But before those defenses are completed, they will be derided as useless and ridiculous toys, like the present obsolete shams. Better spend our hard-

earned cash in harbor improvements, in roads and bridges, in museums, art galleries and schools—in anything to ennoble and elevate rather than useless and debasing military toys.

"Were half the power that fills the world with terror,
Were half the wealth bestowed on camps and courts,
Given to redeem the human mind from error,
There were no need of arsenals or forts."

What need have we to fortify? No foreign power is tempted to annex our territory. We offer a slice free to all comers; and there lives not a foreign potentate but would be apt to find himself a superfluity in a land where the people are all sovereigns.

Instead of clamoring for fortifications, it were wiser to urge Congress to take action on some one of the 12 bills now before it, looking to the taking steps to provide for the establishment of an arbitration tribunal. Law is the sole bulwark needed to protect us from invasion. Our sovereign people express their will in law, and invaders must submit or go. And our society desires that all nations should find an equal defense in that same bulwark—established law. Now, does that program strike you as chimerical? The ridicule should be theirs who uphold the antiquated (would to God I could say obsolete) method of preferring wholesale slaughter to simple justice. And so it will be! Our cause cannot fail. You know that victory nowadays is apt to favor those whose guns have the longest range and project the heaviest metal. Paradoxical as it may appear, our society relies entirely on the range of its guns. We use the widest range gun known to science. It was invented ages ago by one Gutenberg. Its projectile force is the irresistible power of truth. It carries the weighty metal of conviction to the world's end. It hits men in their really vital spot—their conscience. Why, we could bring down the Czar of all the Russias with a shot from a printing-press in San Francisco were it not for the casement of flattery and adulation in which he is buried. The word is quick and powerful and sharper than any two-edged sword. The pen is mightier than the sword, and on tongue and pen is our reliance. Moreover, every one is in duty bound to assist us with tongue and pen. I want every one to feel as interested as though it were certain, did war break out, your roof-tree would be the first shattered and your loved ones the first among the slain. No one has a right to say, "Oh, it's not my business to check the world's madness!"

What business was it of the Samaritan as he journeyed to rescue him who had fallen among thieves? The priest passed by and the Levite; why should the Samaritan stay?

What business had one pale-faced, weak-eyed young man, with an obscure hole on a Boston back street for an office, and one poor negro boy for an assistant, what business had Wm. Lloyd Garrison to proclaim liberty to the captive, and the loosing of the fetters to them who were bound?

What business had one sensitive, delicately-nurtured, beautiful woman to forsake her refined home and cheerful fireside and spend her days among the loathsome outcasts, the filthy, repulsive criminals, half starved and half naked in the noisome dungeons of Newgate Gaol? What business had Elizabeth Fry to devote her life to the raising of fallen womankind from the degradation of beasthood to the level of humanity once more?

What business has any one to do anything but to grab and grub for a miserable handful of dirty dollars to leave to his heirs to fee the lawyers with? What business? You each want something more valuable than a handful of gold to offer to the Almighty as the result of your life's work! You each need some more satisfactory occupation for your leisure than the elegant and fascinating employment of puffing cigarettes. * * * Let not any false sense of personal inability or inferiority check your effort.

"Greatly begin! Though thou have time
But for a live, but that sublime!
Not failure, but low aim is crime!"

Certain cities are identified with certain schools of policy—Manchester of free trade, Birmingham of elective franchise reform, etc. It is fitting that San Francisco being the most cosmopolitan city in the world should become the center of the cosmopolitan policy of "world federation;" and that the Pacific Coast should justify its title by a consistent advocacy of Pacific policy.

Monterey, Cal.

The Iowa Corn Palace.

Among the reports of the Presidential party's movements last week, we find an account of their visit to the "Corn Palace" at Sioux City, Iowa, where a Corn Festival had been held a few days previous. The many unique fabrications of cornstalks, husks, ears and kernels had been kept in place against the coming of President and Mrs. Cleveland, and attendants were waiting to do honor to the distinguished guests.

The wax maiden, with hair of corn-silk and robe of satin husks, climbing a winding-stair of golden ears; the spider of tiny carrots lying in wait in his web of corn fibers; the map of the Union made of kernels, each State having its especial color; the huge national flag and shields, eagles and crests, crosses and emblems of the various nations, the mottoes from the dominant "Ceres Imperatrice" to the multitudinous

and varied "Welcomes," all made of the unshelled ears, were noted and admired in their turn; and then the big building itself, 200x100 feet, and 90 feet in height to the top of the dome, whose sole material, except its bare skeleton, was the product of the cornfield, was explained in detail, and its conception, history and construction described to the party and admired by them.

From the palace the visitors were conducted through the town, which seemed to be constructed in great part of corn productions. Mammoth triumphal arches still spanned the chief thoroughfares; signs made of sections of corn-ears, and awnings, verandas and in some cases the entire fronts of houses were of corn, decked out with squashes and pumpkins. The ride down the Missouri valley, from Sioux City through endless stretches of waving corn, showed the significance of the Sioux City exhibition.

Hash.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

Were all the stories that could be told about hash, without appeal to the imagination, gathered together, they would, no doubt, outdo all the fish yarns ever hatched, and even the story of the pump snake, which, my informant says, has become domesticated somewhere at the East with financial profit to the owner, who has a herd of them and uses them for pumping water from the distant river into the kitchen water-bucket, and for watering the garden and wetting down the dooryard, in doing which they have the aid of a sprinkler. True, these snakes, whether real or but living in the imagination of a dissipated genius, are, to say the least, remarkable, not only for their anatomical peculiarity of being living rubbery pipes from end to end, but for their ready accommodations in times of their immediate need, as in the case of their owner's house taking fire, they joined heads and tails reaching in a line from the river to the burning habitation, extinguishing the fire, flooding the premises and almost drowning their proud owner in their enthusiasm to serve their master.

True, hash stories are usually less startling, though always more or less shocking, as is one of which I had personal knowledge. It was connected with the boarding-house of a railroad camp, employing 50 men. And these men were, like most of us, ignorant of the mysteries of the kitchen. It is strictly unorthodox to unearth the secrets of the hash-pot, no less anywhere else than it was at the time and place of the camp in question. These 50 men had a corner in hash, or rather a corner for hash. The way they could make away with hash at the breakfast-table was really alarming. There were two cooks—women—one the bread and hash-maker, and the other handled the roasts, steaks, etc. The hash was chopped at night, after the evening meal was over, seasoned, mixed, and made ready for the pans and oven in the morning, and by getting up at five, food enough for 50 hungry laborers was made ready by six.

One morning, while the dust flew and the wind flapped the big canvas walls of both kitchen and dining-room, the sun proceeded to rise on a missing dishcloth. The big rag was wanted every moment for wiping dust out of something, but a flour sack was substituted, and little time was lost.

At the usual time, the men gathered around the lengthy table, their hair standing on end, as they had left it in shoving their wet fingers up through it while washing. The big steaming dishes were being strung along the center of the table, for each one to help himself. "Do give us some of that good hash!" called out several cheery voices, as a bit of flattery, joined with their morning's salute to the women who served both as cooks and waitresses. In two minutes the hash dishes were empty and more hash called for. Again they were empty and more hash wanted. The last baking-pan was broken into, and the big rag missing was found. In the uncertain light of daybreak, the hash had been emptied into the pan over the dust-cloth. "What shall I do?" asked the discoverer of her companion. The moment was a busy one; there was neither time for reflection nor regret. "Give it to them; scrape the rag and give it to them," was the hasty reply, and the suggestion was at once acted upon, and all hands as well satisfied as if there had been no extra seasoning in their favorite dish.

A MISSIONARY to the Indians in British Columbia took a keg of whisky and poured it over the grass in the presence of the young people. It destroyed all the herbage. The chief then told them that just as it burned the grass it would burn them if they drank it. This experiment has become a yearly ceremony with the Indians, and there has been very little trouble with the liquor question since.

HIGH LICENSE.—It is said that high license has increased Chicago's revenue from that source from \$200,000 a year to \$2,000,000, and has decreased the number of saloons.

EXCHANGE PROPOSED.—I have a limited quantity of Laburnum seeds for free distribution or exchange; also some young seedlings.—J. C. MOHR, Pleasanton, Cal.

INDUSTRY AND SCIENCE.—An international exhibition of industry, science and art is to be held in Glasgow, Scotland, extending from May to October, 1888.

YOUNG FOLKS' COLUMN.

Mamma.

[Written for the RURAL PRESS by FANNIE H. AVERY.]

Who, when small Fannie bumps her head,
Or Georgie cuts his hand instead,
Is full of loving, anxious dread?
Mamma.

Who ne'er forgets to lay away
Some sweet for both to have each day
When they come home from school or play?
Mamma.

Who for her little folks' dear sakes,
A special kind of cake oft bakes,
And nice molasses candy makes?
Mamma.

Who thinks the patter of their feet,
As they run in from yard or street,
Is music most supremely sweet?
Mamma.

Who is so sorry, but so kind,
When they forget at times to mind,
And hopes no more such fault to find?
Mamma.

Who always is at hand to hear
Their little troubles, saying, "Dear,
I'm sure 'twill be all right, don't fear?"
Mamma.

Who loves them with a wondrous love,
That is all earthly love above,
Which she would every moment prove?
Mamma.

Cheeps and Cheepa.

A Story of Two Little Birds.

[Written for the RURAL PRESS by LEITE.]

It was in the early springtime when the wild-flowers were beginning to bloom that Cheeps and Cheepa, the little red-breasted linnet and his bright-eyed little wife, built their nest. And where do you suppose they built it? Not in the tall sycamore tree behind the school-house nor in the great oak by the gate, but right up against the roof on a rafter inside of the schoolhouse. They did not seem at all afraid, though every boy and girl in school could see them. Miss Curtis told the children they might sometimes watch the little birds as they built their nest and see how carefully they worked and how kind they were to each other. Many days Mr. Cheeps and Mrs. Cheepa worked on that wonderful nest, carrying straws, strings and little sticks, until the children thought it must surely be finished. One morning, when the children were all busy studying and Miss Curtis was hearing the chart class, Bobby Jones laughed right out loud in school. Miss Curtis stopped and looked at Bobby, but Bobby only looked at the bird's nest and laughed again. Then Miss Curtis looked too, and what do you think she saw? There was something white hanging from Cheepa's nest by a long white thread. It was a pretty piece of crocheted lace, which Birdie Clark had made at noon the day before and had left on the bench under the tree when the bell rang. All the boys and girls laughed, and so did Miss Curtis. Birdie Clark called Cheeps a little thief, but Miss Curtis said no; that Cheeps did not know any better, so he could not be called a thief. Nellie Terry said that one birdie ought to be willing to give to another, and they all laughed again at that. So Birdie let Cheepa keep the lace which Mr. Cheeps had brought her, thinking, no doubt, that ladies liked fine laces.

After awhile Cheeps pulled the lace up into the nest and tucked it in very carefully and neatly; then she and Cheeps lined the nest with feathers and Cheepa sat on the nest all day, while Cheeps brought her food and sang to her his sweetest songs. Miss Curtis said there were little white eggs in the nest with tiny birds in them, and that Cheepa sat on the eggs to keep them warm so the little birds might grow strong enough to break the egg-shells and come out.

After two weeks there was great flutter and stir in the pretty lace-lined nest. Now, both Cheeps and Cheepa must go to bring seeds and worms, for there were four gray baby-birds with very large mouths and very hungry little stomachs to be fed. They were very hungry indeed, for they had worked very hard to break those hard egg-shells, and papa and mamma were very proud of them to think they had been so brave. After a few days, the children could see the little ugly gray heads raised above the side of the nest and the red mouths wide open, when Cheepa brought them food.

Cheeps and Cheepa worked very hard for a long time to feed their children, until they should grow quite strong and their little wings had feathers. Then they must be taught to fly so that they might take care of themselves. Sometimes the little birds were very lazy and very timid and would cry "I can't," when their parents called to them to fly. But mamma Cheepa would not let them give up. They must try and try until they could fly across the room. Eddie Bright said it was just like school—the way the mamma bird taught them. At last they learned to fly as well as papa and mamma, all except the large, lazy one that Birdie Clark had named Lacey. Lacey

was a very dull scholar, but even he learned by many trials to fly quite well; and by vacation time they could all leave the nest and go to live among the trees.
Los Angeles.

The Manners of Little Girls.

Little girls who wish to be agreeable must remember that as a rule it is ill-bred to act in a sullen or churlish manner, to say spiteful things, to ridicule the aged or deformed, to talk and laugh so loudly as to attract notice in public, to be petulant, to find fault with a gift, and to complain about the weather or anything else unavoidable that happens to be particularly disagreeable.

Girls, try always to be natural, to forget self, to be gracious toward every one, to cultivate an amiable disposition, and try to add to the happiness of others. If possible, learn to walk in an easy and graceful manner, without mincing or taking steps too long. Learn to use your hands, and do not sit in company with your arms tightly folded, as though they were not intended for present use. Conversation requires gestures at times. If asked to sing or play, comply at once, if it is in your power to do so. Be scrupulously neat in dress, and see that your room is always in order. Avoid all such disagreeable habits as picking the nose, ears, or teeth in company, biting or trimming the nails, yawning and appearing bored when any one—particularly an old person—is speaking. Never interrupt any one because he is telling you a tiresome story. You can bear the infliction much better than he can endure the wound his vanity will receive. Always acknowledge an acquaintance, if worthy of your respect, no matter where he is, or however shabby his clothes may be. The young girl or boy who has a polite bow, a smile and a pleasant word for every one will be blessed with many friends. Above all, learn to be true-hearted and sincere.

A silly, fickle-minded person, with no opinions and principles worth defending or retaining, is at best a worthless member of society, and one who will never have much influence for good. He may attain the mere outward polishing of manner, but his mind and soul will never shine. Such politeness may make a fop or "dude" or a "dudine," but it will never make a true gentleman or lady.

Will not our young readers strive to attain the courtesy that begins at the heart's core and not at the lips? It is worth trying.—Exchange.

GOOD HEALTH.

EFFECT OF AN IMAGINARY INJURY.—A circumstance, showing the wonderful effect of the imagination, recently occurred in Savannah, Georgia, which is related by the *News* of that city substantially as follows: Early one evening of a late date, several persons made an unceremonious entrance into a drug store, bearing between them the body of a companion, who, they stated, had been shot and was dying. The shot-ridden victim emphasized the declaration of his friends with a moan, as they carefully laid him down. The doctor asked where the wound was, and the supposed-to-be-dying man indicated by a feeble wave of his hand his left hip. Immediately it was bared, but no clots of gore met the doctor's anxious glance. The man's body was then carefully examined, but no wound could be found. "I think you are all right," finally said the doctor, with an amused smile. "I don't see a scratch. How did it happen?" The corpse recovered his vitality suddenly, and, leaping up, made the gaslights turn blue by the violence of his feeling, while his friends roared at the comical ending of what they supposed to be a tragedy. It seems, as one of them explained, they were near the market-house and got into a row with several other persons. Verdier must have been hit on the hipbone, the blow giving him a sharp shock. He thought he had been shot and fell to the ground. His friends picked him up and carried him to the drug store, while the assaulting party fled. Verdier's wrath was great over the joke at his expense, and he vowed that he would see the fellow who struck him and make him suffer.

THE STABLE CURE.—A correspondent of the *Boston Post* writes as follows: "I was not a little startled the other day at meeting on the street, in the best of health, apparently, an old acquaintance whom I had supposed to be filling a consumptive's grave long ere this. In answer to my inquiries he told me that when the medical men had exhausted their resources he determined to put in practice a plan of his own. Accordingly, he journeyed by easy stages to the Blue mountain region of Virginia, where he established himself in a farmhouse, and bought a horse. He spent the whole day in the open air, taking care of the steed himself, and riding him about the neighborhood. At first, he told me, his weakness was such that he could not stay in the saddle more than 15 or 20 minutes at a time, and he had to pull very soon if the horse broke into a trot. Every day, however, he became a little stronger, and in a couple of months he was able to ride 10 or 20 miles on a stretch, with very little fatigue. He attributed his recovery in part to the fact that he not only rode but groomed his horse, and busied himself an hour or two in the stable every day. In this opinion he confirmed what I remember hearing

an old physician say years and years ago, that a 'horse-barn,' as he called it, was one of the healthiest places in the world. For those who love horses the stable cure would be such a pleasant one that a physician who prescribed it might be sure that his directions would be followed to the letter."

CREMATION AT QUARANTINE.—In view of the approach of Asiatic cholera and the apprehension thereby aroused on the Atlantic Coast, it is proposed to establish a crematory at quarantine. This, the N. Y. Health Officer avers, would effectually solve the problem how to dispose of the bodies of those who die of contagious diseases, and at the same time save the overworked employees at the station a deal of hard and disgusting labor. The proposal is sensible and timely.

WOMEN AS DOCTORS.—The proportion of men to women in the medical profession is 35 to 1. There are now 2500 women holding first-class medical diplomas, and all of them have won their sheepskins since 1850.

DOMESTIC ECONOMY.

Household Hints.

Capital buns, that the children will delight in for lunches, can be made by the following recipe: Take three cupfuls of new milk and half a cake of dry yeast and mix with flour for a sponge. When light, add three-quarters cupful of sugar, one-half cupful of lard and a bit of salt. Knead well and long, and set to rise until very light, when roll out an inch thick; spread with butter, sprinkle thick with sugar and cover with ground cinnamon; ball up like jelly-cake, making the rolls about three inches in diameter. Cut off from this slices 1½ inches thick; set the cuts on end in rows in the baking-pan (allowing for the rising), and, when risen, bake.

A very nice breakfast dish is creamed chipped beef made thus: Shave beef very thin, freshen by placing in cold water and bringing to a scalding heat, pour off water, add a piece of butter washed free from salt, a little pepper, let fry a few minutes, then add one-half teacup of sweet cream, in which you have stirred one teaspoon cornstarch. Simmer five minutes and serve very hot.

Grilled kidneys are a cheap and appetizing dish. To make them, cut three sheep's kidneys in half, dip them in an egg previously beaten up with salt and pepper; then sprinkle with bread crumbs; put a piece of butter the size of an egg to melt; when melted, dip in the kidneys and pass them again in bread crumbs, then grill over a slow fire and serve with sauce or a rich gravy. Before being dressed in any way kidneys should always be plunged in boiling water for a minute or so.

A simple and favorite dessert is a bird's-nest pudding. Fill a deep pudding-tin or dish with apples cut in thin slices; sugar and cinnamon, or lemon, to sweeten and flavor to taste, and a little water; cover with a thick crust; bake until apples are tender; serve hot with hard sauce or with cream and sugar; be sure to cut air-holes in the crust to let the steam escape.

To have hockeac of the genuine Southern flavor, make a very stiff batter of water and cornmeal. Salt the batter just a trifle. Grease a griddle with lard or pork drip; when hot drop on the batter to make a large cake to cover the griddle; put it down smooth, cook slowly; when browned, turn it over and brown the other side. Set on the table on a large plate, and let each individual break off his own piece while hot.

DUMPLINGS.—Make the dough as for biscuits, with sour milk and soda, then add one teaspoonful of baking powder and roll out as thin as pie crust; spread with butter, fold and roll again, cut into inch-squares and drop in the boiling pot.

CREAM SPONGE CAKE.—One cup flour, one-third cup of sugar, one-half cup of cream, two eggs, one-half teaspoonful of soda mixed in flour. Beat the eggs, sugar and cream together, then add the flour, beat lightly and bake at once.

WHITE FRUIT CAKE.—One pound of flour, one pound of sugar, one pound of butter, one pound blanched almonds, three pounds citron, one grated coconut, whites of 16 eggs, two teaspoonfuls baking powder; flavor to taste.

SWEET PICKLES.—Ten pounds of fruit, four pounds of sugar, one quart of vinegar, four ounces cinnamon, one ounce cloves. Boil fruit tender and drain, scald vinegar and spices together three mornings and pour on hot.

FIG CAKE.—Three pints of flour, one cup of butter, one cup sweet milk, two and one-half cups of sugar, whites of 16 eggs, three teaspoonfuls of baking powder, one and one-half pounds of figs flavored and cut in strips.

CANNED GRAPE.—Pick carefully from the stems, being careful not to tear the skins much; put in a kettle with a little water; stir carefully; when well heated through, remove from fire and put in cans.

POTATO PIE.—Beat together two tablespoonfuls of sugar, one of flour and two eggs; add one small cup of finely mashed potatoes seasoned with salt and butter and enough milk to make two pies.

TABLE OF CONTENTS.

EDITORIALS.—Hornless Cattle; The Great Animal Displays, 319. Poultry in California; Wool Interest and the Tariff; The Weather Service; Texas Fruit Show; The Week; Silk Culture, 326. Report of the College of Agriculture; Dwarf Peaches; A Glimpse of Castrolville, 327.

ILLUSTRATIONS.—Red Polled Cow Flo's 2d, 1623, 319. View of Castrolville, Monterey County—Looking from the East, 327.

CORRESPONDENCE.—The Twenty-Sixth District; More About the Stockton Fair, 320.

HORTICULTURE.—The Florida Orange Interest, 320.

THE BOTANIST.—Kern County Plants and Trees, 321.

THE DAIRY.—Cows Slipping Their Calves, 321.

POULTRY YARD.—Seasonable Hints, 321.

PATRONS OF HUSBANDRY.—The State Grange; Grange Work and Progress; Monument to Dr. Chandler; The Pomona Feast, P. of H.; Degree of Ceres; The Boys and the Farm; Beginning of State Granges; Celebrate the 4th of December; Attending to the Matter; San Jose Grange; The Debris Wrong, 323.

THE HOME CIRCLE.—Lois's Sacrifice; Let Us Have Peace; The Iowa Corn Palace, 324. Hash, 325.

YOUNG FOLKS' COLUMN.—Mamma; Cheeps and Cheeps; The Manners of Little Girls, 325.

GOOD HEALTH.—Effect of an Imaginary Injury; The Stable Cure; Cremation at Quarantine; Women as Doctors, 325.

DOMESTIC ECONOMY.—Household Hints; Various Recipes, 325.

AGRICULTURAL NOTES.—From the various counties of California, 328.

SHEEP AND WOOL.—The Mono License on Grazing, 329.

Business Announcements.

Agricultural Implements—Hawley Bros. Hardware Co.

Agricultural Implements—Baker & Hamilton.

New Music—Oliver Ditson & Co., Boston.

Patent Medicine—Warner's Safe Cure.

Auction Sale—Kilip & Co.

Poultry—R. G. Head, Napa, Cal.

Cards—A. B. Hines, Cadiz, Ohio.

The Week.

One of the most obvious lessons of this year's experience in fruit is being quickly learned. Among the many other booms which are claiming attention is cannery building. It is a good idea. Several places which almost secured a cannery last spring had reason to regret their failure before the season was over. The sale of canned fruit this year teaches that our production can be vastly increased if good fruit is put up. Canneries should be well distributed over the State, so as to be near to the orchards and so as to utilize the labor supply of young people and women in our smaller towns. We would like to see at least a dozen canneries arranged for this winter.

The storm which we noted last week as having laid the dust in Southern California seems to have extended eastward and to have made floods at some points in Arizona. Since our last issue there have been heavy downpours in New Mexico. So far, California north of Tehachapi has gone dry and nothing at present but the wild geese promise rain. It is just as well, however, to have the rains begin late. It gives a chance to gather the grapes, and is likely to secure a continuous growth of feed if the water does not come too early.

The course of justice in this city seems to be

progressive. The rogues of whom we spoke last week are being hunted close, the grand jury is still in session, and it seems likely that we may secure reform in the municipal affairs of San Francisco.

Poultry in California.

EDITORS PRESS:—One thing I cannot understand, how is it that eggs and poultry are so high in your splendid climate, unless people can make more money at other things? Certainly at the prices you receive for eggs, averaging 32½ cents per dozen (or 15 cents the lowest and 50 cents the highest), you should acquire wealth even at the lowest figure. We can make money here at 10 cents per dozen. Your chickens average \$5 per dozen. There must be money in it at these figures. Here we make something at \$1.50 per dozen. It must be that your markets are not overstocked or no such prices would be paid for chickens and eggs. How is it?—**READER, St. Louis, Mo.**

Our correspondent states the facts about as they are. His average price for eggs here is too high, but his extremes are right. Of course, most eggs are marketed while the price is low, and for that reason the price is low. But the average price for California eggs is higher than anywhere else in the country, and, besides, California makes a market for trainloads of eggs from Nebraska and neighboring States.

There is money in poultry in California if the fowls are well kept. The business thrives according as personal care and attention is given. Our impression is, that fowls may not do as well if left to shift for themselves here as in some other parts of the country. The climate favors the rapid increase of vermin, and where fowls are kept in large flocks without proper attention, there are contagious diseases which are very destructive. These evil factors are, however, easily kept in check if the grower knows how and is willing to put forth the effort. We know that people who do this, and who understand the times and seasons for doing things in this climate, make a very profitable business with poultry.

One reason the poultry industry has been neglected in this State is, the tendency of the California mind after big things. The little industry of the poultry flock which adds so much in the aggregate to the comfort of the farmer's home at the East seemed to the Californian to be too small to occupy his attention. He can have his great farm producing his wheat by the shipload or his fruit by the carload, and, of course, he has no time for poultry and his family does not take to the fowls because there is money enough without trying to win it by the method the Eastern farmwife employs. But, as we have said, those who do like to get money this way, and are content with a moderate amount of it and are able and willing to give their fowls proper attention, do make money and are benefited by the high prices in our markets.

The application of the California idea of farming to poultry growing has not proved successful. The figuring of the produce of a few hens, multiplying it by 2000 or 3000 and then "going into hens" on a large scale, has not, as a rule, succeeded in this State. The reason why so many failures have been experienced, in our opinion, is that proper care has not been given, and proper arrangements made for the birds. Poultry will not stand huddling together in this State. The elegant buildings which are pictured as constructed at the East for sheltering thousands of fowls would soon be tenanted in California. Going into the business "on the large," has in the main proved a failure in this State. At the same time we believe there is opportunity for much more profitable work with fowls in this State than has been done. If one will work well with a few until he learns the local points of the business, the proper way to provide shelter, the times for setting, the treatment for vermin and administration of preventives from disease, the furnishing of proper food, including plenty of green food in the dry season, abundance of pure water, and having learned all these things with a few fowls, extends his interest just as fast as he can keep the business well in hand and no faster, we believe that nothing in the range of our agricultural branches will pay better than poultry-growing.

It is to be expected that this branch of California farming will increase in the future more rapidly than in the past. The incoming of many frugal families, and the necessity of securing a livelihood from moderate-sized farms, will call in the feathered race here as in the older States. We believe the secret of success

on our small farms will be mixed farming and the choice of the higher-priced products so as to realize wages for the time put forth to secure them. There is much satisfaction in well-kept fowls in this State. As with other animals, their growth is rapid, maturity early, and the long idle season of the East is absent. We believe that far wider attention should be given to the fowl, that enterprise and necessary investment should be put forth to secure the very best breeds, and then the business should be pursued with care and intelligence. With such facilities and such disposition, there is good pay in poultry for the time and investment employed.

We would like to hear from our readers on this subject, whether they have succeeded or failed, and how and why.

Wool Interest and the Tariff.

We notice that Hon. John Minto, who went East as a delegate of the Oregon Board of Agriculture to attend a meeting of the National Association of Wool-Growers, made a report during the recent State Fair in Oregon. He gives a sketch of some of the statistics set forth at the meeting which are certainly very significant, both of the injury worked by the revised tariff law and by the abuses which are practiced under the law. It was shown that, as a result of the change made in the tariff of 1867 by the law of 1883, wool-growing had diminished in all the States except Oregon; that in the single State of Texas the falling off in wool production had been 19,000,000 pounds, and in that of Ohio 4,000,000 pounds.

It was claimed that, in addition to the crushing out of American production to the amount of 40,000,000 pounds, by the change in tariff made by the law of 1883, there is now being admitted by under-valuations and fraudulently as ring waste, and tops (forms of partially manufactured wool), the equivalent of 40,000,000 pounds of raw wool against the spirit and intent of that law.

It was claimed that as one-twelfth of the male population of our country is directly engaged in wool-growing, and 100,000 more are dependent upon it for employment, and that indirectly its welfare is intimately connected with the entire industrial system and real independence of our country, wool-growers are justified in asking the co-operation they will freely give to keep its industrial life above the level of the ill-paid labor of European countries by judiciously enacted and faithfully executed protective laws.

ARIZONA DATES.—Major O. F. Thornton of Phoenix recently sent to the Department of Agriculture a bunch of dates which grew in Phoenix, which so interested Mr. Van Deman, the pomologist of the department, that he has had a painting made of it, of which a copy was sent to the grower of the dates. We hope the fact that dates have successfully fruited both in California and Arizona will lead the department to make an effort to secure from abroad plants of the best varieties for trial here. So far we have only seedlings from the date of commerce. It is almost certain that by testing a number of improved varieties we can get some fully adapted to our climate, and if so we shall have the material for the establishment of another profitable industry.

TEXAS FRUIT LAW.—We read that affidavit forms are being prepared by the Southern Pacific Co., to be filled out by shippers of fruit destined to Texas points. These affidavits will set forth the fact that fruit so shipped is the product of California, in which case it is permitted to enter Texas. This peculiar regulation is in accordance with a law recently enacted in the Texas Legislature, which excludes all fruit save that shipped from this State. Though the affidavit form may prove somewhat of an inconvenience, a counterbalancing advantage arises from the fact that this State has a monopoly of the deciduous-fruit supply of Texas, all others being excluded under this new ordinance.

ARIZONA.—C. Meyer Zulick, Governor of Arizona, in his annual report, estimates the population of the Territory at 90,000—an increase of nearly 50,000 over the census estimate of 1880. The aggregate assessed valuation of taxable property for the present year is \$26,313,500, an increase of nearly \$6,000,000 over 1886.

Silk Culture.

The Ladies' Silk Culture Society is now proceeding upon an active campaign upon the Society's property at Piedmont, in Alameda county. The \$5000 appropriated by the U. S. Government now comes into the hands of the Society, and with it the work will be carried on. The president, Dr. Gibbons of Alameda, expressed his views regarding the proper course to be pursued in preparing the land for the experimental station at Piedmont. He thought the work could be pushed along so as to allow of the planting of from 10,000 to 20,000 young mulberries during the coming rainy season. He also announced that 500,000 silkworm eggs were ready for distribution. On motion of Professor Davidson a contingent fund of \$100 was ordered taken out of the Board's funds and placed at the disposal of Dr. Gibbons. Professor Hilgard was authorized to communicate with the American Consul at Samoa, in order to obtain specimens of the various silkworms and mulberry trees.

As silk culture is being promoted in California by two organizations, the Silk Culture Society, with the funds from the United States, and the State Board of Silk Culture, with an appropriation from the State of California, it will be of interest to note the progress of silk manufacture in this country. This subject is treated in a special statement from the U. S. Bureau of Statistics, in which it is estimated that since 1879 there has been an increase of at least 235 per cent in the output of silk fabrics by American manufacturers. It is probable that New Jersey's output of silk fabrics will equal \$30,000,000 for the present year. In 136 New Jersey establishments there was invested at the close of 1886 a capital of \$11,543,000, the produce of which was about \$2.46 per \$1 of investment. In 1881 the return was \$2.50 on each \$1 of invested capital. The introduction since 1882 of what is known as the "Grant system" of reeling has effected a saving in the cost of labor to silk manufacturers for soft silk winding of from 62 cents per pound to 12 cents. In one of the largest factories the introduction of this improved system of reeling has resulted in a reduction of the cost of labor in this department amounting to \$40,000 per annum, and the silk is received in much better condition than formerly. Another result of the improvement is that a large number of hands are transferred to the weaving department, thus adding to the production of goods. Weavers now operate two looms, where a few years ago one man was constantly employed on each loom. The close competition for trade and consequent reduction in values have thus been provided for in a great measure. Ten new firms began business in New Jersey in 1876, but five have removed out of the State, four to Pennsylvania and one to Massachusetts. Ten firms operate two, four three, and three four mills each. Nine firms also have branches in Pennsylvania. Some of these annexes are used for throwing silk, which is then returned to the main establishments to be woven.

The Fair at Vallejo.

Among the score of fairs, district and otherwise, which have been held in California the past three weeks, it is somewhat of a puzzle which to notice first and within what limits to confine our observations. Time and space alike forbid our doing anything like justice to these numerous, interesting and valuable expositions; but we hope at least to touch upon them all, sooner or later.

The fair for the 25th Agricultural District, which includes Napa and Solano counties, was held at Vallejo, Oct. 4th to 8th. People in the northern part of the latter county took no interest in the matter, and although a few stout helping hands were stretched out from Napa, the work was nearly all done by dwellers in and around Vallejo. Despite all disadvantages, the enterprise and energy of those who did take hold of it in earnest rendered the fair, both at the stock-grounds and in the pavilion, a notable and glorious success.

The list of awards appears on page 328.

HORTICULTURAL APPOINTMENT.—The Governor has placed W. C. West of Fresno on the State Board of Horticulture, as Commissioner for the San Joaquin district, in place of W. M. Williams, declined.

Report of the College of Agriculture.

The last report of the College of Agriculture of the State University is now being mailed to California farmers who may apply for it to Prof. Hilgard at Berkeley. It is a document of unusual interest and its 167 pages are well filled with matters of local importance to our greatest industry. In his formal report Prof. Hilgard describes the work of his department in instruction and in experiment station work, which is increasing at a wonderful rate, which must be gratifying as signifying the popular interest and the general disposition to turn the University agricultural forces to the fullest practical account, although it entails a vastly increased amount of work upon Prof. Hilgard and his assistants. The report mentions ways in which the facilities of the station must be increased to meet this demand. First, in the securing of a competent specialist in entomology who shall give instruction to students and at the same time serve as an expert to whom horticultural organizations and individuals can submit obscure matters for determination—in short, a specialist who shall act as professor of entomology in the University and as State Entomologist. At present the entomological work is looked after by Mr. Wickson, who does as well as he can, but does not claim to be a professional entomologist, and he takes this in addition to other duties only until an expert can be provided. The report shows also that more room is needed for office work for botanical collections for laboratory investigation, etc. This, it is expected, can be secured in the near future. Another chemist is also needed, for at present it is impossible to keep abreast of the analytical work which is pressing. As the experiment station work may be largely increased under the Hatch bill, if Congress makes the necessary appropriation, better propagating houses will be required and a better heating apparatus for those now used. The planting of an arboretum for forestry observation is also needed and underdrainage is essential for the fields now used for culture experiments. As with most California institutions, the College of Agriculture is growing in amount of work and in the requirements made of it, and it is outgrowing its facilities.

The report has seven appendices. The first fills 54 pages and is written by Prof. Hilgard himself. It is a discussion of the work done in the general laboratory, including examinations of soils, waters and miscellaneous substances. We find that upward of 27 samples of soils have been fully analyzed and practical deductions drawn therefrom. These samples are taken here and there over the State, and add to the great fund of information about California soils which has been accumulating from year to year during the 13 years of Prof. Hilgard's work in this State. The same is true of the analyses of waters, to determine their potable and irrigable qualities. There are 9 artesian-well waters, 14 surface-well waters and 8 spring and drainage waters discussed in the report. The concluding 20 pages of the appendix are occupied with analyses and discussion of rocks, marls and fertilizers, commercial alkalies for insecticides, citrus fruits from different parts of California, etc.

The second appendix is by Mr. Wickson, and is a report on grasses, forage plants and cereals, the data being in the main derived from re-

sults reported by those who have tested the seeds and plants sent out by the University. The reports of about 300 individual experimenters in different parts of the State were used in the preparation of the report. The plants most fully reported upon are evergreen millet, Schrader's brome grass, Hungarian brome grass, millet grass, snail clover, Australian salt bushes, etc. An interesting series of experiments on the University grounds with the growth of different varieties of sorghum is described. There were several cuttings made during the summer and the comparative weights noted. A list is given of the grasses which form the chief meadow and pasture growths of the Sierra mountain region; also the grasses and clovers which can be seen growing in the experimental garden at Berkeley. Another branch of the report relates to the trials of various cereals, including a very interesting statement by Gen. Bidwell of the varieties tested on Rancho Chico.

Another appendix is by W. G. Klee, now State Inspector of Fruit Pests. Mr. Klee reports upon a host of industrial plants which have been sent out from the University, and gives in condensed form the result of several

Dwarf Peaches.

Rev. Dr. O. C. Wheeler gives us very interesting information of a "Dwarf" variety of peaches which he found on the farm of Mr. Maybe, near Carbondale, Placer county. He had quite a small orchard of them, and they delighted Dr. Wheeler so much that he induced him to spare two of the seedlings. They have been in Dr. Wheeler's garden, in Oakland, two years or more and have fruited finely. They do not appear to have been dwarfed by working upon other stock, but to be a distinct variety propagating itself from seed. The tree attains a height of four to six feet, with straight stem and symmetrical head. The leaves are of rich green color, very long, turned up at the sides so as to form a curved semi-tube, and are very abundant on the limb, thus presenting a beautiful effect to the view. The tree is a good and regular bearer. The fruit is large and handsome, slightly oblate globular, apex full and sometimes protruding, basin distinct, broad and deep, suture elevated but not prominent; surface downy, pale yellow with a faintly red cheek to the sun; flesh free from the stone, greenish-yellow, fine-grained, very tender and

A Glimpse of Castroville.

As the times in California are most full of industrial progress, the illustrated reflection of the popular thought deals rather with farm and village scenes than with portrayal of natural scenery. People who used to talk of nothing out-of-doors except our grand mountains and lakes, big trees and Yosemite, may now be heard eagerly discussing fertility of soils, average rainfall and nearness to market, all of which are features of the industrial rather than the natural situation. So, too, the artists are working upon orchard and vineyard scenes, views of growing towns and the like. It is just as well for a change to have it so for a few years. When we begin to get used to the rapid growth of our industries we shall return again to the quiet old mountains and the babbling brooks and other things which do not have the jingle of the dollar about them.

We give on this page a scene in a part of our State which is sharing in the forward movement of our agricultural properties—Monterey county. It is a view of Castroville with its environment of fertile fields. This promising little town is situated at the head of the great Salinas valley, nine miles from the county seat and about 110 miles from San Francisco. It was founded in the year 1864 by Mr. J. B. Castro, Mrs. J. C. Merritt and Mrs. M. A. Sanchez, the owners of the Rancho Bolsa Nuevay Moro Cojo, and they showed excellent judgment in the choice of a site. Immediately surrounding it is as rich an agricultural section as there is in the State, backed by large tracts of fine grazing lands. It is only 2½ miles to the water-route shipping point, Moss Landing, on Monterey bay, where are located capacious warehouses belonging to the Pacific Coast Steamship Co. Possessed of these and other natural advantages, Castroville seems destined to become an important town at no distant day.

VIEW OF CASTROVILLE, MONTEREY COUNTY—LOOKING FROM THE EAST.

years' comparative study of the fruit varieties in the standard orchard at Berkeley. This appendix will be read with great interest both by the grower of ornamental plants and by the fruit-grower. From it can be ascertained which apricots, apples and pears are most likely to give good results in the coast region of California and many other points of wider application. Another appendix gives entomological notes, the full record of the Hessian-fly experiment, etc., by Mr. Wickson. Another gives details of the distribution of seeds and plants and donations of the same to the University.

Besides this pamphlet, there are two others which are appendices also, but published separately. One is the Viticultural Report and the other the Report on Alkali Lands and Drainage, which were issued last January. The whole report indicates a large amount of work by the college staff, and the results, as set forth, are a valuable contribution to our agricultural literature.

SAN DIEGO, according to estimates in last week's Union, has had 45,000 passengers brought to her by rail and steamer since the 1st of January. They claim that quite 30 per cent of the arrivals have remained, thus adding 13,500 to the population.

THE National Bureau of Statistics estimates the wool clip this year at 70,000,000 pounds, and the number of sheep in the country at 40,000,000, an increase of 5,000,000 since the last census.

full of juice, with vinous, sub-acid flavor—in all respects most desirable for the table. Its keeping qualities or value for canning have not been tested, but Dr. Wheeler designs to make these tests next year. For a small place and for a combination of beauty and utility he regards it with high favor.

INVESTIGATING THE WOOL INDUSTRY.—We learn from the Washington Republican that R. M. Bell, Esq., formerly of Brighton, Ill., one of the most successful practical shepherds in the United States, is now connected with the Bureau of Animal Industry, and is making a thorough investigation relative to the wool and mutton growing interests of this country. Mr. Bell is now making a tour of observation, and his conclusions will form a most useful and valuable compendium on the sheep husbandry of America. The securing of the services of Mr. Bell by the present commission of agriculture is another evidence that Mr. Colman is wide awake to the importance of sheep husbandry. We hope to see Mr. Bell in California in pursuit of his inquiry.

DEATH OF CHARLES LEFRANC.—We regret exceedingly the death of Charles Lefranc, a pioneer citizen of Santa Clara county and prominent vineyardist. He was killed recently at his home a few miles from San Jose while attempting to stop one of his teams which was running away. He was held in high esteem by those who knew him best, and his death is widely and deeply regretted.

THE NEVADA CATTLEMEN.—There has long been considerable feeling among some of the Nevada cattlemen concerning the way the railway managers have treated them. We notice now that they propose to drive their cattle from Elko to Reno for shipment in case the Central Pacific Company continues to refuse them the privilege of laying the cattle off at Reno to feed. They say they can better afford to do that than pay two rates by making the stop at Reno. The proposition is to establish a trail and dig wells where necessary. They claim, according to the Reno Gazette, that they can drive the cattle from Elko to Reno at a cost of \$1.50 per head.

GONE TO CANADA.—John A. Benson was one of the most prominent persons indicted some months ago by the U. S. Grand Jury for perjury and conspiracy in fraudulent surveys of public land. The indictment against the alleged conspirators was dismissed, on account of the looseness with which the document had been drawn up, but with the expectation that another would soon be found against them. Meanwhile Mr. Benson left the Pacific Coast and is reported to have joined the Dominion colonists.

STOCKTON seems likely to have a large cannery running next year at the old Houser Agricultural Works. Chas. M. Weber has been up there, from San Jose, pushing the project and meeting with great encouragement.

Fair Awards.

The following awards for the products of agricultural and allied industries were made at the several fairs designated:

Nevada State-Reno.

HORSES.

THOROUGHBRED—Best 4-yr-old and over mare, F. A. Cooks of Bellevue, Idaho, "Clara L.," 1-yr-old do., Theo. Winters, Washoe City, "Ogzele;" 4-yr-old stallion, T. Winters, "Jumbo;" 1-yr-old do., W. D. Hardins, Reno, "Toby;" 1-yr-old mare, Joe Frey, Reno, "Ione."

ALL WORK—Best 4-yr-old and over stallion, Joe Hennen, Elko, "Sam;" 3-yr-old do. and 2-yr-old do., Jesse Harris, Fort Collins, Col., not named; 1-yr-old do., A. J. Smith, Reno, "Telephone;" 4-yr-old and over mare, same party, "Nel S.;" 3-yr-old mare, Jas. Gault, Reno, "Minerva;" 2-yr-old mare, same party, "Maud;" single gelding 4 yrs. old and over, same, "Alex;" do., 3 yrs. old and over, Gov. C. C. Stevenson, "George S."

DRAFT—Best 4-yr-old and over stallion, J. A. Steiner, Reno, "Royalty;" 3-yr-old do., E. C. Hardy, Toano, "St. Laurent;" 2-yr-old do., same, "Hammond;" 4-yr-old and over mare, T. G. Herman, Wadsworth, "Queen;" 3-yr-old do., A. J. Smith, Reno, "Lady Maud;" family (sire, dam and three colts), J. Gault, Reno, "Jim," "Nellie," "Lucy," "May" and "Frank."

ROADSTERS—Best stallion, 4 yrs. old and over, Wm. H. Collins, Reno, "Arthur C.;" do., 3 yrs. old, E. P. Smith, Taylorville, "Engineer;" gelding, 4 yrs. old and over, E. L. Hubbard, Reno, "Johnny Golong;" horse, mare or gelding, 2 yrs. old, J. P. Sweeney, Carson, "Pat Reddy;" horse, mare or gelding, 1 yr. old, T. Herman, Wadsworth, "Mollie H.;" 4-yr-old and over mare, O. C. Ross, Reno, not named.

SADDLE—Horse, mare or gelding, H. Douglass, Reno, "Dude."

JACKS—B. C. Platt, Reno, "Bourbon."

SWEEPSTAKES—Best stallion, any age or breed, Jesse Harris, Fort Collins, Col., "Blooming Heather;" mare, any age or breed, A. J. Smith, Reno, "Lady Maud."

CATTLE.

SHORTHORNS—Best 4-yr-old and over bull, Vail Bros., Fort Churchill, "Prof. Mike;" 2-yr-old bull, W. J. Marsh & Son, Fort Churchill, Imported "Duke of Waterloo;" 1-yr-old, E. W. Crutcher, Winnemucca, "Sylvia's Waterloo 39th;" 4-yr-old and over cow, same, "Lulu Watson;" 3-yr-old, same, "Felicia;" 2-yr-old, same, "Claudia 3d;" 1-yr-old, W. J. Marsh & Son, Fort Churchill, "Wild Eyes Duchess 12th;" best herd of 1 bull and 4 heifers, under 2 yrs., shown by owner or breeder, thoroughbred cattle, raised in Nevada, or counties of California and Oregon as admitted, same party; best herd of thoroughbred cattle over 2 yrs. old, to consist of 1 male and 4 females, owned by one person, Vail Bros., Fort Churchill.

HEREFORDS—M. Polk, Halleck, all-premiums.

JERSEYS—Best 4-yr-old and over bull, B. C. Platt, Reno, "Grey Knight;" 4-yr-old and over cow, same party, "Princess Montgomery;" all other premiums, Gov. C. C. Stevenson, Carson.

POLLED ANGUS—Best 3-yr-old bull, E. W. Crutcher, Winnemucca, "Orlando;" 4-yr-old and over cow, same party, "Gretchen."

POLLED GALLOWAYS—Best 4-yr-old and over bull, Vail Bros., "Black Knight;" 3-yr-old bull, E. W. Crutcher, "Spring Water Monarch;" 1-yr-old bull, same.

HOLSTEINS—Best 4-yr-old bull, M. Gulling, "Prince of Nevada;" all other premiums, Stanford.

CROSS-BRED FULL BLOODS—Best 3-yr-old cow, B. C. Platt, "Lily of the Vale."

GRADED—Best 1-yr-old bull, M. Polk, Halleck, "John Henry." Cows—Best 4-yr-old and over, same party, Roan; 1-yr-old, Vail Bros., "Compromise."

SWEEPSTAKES—Best 1-yr-old bull, M. Polk, Halleck, "Homestretch;" cow, any age or breed, same, "Patch." Best bull with five calves under 1 yr., Vail Bros., "Prof. Mike;" "Shoshone;" "Princess;" "Pawnee Girl;" "Apache Chief;" "Sioux Boy;" "Comanche Chief."

E. W. Crutcher was awarded the W. O. H. Martin prize for the best Nevada exhibit in the first department.

Mrs. A. Longley gets 1st prize for best calf under 1-yr-old. Hallock Cattle Co. 2d prize.

SHEEP AND SWINE.

Spanish Merino ram, 2-yr-old and over, E. C. Hardy, Toano, "Merrimac." **French Merino ram** 2-yr-old and 1-yr-old, Theo. Winters, Berkshire boar, sow and pigs, A. C. Hill, Reno.

POULTRY.

Best Plymouth Rocks, A. C. Hill; **Asiaties**, B. C. Platt; **Brown Leghorns**, same; **Houdans**, A. C. Hill; **B. R. games**, W. M. Starling, of Carson; **bronze turkeys**, A. C. Hill; **Muscovy ducks**, J. Gault; **Pekin ducks**, Ben Peck; **geese**, Mrs. J. Gault. **Sweepstakes**—Best trio fowls, any age or breed, W. M. Starling.

DAIRY PRODUCTS.

Best 10 lbs. cheese, and best and largest display of cheese, Mrs. Theo. Winters; **best 10 lbs. butter** in rolls, Mrs. J. Gault; **best firkin or jar butter**, 20 lbs., Mrs. W. W. Morton.

FRUIT, VEGETABLES, ETC.

Best doz. varieties apples, Wm. Riley; $\frac{1}{2}$ doz. do, Mrs. J. Gault; **display pears**, Wm. Riley; **peaches**, C. H. Symonds; **plums**, Wm. Riley; **quinces**, same; **grapes**, C. H. Symonds; **5 lbs. dried apples**, J. S. Towles; **exhibit fruits in variety**, Mrs. Wm. Riley; **dried vegetables**, C. Stoddard; **dried apples**, dried peaches, dried plums, Miss C. Graff.

Best var. vegetables, A. Winters; **2d coll. vegetables**, Guy Flint; **100 lbs. early rose potatoes**, Geo. Alt; **100 lbs. any var. vegetables**, T. G. Herman; **best doz. parsnips**, carrots, long blood beets, turnip beets, G. Alt; **10 lbs. tomatoes**, Mrs. J. Gault; **drumhead cabbage**, G. Alt; **other variety**, L. Capurrow; $\frac{1}{2}$ doz. cauliflower, G. Alt; **lettuce**, W. Riley; **yellow onions**, G. Alt; **narrow squash**, Mathews; **Hubbard squash**, I. P. Johnson; **pumpkin**, O. C. Ross; **sweet corn**, B. Peck; **mammoth**

squash, Mathews; **watermelons**, O. C. Ross; **cantaloupes**, Mrs. J. Gault; **white beans**, royal beans, chestnut beans, cucumbers, W. Riley.

Display of honey, E. A. Moore.

Best and largest collection of flowering plants in bloom, Mrs. D. B. Boyd; **best coll. ornamental foliage plants**, Mrs. J. L. Flint; **best display cut flowers**, Mrs. A. H. Manning; **best disp. hanging-baskets** containing plants, Mrs. T. K. Hymers.

Vallejo—25th District.

HORSES.

THOROUGHBRED—All premiums to B. C. Holly, Vallejo.

ALL WORK—4-yr-old stallion, "Rigoletto," F. Brughelli, Napa; 4-yr-old mare, "Hattie P.," Mrs. S. S. Drake.

GRADED—4-yr-old stallion, "Coligna," Cal. Reams, Suisun.

DRAFT—4-yr-old stallion, "Frenchy," E. J. Upham, Collinsville; 4-yr-old stallion, "Samson," H. D. Deming (special); 3-yr-old stallion, "Gladstone," P. D. Walsh; 4-yr-old mare, "Nellie," H. B. Deming; 3-yr-old gelding, "Frank," J. W. Farmer.

ROADSTERS—4-yr-old stallions — "Woodnut," B. C. Holly and —, T. Smith; 4-yr-old mares — "Nellie," A. J. McPike, Vallejo, and "Flora Belle," Mr. Skinner, Napa; 2-yr-old mare, "Ramona," F. H. Sanderson; gelding, "Acme," A. J. McPike.

CARRIAGE AND SADDLE HORSES—Double team, "George" and "Ed.," S. Corcoran. Single buggy mares, "Pet," Mrs. L. A. Starr, and "Maggie," G. H. Pease, Napa; 4-yr-old stallion, "Hambletonian, Jr.," F. W. Loeber, Napa; 3-yr-old stallion, "Free Willie," H. B. Starr; 4-yr-old mares, "Matamore," Mrs. Skinner, Napa, and "Alice P.," M. Kemper; 3-yr-old mare, "Jordan Beauty," Mrs. Skinner; 2-yr-old mare, "Hattie G.," J. W. Farmer; suckling colt, "Aggie K.," and 2-yr-old gelding, "Starr K.," M. Kemper.

CATTLE.

DURHAM BULL—"Roscoe," J. Hunter & —, A. K. Brown.

ALDERNEY BULL, "Abe Lincoln," Joseph Wilson. **JERSEY BULLS**, "Gold Digger," B. C. Holly, and "Cable Fawn," J. M. Grogan, Napa; cow, "Pailful," J. Wilson.

HOLSTEIN BULL, "Waterloo," and cow, "Submonte Princess," J. Wilson.

SHEEP AND SWINE.

SOUTHDOWNS AND SHROPSHIRE—W. Middleton, Napa. **Cotswolds**—W. Watson, Suscol. **Leicester**—back and grades—P. D. Walsh. **Berkshire**—boar, sows and pigs, F. Sanderson.

POULTRY.

TURKEYS—Black, White, and Game Leghorns, and best exhibit poultry, E. McLees. **Wyandottes**, **Black Polands**, and **Game Bantams**, Mrs. Starr. **Plymouth Rocks**, D. W. Harrier. **Ducks**, H. B. Deming. **Best graded poultry**, Commodore Belknap.

PAVILION EXHIBITS.

GRAIN AND VEGETABLES—Barley and oats, F. H. Sanderson; corn, C. B. Deming; potatoes, F. Brughelli; squashes, Mrs. Graves; pumpkins, J. Soanes; corn, growing, J. Hunter.

FRUIT, GRAPES AND NUTS—Exhibit fruit, C. B. Deming; ex. apples, F. De Carlow; single var. and 6 var., Mrs. R. E. F. Moore; pears, same; plums, Miller Ranch; quinces, Mrs. D. Smith; oranges, Dr. Anderson; lemons, P. Grimes; watermelons and muskmelons, J. R. Simmons; grapes and raisins, C. B. Deming; ex. grapes (special), H. W. Crabb; figs, D. C. Snyder; almonds, F. De Carlow; canned fruits, Mrs. J. W. Farmer and (special), Mrs. C. B. Deming; dried apples and dried fruit, Mrs. C. B. Deming; California wines, 1st, H. W. Crabb; 2d, M. M. Estee; California brandy, H. W. Crabb.

DAIRY PRODUCTS—Butter, 1st, F. Brughelli; 2d, J. W. Farmer; cheese, D. W. Harrier.

IMPLEMENTS, ETC.—Gang plow and cultivator, E. Topham; pruning shears, Briggs & Jacobson; butter box, J. W. Farmer.

FLOWERS AND SHRUBBERY—1st prem., P. Hassitt; 2d, Miss E. Maguire; house plants, Mrs. J. C. Browne; blackberry vine, Jos. Byrle; floral exhibit, Miss F. Deming; roses and pot plants, Mrs. H. Englebright; pot plants (spec. prem.), Ray Cassidy.

Fire in Lodi.

About noon on the 11th inst., the Novelty Planing-Mill at Lodi was found to be on fire, and in less than an hour the chief business block of the town, bounded by Sacramento, Pine, School and Elm streets, was almost entirely consumed. The only buildings left standing in it were the Grangers' store and two dwelling-houses in the northwestern corner.

The saving of the Grangers' building, and probably of two whole blocks beyond, was due to a somewhat singular occurrence. A house close in the rear of the store was just catching fire, when the joists supporting the full tank gave way, and the contents deluged the premises, dashing against the house and extinguishing the blaze. E. Lawrence, manager of the Grangers' Co-operative Business Association, estimates the damage to their building and stock, mostly by water and smoke, at \$2500, fully covered with insurance.

The total loss was estimated at \$70,000, not more than a quarter of that amount being covered by insurance. It is thought, however, that one good will result from the conflagration, namely, the organizing of a fire department.

"INJURIOUS INSECTS."—In our issue of 8th instant Matthew Cooke's large illustrated work on entomology was mentioned as costing \$30. Mr. Robert J. Cooke writes us that that was a mistake and the price is \$4 per copy. At the latter figure, however, we regard the book as affording the practical farmer and orchardist an opportunity which he should not neglect, for investing a small amount of money to great advantage. We have a few copies on sale at this office. Price \$4, post free.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

GOPHERS' GARNER.—Irvington Reporter: E. H. Frick, while excavating in the cemetery last week at a depth of three feet beneath the surface, came upon a cavity made by gophers that was filled with 135 bulbs of the narcissus flower plant, growing 35 feet from where found. This shows the destructive habits of the rodent and that a subterranean wall a foot or two deep will not shut them out of a lot. In order to protect against them it is necessary to sink walls as much as four feet deep.

WHEAT IN WAREHOUSE.—Haywards, Oct. 17: Grain has been pouring into the warehouses steadily, and even with the additions it has been difficult to accommodate all who wished their grain stored. All the grain will probably be in by the last of next week.

Amador.

MORSELS FROM MIDDLE BAR.—Jackson Dispatch, Oct. 15: Dr. Chambers has a ranch on the hillsides which he can either irrigate or cultivate. His fruit trees, though young, show what this country can do. He also has a large fish-pond. Mr. Crannin, at the Bar, has the largest fig tree in the county, and one of the largest outside Mission San Jose. Mr. Sanguinetti, just above, has a ranch with the finest of fruits and vegetables. Passing along the river, up and down, you not only find the citrus fruits, but all others, particularly apples, grapes and pears, which we only need a railroad to make a success of.

FOREST FIRES.—An extensive fire has been raging in the neighborhood of Clinton, N. Y. Ranch and Pine Grove for several days past, and has done considerable damage, destroying feed, wood, fences, houses, barns, etc. Nearly every farmer in the neighborhood has suffered more or less, but the heaviest loser is Mr. T. Gianini, who lost his dwelling-house, barn, two wagons, harness and farming implements, and also about 65 tons of hay. Wm. Scharenbroch, we understand, lost about \$1000 worth of mining timbers. J. D. Mason lost about 100 cords of wood. A. Douet, at the Esperance tunnel, lost his dwelling-house, blacksmith-shop, tools, provisions, etc., amounting in the aggregate to about \$600, and many others lost wood, fences, etc.

Butte.

CANNERY PACK.—Chico Enterprise, Oct. 7: H. G. Hulbard, Supt. of the cannery, gives us the following figures of the season's work: Apricots, 73,335 cans; blackberries, 2129; cherries, 8607; green peas, 1250; peaches, 154,732; pears, 40,000; apples, 2000; plums, 12,000; tomatoes, 6000; grapes, 16,000; nectarines, 2000; miscellaneous, 2000; total number of cans, 320,053. Of the above, seven carloads have been shipped to St. Louis and six to Chicago. There are 20 carload lots yet to be shipped East on orders, besides a large growing trade has sprung up in Northern California and Oregon which has to be supplied. Early in the season orders for the Chico cannery fruit came in so thick and fast that the agent at the East had to be recalled and many orders canceled. The fruit was plenty, but could not be handled. Had the capacity of the cannery been larger and help plenty, the above figures might easily have been doubled. As high as 250 hands have been employed at one time during the past season. Work will soon be commenced to enlarge the building, so that more can be accomplished, if the help can be secured, next season.

IN THE BURNING FOREST.—Chico Enterprise, Oct. 14: Grant Seward & Eugene Gifford, on their trip to Nimsheaw yesterday, noticed the fire raging on the hillsides above, but did not think it would burn down to the road before their return. On driving back, the dense smoke they encountered they thought came from the hillsides. They drove by a burning pine tree, and, in passing, saw it was ready to fall. When a short distance past the tree, it fell with a mighty crash across the road, and effectually barred all escape in that direction until it was burnt up. They were now in the midst of crackling flames, blinding smoke and falling limbs, with a thoroughly scared team. Gifford got out and led the horses, while Seward lashed them with the whip. After struggling through this terrible ordeal for 15 minutes, they reached a dell in the road that the flames had not yet penetrated, and threw themselves, almost blinded and suffocated, by the wayside, panting for breath. After a few minutes' rest, they started the horses through on a dead run, and escaped without further mishap. The young men show traces to-day of their hard trip, and are considerably scorched and blistered. They report that the fire is raging with great fury near Nimsheaw, and a large territory has been burned over and valuable timber destroyed, with seemingly no effort made to check it.

Contra Costa.

GRAPES HIGH AND LOW.—Antioch Ledger, Oct. 15: We have received generous samples of Rose Peru and Muscatel grapes from the Oak Point ranch, raised on the reclaimed tule land; and the samples noted had all the excellent qualities for which these varieties of table grapes are valued. As showing the wide range over which grapes may be successfully grown, we mention an instance where the conditions of growth are as dissimilar as possible, although

the result is equally satisfactory. On Chris. Nagle's place in the high chaparral, and almost without cultivation, a two-year-old vine has yielded this season 75 pounds of fruit.

Fresno.

TEMPERANCE RAISINS.—Fresno Republican, Oct. 14: Sam Littlefield will get about 14 tons of raisins from less than 12 acres of vineyard this year in Temperance Colony.

USEFUL TO RAISIN-PACKERS.—The patent recently granted to T. C. White of Raisina vineyard is one of great utility to raisin-packers. Hitherto the great trouble in packing raisins in the boxes for shipment has been to give the top layer the smooth, even and regular appearance that those of foreign countries have. To do this it has always been necessary to put this layer in by hand, and a great deal of time was consumed in doing it. With Mr. White's plate it can be done without trouble and very quickly, while the appearance of the layer is greatly enhanced.

Humboldt.

VEGETABLES IN VARIETY.—Eureka Standard, Oct. 15: We are in receipt of fine samples of vegetables raised on the farm of Mr. R. L. Waite, near Springville, which it would be hard to excel anywhere in the State. In the lot we observe as most worthy of mention one head of cabbage, which weighs 22 pounds, two large beets weighing 8 or 9 pounds, which excel anything in their line for table use, six onions of 10 pounds weight, and as fine a lot of large potatoes as can be found in any market.

VORACIOUS VERMIN.—G. O. Barber of Grizzly Bluff has lost 80 sheep during the last month by the ravages of coyotes and wildcats, and the same general complaint is universally heard from sheep-owners on Mad river and other ranges throughout the county during the past season.

Inyo.

WATER STORAGE.—Bishop Creek, Oct. 13: A Nevada company has located a series of lakes in the mountains east of this place, with a view to impounding the waste water in the early spring. Some 1200 acres of hitherto valueless land will be made available for location and cultivation. Surveys are being made and the work of constructing dams will be commenced at once.

Monterey.

FOOTHILL FRUITS.—Monterey Democrat, Oct. 15: J. P. Pugh, whose place is located in the foothills west of the Salinas river, between Gonzales and Soledad, sent this office yesterday a box of magnificent grapes, which excel in flavor and size of the bunches any we have seen. The box contained three varieties—Flaming Tokay, Muscatel and Black Hamburgs. Besides grapes, the Pughs, father and son, raise the choicest varieties of peaches, apricots, almonds, nectarines, prunes, plums and apples in abundance. They have demonstrated that the foothills west of the Salinas river are capable of producing fruit as fine as can be grown in any part of the State. We have kept a few bunches of these grapes, and those who desire to see what can be produced in Monterey county can call at our office and see them.

Napa.

THE FIRE ON HOWELL MOUNTAIN.—St. Helena Star, Oct. 14: From Mr. Angwin, who has large possessions there, we learn that it swept over about 2500 acres of forest. Among the heaviest losers are A. C. Donnell of Oakland, one barn and seven tons of hay, also a lot of farming tools and one-quarter of a mile of picket fence. Edward Haast, house and barn, 50 cords of wood and one-quarter of a mile of fence. Mr. Ross, one-half mile of picket fence and 30 cords of wood. Mr. Culter, 75 cords of wood. Captain Dunbar, one-quarter of a mile of fence, and Messrs. Holihan one-quarter of a mile of fence. Angwin's summer resort was in danger, and the ranch of E. M. Hall, Jr., was also threatened. Colin Ross' property stood in great danger also. Tuesday the fire was completely under control in this section.

San Benito.

ARTESIAN WATER.—Free Lance, Oct. 14: J. G. Hamilton's well, bored on his grounds in the center of Hollister, has attracted a great deal of attention. Three streams were struck between a depth of 80 and 174 feet from the surface. Not content with this, although the flow of water was abundant and rose to the height of two feet above the ground, Mr. Hamilton went still deeper, until at a depth of 220 feet the drill struck solid rock. Having all the water he could use, and in fact enough to supply the town if necessary, Mr. Hamilton stopped drilling, and is now running pipes from the well all over his large grounds. The only other well in Hollister is that on the grounds of W. I. Reed, which was bored by Thos. Yost some years ago. It is now thoroughly demonstrated that artesian water can be obtained anywhere in Hollister at a depth averaging 170 feet. The wells thus far have been bored by hand, and the process is therefore rather slow and laborious. The water is clear and cool, and as pure as can be. Coming from 170 feet below ground, there can be no surface water in the pipe.

PROLIFIC PEAR TREE.—On the corner of Williams and Monterey streets is growing a pear tree of the Spanish Mission variety, planted by Col. Hollister over 17 years ago. For the last 10 years it has been utterly neglected, the soil in the lot in which it is situated has not been tilled, neither have the branches been trimmed. Not a drop of water has touched its roots other

than that which fell from the heavens. In spite of this neglect the tree has grown and thrived. This year over a ton of pears have been gathered from it, and a large number are still left. The fruit is large and sound, and admirably adapted for preserving. It is easily worth two cents a pound, or \$40 for this year's crop.

HAY AND GRAIN.—As an instance of what has been done in this county without irrigation, we give the results of cultivating 1100 acres farmed by Robert Osborn, in the Quien Sabe valley, 10 miles east of Hollister. Hay, 600 tons, valued at \$6000; wheat, 4300 centals, valued at \$5500; barley, 2500 centals, valued at \$2250. Total value of crop this year, \$13,750. These are not fancy figures, but show what is recurring every year in various portions of Central California.

San Bernardino.

IRRIGATION HEAD-DITCH.—*Ontario Record*: J. W. O'Bryan is manufacturing some sections of his patent head-ditch, and the invention promises to be of great service to the fruit-growers of Southern California. The same combination of cement, sand and gravel is used as for making cement pipe, and the mold is constructed on the same general plan. A cross section of the pieces would have about the shape of the letter U. The joints are two feet long, about two inches thick, 12 to 15 inches wide and about 12 inches deep. The ends match so that the laying can be rapidly done, and provision is made for turnouts at proper intervals, an iron plug being used in the model. This ditch will certainly be a great improvement over the common dirt one.

CANNING 'COTS AND PEACHES.—*San Bernardino Index*, Oct. 15: The Lugonia cannery shut down for the season last Saturday night. They began June 7th and have used up 100 tons of peaches and 60 tons of apricots. They have employed an average of between 75 and 100 hands, and the entire pack has been shipped to fill orders from Eastern buyers.

San Joaquin.

SECOND-CROP APPLES.—*Stockton Independent*, Oct. 15: Thomas Smith has an apple tree growing in his yard, at the corner of Church and American streets, that has distinguished itself by producing a second crop this year. This tree is of the red Astrachan variety, and six years of age. In June last the first crop ripened and were picked. In the latter part of July the tree put forth new blossoms, and a few days ago Mr. Smith picked two fine, large, ripe apples, the first installment of his second crop.

San Luis Obispo.

MOUNTAIN VINES AND PRUNING.—*Josephine Cor. S. L. O. Tribune*: No frost reaches us, nor is there any continued low temperature, and all fruits prosper exceedingly. Considerable progress has been made, particularly in grape-growing. Mr. A. York has about 40,000 vines, 20,000 of which were set out last year, the others planted in successive seasons for the past eight years, embracing all the fine varieties. Adjoining him, Mr. Dover has from 5000 to 6000 vines, mostly of the Mission and Malvoisie varieties. The yield is very large, averaging quite 50 lbs. to the vine, some of the vines bearing over 100 lbs. A rather peculiar and suggestive fact is, that the vines bearing most heavily were pruned, leaving a growth of three feet or more, instead of as usual only a few inches. The old growth is a solid mass of grapes. We would like to hear what experience teaches elsewhere. Mr. York tells us that his conviction is, that the usual close pruning is a mistake, and that he intends to prune differently in the future, leaving longer vines.

Santa Clara.

FRUIT SENT EAST.—*San Jose Times*, Oct. 14: Yesterday the largest shipment of green fruit ever made from this place to the East in one day took place from the S. P. depot. It was in nine cars, each containing from 10½ to 12 tons, and aggregated over 100 tons, principally pears and grapes, addressed to Chicago, Louisville, New York, St. Louis, Minneapolis, Kansas City, Omaha, Cincinnati, Denver and New Orleans.

Santa Cruz.

VITICULTURAL.—*Pajaronian*, Oct. 13: Last spring Judge Gaffey distributed several thousand grape-cuttings among farmers who desired to experiment in viticulture. With scarcely an exception, the reports therefrom have been gratifying as to the growth of the vines. The valley upland and the foothills of this township are adapted for the grape. The vineyards of John Rossi, F. Ceschi and others in the vicinity of Corralitos are in fine bearing this year, and the table grapes from that section are as good as those shipped from Napa. In the northeastern foothills A. Mendia has a thrifty young vineyard that promises well. Experts claim that along the foothills in the vicinity of Mr. Mendia's home the grape will mature as perfectly as at St. Helena.

Sonoma.

RESISTANT RIPARIAS.—*Sonoma Tribune*, Oct. 15: John H. Wheeler, Chief Viticultural Officer of the State, and Chas. Krug of St. Helena recently visited the vineyard of Mr. J. Dresel, one mile east of Sonoma, to examine the resistant vines. Mr. Dresel's vineyard, one of the finest and most thrifty in the State, is grafted almost entirely on riparia roots to resist phylloxera, and is the earliest effort conducted on an extensive scale made in this State. The committee, Mr. Wheeler states, is

able to report a perfect success for Mr. Dresel; and in their report will call the attention of the viticultural public to his generous example, as that gentleman has spared neither time nor money in successfully demonstrating that phylloxera can be resisted. Mr. Dresel's vineyard, the committee say, is not only notable for its resistance, but also for the large crop which it has produced since coming into bearing.

LOCAL ITEMS.—*Santa Rosa Republican*, Oct. 13: Farmers and sheep-raisers in the sparsely settled parts of the county complain of the ravages made upon their flocks by coyotes. Supervisor O'Hara has lost a number of sheep, and it seems almost an impossibility to kill the ravenous animals. The cannery closed Saturday. The boys and men who were engaged in the cannery can find plenty of work in the vineyards. W. Hotel of Sebastopol brought to this office a watermelon weighing 42 pounds. A sunflower measuring 15 inches in diameter has been left at this office by N. P. Dibble of Forestville.

Shasta.

TAKING UP LAND.—*Redding*, Oct. 13: A colony of 70 Germans from the southern part of the State have entered all the Government land in Hat Creek valley. Thirty of the company are on the ground, and the remaining 40 will arrive in a few days. The hotels the past week have been crowded with parties taking up timberland on the headwaters of Cow, Clover, and Montgomery creeks. The land office at Shasta has more applications for land than at any previous period of its existence.

Ventura.

BEANS AND SPUDS.—*Democrat*, Oct. 13: Immense beanfields yet unthatched are seen on both sides of the railroad between this town and Santa Paula. On a trip up the valley Saturday last only one thrashing machine was seen at work, and a heavy rain, which might happen now almost any day, would do great damage to this crop. One day last week Mr. J. V. Alvord, a successful farmer on the Colonia, left at the *Democrat* office 13 potatoes of the Peerless variety, white-skinned, oblong in form and weighed in the aggregate 33 pounds. The largest of the lot weighed 4½ pounds, were firm throughout and of excellent flavor. If Mr. Alvord has many such he should be able to take premiums at all fairs in the State.

Yolo.

ANYTHING TO KILL COYOTES.—*Woodland Democrat*, Oct. 13: Geo. Chapman, J. Briggs, Scott & Lowe, Duncan Bros., W. Levy, N. Sweitzer, D. Woigamott, Pace & Cramer, G. Vallmer, R. M. Aucker, J. P. Goodnow and J. R. Parker, all sheep-raisers along the line of the foothills bordering the west side of Yolo county, have contracted to pay \$1 each into a common fund in order to pay a reward of \$15, in addition to the \$5 bounty awarded by the county, for every coyote scalp captured on their ranges. Doc Duncan of Capay has been chosen treasurer, to whom the coyote scalper must apply, swear to the locality in which the coyotes were captured, and receive his reward. If the coyotes in that section are as plentiful as they are represented to be, a good hunter might do well in the business.

MARKETING POULTRY.—*Yolo Mail*, Oct. 15: For the past few weeks Wells, Fargo & Co.'s wagon has been heavily laden every day with enormous coops of chickens, all of which were sent to S. F. and Sacramento. The demand for the Yolo birds still continues, and yesterday some 20 dozens of chickens and turkeys were shipped to S. F. The present is an excellent time for our producers to sell their poultry, as prices are quite high. Many ranchers make a practice of reserving their chickens until the holidays begin; but then the market is glutted and prices are much lower.

NEVADA.

ALFALFA AND OATS.—*Reno Journal*, Oct. 8: E. W. Powell, manager of the Russell & Bradley ranch, on the English mill property, brought in a specimen of oats and alfalfa that was planted in July. The growth is vigorous, the oats being about four feet high. It shows conclusively what soil here will do when water is used freely.

CARSON FAIR.—*Reno Gazette*, Oct. 8: The first District Fair of Ormsby, Storey and Douglas counties ended Saturday. The exhibits of live-stock and ranch produce were highly creditable, and made the old '49er realize that the State was good for something besides its stores of precious minerals in the mountains. It has been proven beyond a peradventure, by both the State Fair and Carson exhibits, that our soil is exceedingly productive when irrigated. As an instance, Mrs. Stewart, wife of our United States Senator, exhibited at the Carson pavilion 40 Snowflake potatoes weighing a fraction over 60 pounds, raised in her garden this summer. President Lee said the fair was in every sense more of a success than was expected by the most sanguine, larger and better exhibits, greater attendance and the results financially were gratifying. The fair was self-supporting, with the exception of probably about \$400, which will be covered by life-membership fees.

BREEDING HEREFORDS.—*Gazette and Stockman*: There is a ranch in Nevada at which the raising and breeding of Hereford cattle from the choicest strains is made a specialty. Joseph Scott & Co. of Halleck, Elko county, are, so far as is known by the writer, the only firm in the sagebrush country engaged in breeding the

"whites." The farm proper is nine miles from Halleck, and is under the superintendency of Mart. Polk, whose experience and enterprise entitle him to be placed upon the list of progressive breeders. There are at present fully 100 head of pure-blood Herefords, Devons and Durhams on the farm, the former being closely allied to the famous lines over which Grove 3d and Lord Wilton have shed so much distinction. At the recent State Fair the firm exhibited a number of Herefords, among them being the famous bull "Homestretch," who has been for a long time, and still is, the monarch of their herd. "Sagebrush Bull," exhibited by Hunter Bros. of Elko, was first owned by Scott & Co., and the success attained by him as a sure "getter" has proved a winning card to his breeders, who have disposed of many head to Nevada stockmen on account of his good record.

SHEEP AND WOOL.

The Mono License on Grazing.

A decision of considerable importance to counties largely interested in the sheep industry was handed down recently in the Supreme Court. The decision was made in the matter of ex-parte Mirande on habeas corpus. The petitioner was convicted on a charge of violating the provisions of an ordinance of the Board of Supervisors of Mono county relating to the business of "raising, grazing, herding of sheep" in said county. The ordinance required persons engaged in the above business to obtain from the tax-collector an annual license, as follows: Those owning or having under their control 5000 sheep or more, \$250 for the first 5000 and for every additional 1000 \$50; 4000 sheep and less than 5000, \$200; 3000 sheep and less than 4000, \$150; 2000 and less than 3000, \$100; 1500 and less than 2000, \$75; 1000 and less than 1500, \$50; less than 1000, \$25. The petitioner objected that the ordinance was not passed at a regular meeting; was invalid and conflicted with the State Constitution and the Fourteenth Amendment of the Federal Constitution. The Supreme Court sustains the ordinance and remands the prisoner. The decision in effect upholds the constitutionality of the Act of the Legislature of March 14, 1883, known as the "County Government Act," Subdivision 27 of Section 25 of that Act, defining the powers and duties of supervisors, reads as follows:

To license for purposes of regulation and revenue all and every kind of business not prohibited by law and transacted and carried on in such county, and all shows, exhibitions and lawful games carried on therein; to fix the rates of license tax upon the same and to provide for the collection of the same by suit or otherwise.

In the course of the decision the Court says:

Herding or grazing stock is or may be a business, and it is upon such business that the license is imposed. That property used in any particular calling is subject to and has paid a property tax, ad valorem, as in this case, does not interdict the right to impose a license upon the business in which such property is used. The Constitutional provision in relation to uniformity of taxation does not apply to prevent such license tax for such reasons.

The opinion is written by Chief Justice Searle, and is concurred in by Justices Thornton, Temple, Paterson, McFarland and McKinstry.

HORSE BREAD.—Horse bread is still commonly made in Sweden. It is also commonly made and used in Tyrol and in certain parts of Switzerland—the Engardine, for instance. Your driver stops at a roadside inn, and, before he buys anything for himself, he buys for his horse a large cake of brown oatbread, circular, flat-tish, the size and shape of a Yorkshire yule cake. The strong, quiet, steady horse—or mare, very likely—knows well what all this means; looks on with eager eyes as he slices the cake into strips; munches slice after slice with keen enjoyment; and finally, perhaps, lays its lips upon his palm, to suggest the possibility of another loaf. Some drivers, indeed, themselves desirous of a meal, are content to crumble the bread into a trough, and in that case the horse will not only eat all the larger pieces, but will, with teeth and tongue, take up every morsel and crumb that strews the floor of the trough. Such are his views as to the merits of oat bread.

TRAIN ROBBERS KILLED.—On the G. & S. A. railroad, near El Paso, last Friday night, two scoundrels armed with revolvers and dynamite bombs boarded and attempted to rob an express train; but Ernest Smith, Wells-Fargo's messenger, shot and killed them both, thereby earning the thanks of his employers and the gratitude of people generally.

The new two-cent postage stamp is green; the three-cent is vermilion; the four-cent carmine instead of green; the five-cent has been changed from chocolate-brown to blue, and has the head of Grant upon it instead of that of Garfield; the 30-cent stamp is brown and the 90-cent is purple instead of carmine.

A PHILADELPHIA dancing-master rebuked a rowdy thus: "Pardon abruptness, my dear fellow, but I must insist on perfect decorum," and then he kicked the rough downstairs.

IS THERE ANY HOPE?

NEW AND IMPORTANT OPINIONS OF PULMONARY EXPERTS!

Can the Universal Consumption be Successfully Treated?

Dr. Borgeon, a leading French doctor, has a new treatment for consumption!

He gives an enema of carbonic acid and sulphuretted hydrogen gases, the latter gas carrying the former into every part of the throat and lungs.

This treatment, too, is directed at effects—the cause remains undisturbed.

What this cause is has been stated by perhaps the highest pulmonary authority in the world, i. e., the Brompton Hospital for Consumptives, in London, Eng.

This malady every year carries off from one-seventh to one-fifth of the entire population of England!

Dr. Payne, M. D., M. R. C. P., London, is authority for this statement.

The same or a greater proportion of deaths obtains in America.

Dr. Payne also says that one-half the total number of deaths from all other causes have seeds of this disease in the system which only require some irritant to develop!

Dr. Hermann Brehmer, an eminent German authority, says that consumption is caused by deficient nutrition of the lungs, by poor blood.

These authorities cannot be disputed. The medical world recognizes them. The uric acid is the irritant in the blood that causes the development of the seeds which Dr. Brehmer says lie dormant in the blood.

Every particle of blood which passes through the lungs and heart also goes through the kidneys, and if they are in the least deranged they cannot rid the blood of its killing poison. The thousand little hair-like sewer tubes of the kidneys very easily get blocked up and diseased; and when they do, they corrupt instead of purifying the blood. Kidney disease may exist, and yet no pain occur in that organ, because it is deficient in nerves of sensation.

Dip your finger in acid every day and it soon festers and is destroyed. Send acid-poisoned blood through the lungs every second, and they soon give way.

The Brompton Hospital investigation showed that 52 per cent of the victims of consumption were afflicted with deranged kidneys, which permitted the uric acid poison to remain in the blood and irritate the lungs. This uric acid is always fighting every vital organ, and if there be any inherent weakness in the lungs it inevitably causes pneumonia, cough and consumption.

The real cause of pulmonary troubles being so authoritatively shown to be faulty even though unsuspected action of the kidneys, explains why, in order to master the dreaded consumption, one must rid the blood of the uric acid irritant which inflames and burns up the lung substance. For this purpose there is nothing equal to that great specific, Warner's safe cure. This remedy has now the favor of medical men all over the world purely on its merits. We have no doubt that if the kidneys are kept in natural action, consumption and a great many other diseases, caused by uric acid, will not only be cured, but will be prevented.

When the kidney is healthy, no albumen appears in the water, but albumen is found in the water of more than half of those who die of consumption!

This, then, is the condition of things that always precedes consumption: First, weakened kidneys; second, retained uric acid, poisoning the blood; third, the development of disease in the lungs by the irritant acids passing through them. Then there is a little cough in the morning; soon thick, yellow matter is spit up, followed by loss of flesh and strength, with dreadful night sweats; and when the patient goes to his school physician for help, he is put on cod-liver oil which his stomach, weakened also by uric acid in the blood, cannot digest. Because there is no pain present in the kidneys, the patient does not think they are affected, but the kidney acid is doing its work every minute, every hour, day and night, and by-and-by the disease of the lungs has advanced until pus is developed, then come hemorrhages, and at last the gassy state which denotes that the end is near!

A post-mortem examination of such cases shows that the terrible uric acid has completely destroyed the substance of the lung.

It is impossible to cure lung disease when the blood is poisoned with uric acid.

NEXT to Mt. St. Elias, in Alaska, Mt. Tacoma is the loftiest peak in the United States. Its ascent is very difficult, and the scenery is extremely wild. An illustrated account of a climb to the highest attainable point will be given by C. D. Hendrickson in the November *American Magazine*.

Monterey District Fair.

The Eleventh Annual Fair of the Seventh District Agricultural Association took place at Salinas October 4th to 8th. The district is composed nominally of the counties of San Benito and Monterey, but practically almost the whole showing devolves upon the latter. There was a very creditable display of horses and cattle, the latter particularly being more and better than a year ago. The weather was favorable and the attendance good. While the exhibit in the pavilion was not so large as on some former occasions, it was deemed the best representative showing ever made of the agricultural resources of the region. An inspection of the appended list of awards will give an idea of the scope and variety of the products displayed.

Awards—Seventh District.

HORSES.

THOROUGHBREDS.—Stallions—3-yrs.-old, C. Cockrill, "Ironclad;" 2-yrs.-old, M. P. Kelly, "Round-out;" 1-yr.-old, C. Luce, "Sorrel Charley;" Suckling colt, J. D. Carr, no name. Mares—3-yrs.-old, C. Cockrill, "Daisy D;" 2-yrs.-old, M. H. Kavanaugh, "Kitty C;" 1-yr.-old, J. B. Iverson, "Herculean."

ROADSTERS.—Stallions or geldings—4-yrs.-old, C. F. Langley, "Black Duke;" 3-yrs.-old, P. Kilburn, "Capt. Kidd;" 2-yrs.-old, J. H. Harris, "St. Patrick;" 1-yr.-old, J. D. Cochran, "Jim Mulvaney;" mares—3-yrs.-old, A. A. Watson, "Laurina;" 2-yrs.-old, P. Kilburn, "Lunetta;" 1-yr.-old and under, M. H. Clark, "Maud C."

ALL PURPOSES.—Stallion or gelding, 4-yrs.-old and upward, J. C. Storm, "Nonpareil;" Stallion, 3-yrs.-old, M. H. Clark, "Louie;" 2-yrs.-old, J. R. Hebron, "Glenwood;" suckling colt, Jas. Storm, "Roger;" mares—4-yrs.-old and over, P. Kilburn, "Maud;" 3-yrs.-old, M. Lynn, "Nelly;" 2-yrs.-old, J. W. Patton, "Lizzie Dunbar;" 1-yr.-old, W. Parsons, "Gipsy;" gelding, J. B. Iverson, "Kingsley;" mare, 4-yr.-old and over with colt, C. F. Langley, "Nelson."

DRAFT HORSES.—Stallion, 4-yrs.-old and over, J. Storm, "Revier;" graded stallion, 4-yrs.-old and over, J. Storm, "Ripper;" stallion, 3-yrs.-old, G. W. Theuerkauf, "Col. Bill;" mares—4-yrs.-old and over, J. R. Hebron, "Fannie;" 3-yrs.-old, J. B. Smith, "Flora;" suckling colt, J. B. Iverson, "Susie."

CARRIAGE HORSES.—Span, J. D. Carr, "Jackson" and "Pilot;" single buggy horse, Wm. Vanderhurst, "Charley V."

SWEETSTAKES.—Stallion with 4 colts, M. Lynn, "Pirex;" stallion, any breed or age; 1st, J. C. Storm, "Nonpareil;" 2d do, C. F. Langley, "Black Duke;" mare, any breed or age, 1st, M. Lynn, "Maggie;" 2d do, J. B. Iverson, "Lady Jones;" gelding, any breed or age, J. B. Iverson, "Kingsley;" colt, any breed, foaled in 1887, J. C. Storm, "Daisy."

CATTLE.

DURHAM.—Bull, 1-yr.-old, J. Storm, "St. Nicholas;" Cows, 4, 3, 2 and 1-yr.-old, and calf, P. Kilburn. Graded—bull, Ben Hitchcock, "Tom Tinker;" cow, 3-yrs.-old and upward, J. Storm, "Scotty;" herd of cattle, J. Storm, "St. Nicholas;" "Rosie," "Bride," "Scotty" and "Lady Mac."

OTHER ANIMALS.

Sheep—Ram and ewe, J. W. Patton.
Swine—Boar and sow, W. T. Gilkey.
Poultry—Bronze turkeys, Blk Spanish and Br. Leghorn fowls, J. W. Patton.

FARM AND GARDEN PRODUCTS.

Sack wheat, J. Storm; barley, M. Williams; oats, J. W. Patton; rye, J. B. Hickman; corn, W. T. Gilkey; flax, J. B. Hickman; hops, Mrs. Gilkey; hams, R. N. Windsor; 10 lbs. lard, Mrs. Hickman; honey in comb, and strained, Mrs. Gilkey; pickled olives, Mrs. Gilkey; sack potatoes, R. Porter, "Blanco;" dried beans, W. T. Gilkey; melons, S. O. Pugh; cucumbers, Mrs. Hickman; 20 lbs. turnips, W. S. Hunt; 20 lbs. tomatoes, radishes, peanuts, Mrs. Hickman; sugar beets, Mrs. Conklin; pumpkins, J. R. Hebron.

FRUITS.

GREEN.—Best display of all descriptions; collection pears, nectarines, nuts, coll. oranges and lemons, W. T. Gilkey; 12 var. apples, single var. pears, plums, R. N. Windsor; single var. apples, W. S. Hunt; peaches, Mrs. Hickman; coll. foreign grapes, coll. wine grapes, S. O. Pugh.

DRIED.—Exhib. domestic dried fruit and 5 lbs. each of prunes and plums, apples, pears, apricots and peaches, Mrs. Gilkey.

PLANTS AND FLOWERS.

All premiums to P. Zabula, except the following: Cut flowers, Mrs. Dixon; named varieties dahlias, Mrs. Hickman.

MISCELLANEOUS.

Cheese, Z. Hebert; butter, C. Reynolds; wines, M. Cartier; silkworms, Mrs. P. Kilburn; harrow and "Common Sense" sulky harrow, J. V. Lacey. Designs of farm barn and of granary, J. B. Hickman.

SPECIAL MENTION.

Exhib. oranges, lemons, nuts, etc., from H. Escolle's place, too late to compete; J. Mayer's corn and apples; to apples from orchard of H. L. Davis, averaging 1½ lbs.; large watermelon raised by F. M. Jolly of Paraiso Springs, without irrigation; conserved and sugar-cured fruits by Mrs. W. T. Gilkey; quinces of R. N. Windsor, W. S. Hunt and W. T. Gilkey; S. O. Pugh's raisin grapes, J. R. Hebron's big pumpkins, and W. M. R. Parker's grapes, pomegranates and peaches.

FIFTY illegal squatters and cattlemen have been removed from the Mescalero Indian reservation, in New Mexico, by United States troops. Most of those removed were wealthy stockmen who had set up fraudulent claims to Government land. Fifteen settlers, who proved to have bona fide claims, were left unmolested.

Two inches of snow has fallen on Siskiyou mountain, which is rather early in the season.

The Central Pacific Railroad.

The Result of the Year's Traffic.

The annual report of the Board of Directors of the Central Pacific Railroad Company, for the year ending December, 1886, has been issued. The report is signed by Leland Stanford, President, who submits figures and statements showing the result of the year's traffic. Particular attention is drawn to the effects of the transcontinental rate-war. Rates, says the report, have been excessively low and in many cases unreasonably so.

The common interest of all is best subserved by rates which are fair and reasonable, as these only can be permanent and uniform.

With passenger traffic, however, the extremely low fares that have prevailed during the rate-war have had an indirect effect of great value to the company's lines. The travel encouraged by these fares has brought to the knowledge of a great number of persons the unequalled advantages of the Pacific Coast as to climate and productiveness. This has led to an unprecedented immigration to California from the older Eastern States of well-to-do citizens, which is having a great influence in the development of the coast.

The capital stock authorized is stated at \$100,000,000; the capital stock outstanding is stated at \$68,000,000.

The total indebtedness, not including the capital stock, is \$171,719,527.37. It is made up as follows: Funded debt, \$61,697,000; less sinking fund of the company, \$9,543,022.83; unclaimed dividends, \$9263; due trustees land grant mortgage, \$52,153,977.17; to be used to redeem land bonds, \$1,413,361.18; sinking fund uninvested, \$986,995; United States bonds, \$27,855,680; interest on United States bonds, accrued but not due, \$30,970,497.01; less repaid by transportation and cash, \$9,670,245.99; balance of interest payable to United States at maturity of bonds in 1898, \$21,300,251.02.

The total assets are set down at \$203,342,049.86. Balance of assets over capital stock and total indebtedness, \$31,622,522.49. In the assets \$153,557,630.45 is put down for all railroad and telegraph lines, ferry steamers, wharves, depots and station buildings. The equipments are placed at \$8,529,938.84. Another item is cash due from the United States over all requirements to December 31, 1886, \$756,992.16. The company's real estate in Mission Bay, Oakland water-front and Sacramento water-front, \$7,750,000. Unsold lands are estimated at \$23,500,000.

Reduction of Debt.

The report goes on to say that the net floating debt of the company has been reduced during the past year \$1,228,873.35. Its total is now \$1,306,375.71, of which \$822,035.98 represents the amount due the Southern Pacific Company, less amounts due from said company on accounting net profits for the year.

Up to April 1, 1887, 133 bonds, at a cost of \$139,982.50, have been redeemed.

The net funded debt of the company on December 31, 1886, was \$47,756,548.53. On December 31, 1886, it was \$49,623,958.04, showing an increase during the year of \$1,867,409.51. With deductions from the floating debt this total is reduced to \$638,536.16.

The Sinking Fund.

The amount in the sinking fund in the company's treasury on December 31, 1886, was \$8,276,076.17. This fund has been increased by \$1,266,946.66, making a total in the fund of \$9,543,022.83. Cash assets from the proceeds of land sales used for the redemption of land bonds, \$2,530,019.13. The total sums provided

for payment of the bonds of the company now amount to \$15,195,273.06.

The total income is as follows: Net profit from operation of lines under lease to Southern Pacific Company for the year, as shown in the accompanying report of the secretary, table No. 4, \$1,324,998.31; dividends on investments, \$7200; interest earned on sinking funds, \$463,446.66; land sales used to redeem land bonds, \$60,000; received from Southern Pacific Company account of sinking funds payable from income, \$778,500; sinking fund, etc., in United States Treasury, requirement for the year paid by the Southern Pacific Company, \$418,271.56; total, \$3,052,416.53.

The expenditures amounted to \$2,098,424.37, showing a surplus of \$953,992.16 applied to the payment of the floating debt. Total transportation charges for the year incurred by the United States amounted to \$849,037.86.

The gross earnings of the Central Pacific and associated lines were \$15,206,136.55.

The expenditures amount to \$13,881,138.24, the principal items of which are as follows: Operating expenses of railroad, \$7,096,105.14; operating expenses of Sacramento-river steamers, \$146,561.79; taxes, railroad, \$430,368.78; rental for leased lands, \$1,222,643.35; interest on floating debt paid, \$191,829.17; interest on Central Pacific Railroad Company's bonds, \$3,588,120; Central Pacific railroad sinking funds, \$778,500; Central Pacific railroad United States requirements under Thurman Act, \$418,271.56; net earnings of Stockton & Copperopolis Railroad Co., payable on floating debt of that company, \$1361.36; balance, net profit due Central Pacific Railroad Co. under lease, \$1,324,998.31.

General Manager A. N. Towne's report shows the amount of earnings over the operating expenses were \$7,970,696.29. The percentage of operating expenses for 1885 was 43.84 per cent, while for 1886 it is 47.10 per cent.

Plant Olives.

An exchange says: "Plant olive trees along your roads and highways, and wherever you have a piece of land you consider worthless, plant olives. With a little care in the start they will grow and in a few years produce more wealth than any other fruit on the farm. They live longer and with less care after the second year than any other fruit tree, and when in full bearing will produce bigger profits. They are an evergreen, and one of the handsomest trees that can be planted for ornamental purposes. Make your children happy by planting olive trees, and they will in the near future bless you for having done so."

Information concerning the planting and culture of the olive can be had in the book just prepared by A. Flamant, a well-known olive-grower of Napa, which can be had from this office for \$1 per copy.

JAPANESE ORANGE TREES.—We are informed of an importation by the Oriental Importing Company of 6700 Unshiu, Canton Hybrid and Satsuma orange trees in good condition on steamer Oceanic, which arrived about 10 days ago. We are told the trees came in elegant condition, and 1300 have been ordered already from the wharf by parties in San Diego county. At the agricultural fair the Oriental Importing Company received a premium of \$2.50 for best Unshiu orange trees and tea plants. There were also received a fine lot of palms, camellias and orchids.

SAN BERNARDINO is the banner railroad county in the State, at least so far as mileage and assessments are concerned, says the *Courier*. There are nearly 400 miles of roadbed within its borders, and the companies pay assessments on \$4,991,250.

A LESSON WITH A MORAL.

When Will Our Eyes be Opened to the Great National Calamity?

The year 1886 played sad havoc with many prominent men of our country.

Many of them died without warning, passing away apparently in the full flush of life.

Others were sick but a comparatively short time. We turn to our files and are astonished to find that most of them died of apoplexy, of paralysis, of nervous prostration, of malignant blood humor, of Bright's disease, of heart disease, of kidney disease, of rheumatism or of pneumonia.

It is singular that most of our prominent men die of these disorders. Any journalist who watches the telegraph reports, will be astonished at the number of prominent victims of these disorders.

Many statements have appeared in our paper with others to the effect that the diseases that carried off so many prominent men in 1886, are really one disease, taking different names according to the location of the fatal effects.

When a valuable horse perishes, it becomes the nine days' talk of the sporting world, and yet thousands of ordinary horses are dying every day, their aggregate loss is enormous, and yet their death creates no comment.

So it is with individuals. The cause of death of prominent men creates comment, especially when it can be shown that one unsuspected disease carries off most of them, and yet vast numbers of ordinary men and women die before their time every year from the same cause.

It is said if the blood is kept free from uric acid, that heart disease, paralysis, nervous prostration, pneumonia, rheumatism, and many cases of consumption, would never be known. This uric acid, we are told, is the waste of the system, and it is the duty of the kidneys to remove this waste.

We are told that if the kidneys are maintained in perfect health, the uric (kidney) acid is kept out of the blood, and these sudden and universal diseases caused by uric acid will, in a large measure, disappear.

But how shall this be done? It is folly to treat effects. If there is any known way of getting at the cause, that way should be known to the public. We believe that Warner's safe cure, of which so much has been written, and so much talked of by the public generally, is now recognized by impartial physicians and the public as the one specific for such diseases.

Because public attention has been directed to this great remedy by means of advertising, some persons have not believed in the remedy. We cannot see how Mr. Warner could immediately benefit the public in any other way, and his valuable specific should not be condemned because some nostrums have come before the public in the same way, any more than that all doctors should be condemned because so many of them are incompetent.

It is astonishing what good opinions you hear, on every side, of that great remedy, and public opinion thus based upon an actual experience, has all the weight and importance of absolute truth.

At this time of the year, the uric acid in the blood invites pneumonia and rheumatism, and there is not a man who does not dread these monsters of disease; but he need have no fear of them, we are told, if he rid the blood of the uric acid cause.

These words are strong, and may sound like an advertisement, and be rejected as such by unthinking people, but we believe they are the truth, and as such should be spoken by every truth-loving newspaper.

EYE-GLASSES or spectacles are great conveniences and comforts to some of us, and Hirsch, Kahn & Co., the opticians, whose business card appears elsewhere in this paper, make a specialty of their adaptation.

GEN. FRANCIS A. WALKER, of the Massachusetts Institute of Technology, will have in the November *Scribner's* an economic and social essay, entitled "What Shall We Tell the Working Classes?"

The revenue of the Santa Rosa postoffice has increased within the last three years threefold.

A New Spraying Outfit.

The engraving on this page shows a new style of spraying outfit furnished by Woodin & Little of 509 Market street, S. F., the well-known dealers in pumps and all appliances for insect destruction. The engraving shows clearly the manner of mounting and operating the outfit, and it is evident that rapid and effective work can be done with it. The pump is a new double-acting force pump, especially arranged for the distribution of insecticide substances, by throwing a constant and powerful stream. The pump can be made to throw one or two streams as desired. It has only metal valves and patent packing which are free from injury by corrosive substances. Woodin & Little issue full descriptive circulars which are sent on application.

The *Ventura Democrat* says: Arrivals of vessels at this port are of such frequent occurrence of late that there is not wharf room to accommodate them, and numbers lie and wait for their turn to unload their freight like Western farmers at a grist-mill.

A NEW SPRAYING OUTFIT—GOULD'S NEW DOUBLE-ACTING FORCE PUMP

Songster Slaughter.

In spite of the earnest protests of the humane, of the remonstrances of economists, and the laws of many States, the cruel slaughter of our feathered songsters still continues. The mortality among birds by ordinary accidents, depredations and slaughter, nearly counterbalances their increase, and such special havoc as has of late years been committed among them upsets the balance of nature and leads to the speedy extinction of whole species. Within the last half dozen years so disastrous has been the slaughter of many whose bright plumage and glad some song beautified and thrilled country places, that ornithologists estimate that even if the slaughter were at once to cease, several generations must pass before the evil effects of the recent reckless destruction would be effaced. Entomologists estimate that the annual loss in food and fiber plants caused by insects amounts to fully \$300,000,000 in this country alone. At a very low estimate, 5,000,000 birds are annually slaughtered for feminine adornment, and it is calculated that the death of every insect-eating bird causes an actual and consequential loss equivalent to four bushels of grain. What an enormous tax the country is paying to gratify the cruel demand of a fashion set by a notorious Parisian profligate and maintained by thoughtless vanity! While the reckless vanity of woman is the chief cause of this baneful butchery, man's gluttony and greed are powerfully aiding woman's vanity. Every year the rapacious pot-hunter and the inconsiderate school-boy are abroad heedlessly decimating the most destructive foes of the fast-multiplying myriads of insect pests that cause agriculture annual losses high among the millions. Several of the States have lately passed salutary laws for the protection of insectivorous birds; but scarcely any of them have provided suitable means for their enforcement. Recent events have shown that the wishes of the farmers of the country, emphatically expressed, have powerful influence with our legislators, and on what subject should their wishes be expressed more emphatically than on the necessity for prompt and effective legislation for the protection of friends whose graceful, melodious presence beautifies the country, gladdens their homes and greatly aids to save their crops from destruction?—*Rural New Yorker*.

Engraving Improvements.

The Dewey Engraving Company has lately issued a proof sheet, giving an idea of the remarkable work it is now prepared to produce by methods combining all the advanced ideas in the arts of engraving and photography. The company makes engravings from photographs, drawings and original designs, for book, card or job printing. Also fac-simile printing plates of letters and legal documents, portraits and maps, and fine pictorial engravings.

The company has for sale over 3000 engravings, many of which are fine and picturesque illustrations, including historical scenes and views of this coast and other parts of the world, and portraits of notable men, of which enterprising publishers will doubtless avail themselves. Proof sheet No. 1 contains 40 engravings, and proof sheet No. 2, just issued, about 20 more. Copies may be obtained, with further information, by addressing DEWEY ENGRAVING CO., 220 Market St., S. F.

August, 1887.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Money Loaned

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., room 3.

SPRAY PUMPS.

Now is the time to buy. Do not waste money on poor pumps with leather valves, but buy the "CUMAX SPRAY PUMPS," the only pump having all its parts made of non-corrosive metal, and the very best Spray Pump in the market.

Send for circulars and prices. Hose furnished to farmers at wholesale prices.

A Treatise on the Horse and his Diseases
By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address.

DEWEY & CO.,

220 Market St., S. F.

Fruit Engravings, The finest, best and cheap est Photographs and En-
PHOTOGRAPHS, ETC. Engravings of Fruits, Vegetables, Houses, Farms, Landscapes, etc., made by S. F. PHOTOGRAPHING CO., 659 Clay St., S. F.

EVERY FARMER
THE BEST
is the
CHEAPEST
HIS OWN
MILLER

Use the Halladay Standard Geared Wind Mill, I-X-L Corn Sheller and I-X-L Iron Feed Mill and do your shelling and grinding at home, thus saving toll and teaming to and from the Grain Mill. This work can be done rainy, windy days, when outdoor work is suspended on the Farm. The same Mill will cut corn stalks, saw wood, run churn and grind-stones, pump water, etc.

We manufacture the Halladay Standard Geared and Pumping Wind Mills, I-X-L Corn Shellers, I-X-L Iron Feed Mills, I-X-L Stalk Cutters, Horse Powers, Jacks, Saw Tables, Standard Hayting Tools, consisting of Anti Friction, Reversible, Swivel and Roll Hay Carriers, Harpoon and Grapple Horse Hay Forks, Pulleys and Floor Hooks. Also a full line of Tanks, Tank Fixtures and Pumps for Farm, Ornamental, Village and Railway purposes. Send for catalogue and prices. Reliable Agents wanted in all unassigned territory.

U. S. WIND ENGINE & PUMP CO., Batavia, Ill.

Sale of Standard Trotters.

A sale which will no doubt attract much attention is that of standard trotting brood mares, colts and fillies, bred by G. Valensin of the Arno stock farm and property of R. B. Milroy. The young animals are chiefly the get of Sidney, son of Santa Claus and Sweetness. They include near relatives to the great stallion Valensin and Shamrock. There are also colts and fillies by Buccaneer and Crown Point. The catalogue includes fine brood mares, one six-year-old stallion, "Arno," three three-year-olds, ten two-year-olds, and eight yearlings. Horsemen describe the lot as one of the most superior ever offered, and no doubt their sale will attract a large attendance at the Bay District track, S. F., Nov. 2d, at 11 A. M. Mr. Milroy announces that to show Sidney's value as a getter he will show several of his colts in harness at the sale. The sale will be by Killip & Co., and the advertisement in another column states where catalogues may be had.

WHAT LOCOMOTIVE WHISTLES MEAN.—One long blast of the whistle is a signal for approaching stations, railroad crossings, and junctions. Oneshort blast of the whistle is a signal to apply the brakes—stop. Two long blasts of the whistle are a signal to throw off the brakes. Two short blasts of the whistle are an answer to the conductor's signal to stop at the next station. Three long blasts of the whistle are a signal that the train has parted. Three short blasts of the whistle when the train is standing are a signal that the train will back. Three short blasts of the whistle when the train is running are a signal to be given by passenger trains, when displaying signals for a following train, to call the attention of trains they meet or pass to the signals. Four long blasts of the whistle are a signal to call in the flagman. Four short blasts of the whistle are the engine-men's call for signals from the switchmen, watchmen and trainmen. Two long, followed by two short, blasts of the whistle are a signal for approaching road-crossings at grade. Five short blasts of the whistle are a signal to the flagman to go back and protect the rear of the train. A succession of short blasts of the whistle is an alarm for persons or cattle on the track, and calls the attention of trainmen to danger ahead.—Ex.

DANGEROUS FLIES—STRANGE AFFLICTION.—Charles Griffin, a farm hand, about 26 years of age, working near Belleville, Missouri, has had a singular experience the past few weeks. He worked on a farm in Texas, and one day he lay on the hay in the fields to take a nap. While asleep he was attacked by poisonous flies, which had crawled over his face and into his nostrils, where they laid their eggs. Griffin came North about 10 days ago. He had been suffering for weeks with a dizziness in the head, and for the past few days with a terrible pain, which nearly blinded him. Besides that, he found it very difficult to breathe. Yesterday he consulted a physician, who once in his practice had a similar case. He ejected a liquid into Griffin's nose, and in 15 minutes the latter passed from his nostrils over 100 worms, from a quarter to half an inch in length, so hard that it was almost impossible to break them with a hammer. The man was very much relieved, but it is supposed that his head is still full of these worms. The worms eventually develop into flies. These flies seldom come further north than the southern line of the State of Kansas.

COPYRIGHT DECISION.—Judge Levy has rendered a decision of interest to all authors and playwrights whose works may be infringed upon. A suit was brought by William and Lizzie Vegoreux against an actor in this city for bringing out a play on which they held a copyright, and an injunction was asked for, he having obtained no permission from the authoress. In sustaining a demurrer to the complaint, Judge Levy states that Section 711 of the Revised Statutes of the United States vests in the courts of the United States exclusive jurisdiction in all suits at law and in equity under the patent and copyright laws of the United States. It is said that irrespective of the copyright the author has an ownership in his production upon which a stranger cannot trespass. Sufficient answer to this is that the plaintiff sues on the grounds of an infringement of copyright and not for an infringement of her common-law rights. The action was dismissed.

HEAVY TRAVEL.—The traffic on the line between Santa Barbara and Los Angeles has increased lately to so great an extent that the company is now figuring on doubling the service. Should this be done there will be two trains per day between Los Angeles and Santa Barbara instead of only one as at present. The local traffic on the Southern Pacific line south of Los Angeles has grown tremendously lately, and the evening train is now accompanied as far as Mojave by a chair car, which returns with the morning train. It is invariably full of passengers.

RECLAIMING THE SAHARA.—With the aid of science even the desert of Sahara is becoming inhabitable and colonization is encouraged. The Lower Sahara is an immense basin of artesian waters and the French are forming fresh oases with skill and success, so that the number of cultivated tracts is increasing rapidly. After a period of 30 years 43 oases have 13,000 inhabitants, 120,000 trees between one and seven years old and 100,000 fruit trees.

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper.

In writing correspondence, items of information, or on other business, please use a separate sheet.

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

Law in Relation to Newspapers.

1. Subscribers who do not give express notice to the contrary are considered as wishing to continue their subscriptions.
2. If subscribers order the discontinuance of their periodicals the publishers may continue to send them until all arrears are paid.
3. If subscribers neglect to or refuse to take their periodicals from the office to which they have been directed, they are held responsible till they have settled their bill and ordered their paper discontinued.
4. If subscribers remove to other places without informing the publisher, and the papers are sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take periodicals from the office, or removing and leaving them uncalled for, is prima facie evidence of intentional fraud.
6. Any person who receives a newspaper and makes use of it, whether he has subscribed for it or not, is held in law a subscriber.
7. The postmaster who neglects to give the legal notice of the neglect of a person to take from the office the newspapers addressed to him, is liable to the publisher for the subscription price.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation). CATALOGUE OF EUROPEAN VINES.—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA.—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL.—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA.—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, \$1. This book is the best general review of California soils, climate and productions in existence.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 250 Market St., S. F.

FOR THE WEEK ENDING OCTOBER 11, 1887.

371,411.—BLAST GOVERNOR FOR GRAIN CLEANERS.—Daniel Bist, San Leandro, Cal.

371,420.—LATCH.—W. B. Cantrell, Portland, Oreg.

371,489.—CALIPERS.—Jas. H. Culver, S. F.

371,319.—PICTURE SUPPORT.—C. Hinsberg, S. F.

371,338.—FRAME FOR READING AND NUMBER CARDS.—Fannie L. Matson, San Jose, Cal.

371,468.—CARPET WEAVER.—Mary A. McMaster, Antioch, Cal.

371,213.—INHALER.—B. R. Peyton, S. F.

371,356.—ELECTRO THERAPEUTIC BELT.—W. L. L. & W. J. Pierce, S. F.

371,364.—CABLE GRIP.—Geo. Rischmuller, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

DR. SKETCHLEY talks of establishing an ostrich farm at Santa Barbara if "satisfactory inducements" are offered.

SPECTACLES, OPTICAL GOODS, PHOTOGRAPHIC OUTFITS, ETC. HIRSCH, KAHN & CO. 333 KEARNY STREET. SAN FRANCISCO.

Microscopes, Telescopes, Field & Opera Glasses, Magic Lanterns, Barometers, Thermometers, Compasses, Electric Batteries, Drawing, Mining, Surveying and other Scientific Instruments. Send for Illustrated Catalogue and Eye Tests, free.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

DEWEY & CO., Patent Agents. No. 220 Market St. Elevator 12 Front St. S. F. Telephone No. 658.

ORANGE CULTURE IN CALIFORNIA

A Timely Treatise.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued, will be found of wide usefulness.

"Orange Culture in California" was written by Thomas A. Garey, of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well printed hand-book of 136 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc., etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address, DEWEY & CO., Publishers, "Pacific Rural Press," 220 Market St., S. F.

"GRIMSHAW'S STEAM ENGINE CATECHISM," only 20 months old, has gone into its fifth edition already, and the "Pump Catechism," only six months, is just going into its third. We will mail either to any address, postpaid, for \$1.00. Address this office.

Never Mind Them.

What a silly practice it is to fret, fume and worry over what the world thinks of one, and live in a state of chronic discomfort because some choose to underrate us or to view us through the green goggles of envy or suspicion. We would not advocate entire indifference to the world's estimate, for all should strive to do right, and thus earn its confidence and respect. But no matter how near the line some may walk, there are some natures who delight in talking. To chase these slanders would be as foolish as stopping an important mission to fight a mosquito, or to catch every little dog that barks from the wayside as we pass. If a person would devote the time to catching these little lies and unworthy suspicions set in motion by small natures, there would be little time left for life-work. We would not counsel indifference to serious misstatements or great slanders that threaten disaster—such should be traced to their source and their cowardly originators exposed and promptly punished. We simply hold that it is worse than useless to try and bridle every wagging tongue, and most of the little doubts and insinuations belong to the insect tribe and are not worth tracing up. Let them alone and they will soon bite at some one else, and the richer the character the better they will like it. Great natures strong in their sense of justice and right should scorn to notice them, or to spend time in hunting gnats when nobler game awaits them. They are not great annoyances, and all people must expect to be stung by them occasionally; consequently, the wiser way is to take their pin-like punctures in a philosophic spirit, and to pursue the way that wisdom marks out regardless of their puny importance. Life is too short and its real duties too many to be neglected for the sake of catching and killing these fussy and foolish little verbal flies.—*Lower Lake Bulletin.*

Growing Umbrellas for the Market.

The *Tulare Register* professes to have received a letter from an Easterner, asking what kind of an opening there would be for him in Central California to go into the cultivation of the umbrella tree he has heard about, and how much can be realized from an acre of them. The *Register* informs him publicly that there is nothing in the umbrella business here. Nearly everybody has one or two umbrella trees, from which he not only raises all the umbrellas he and his family can use, but has them to give to new-comers until they get a start. It is a beautiful sight to see these trees in bearing; to see the little umbrella shoot forth in the incipient stage and gradually develop into the full-blown, ivory-handled umbrella of commerce. There is a species widely grown in Fresno county which produces the fragile six bit umbrella, but they do not thrive in this glorious climate. The umbrella tree bears two crops a year, one in May and one in November; so we have the summer umbrella to protect us from the heat of the sun and the heavy winter umbrella that sheds the heaviest rains and never blows inside out in the fiercest gale. Umbrella-stealing is unknown here, for if you mislay or lose one, all you have to do is to step out into the yard and pick another. That is all we can tell you now about the umbrella tree. There are plenty of openings here for an energetic young man. Come ahead, and if you are anxious to lay up something for a rainy day, the first thing you want to do is to plant an umbrella tree.

Our Agents.

Farmers and Viticulturists, Attention!

FERTILIZE! FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agriculture. BERKELEY, Nov. 20, 1886.

DR. J. KOBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

Amongst other improvements, all Four Gang New Deal Plows are so constructed that the OUTER or REAR BEAM can be removed, thus making it a THREE GANG for use in first plowing, and READJUSTED to a FOUR GANG for second or cross Plowing.

FOR LIGHTNESS OF DRAFT, EASE OF MANAGEMENT, STRENGTH, DURABILITY AND QUALITY OF WORK,

The "NEW DEAL" is Without a Parallel.

Further Description, Testimonials, Prices, Etc., Given on Application to

HAWLEY BROS. HARDWARE CO.,
SAN FRANCISCO, CAL.,

SOLE AGENTS FOR THE PACIFIC COAST.

Also Agents for the JOHN DEERE MOLINE GANG, SULKY and SINGLE PLOWS, SOUTH BEND CHILLED PLOWS, HOOSIER GRAIN DRILLS, SCHUTTLE FARM and SPRING WAGONS, KEYSTONE DISC HARROWS, all kinds of Large and Small Farming Implements, HOWE SCALES, Etc. SEND FOR CATALOGUE.

THE PEERLESS GANG PLOW.

LIGHT DRAFT, STRONG and DURABLE.

The Only Steel Beam Gang Walking Plows which will not Clog in Heavy Stubble or Weedy Land.

They have HIGH BEAMS, WIDE TIRES, WROUGHT IRON CARRYING WHEELS, and are so constructed that there is ample space under the Beams and between the bottoms to allow the stubble or weeds to pass through and not clog. These Plows are made by the BENICIA AGRICULTURAL WORKS, BENICIA, CAL., and are the only STEEL BEAM BENCH GANG PLOWS which have been successful.

REASONS WHY THE PEERLESS STEEL BEAM GANGS ARE THE BEST:

1. By means of a draft rod, the draft is applied to the second beam, close to the Plow, instead of at end of beam, which brings the draft close to the point of resistance and by this means the Plow is carried on the wheels.
2. The regulating levers are securely attached to the STEEL AXLES, each one being independent of the other, thus enabling the driver to adjust the Plow to the inequality of the land, which is a great improvement over any other walking wheeled Plow.
3. The hubs and boxes of carrying wheels are detachable and can easily be replaced.
4. The Peerless is the only Gang which can be instantly changed from a four to a three-Gang Plow on account of our improved detachable Beam.
5. The Peerless Gang is made of the best material to be had. Shares have only two bolts which requires but half the time to change shares when necessary to get them sharpened.
6. The Peerless is no experiment. It is home made, home tried, has given satisfaction, and will continue to be the farmers' friend.

PRICE LIST:

No. 1, 3-Gang, 8-inch,	-	-	-	-	\$75 00

Beet Sugar.

We can but call the attention of all readers to the significant announcement of Mr. Spreckels' intentions with reference to beet sugar, which appears upon another page of this issue. Mr. Spreckels evidently means business upon a broad and deep plan. He has his machinery contracted for—machinery to be the most capacious and excellent in the world. He has his seed arranged for to arrive at an early date. More than this, he has brought to this coast a German chemist and beet-sugar expert of the highest rank, who is now actively at work informing himself upon local conditions in order that the enterprise may be intelligently directed. This expert has already been in consultation with Prof. Hilgard, and has expressed himself highly pleased with the data available at the State University concerning our soils and beet analyses. All these things, and the meeting of farmers called in Watsonville for November 5th, show that immediate work is intended by Mr. Spreckels. As is expressly stated in the article on another page, the location for operations is not yet decided upon. There is really a vast area of this State which can grow good beets—beets with a sugar percentage and purity coefficient, very gratifying to the sugar-maker, and if the industry is promoted, as now seems to be intended, and as there is field for, it will be a grand thing for the bringing in of wealth to this State and for diversifying our industries splendidly. The sugar and by-products of the beet should take a wide area from our grain-fields and aid our orchards and vineyards in spreading verdure over our too-yellow summer landscape.

Beet sugar is gaining ground all over the world. There has been some question as to its fitness for fruit canning, but this has not rested upon any good foundation. It is quite interesting, on the other hand, to see it stated that beet sugar is prepared in India for the special purpose of fruit preservation. A New York dispatch, Oct. 26th, says that a Singapore correspondent of the *Commercial Bulletin* writes that for the last year and a half the Germans have been exporting sugar to Singapore, which, as is well known, is close to the great sugar-producing countries. There are three manufactories of preserved fruits in Singapore, and the managers assert that they find it more advantageous to use German beet-root sugar than the production of Penang and Java. In the year 1886 these works imported 400 bags of 100 kilos up to the end of June.

It is not likely that there is any intrinsic superiority in sugar from the beet, but probably the German sugar is better refined or something of that sort. The conclusion is, however, just as strong that beet sugar properly made is good for fruit preserving. California fruit put up with California sugar is an idea both poetical and practical, and we believe practicable also.

CHESTNUTS IN SONOMA VALLEY.—The *Courier* says that Col. Hooper has growing on his farm a grove of chestnut trees. They are the regular chestnut of the Eastern States and now in bearing. They grow rapidly and add much to the beauty and attraction of any place.

HOP SHIPMENTS overland are becoming very heavy. Great quantities are consigned direct to London.

THE ISTHMIAN CANAL.—We have not heard much of late of the enterprise of De Lesseps at Panama. It is now announced that active work at the Nicaragua project will be taken up. A. G. Menocal, chief engineer, is credited

BEANS FOR THE EAST.—As another indication of the growing outlet for our field products of the garden persuasion, to which we have frequently alluded, the increasing Eastern shipment of beans is significant. It is an-

CACTUS AND AGAVE AT MARYSVILLE.

with such a statement in New York this week. He states that arrangements have been made to send out eight engineering parties, who will leave Greytown either on the 29th or 30th of November. The preliminary surveys are com-

nounced that 18 carloads of beans will be shipped this week to Hannibal, Mo. There is a very large bean tonnage now on the way East. Orders from Chicago, Philadelphia, New York and bean-eating Boston are numerous this sea-

THE BLENHEIM OR SHIPLEY APRICOT.

pleted, and their work will be to locate the route of the canal, including dams, sites of locks, etc. They will be equipped with boring machines, and will ascertain the various strata to be excavated. Mr. Menocal expects that their work will be completed in eight months, and that by July 13th, if not before, the work of excavation will begin. The total cost will be about \$65,000,000. After completion, it is calculated that one-half the revenue of the canal will come from California, Oregon, and British Columbia products.

SONOMA VALLEY is overrun with tramps.

son. The California white bean is growing in favor with the Easterners on account of its superior flavor. Low rates enable our dealers to lay beans down in Eastern cities at prices that meet local competition.

HEREFORDS IN ARIZONA.—H. C. Hooker of Wilcox has imported from Illinois 43 Hereford bulls, which are to be turned loose with his huge herds on the San Pedro. Stock-raising is on the advance in the Territory.

L. U. SHIPPEE is the Republican nominee for Mayor of Stockton.

The Blenheim or Shipley Apricot.

We give herewith an engraving of the Blenheim or Shipley apricot because of late this variety has made considerable progress in winning the esteem both of growers and canners. The engraving is from a drawing made of a specimen from the University orchard at Berkeley. In the University collection of apricots of trees all planted at the same time, and including nearly 20 prominent varieties, the Blenheim trees are the largest and most constant and heavy bearers. This has been the case for a number of years. Mr. Klee, who had charge of the orchard for four years previous to his engagement as State Inspector of Fruit Pests, pronounced the Blenheim the best variety tried, and the two crops since then have borne out Mr. Klee's estimate. The fruit ripens early; in Berkeley sometimes as early as July 1st. The trees began bearing the fourth year after planting, are vigorous and healthy, and one tree has several times borne from 200 to 300 pounds of fruit. The fruit in the engraving is rather above the average size as grown in Berkeley, the average being about seven to the pound, when properly thinned.

The Blenheim is well regarded by the canners. It probably will run a little larger than the Royal in size. It ripens evenly and has splendid color. At one of the Horticultural Society meetings last summer, Mr. Hathaway of San Lorenzo stated that a prominent fruit-canner had told him that he looked upon the Blenheim as the coming apricot. We are not aware how far its adaptation extends over the State, but from experience at Berkeley and elsewhere, it succeeds admirably in the coast region.

Eastern fruit authorities seem to give the name Shipley the prominence; here, Blenheim appears to be the favorite. Thomas says the variety is of English origin; Downing does not mention its source. Thomas' description is: "Large, oval, surface orange, flesh deep yellow, juicy, rather rich; stone, roundish, not perforate; kernel, bitter; inferior to Moorpark, but rather earlier."

Warm Weather Plants.

It is rather fashionable to use illustrations to show the extent of the semi-tropical area of California, and the thrift of arid region flora over the greater part of our valley country. Such a purpose is served by the little engraving on this page which is reproduced from a photograph taken in the vicinity of Marysville, California. The planter seems to have been seized with the idea of making a hedge by alternating cactus and agave, which would certainly give his ground rather a queer boundary. The cactus, which is native to the desert area of Southern California and Arizona, seems to thrive in the higher latitude, as it is overtopping the fence. The figures in the engraving must be taken for a party of tourists, for they have rather an air of abandon which can only be pardoned on the plea of an undue amount of globe-trotting.

The shores of San Luis Obispo bay, especially below Port Harford and Cape Landing, are covered with dead sardines, and the sea is continually washing them ashore. In some places, the dead fish lie a foot deep and several feet in upon the sand.

THE DAIRY.

Drouth and Dairy Feed.

It is not often that we can draw deductions from Eastern growths which are of value in California, but occasionally there are conditions at the East which somewhat resemble ours. There was a very long and grievous summer drouth in the Mississippi valley last summer, and the behavior of forage-plants during its progress may give a hint of adaptation to our customary conditions.

The Illinois experiment station is located in what was the very center of the drouth district in that State last summer, and this gave Prof. Morrow an excellent opportunity to study the effect of dry weather on various grasses and clovers. The result of his observations and conclusions was promptly given to the public, whereby the farmers of not only his State alone, but of all the States, are given much light on this very important subject. The professor says:

"Alfalfa, or lucern, has made the most continuous growth and remained most fresh and green during the time of the greatest heat and drouth. The stems are more harsh and woody than in favorable seasons.

"Red clover ranked next to the alfalfa in growth during the worst period of drouth, and is counted a much more valuable plant for this region. Its presence in pastures and meadows has been a great help. Clover sown last spring made a fair growth, while timothy sown last autumn and this spring failed entirely.

"Of the more commonly grown grasses proper, orchard grass stood easily first in quickness of starting growth after cutting, or after rain, and in the quantity of food furnished during the driest weather.

"Timothy well illustrated one of its weakest points, showing little sign of growth for three or four weeks after being cut, and not responding readily to the first rains.

"Bluegrass stopped growth probably first of all the pasture grasses, and for a time seemed lifeless. After moderate rains it quickly revived and has made a fair growth.

"Rarely has there been a better illustration than that given this year of the good effects from allowing a good growth of grass on the pastures in spring and early summer as a safeguard against drouth, or of the much better growth even during dry weather, on fertile soils in good condition.

"In a noticeable degree grass was nutritious during the dry weather, cattle doing fairly well on very short pasturage. In an equally noticeable degree the first growth of grass after rains had the 'washy' character of the first growth in spring.

"The check to evaporation by the shade of trees in many cases was such that the grass on the north side of the trees remained green, while on the south it was parched, apparently lifeless. On the other hand, the great quantity of moisture drawn from the soil by the roots of trees was clearly shown by the lessened growth of corn within 20 feet of a row of trees running north and south.

"The astonishing ability of corn—a true grass—to resist drouth, if once well established on fertile soil, has not often been better shown. With the soil so dry that seeds would barely germinate and young plants make but feeble growth, the field corn continued to grow and perfect ears in a surprising manner.

"Among the lessons retaught farmers by this drouth are these: It is well to give red clover a prominent place in seeding lands for pasture or meadow if the hay is to be used on the farm. Orchard grass has not been so well appreciated as it should be. It may well be tried more extensively. Blue grass does badly during great drouth, but its fine quality, permanence, thick sod, early growth in spring and late growth in autumn make it very valuable. No substitute of equal value has been found for timothy as a grass for hay, but the yield per acre and feeding value per ton is greater if clover is grown with it. Grass suffers more from drouth in cases where the fields have been closely grazed early in the season than when a fair growth has been allowed to remain, serving as a slight shading to check evaporation partly or fully counterbalancing the increase of evaporation from the leaves, and certainly this better growth enables the plant to more successfully resist unfavorable conditions."

Use of Corn Fodder.

Prof. Henry, Wisconsin's efficient agricultural experimenter, writes to *Hoard's Dairyman* concerning corn fodder. The following are extracts from his letter:

How Fine to Cut.

Here, as in most other matters in this world, we cannot give exact advice, for the conditions constantly vary. I should say out to such length as experience shows will get the stock to eat the fodder with the least waste. This length may be as short as a fourth of an inch, but I have known of the largest per cent of fodder being consumed where the stalks were cut in two-inch lengths. By varying the length of cut and noting the amount of waste fodder left in the manger, one can settle the

question for himself. Experience will show that the rule for cutting a fodder with a soft, watery stalk like Stowell's evergreen sweet corn, will not apply to a mammoth corn like the B. and W. Southern ensilage.

Does It Make Sore Mouths?

Here we have the most varying experiences. We have had yearlings' mouths get sore on succulent ensilage when cows and other stock fed on the same showed no such trouble. That the mouths of cattle often get sore when fed on cut cornstalks is a fact, and farmers should watch closely to note such effects. It can be detected easily when one is watching for it, by the dainty, nervous way in which the feed is pushed about by the cow that is hungry for a good meal but is forced to pick out the soft parts and leave and avoid the sharp, hard points that will injure her tender mouth. Just as soon as trouble is detected, change the length of cut, cutting longer or shorter as judgment dictates, and as a rule the trouble will pass away.

Is the Lower Half of a Cornstalk of any Value?

Certainly it is. Chemically, it grades higher than oat-straw, and we cannot afford to throw it away after raising it and handling it any more than we can waste our oat-straw which we are forced to raise, cut and handle in order to get the grain.

Proper Feed to Go with Cornstalks.

Cornstalks provide the heat and fat forming elements, but are lacking in those adapted to muscle and nerve-making; hence we must pay close attention to what we feed with them. For other roughness, clover hay leads in the list, while any kind of straw is the poorest to go with cornstalks. For grain ration, bran and shorts lead, and corn comes last in the list. One must pay attention to these matters if he wishes to get good results.

How Much Do We Save by Cutting Our Cornstalks?

From three years experimenting I should say that the extremes of the amount saved vary from the minimum of 7 per cent with soft, fine fodders to 40 per cent with the coarse mammoth varieties. For common field corn grown for ears which have been husked, we may save over 30 per cent by passing the fodder through the feed-cutter. By this, I mean that 100 pounds of cut fodder will be worth rather more than 130 pounds of uncut fodder. We are not done with this question yet, and our figures are subject to revision.

One of the Benefits of the Drouth.

The drouth this season has not been an unmixed evil. Our farmers have learned that Indian corn is the safest, most reliable crop we can grow. The short hay crop is forcing farmers to care for their cornstalks, and they will come to see in them a value such as a dozen years of ordinary prosperity would not have taught. I anticipate lively discussions at the institutes this winter, on the best ways of raising, harvesting and feeding this, our grandest of all food plants.

THE STABLE.

Glanders in California.

The *Oakland Enquirer* says that up to Oct. 8th 14 horses had been shot in Oakland because they were infected with glanders, and owners of fine teams are beginning to inquire with some alarm what degree of danger they are to fear for their animals. So far as the Sanitary Inspector knows, this is the first visit of the disease to Oakland, though it prevailed to a considerable extent in San Francisco some years ago. There does not appear to be any veterinary authority in Oakland who feels capable of saying precisely what the degree of danger is or what—besides shooting the afflicted animals—ought to be done toward extirpating it, and therefore the best recourse we have is the treatises on the subject to be found in reports of the Department of Agriculture and other books.

An Experience in Benicia.

The worst outbreak of glanders that has yet occurred on the coast was one among the United States Army horses at the post in Benicia, which occurred about 1875. There were nearly 200 animals there, and before the presence of the disease was discovered it had thoroughly permeated the drove. On application from the post-commander, the Government sent out a skilled veterinary surgeon from the East, and his method of ridding the place of the presence of the disease was effectual if not economical. He had the horses taken out in platoons and shot, continuing the process till not an animal was left alive. Then he had the stables gutted, the racks, mangers, partitions and bedding, and the saddles, bridles and other accoutrements collected and made a big bonfire of them. There was no more glanders in the Benicia barracks after that, but it cost the Government a neat little sum to remount those companies of cavalry. Whether such heroic methods were really necessary may be doubted, however, for glanders has been extirpated in other places before now without shooting the well horses with the sick ones. Before this slaughter at Benicia

took place, one man had already died there from the bite of a glandered horse.

Glanders is a contagious, but not an epidemic, disease, and therefore it does not sweep over a district and in a short time affect all the horses in it. Its spread is rather slow, and it sometimes remains in a city for as much as five years, affecting a horse here and there. But, on the other hand, it is always fatal, for the glandered horse never recovers, though he may live for several years in cases where the disease is chronic. Ordinarily the run of the disease is only from two to four weeks.

The American authority has this account of the symptoms: "The symptoms of glanders are not always well defined, but the three principal ones are: Ulcers of the membrane lining the nose, a more or less continuous sticky discharge from the nostrils and a swelling of the glands beneath the jaw. When all these conditions are present there is no difficulty in making out a case; but the disease may be present without all these symptoms, and its detection prove most difficult. The first symptom to attract attention is usually the continued discharge. This may take place from both nostrils, if both are affected with ulcers, or from one only if the ulcers are confined to that side. This discharge does not differ greatly from catarrh. It is less thick, not so yellow, and flows in a thin stream from the most dependent part of the nostril. But the discharge is not constant, and in a dry climate, such as that of California, it may be so slight and infrequent as scarcely to attract attention. An aid to diagnosis is the temperature of the animal, which in nearly every instance will be above 110 degrees F. The most reliable symptom of the disease is the 'glanders nodules' or of the 'glanders ulcers.' Before the ulcer forms there appears in the membrane a small lump or nodule, varying in size from the head of a pin to the size of a pea. As a rule, the nodule is yellow in color, and, while small, can be more readily felt than seen. Oftentimes the development of the nodule is preceded by the appearance of a yellowish-red streak, which looks as if made by drawing a camel's-hair pencil, dipped in blood, across the membrane."

Hard Drivers.

In taking them to task the *National Stockman* justly says:

It is one of the peculiarities of many of those who use driving horses that they never get in a hurry until they get started to go somewhere. It is also noticeable that the faster their horses can go the greater the hurry. In other words, there are many men throughout the country who are naturally hard drivers. They are not generally aware of the fact, but such men kill more horses than they wear out, and the haste thus made turns out to be a waste, and frequently one that amounts to something. The average life of driving horses is not much longer than that of street-car horses, and were all the horses in such hands as what are known to be hard drivers, the difference would undoubtedly be in favor of the streeters. It is nothing uncommon to see a strong, promising young driver get into the possession of a man who is in the habit of letting no grass grow under his horse's feet, as the saying goes, and within a year or two get banged up so badly that he is fit for nothing, except for the tread-mill or bone-yard. Fast driving is simply a habit, a bad habit, and one which those who indulge in generally pay well for the privilege. If a certain point is to be reached by a certain hour, why not start soon enough to reach it without hurting your horse? When a horse is able to go fast when called upon, there is a greater reason for saving him than if he were a plug, and too slow for either pleasure or profit. A good, free driver is one of the greatest pleasures to be enjoyed by those who have much driving to do, and therefore should not be driven to death before his days of usefulness would be half over under proper treatment. It is always the good drivers that are abused. No one ever heard of lazy horses being hurt by men who are in the habit of driving fast. They seldom use that kind of a nag. It is the best kind only that suits them, and the better the horse the quicker he is put upon the retired list on account of being stiff and broken down from the effects of hard usage. There may be no law to prevent men from doing as they like in regard to driving fast or slow, but there is a law to prevent the practice of cruelty to dumb animals, and were that law strictly enforced there would be fewer horses broken down and useless at that period in their lives when they might be in their prime. The slaughter of a valuable horse every few years means a small fortune in the average lifetime of a man.

UTILIZING SEAWEED.—An English chemist has found a way for turning to account the practically illimitable quantity of seaweed that the ocean supplies, or at least as much of it as may be desired. He boils the weed with carbonate of soda, and treats the filtered solution with sulphuric acid, obtaining from it in this manner a substance that has more viscosity than starch, or even gum-arabic, and that can be profitably employed in stiffening various textile fabrics. It is also said to be excellent adapted for the making of syrups and for certain culinary uses. From the cellular and fibrous matter left after the extraction of that material—to which he has given the name of "algin"—a very good quality of writing paper can be cheaply made.

THE FIELD.

Great Enterprise in Beet Sugar.

For some months the statement that Claus Spreckels, the great sugar king, had been won over to the idea of home-grown sugar has been discussed in the public press and has attracted much attention. There seems no doubt remaining that Mr. Spreckels is really upon the eve of establishing a great beet-sugar enterprise in this State. Last week there was organized an incorporation to be called the Western Beet Sugar Company, with a capital stock of \$500,000, actually subscribed, with E. B. Pond, Jas. B. Stetson, Louis Sloes, M. P. Jones, John L. Koster, Meyer Ehrman and Claus Spreckels as directors.

Rumor has located the probable place of Mr. Spreckels' enterprise in the Pajaro valley, and we are glad to find in the *Pajaronian* of Watsonville of Oct. 20th, a very well written article, giving the history of a previous undertaking in that valley and outlining what may be done in the future. We reproduce the article as follows:

Historical.

In 1877 the California Beet Sugar Co. purchased a mill plant in Alameda county and located it at Sequel, in this county. At that time the cultivation of the sugar beet in European countries had been demonstrated to be a successful industry, and as the United States was mainly dependent on imported sugar for its supply of that necessary article, much attention was being paid to sugar-beet culture; and from its successful development was expected to result a relief from foreign sugar importations, and at the same time build up a great enterprise that would ultimately open a vast field for labor and give farmers the opportunity to produce something more profitable than cereal crops. The factory at Sequel ran three years and failed. The machinery was crude, the management was inexperienced, the factory was quite a distance from the beet-fields and the cost of freight on the beets was heavy. These and other reasons contributed to the failure of the factory. The beet-fields were in Pajaro valley. As the capacity of the Sequel factory was very limited, only about 500 acres of land in this valley were cultivated in beets. The methods of cultivation were far cruder than those in use in Germany, France and Austria, yet the yield was from 10 to 32½ tons per acre, and the average yield on good valley land was from 15 to 20 tons. The price paid for the beets was from \$4 to \$5 per ton. Sugar beets were a more profitable crop than cereals, and Pajaro farmers felt that the failure of the Sequel factory was a hard blow at the most promising industry of this section. The beet production of Pajaro valley was restricted by the capacity of the Sequel factory. Prior to its closing down the farmers sought to have its capacity enlarged so that a larger acreage in Pajaro valley could be devoted to beet culture each year. The failure of the factory was due to itself, not to the beets. The ability of Pajaro land to produce immense crops of first quality beets was clearly shown, and from that time up to the present the farmers of this section have been extremely anxious to see another beet-sugar factory located in or near this valley. There is enough land here that can be devoted to beet culture to assure a season's work for a large factory.

Mr. Spreckels' Foreign Studies.

The interest in beet-sugar culture has been strongly revived by the recent publication of interviews with Claus Spreckels of San Francisco, one of the largest sugar refiners in the world. Mr. Spreckels has spent several months in Germany and Austria, and during his stay on the continent closely devoted his time to a careful study of sugar-beet culture and the process of extracting the sugar from the beet. He was so thoroughly satisfied with his investigations, and was so confident that the enterprise could be equally successful in California, that he ordered a \$300,000 beet sugar mill plant, and it will soon be shipped from Germany to California. He also ordered many tons of seed to be shipped about Dec. 1st. The location of the sugar factory in California was not determined upon. These facts were stated by Mr. Spreckels in interviews at Southampton, New York and San Francisco. Upon the publication of the first interview, the *Pajaronian* called attention to Mr. Spreckels' plans, and suggested that the people of this town and valley appoint a committee of citizens to wait upon Mr. Spreckels, on his arrival home, and lay before him the results in beet culture in this valley, and present the many advantages this locality offers as the site of his beet-sugar factory. The suggestion was considered good, and street talk was plentiful. Every one wanted to see such an enterprise located here, and believed that steps should be taken to lay the claims of this valley before Mr. Spreckels. While this plan was under consideration Mr. Spreckels arrived in San Francisco—Wednesday last, we believe. On Friday evening he passed through this valley for his country residence at Aptos. On Sunday a representative of the *Pajaronian* called and had an interview with Mr. Spreckels on his European investigations and the great enterprise he was about to establish in this State. Mr. Spreckels is a hale, vigorous man, accustomed to active commercial

life, and the conduction of vast enterprises, and has the indomitable energy and clear judgment that are the essential characteristics of a successful man.

Mr. Spreckels stated that he had visited Germany for the purpose of carefully investigating every detail of beet culture and sugar-beet manufacture. It had been 17 years since his previous visit to the Fatherland, and the changes made in that time were many and the development great in the sections devoted to beet culture. The production of beet sugar in the German Empire had grown to enormous proportions, and now aggregated 1,000,000 tons per annum, of which a large proportion was sent to the United States. Mr. Spreckels said that when in Great Britain, the vast "dumping-ground of the products of the world," as he tersely expressed it, the farmers were unable to till the soil and market the products thereof in competition with the grain shipments from America and India, and he was satisfied that, before long, Great Britain would be compelled to protect her farmers against American products by a restoration of the tariff on certain articles. Germany had refused American hogs and grain. When the great European markets would be closed against American cereals the recourse to other forms of agriculture than those now in vogue would be compulsory if the American farmer did not wish to fall into the condition of the farmers of Great Britain. The sugar consumption of this country was enormous, and the sugar was mainly imported. If Germany would not have our hogs and grain, then we should endeavor to do without German sugar. In pursuance of this thought he had visited that country, and had become firmly convinced that the sugar needed for American consumption could be produced in this country, thereby giving variety of crops to farmers and providing the means for more labor. The millions of dollars sent to Germany for sugar each year could be kept at home and go into the pockets of American farmers and American laborers. He then explained at length the process of selecting the beet seed, planting, cultivating, etc. Mr. Spreckels has evidently been a careful student among the German beet-growers and sugar-makers, for he minutely described the process from the planting of the seed to placing the sugar on the market. In Germany over 30 tons of beets per acre are raised, but this is only by careful fertilizing and cultivation. Rotation of crops is practiced, and wherever Mr. Spreckels locates his factory he will require the same system to prevail. Half of the land in beets every year, the halves changing, is the plan he will require. In favored localities in this State he thought the yield would run close to 30 tons per acre. By a new process, invented by an Austrian (the patent is controlled in this country by Mr. Spreckels), the salts are separated in the process of sugar manufacture and become articles of commerce. This gain is an item of considerable importance to beet-sugar manufacturers. In Germany the soil washed from the beet, with lime added, is replaced on the land as a fertilizer. The pulp from the mills is fed to stock, and the German beet-growers have fat stall-fed cattle for market all through the year. No part of the beet is wasted in the process Mr. Spreckels will introduce in this State. The improvements in machinery, and the large percentage of saccharine matter in the quality of beets he will introduce, assure him that his enterprise will be successful from the start.

Mr. Spreckels' Intentions.

As to its location he has not determined. The ability of the Pajaro soil to produce good beets was known, but whether farmers would engage in it was unknown to him. The factory he would start next year would employ from 150 to 200 men, would handle 350 tons of beets per day, and make 40 tons of sugar daily. It would begin work Sept. 1st and run perhaps five months. It would handle in the run nearly 45,000 tons of beets, and he would require at least 2500 acres of good land in beets each year in the section where the factory was located. For the beets he would be willing to pay a price that would make beet culture a far more profitable business than cereal growing. (Mr. Spreckels named the price, and it is a figure to which the pioneer beet-growers will take no exception.) He stated that he had thought of this valley, that he knew the quality of land was here, but that of the quantity he would have to be assured wherever the factory was located. Santa Cruz county had an abundant supply of wood and lime, shipments could be made by rail or water, and the Pajaro valley had the requisite quality of soil. On his Aptos ranch he could place a large tract in beets. The San Andreas hills would pay better in beets than in grain; so would the upland near Freedom and the farms near the mountains, while the valley lands should produce big crops. In response to the inquiry, "What do you wish the people of Pajaro valley to do in the direction of having the factory located there?" he replied: "Call the farmers together—say on Saturday, Nov. 5th; have them from all parts of the valley; get every farmer there; I will come there, meet them, talk to them, and ascertain if they want a beet-sugar factory and are willing to go into the cultivation of beets to the extent needed." The interview touched upon many other points, but Mr. Spreckels will be here on Saturday, Nov. 5th, and discuss them with the farmers of our valley. From all parts of the State Mr. Spreckels is in receipt of letters, asking the location of the factory at

many different places; but he is anxious to meet the farmers of Pajaro valley and learn their desires in reference to locating a beet-sugar factory in their midst. The matter is in their hands. On Saturday, Nov. 5th, every farmer in the valley should attend the meeting at the Rink. Circular letters will be mailed to-day to the farmers; but if any should fail to receive them, the omission will be an error and they are expected to be on hand on Nov. 5th. Mr. Spreckels has shown a most praiseworthy spirit in offering to come here and meet the farmers, and he should be met with a spirit equally as frank. The establishment of his factory in this valley would give a great impetus to the development of this section, would create a large field for labor, would increase the variety of profitable crops, would save nearly \$75,000 per year to farmers in thrashing, freight and storage expenses, and would be the beginning of a most prosperous era. The prices assured for beets guarantee a profit. Mr. Spreckels aptly puts it that one acre in beets will return as much profit as three acres in grain. Pajaro valley is a most desirable location for a beet-sugar factory, and its location here is a matter that will depend mainly on the meeting of Nov. 5th. Every friend of progress should attend that meeting.

FORESTRY.

Forests in Santa Barbara County.

H. C. Ford, the well-known artist and naturalist of Santa Barbara, makes the following important communication to the *Press* of that city:

It will perhaps be a surprise to some citizens of Santa Barbara to learn that at a distance of less than 20 miles in an air line from their city are forests of resinous trees, the individual specimens of which rival in dimensions and height their congeners in the Sierras and the more northern portions of the Coast Range. These trees were discovered recently by Mr. James O'rd, and brought more into notice last year by Mr. John Spence, who collected specimens of the foliage, cones and bark of many of the species, some of which found their way into the museum of this society. Although so near "as the crow flies," yet the best part of four days were spent with pack animals in reaching the principal body of timber. At an elevation of 7000 feet, on the highest portion of the San Rafael range, we found the first trees, with trunks and limbs quite stunted, twisted and gnarled from the height and exposure. As we descended the northern slope through this forest the trees grew larger, the more dense growth following the deep-cut ravines, at the bottom of which the snow lay in masses in the early days of June.

At a height of 6300 feet in a basin of rich soil through which flowed a stream of cold, pure water, we found the most extensive body of timber, and here we observed the largest individual specimens consisting of the following species: *Pinus ponderosa*, *P. Coulteri*, *P. Sabiniana*, *P. Lambertiana*, *Librocedrus decurrens*, *Pseudotsuga Douglasii* var. *macrocarpa* and *Abies concolor*.

In measuring several of the heavy yellow pines (*Pinus ponderosa*), we found them to be over 19 feet in circumference and an estimated height of from 150 to 200 feet. This tree has very thick, reddish-brown bark, deeply furrowed and split in large plates. The cones of those in the Coast Range are much smaller than those of the Sierras. This pine is known throughout the West as the yellow pine from its heart-wood, which is yellow, heavy and very resinous. It is considered among the best timbers of the Pacific. The thickness of the bark in the largest trees is from three to four inches, and the sap wood is also very thick. The leaves are not deciduous until about the end of three years, therefore forming brush like tufts at the end of the small branches. In the older trees, the trunks are without branches to the height of from 75 to 100 feet, rendering them, for lumber purposes, free from knots. The trunk generally rises true as a line and rarely forks.

Fine examples of the Sugar Pine (*Pinus Lambertiana*) are scattered through this forest and along the ravines leading down from higher elevations. One measured 15 feet and 7 inches in circumference, but there are others of larger dimensions. It was formerly supposed that this noble pine was not found south of the Santa Lucia mountains of Monterey county in the Coast Ranges, but we find it here apparently as vigorous as farther north and in the Sierras, its conspicuous form, with widespread upper branches, rising above the spruces and firs. Its cones are of greater length than those of any other species, one in my collection from the Sierras measuring 22 inches in length. From one to five of these long, cinnamon-brown cones are borne at the end of the branches, and many of these we find on the ground before maturing, cut from their stems by the beautiful gray squirrels who covet the rich nuts therein contained. The sweet and aromatic nuts were much prized by the Indians, who laid in large stores for future use. The timber closely resembles the white pine, being soft, light and white, and is of equal value, if not superior. The name of sugar pine comes from a manna like sugar that concretes from the oozing sap, sometimes crystalline, like beet sugar, very sweet and without a pine-resin flavor, and,

according to Dr. Kellogg, contains laxative and balsamic properties that commend itself to the medical profession if it could be found in sufficient quantities. To the artist its sparse, widespread upper branches present a striking contrast to the pointed and pyramidal contour of its neighboring conifers, and the warm, neutral tint of its bark affords a pleasing variation in color. In its best estate, it rises to the height of 300 feet and 15 or 16 feet in diameter, one of that dimension being found between the two forks of the Stanislaus river.

The Great Coned Coulter Pine (*Pinus Coulteri*), a tree peculiar to the coast ranges, is sparsely scattered here among other members of the family. This so closely resembles Sabin's Pine (*Pinus Sabiniana*) that it is often confounded with it, both being nut pines and having somewhat similar cones, the latter of both species having the scales armed with spurs; but the seeds and wings always distinguish them. The spurs of the *Sabiniana* are somewhat longer and more incurved, and the cones are shorter and thicker. The foliage of Sabin's pine has a soft sea-green tint, bark of ashen gray, and a little more open branched than Coulter's species. The bark of the latter is very thick and rough and the cones cling tightly to the branches and are loth to open, while those of Sabin's are loose and shed the seeds easily. Both are nut pines. The timber of each is little used.

The White or Incense Cedar (*Librocedrus decurrens*) is represented by noble specimens, the largest of which measured nearly 24 feet in circumference. It has a conical trunk with cinnamon-colored, thick, spongy bark not unlike that of the Sequoia, and this led the first observers of this forest to call them redwoods. Specimens of the bark were obtained last season by Mr. Spence and may now be seen in our collection. Irregular sutures in the shreddy bark extend longitudinally along the trunk. The wood has a delicate salmon tint and is fragrant like most of the other cedars. It is durable under cover. The expanded base of the trunk renders them able to resist storms, yet we saw many weakened by fire that had been blown prostrate.

There also we found the Great White Silver Fir (*Abies concolor*), which Dr. Kellogg calls the most stately, elegant and useful fir of the Pacific. The specimen under which we made our camp and whose branchlets made our springy and fragrant beds, was 13 feet in circumference three feet from the ground. In the young trees this fir is exceedingly symmetrical, the whorled branches spreading horizontally, and would make a very desirable specimen for the lawn or park, and should be generally introduced. The bark of the old trees is gray, and that of some of the younger ones nearly white, as are the upper portion of the more mature trees, and for that reason it is called the California White Fir. Although this tree has not a general reputation for timber, Dr. Perry says it makes excellent railway ties, and it is said to make choice ceilings, shrinking but little and taking less paint than any other lumber. If used for butter kegs or boxes, no taste or odor would be imparted to the contents, and in the mining camp it is famous as being the stiffest and strongest of the mountain timbers for bridges and strong floors. We found a few trees growing on the summit of the highest peak of the San Rafael at an elevation of 7000 feet, and in the Sierras it thrives at 8000 feet.

The Douglas Spruce (*Pseudotsuga Douglasii*, var. *macrocarpa*) is found on the sides of the rocky canyons near this forest, and we also observed it on the northern slopes of the Santa Ynez river, and at other points along the Mono creek and its tributaries. The variety is a smaller tree than the typical species, having larger canes that are fringed. It is found at a lower elevation than most of the coniferous trees, growing often among the oaks, is rarely more than 80 feet in height, having long spreading branches.

Of the species above mentioned, we found trees of all stages of growth, from seedlings upward, and if fires could be prevented the forest would be renewed by nature's processes. Evidence of former and quite recent devastation was plentiful, some of the finest specimens having been weakened at the base until prostrated by winds, or, if still standing, their vigor is greatly impaired or they are left blackened skeletons. Forestry legislation may not reach such remote districts as this, but it is hoped that an enlightened sentiment will prevail that will protect without enforcement of law. The habit of stockmen in burning the chaparral from the hillsides in order that the grasses may spring up in its place may be profitable to the grazer, but such fires spread to invaluable tracts of timber, destroying the young growth and greatly impairing the vigor of adult specimens.

There are other bodies of timber in the neighborhood of the one visited, some of which are said to be of considerable extent, but all are like the one described, practically inaccessible at present for utilitarian purposes, being situated at the head of canyons along which roads could only be constructed at an expense over-balancing the value of the timber reached.

To the list of forest trees of Santa Barbara county read before the society Dec. 29, 1885, I am obliged to add the variety of the Douglas Spruce and the Great Silver Fir and *Pinus monophylla* discovered by Mr. Spence last year.

RAILWAY CARS.—There are about 900,000 railway cars in the United States and over 26,000 locomotives.

SHEEP AND WOOL.

A Sheep-Shearing Machine.

Our foreign exchanges contain accounts of the trial of a sheep-shearing machine in Australia that, it is stated, proved quite successful. It is predicted that this machine will come into general use there where such large flocks are raised. The following gives some particulars that will prove of interest:

For some weeks back various statements, couched in more or less vague terms, have been going the round of the agricultural papers respecting a new sheep-shearing machine, which was said to be capable of shearing 10,000 sheep per day. Flock-masters in general received these statements with a very considerable grain of salt, for, although the present is an age of inventive wonders, yet practical men were inclined to think that such statements almost defied belief. It appears, however, that the capabilities of this new invention have by no means been overstated. The machine consists of a length of shafting facing the shearing floor, driven by a small engine. On this shafting and five feet apart are cast-iron wheels two feet in diameter, each wheel having one side of its flange slightly beveled. Six feet six inches above the shearing floor, and attached to each post by back screws, and five feet apart, is a cast-iron bracket with an extension of three feet of light angle iron. On each bracket is a small leather wheel four inches in diameter, with a bevel of one and a half inches, corresponding to the bevel of the iron wheel above. This wheel, which rotates on a spindle, is formed by compressing several layers of leather between brass plates. On the end of the spindle is a steel hook, and outside the bearing is screwed a brass coupling, which is attached to a flexible tube six feet six inches long. Inside this tube is a piece of round gut half an inch in diameter, with a hook at one end and an eye at the other. The eye is placed in the hook at the end of the spindle carrying the small leather friction wheel, and the hook is placed in the eye at the end of the universal joint forming part of the shearing machine. The connection is made complete by a thin brass coupling slipping over a light brass ferule on the end of the flexible tube and screwed to the end of the universal joint. By pulling a small cord hanging from the bracket a spring liberates the catch, and instantly the bevel leather-wheel is pushed into position and contact with the bevel of the iron wheel revolving on the shaft, and thus it communicates a rotary motion to the core inside the flexible tube, and so to the small rods working the crank inside the casing of the machine. This crank moves from side to side of the cylinder, and thus causes the fork with cutter attached at the end to reciprocate over the comb, and as the comb is pushed into the wool, so does the small cutter cut. An eight-horse power engine will drive 100 shears, one man attending each, and their construction is not so complex but that a shearer of ordinary intelligence can learn to work them in a few hours. The time required for the shearing of one sheep is from 3½ to 5 minutes.

The Melbourne *Australasian*, from which the above particulars are taken, states that Mr. Wolseley's sheep-shearing machine was lately tested as against an experienced hand-shearer in presence of a large gathering of flock-masters and wool brokers. The sheep selected for the occasion were a very difficult lot to shear, being thick in the wool, very low in condition, and the wool on the majority of them was full of sand. The trial was for half a dozen sheep each, and the hand-shearer got through his lot in 48 minutes 22 seconds, while the machine-worker required 63 minutes 28 seconds for his half-dozen. But, although the shearer beat the machine in point of speed, yet in every other respect the advantage rested with the machine. The shearer, although one of the best hands in the colonies, could not help cutting the sheep in his anxiety to shear close to the skin, while the machine-shorn sheep presented an even surface, closely shorn, and with the skin intact. From the hand-shorn sheep, the machine cut 6½ ounces of good, clean wool, while the shearer only got 2½ ounces of very sandy wool off the machine-shorn sheep, and in getting this quantity he made numerous small cuts in the skin. Another hand-shorn sheep was run over by the machine, and six ounces of clean wool was taken off it. The general opinion of those present was, that although a highly skillful shearer had beaten the machine in the time test, yet for closeness of shearing, freedom from second cuts in the wool and cuts in the skin, the results were decidedly in favor of the machine. It was evident that in a flock of wethers, as usually shorn, the machine would take from 8 ounces to 12 ounces more wool than a hand-shearer would, and that is an advantage which flock-masters will not be slow to appreciate.

THE FAN PALM.—Rev. B. C. Henry states that the fan palm of China grows only in the San U district, 20 miles long by 10 miles wide. The trees do not yield leaves suitable for fans until six years old. Some trees are said to be over 100 years old, but the tallest measure only about 12 feet. From April to November the leaves are cut monthly, from one to three being taken from each plant. From 10,000 to 20,000 people are employed.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The State Grange.

We continue the publication of official documents and resume of proceedings at the recent session of the State Grange. The Treasurer made the following report:

Treasurer's Report.

To the Officers and Members of California State Grange:—There has been in the treasury within the Grange year \$142.01, as shown by the accompanying statement and vouchers. All other moneys belonging to the State Grange have been collected and disbursed by the Secretary, to whom I must refer you for the account. The National Grange dues have been paid by the Secretary, except one quarter, not at the close of each quarter, as the law of the Order requires, but within the succeeding months, as I am informed. I would also refer the Grange to the Worthy Secretary for an explanation of the cause of delay. I. C. STEELE, Treasurer.

Referred to Committee on Officers' Reports.

Secretary's Report.

The summary of the Secretary's monthly financial statements for the year ending Sept. 30, 1887, showed the total receipts to have been \$1797.84, all which was disbursed, leaving on hand supplies valued at \$28.50.

The membership reported Oct. 1, 1886, was 2786; the membership at date 3032; gain in membership, 246.

A sketch was given of the revival of Grange interest in California during the past year, and of the missionary and organizing work accomplished by Bro. Overhiser, as General Deputy, with the timely pecuniary aid of Bros. Logan, Steele and Chester, the most salient features of which have been noted from time to time in our columns.

An interesting correspondence was reported to have been had with James Dunn, delegate of a pastoral and agricultural society in Australia, looking to the organizing of a farmers' association, modeled after the American Patrons of Husbandry. The following

Report of the Executive Committee

Was read and referred to the Committee on Officers' Reports:

To the Worthy Master, Officers and Members of the California State Grange:—The lapse of another year has again brought us together from all parts of the State for a retrospective consideration of the past and for the purpose of devising and formulating new enterprises and labor for the future welfare and prosperity of our beloved Order.

The work of your Executive Committee has been necessarily very much retarded and crippled from the lack of funds wherewith to put in operation many suggestions and plans which we had from time to time under discussion and hoped to perfect, but have been compelled to abandon from our inability to meet the necessary expense to bring them to a successful realization.

Through the liberality of a few of our noble and generous brothers who each placed in the Grangers' Bank their individual checks as a fund wherewith to meet the expense of an Organizer, we have been enabled to accomplish something in that direction in the southern portion of the State. They are still calling on the mother Grange for much needed help. A full report of what has been done will doubtless be presented to you by said Organizer at this session.

With a keen appreciation of these difficulties and a sincere hope to be able to remedy them in the future, your committee would respectfully suggest and recommend the passage of resolutions whereby the dues from subordinate Granges to the State Grange be increased at least 100 per cent. It will be borne in mind that by such an increase no individual member will be directly called upon to incur any further liability to their respective Granges, as this amount is paid to the State Grange from the treasury of the subordinate Granges.

From the reports of the W. Secretary and W. Treasurer you will be enabled to appreciate the financial status of the State Grange, therefore there will be no figures reported by your committee, but reference is hereby made to such reports for detailed information.

Our connection with the California Patron Publishing Company will be fully set forth in the report submitted by the manager of said company, hence it will not be further alluded to in this report.

In connection with the Patron Publishing Company an informal attempt has been made to organize a Bureau of Information for the immigrant Granger and farmer and space provided at the office of the Secretary for an exhibit of the products and resources of the various sections of the State, and an appeal made through the columns of the *Patron* requesting farmers and others to send forward such specimens and information as they might possess or be enabled to procure that would assist in carrying out the above idea.

In response to such an appeal, many letters have been received by the Secretary indorsing the enterprise and promising after the lapse of county and other fairs to forward exhibits to be placed on permanent exhibition at our rooms. Your committee would respectfully ask an expression of opinion from this body as to the expediency of continuing work in that direction, as well as suggestions as to the most advantageous means of consummation. Hoping your deliberations may be productive of many lasting benefits, and that a spirit of fraternal interchange of opinion may characterize your discussions, we beg leave respectfully to submit for your consideration this report.

WM. JOHNSTON,
A. L. CHANDLER,
H. G. KEESLING,
JOHN F. DEMING,
Committee.

Woman's Plea for the Ballot.

In the course of the debate on the resolution favoring Woman Suffrage, Sister Mary F. Merrill of Stockton Grange made the following most eloquent and soul-stirring appeal:

Since I was old enough to know her history I have always loved my country. My country, did I say? I have no country.

She stretches out her beneficent hands to the uttermost parts of the earth; she invites even the lowest and most degraded, and they come—come, from the hovels and mudsills of Ireland—come, from the slums and the gin-mills of England—come, bending beneath a load of ignorance and superstition from Spain and Italy—come, loaded with dynamite from Germany, France and Russia, and she bids them welcome. She says: "Look abroad over my vast domain and take whatever there is left of the fairest and the best. Stay yet a few days and then enter into the councils of the nation. Stay yet a few days and have a voice in saying how this fair land shall be ruled."

But when an American woman, true-hearted, intelligent, and patriotic, knocks at the door of the council-chamber, she shows a forbidding face. She says: "Go home! go home! and use your influence there. I know that influence is ever exerted for good, but we want none of it here. Go home and use it there; and when your husband comes to you, mad with drink, why, influence him; and when your son, the beloved of your life, comes besotted into your home, when every reeling footstep leaves its impress upon your breaking heart, why, influence him; and if he will not influence, go to the man who turns the happiness of your home into food and drink and fine raiment; who breaks your heart and ruins your life that he may live in slothful luxury, go to him and try your influence."

I tell you, brothers and sisters, I would rather influence the wild beast from the mountains, mad with hunger and fierce with the thirst for blood!

Oh! that I had the right, when he sneeringly asks, "What are you going to do about it?" Oh! that I had the power to say: "I will put you in the eyes of the law on a level with other malefactors. I will make you responsible for the ruin and sorrow you bring upon the world."

My brothers, put this power into our hands; we will rightly use it, not abuse it. We ask it as a privilege—we might well demand it as a right.

It is ours now; the right is ours, inalienable. But the power to exercise our right is denied us. Not through any sense of justice, not through any appeal to reason and morality, but simply through the power of absurd prejudices and the superiority of physical force.

Legislators and Debris.

On the 10th of October, as we mentioned a week ago, the Anti-Debris Association resolved to invite our Congressmen to visit Marysville and satisfy themselves by personal inspection that the evils caused by dumping mining debris into rivers and streams have not been overstated.

In accordance with that resolution, the president of the association, Chas. E. Stone, has sent the following invitation to each of the U. S. Senators and Representatives from California:

MARYSVILLE, October 13, 1887.

Dear Sir: I am instructed by a resolution adopted by the Anti-Debris Association of the Sacramento valley to request you to visit Marysville at your earliest convenience to examine into the condition of the rivers in this vicinity.

The object of this visit is to afford you an opportunity to become thoroughly acquainted with the effect of hydraulic mining upon our navigable rivers, which, by the Act of admission of California into the Union, were guaranteed to be kept unimpaired. It will also give you very important information as to the condition in which the bay of San Francisco will ultimately be placed by the continual accumulation of debris from the rivers emptying into it.

I hope you will make it convenient to come at an early day, as I consider it a matter of great importance that our Senators and members of Congress should be fully informed by personal observation of the menaced destruction of the entire Sacramento valley, with its cities, and of the harbor of San Francisco.

An early reply is requested. If you will name a day on which you can visit us, we will meet you at the train. Your stay can be limited to one full day, as we can take you to any point upon the rivers in that time which will give you a correct idea of the situation.

Yours respectfully,

CHARLES E. STONE,

Pres. Anti-Debris Association Sacramento valley.

Dr. Stone has already had favorable responses from some of the gentlemen in question.

NATIONAL GRANGE EXHIBIT.—Worthy Master Overhiser and Bro. J. D. Huffman, of Lodi, are using their best efforts to have a creditable display of California products made at the National Grange. It has been strongly hoped that some provision would be made for transporting all suitable products that could be collected, but up to this date no definite arrangement has been effected. The railroad officials have declined to give free carriage; it is hoped, however, that means will be provided by subscriptions and donations to secure transportation without expense to exhibitors, and that such announcement can be made by Saturday, October 29th.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

In a number of the States of our Union fall elections are approaching, and the campaign grows warmer as the day for casting the ballot draws near. Party lines are drawn as closely as possible by the party managers, the "machine" is kept in good running order, and citizens who "belong" will go through the form of depositing the ballot with little thought as to the qualifications of the candidates for the positions. Parties are all right in their places, and the more equally balanced they are the better, for it keeps them on their good behavior; but we should see to it that the people run the party and not the party the people. The voters are greater than any great party. Emerson once said: "The great end of all political action is to secure morality as the basis of all political action," and Thos. Jefferson said: "The whole art of government consists in the art of being honest." We need honesty in politics nowadays, and honest men in all political parties. The Grange teaches the farmer to purify his own party, and not to believe the wrong is all on the other side. "It is his duty to do all he can in his own party to put down bribery, corruption and trickery; to see that none but competent, faithful and honest men, who will unflinchingly stand by our industrial interests, are nominated for all positions of trust." Here is a plain duty for all members of the Grange, for all farmers, for all good citizens.

So long as men serve their party in preference to their own sense of right and justice, so long we must suffer from unjust legislation. It lies with the people to demand that the best men be nominated for office, and then go to the polls with the determination to support the best men without regard to their political beliefs. Farmers spend all their time and labor in producing crops, and devote too little time to studying what the laws and politicians are doing for them.

Two Farming Issues a Week.

Heretofore the California Patron and PACIFIC RURAL PRESS, the two leading Grange and agricultural papers of the Pacific Coast, have both been published on Saturday and circulated at nearly the same time. Many copies of these papers are taken by the same subscribers. Under such circumstances two large papers come to hand to be read simultaneously, often furnishing more good reading than their readers care for at one time. To make the two papers more valuable to the farmers of this coast, the PATRON, as soon as possible, perhaps next issue, will be dated on Wednesday and printed in the early portion of the week.

The market reports are an important feature to the producing readers of any farming paper, and it is proposed to render the market reports of both these papers a significant feature. The Rural Press has had its market reports prepared specially by its own editors and reporters, and now that the PATRON will be published upon a different date, the same pains will be taken with the market reports hereafter to be found in its columns. These arrangements will afford farmers who take both papers the equivalent of a semi-weekly journal. We therefore hope that all subscribers will find it not only agreeable, but profitable, to continue their names on the subscription list of both papers, and that many who have heretofore taken but one paper will now avail themselves of this favorable opportunity of securing two first-class rural papers, issued during different periods of the week.—Patron, Oct. 22d.

Celebrate the Grange Birthday.

December 4th will be the anniversary of the birthday of the organization of the Patrons of Husbandry. The Patron suggests that representatives of Pomona Grange and State officers, Past Masters, and as many other Patrons as can, meet on the 4th of December at Oakland or some other place that may be selected, and commemorate, with appropriate exercises, the birthday of the Order. Also, at the same time, discuss plans and adopt some methods for the strict co-operation in carrying on the work of the Order during the coming year to the best advantage possible to revive the work in the different sections of the State and to increase the membership and activity and the fruitful doings of the Order throughout our whole ranks, and particularly to start the ball in motion for a successful annual session at Tulare.

We believe it is feasible to hold an inter-State picnic or Grangers' camp-meeting in some southern, northern or central part of the State in the Spring time when the country is in its brightest and handsomest livery and before the extra busy season of farm work begins; or, if more feasible, during the camping-out times when all the farmers need a season of rest and recreation, and more than any other class should be entitled to take it. We need these general gatherings to talk over plans for co-operation and advancing the interests of farmers. We wish to hear from correspondents. Let

subordinate Granges discuss this matter and give an expression as to the best time and location for such desirable gatherings.—Patron.

[From Patron, Oct. 22.]

State Lecturer's Bulletin.

Open Letter No. 1.

BROTHER DEWEY, MANAGER OF THE PATRON:—I extend to you the right hand of fellowship, and believe you a true friend in your future management of the PATRON. You have been tried and not found wanting when the time arrived to strike the fatal blow.

By a tenacity and uprightness of purpose you have so devoted your time, means and talent to the upbuilding of a paper (*Rural Press*) that surpasses everything on this coast of its kind, and, not much to say, stands second to none on the other side of the Rocky Mountains.

You have greater facilities and more experience to bring to bear in the conducting of the PATRON than it ever possessed, and I am satisfied nothing will be left undone on your part to make it the beacon light to the farmers and Grangers on this Coast. Now,

FARMERS AND GRANGERS,

What is your duty in the matter? Will you allow Bro. Dewey to carry on this contest single-handed and alone, without one word of encouragement or the sinews of war? Do you fully comprehend the word "aggregate?" If not, consult "Webster."

Send him something of the workings of your Grange or news of your section, and, when that is exhausted, give him some of the ideas that are struggling in your brain for an utterance.

By this aggregation from all parts of the Coast we will have a chance to contribute to the columns of the PATRON and (wastebasket.)

By this means we learn to write, to spell, to express our crude ideas in an intelligent manner, which is an accomplishment, and an education worthy the effort.

Each family, neighborhood or Grange should appoint one or more persons to correspond with the PATRON and write up the interesting matter connected with their locality, which, when published, would make very interesting reading matter, and each could know what was going on in other sections of the State.

We have a very efficient set of officers in the State Grange. Now, will each subordinate Grange see that their officers are capable, willing, and have the push to them? Let each member feel that it is as of much importance for him to be there as it is for the officers.

Next Saturday, at South Sutter Grange, I begin the first campaign of my second term as Lecturer of the State Grange.

Will you lend your presence and personal efforts to make these meetings a success? I think from my record of the past that you can depend upon it that I will put forth my best efforts for the future. I ask one and all, will you lend your presence and ability in helping along the work that we have undertaken?

Come to the Grange, if you are cumbered with wealth, we will take out our percentage, and give you more pleasure than you have now.

If you are not loaded down with this world's goods we will point out to you the short road to a competency and happiness.

If you are treading the devious paths of this world alone, and have no star to guide by night, or cool shade of retreat by noon, come to the Grange, and we will introduce you to living subjects and make suggestions, to illumine your life and immortalize your name, and it can be truly said you have made two spears of grass grow where one grew before.

If you are despondent and gloomy, and fancy you have no friends, come to the Grange, especially when the sisters set out one of their fine banquets attended with smiles and fragrant flowers, and the long furrows in your face will turn into smiles of joy, and you will go home and take the rope that you contemplated in ornamenting a gallows, and hang the dogs that bark at the man in the moon. D. F.

Our Worthy State Lecturer is generally very level headed, but he has levied on us more than the tariff will bear by placing on us too high a standard. However, we will, all the same, stand square up to the rack, "fodder or no fodder," and honestly do our best. We propose to give his good, plain name in full hereafter in these columns—Daniel Flint.

PERSONAL. Worthy Master Overhiser and Brothers I. C. Steele, A. L. Chandler, H. G. Keesling, J. D. Huffman and Christian Bagge were among the out-of-town visitors at our office this week.

Exhibits for the National Grange.

Worthy Master Overhiser wishes us to state that specimens of all agricultural products suitable for exhibition at the National Grange are solicited for that purpose, the National Grange having provided space for exhibits from all parts of the Union.

Pomona and subordinate Granges, boards of trade and all firms and individuals are solicited to send on as fine and complete samples as possible, such as vegetables, nuts, dried and preserved fruits, etc., and other products of the soil. Pamphlets and other printed matter suitable for free circulation on such occasions will be received and well cared for.

Send by express, addressed W. L. Overhiser, care National Grange, Lansing, Michigan, in time to be received by the 15th of November. Give full description in letter by mail. Also be particular to label each article with its proper name, locality where grown and address of grower. All fruit should be wrapped in paper or shavings and securely packed, and on the outside of each box also should be marked the locality whence it comes. Prepay all charges, unless otherwise advised later.

From Sacramento Grange.

Relating to California's Exhibition at the National Grange.

We wish the Worthy Master success in this undertaking, and only regret that action was not taken in the matter sooner. But I hope the members of Sacramento Grange will not be backward in the matter, and send such samples as they have to the committee at an early date, as all must be in readiness by Nov. 5th. The committee consists of Bros. G. C. McMullen, E. Greer and L. H. Fassett.

Members of Sacramento Grange will take notice that the fourth degree will be conferred on a class at our next meeting, Nov. 12th, and we shall hold a Harvest Feast.

Grange will be called at 10 o'clock A. M. All initiatory offers will please be on hand promptly. In the afternoon a short literary program will be presented under the charge of the following committee: W. O. Bro. Holmes, W. St. Bro. Mack and W. Sec. Sister Stevens. We anticipate a good time and expect a large attendance. Fraternally yours,
W. WALTER GREER, M. W.

SOUTH SUTTER GRANGE.—A grand meeting of Patrons was held at this Grange last Saturday. Worthy Lecturer Flint was present with many other visiting Patrons. Worthy Master Overhiser had gone to Sacramento in anticipation of meeting with the Pomona Grange, but the meeting did not occur at that date. By the kindness of Brother Hull, and the Manager of the Grangers' Business Store at Sacramento, he was enabled to reach Sutter Grange in the early part of the afternoon (in time, we presume, for the Harvest Feast). This was the Worthy Master's first official visit since his inauguration. He gives a favorable report of Sutter Grangers. The Worthy Master with the Worthy Lecturer enjoyed the hospitalities of Brother Chandler's elegant home, of which he speaks volumes of grateful admiration.

EDEN GRANGE, not having a full attendance last Saturday, let the subject of holding a joint celebration with Temescal Grange lie over for another week, when it is hoped there will be a large meeting and final action taken. The member of Temescal Grange committee who visited Eden Grange reports a pleasant meeting. An interesting recital was given by Sister Anway, and a guitar solo by Miss Gladding was very fine. Sister Roxy Dennis also delighted the Grange with one of her inspiring vocal solos. Overseer Blackwood presided in the absence of Worthy Master Chester.

DIRECTORS' MEETING.—A called session of the Directors of the California Patron Publishing Co. was held Monday and Tuesday of this week, and the agreement with Dewey & Co. for the publication of the *California Patron* was completed, and the books of the California Patron Publishing Co., with all the assets except for advertising to October 15th, were placed in the hands of Dewey & Co. for collection, all the proceeds to be applied to the liquidation of the debts of the Patron Publishing Co.

TEMESCAL GRANGE expects to confer the First and Second Degrees Nov. 5th. A good attendance is desired. Sister M. S. Smith of Oakland, whose farm is near Yuba City, is now on a visit to Tulare, where we hope she will visit and talk to the Granges as well as to the Patrons individually at their homes.

EFFECTS OF IMAGINATION.—A young man in Philadelphia was hurt at the locomotive-works and two physicians said his leg was broken. After he had been in bed a week another doctor was called who said the limb was not fractured, and the young man at once got up and walked without difficulty.

The list of awards at the Independence Fair, as printed in the *Inyo Index*, was the neatest, tastiest and (typographically speaking) most exemplary work of its class that we have seen in years.

WILLOWS suffered loss by fire to the amount of about \$50,000 early Monday morning. One-fourth the value was covered by insurance.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

COLLAPSE OF A WAREHOUSE.—Haywards Cor. *Chronicle*, Oct. 21: The grain warehouse of Isidor Franklin, on the south side of the railroad, is a total wreck. Mr. Franklin and his employees had just left the building yesterday when they heard a roar like thunder, and looking around beheld the warehouse, grain and all, in a mass of destruction. The building contained 90,000 sacks of grain, 50,000 of which were more or less damaged, while a part of it is a total loss. The loss is estimated at not less than \$8000. Twenty men are employed in clearing away the debris and piling the uninjured grain under adjoining sheds to protect it in case of rain. Another warehouse will be erected as soon as possible on the site of the one recently demolished.

Butte.

COTTON.—*Enterprise*, Oct. 21: This morning Charles Sanders of Diamondville, eight miles from Chico, brought us down a fine specimen of cotton grown on his father's ranch at that place. It is from a stalk 3½ feet high, which contained 19 bolls, and shows what our foothill lands will do. The variety is called the "Texas Prolific," Mr. J. J. Sanders having had the seed sent him from Texas.

Contra Costa.

MANGOLDS.—*Martinez Item*, Oct. 25: D. R. Thomas' West Hill farm is an example of what can be done in and around Martinez in raising almost anything that grows. He has a patch of beets that beats anything in the beet line we have ever seen, and they are not dead beets either, but living mangel wurtzels, growing two feet out of and covering the ground.

El Dorado.

GARDEN VALLEY NOTES.—*Cor. Republican*, Oct. 15: Some farmers have sowed part of their grain, but it is too dry to do much toward putting in a crop yet. Potatoes in this vicinity are excellent and yield well.... The Wakefield boys have just sold a lot of uncommonly fine late peaches, for which they received a good price.... Apples are very scarce and in most cases badly troubled with worms. If any one has salable apples this year, they will bring a good price.

Lake.

PLANTING PEANUTS.—*Clear Lake Press*, Oct. 15: Linck is cultivating on his place in town peanut vines, which are producing good, large peanuts. He has left a bunch of them at our office. The experiment having proved successful, Mr. Linck intends planting a large patch with vines next season.

Lassen.

HAY AND GRAIN IN BIG VALLEY.—*Bieber Tribune*: This valley can already boast of a population of nearly 3000 souls, mostly thrifty, well-to-do farmers and stock-raisers, with enough land unoccupied to accommodate as many more. The amount of natural hay harvested in the valley this year is estimated at not less than 20,000 tons, and yet not more than half the hay ground was mowed; and with the present irrigating schemes in progress 50,000 tons may be harvested annually within five years. The like can be said of grain. A few years ago we harvested about 40,000 bushels, and thought Big valley was doing wonders. This year—a poor one for grain—nearly 100,000 bushels were harvested, and if all the tillable soil were farmed our grain crop would count up into the million bushels.

Los Angeles.

SWEET POTATOES.—*Santa Ana Standard*, Oct. 22: Last winter when John Hassheider dug his sweet potatoes, he rolled the vines off the hills and left them to die. But they didn't—they just took root and went to growing again, as they will here if the rain falls on them, and looked so well that he concluded to see what they would do. A short time since he went out with his shovel to prospect and found the finest lot of large, handsome potatoes he ever raised. Many of them weighed from 5 to 10 pounds each.

THE RAIN AND THE RAISINS.—*R. M. Hargrave* is packing his raisins this week—that is, he is packing them to the wineries as fast as he can load them up. Too much moisture last week for them.... The raisin crop upon the gravel lands was seriously injured. This is unfortunate, as first-class raisins are very scarce in Europe this year and command high prices. It seems that bad weather did a great deal of harm.

WESTMINSTER PRODUCTS AND PRICES.—*Cor. L. A. Times*, Oct. 18: At the District Fair last week, Westminster took 26 first prizes. It was conceded at once that the Westminster apples were entitled to all prizes and were beyond competition. Our people have laughed a little over the first prize awarded us for the best three varieties of oranges, ahead of Riverside and Duarte. A family can raise all the semi-tropical fruits they want here. We took first prize for Japanese persimmons, which thrive in our damper soils. Of course it was only to be expected that we should clear the lists in barley, corn, potatoes, squashes, onions, cabbages, beets, carrots, radishes and the like. A box of peat soil was sent up by John Anderson, and little bags of it were carried off as specimens by the curious visitors. It is not to be expected that much rest will follow such laurels. Real estate to the value of over \$60,000 has recently

changed hands, including 20 acres peat land at \$200, 130 acres peat and mixed lands at \$150, 20 acres corn land at \$150.

Napa.

WALNUTS.—*St. Helena Star*: The crop of walnuts, at the Walnut Grove farm, between here and Calistoga, is unusually large and of good quality. The Shamp Bros. expect to gather from 3000 to 4000 pounds of these fine nuts, which find a ready local market at 15 cts. per pound. It was the fine exhibit of walnuts from this farm that aided materially in securing for Napa county the Mechanics' Fair award for best display of nuts.

Sacramento.

FIRST FROST.—*Record-Union*, Oct. 21: Thursday morning the mercury was down to 37°; a faint trace of white frost was visible in some places—the first of the season. In 1886, according to the record kept by S. H. Gerrish, the first frost was Oct. 9th. In 1885, Oct. 11th; in 1884, Sept. 30th (the earliest ever known here); 1883, Oct. 16th; 1882, Oct. 5th; 1881, Oct. 4th; 1880, Oct. 31st.

San Benito.

BENEFITS FROM ARTESIAN WATER.—*Hollister Advance*: Riding through the San Felipe district at the present time, a person notices hundreds of sleek horses and cattle grazing in the alfalfa fields. The succulent grass grows luxuriantly, in many places from 12 to 15 inches high. While farmers in other parts of the county are growing anxious about feed for their stock before the grass comes, the San Felipe farmers have feed and pasture to sell. Their alfalfa fields are watered by numerous artesian wells, which, added to the natural fertility of the soil, renders the nutritive grass perennial. The total cost of Mr. Hamilton's well was only \$370, and he bored nearly 50 feet deeper than was necessary. An artesian well upon 20 acres of land sown to alfalfa, will yield a handsome return on the investment. [Particulars respecting the well above mentioned were given in our "Agricultural Notes" last week.—EDS. PRESS.]

San Diego.

A HOME IN THE MOUNTAINS.—*Julian Sentinel*: In a nice little valley nearly surrounded by two protecting arms of the Volcan mountain, David Price showed us a field containing about three-fourths of an acre from which he had gathered 50 bushels of corn. He has a patch of blackberries about the size of a town lot, from which he sold \$40 worth of fruit. If he should happen to want to sell his land to a tenderfoot, he would probably be offered \$10 or \$15 per acre, notwithstanding he is deriving a cash income which is 10 per cent on from \$500 to \$1000 per acre. Several fine springs come out of the mountain-side on this ranch, which furnish an abundance of water at all times. The garden is well supplied with vegetables and the yard filled with ornamental and shade trees.

San Joaquin.

NOT PHYLOXERA.—*Stockton Cor. Chronicle*, Oct. 25: The statement that phylloxera has attacked vines in an orchard near this city is pronounced incorrect by W. H. Robinson, local correspondent of the U. S. Agricultural Department. He says the alleged cases of phylloxera are merely black wart, and that there has been no instance of phylloxera in this county for many years.

Santa Barbara.

BEANS AND WALNUTS.—*Carpinteria Cor. Independent*, Oct. 13: The foggy and rainy weather greatly interfered with the harvesting of the bean and walnut crops. The bean thrasher was started last Monday and has run between showers. H. L. Hall, the owner of the machine, is running it with a steam engine this season, which, it is believed, will facilitate the work. Many farmers are thrashing with horses and wagons as usual. The showers of rain caused the hearts of those whose beans were on the floors to beat unpleasantly, and many lanterns could be seen bobbing around Monday night, when a small shower commenced to fall. So far but little damage has been done the beans, and in a short time the crop will all be harvested if the weather is favorable. The walnuts have been considerably blackened by rains and heavy fogs. The crop is being gathered in great haste and is proving unusually heavy. The crop, with the exception of that of Hon. Russell Heath, has been contracted for by S. F. parties. Mr. Heath has special and regular customers, and consequently does not contract with the commission dealers.

Santa Clara.

CANNERY BUSINESS.—*San Jose Mercury*, Oct. 20: The fruit season is coming to an end and the canneries are closing. At the various packing establishments, this year has been one of the heaviest in the memories of the managers, the failure of Eastern crops being seconded by propitious returns in the West, and both combining to make such a large demand on our home products. At the San Jose Fruit-Packing Co.'s cannery, it was reported that they were running at full force and will continue to do so until the first of the month. They are working principally on tomatoes, the other crops having ended. The total pack up to date, Oct. 19th, this year, is 2,827,556 cans of fruit, as against 1,662,820 last year. By the end of the season, the pack will exceed 3,000,000 cans—double that of the preceding season. This enormous amount is composed of cherries, apricots, plums, grapes, peaches and tomatoes. Of cherries alone, 1500 tons of green fruit were used, while others approach that amount. The

largest number of cans packed in one day was 55,621. During the season, they have had employment on an average to 500 people a day, while at the height of the output the number has gone close on to 1000.

Solano.

MULES AND NORMANS AT ELMIRA.—*Vacaville Reporter*, Oct. 20: L. C. Northcut has been purchasing mules and Norman horses for the N. P. R. Co., and on Wednesday afternoon shipped a carload. E. H. Vance sold a span at \$450; Johnson Bros. a span at \$500; Owen O'Neill a span at \$450; J. Wolfskill a span at \$500; D. O'Neill two span of four-year-old Norman colts, \$725; J. H. Selemcan one four-year-old Norman colt, \$200. It pays to raise good stock, for which Elmira is becoming noted.

LAST OF THE FRUIT.—*Dixon Tribune*, Oct. 22: L. W. Buck & Sons shipped their last carload of fruit last Monday. Henry Bassford and W. W. Smith will perhaps close shipments for the season this week.

A NOTABLE GRAPE SHOW.—*Vallejo Chronicle*: The exhibit [made at the late district fair] by J. F. Deming from his Cypress Hill vineyard, consisted of 26 varieties of grapes, and proved the adaptability of the soil of Southern Solano to growing vines, and producing grapes equal to the best. Among the varieties are the White Syrien, Black St. Peter, Flaming Tokay, Muscat of Alexandria, Zinfandel, Black Muscat, Fifer Zagos, Emperor, Cornichon, Violet, Black Pinot, Muscatelle Gorrion, Black Morocco, Black Hamburg, White Tokay, Black Prince, Verdaho, Isabella, Rose of Peru, Mission and Black Malvoise.

Sonoma.

REDWOODS BURNING.—*Sonoma Democrat*, Oct. 22: D. A. Foster of Forestville reports a big fire in the redwoods. The fire started from Lautran's ranch, near Guerneville, last Tuesday, where some laborers were burning brush, and swept with great fury and rapidity through the dense woods toward Forestville, cutting a swath two miles in width. All day Wednesday 75 or 80 men fought the fire without success, and Thursday it was burning in the Green valley switch, about three miles east of Forestville. It is reported that three houses were burned, a large tract of country devastated, and a great amount of wood, tanbark and fencing destroyed, also live-stock. The fire is now reported to be checked, if not under control.

POTATOES around Bloomfield are better than they have been for 10 years, and there is every prospect of a large yield. Laborers are scarce. Last year white men and Indians did the digging, performing satisfactory work and freezing the Mongols out, and the farmers want the same order of affairs now.

Tehama.

FROM THE RANGES.—*Red Bluff Sentinel*, Oct. 15: I. M. Henderson, superintendent of Gen. Chipman's grazing and stock interests at Big Meadows, came down to Millville, near which the General has a large winter stock range, with 190 head of stock cattle and 45 horses, mares and colts, and located them on South Cow creek, eight miles above Millville. The stock is in fine condition. Riley & Hardin had 1700 beef cattle on the General's meadows when he left there, and he has no doubt that by this time there are 1500 more, as they were near the meadows a few days ago. Riley & Hardin will let the cattle remain there until some time in November, and then drive them to their range in this county.

HONEY DEW.—John Gleason, a well-known farmer and horticulturist near Henleyville, on Thomas creek, has forwarded to the *Sentinel* office a box of branches and leaves out from an oak tree near his residence, and the leaves are covered with "honey dew," drops as large as peas, and some the size of small walnuts being found, as white as loaf-sugar, that look and taste like candied honey. In a note he says: "I have never read one word in the papers about the appearance of 'honey dew' in this place. I can show dozens of trees loaded with it, just like the branches and leaves of the scrubby oak which I herewith send you. If a man could place say 100 beehives on my place, he could take out each week as large a quantity of the finest, purest honey, in snow-white comb, as could be produced in any other part of California or the Eastern States." Was not the manna upon which the Israelites fed during their journey through the wilderness the same as the "honey dew" of Tehama county?

Tulare.

INDEMNITY LANDS.—*Visalia Times*, Oct. 20: Sixty-nine filings on land were made in the land office on Monday, 19 of which were timber-culture claims, the remainder homestead and pre-emption. The majority were on railroad indemnity lands lying west of Huron and from the San Joaquin river to the remotest southwest corner of Kern county. The indemnity lands filed on are supposed to aggregate in the neighborhood of 9000 acres.

FROM VISALIA TO CHICAGO.—I. H. Thomas last week shipped 29,400 pounds of dried fruit to Sherman, Marr & Higgins of Chicago. The value of the fruit was \$3800. This is the first shipment of the kind ever made direct to Eastern dealers from this city.

PROFITING BY THE FAIRS.—Elias Gallup of Jona, who had Holstein cattle and Poland China hogs on exhibition at the fair last week, says it pays a stock-raiser to exhibit at the fairs, and remarked that he had sold \$200 worth of stock by his visit to the fair this year.

Shakespeare Memorial Fountain.

On October 17, at Stratford-on-Avon, a Shakespeare Memorial Fountain was presented to the town of Stratford by George W. Childs of Philadelphia. There were imposing ceremonies and the following poem by Dr. Oliver Wendell Holmes was read:

Welcome, thrice welcome is thy silvery gleam,
Thou long imprisoned stream!
Welcome the tinkle of thy crystal beads
As plashing raindrops to the flowery meads,
As summer's breath to Avon's whispering reeds!
From rock-walled channels, drowned in rayless night,
Leap forth to life and light;
Wake from the darkness of thy troubled dream,
And greet with answering smile the morning's beam!

No purer lymph the white-limbed Naiad knows
Than from thy chalice flows;
Not the bright spring of Africa's sunny shores,
Starry with spangles washed from golden ores,
Nor glassy stream Bandusia's fountain pours,
Nor wave translucent where Sabrina fair
Braids her loose-flowing hair,
Nor the swift current, stainless as it rose
Where chill Arveiron steals from Alpine snows.
Here shall the traveler stay his weary feet
To seek thy calm retreat:
Here at high-noon the brown-armed reaper rest;
Here, where the shadows, lengthening from the West,
Call the mute songbird to his leafy nest,
Matron and maid shall chat the cares away
That brooded o'er the day,
While flocking round them troops of children meet,
And all the arches ring with laughter sweet.

Here shall the steed, his patient life who spends
In toil that never ends,
Hot from his thirsty tramp o'er hill and plain,
Plunge his red nostrils, while the torturing rein
Drops in loose loops beside his floating mane;
Nor the poor brute that shares his master's lot—
Find his small needs forgot—
Trust of humble, long-enduring friends,
Whose presence cheers, whose guardian care defends!

Here lark and thrush and nightingale shall sip,
And skimming swallows dip,
And strange, shy wanderers fold their lustrous plumes
Fragrant from bowers that lent their sweet perfumes
Where Pæstum's rose or Persia's lilac blooms;
Here from his cloud the eagle stoops to drink
At the full basin's brink,
And whet his beak against its rounded lip,
His glossy feathers glistening as they drip.

Here shall the dreaming poet linger long,
Far from his listening throng—
Nor lute nor lyre his trembling hand shall bring;
Here no frail Muse shall imp her crippled wing,
No faltering minstrel strain his throat to sing!
These hallowed echoes who shall dare to claim
Whose tuneless voice would shame
Whose jangling chords with jarring notes would wrong
The nymphs that heard the Swan of Avon's song?

What visions greet the pilgrim's raptured eyes!
What ghosts made real rise!
The dead return—they breathe—they live again,
Joined by the host of Fancy's airy train,
Fresh from the springs of Shakespeare's quickening stream!
The stream that slakes the soul's diviner thirst
Here found the sunbeams first;
Rich with his fame, not less shall memory prize
The gracious gift that humbler wants supplies.

O'er the wide waters reached the hand that gave
To all this bounteous wave,
With health and strength and joyous beauty fraught;
Blest be the generous pledge of friendship, brought
From the far home of brother's love, unthought!
Long may fair Avon's fountain flow, enrolled
With storied shrines of old,
Castalia's spring, Egeria's dewy cave,
And Horeb's rock the God of Israel clave!

Land of our Fathers, ocean makes us two,
But heart to heart is true!
Proud is your towering daughter in the West,
Yet in her burning life-blood reigns contest
Her mother's pulses beating in her breast,
This holy fount, whose rills from heaven descend,
Its gracious drops shall lend—
Both foreheads bathed in that baptismal dew,
And love make one the old home and the new!

[Original Contribution.]

Joaquin Miller's Open Letters.

To a "Fellow-Gardener in the New Eden":

Yesterday a great man, a man so great and so good and so modest, indeed, that he would be deeply offended should I give his name, said to me: "I am going to use your pretty idea and expression about every cultured and refined soul trying to get back into Paradise by making a little Eden of his own on earth; for I think with you that it is singularly fit evidence of the beautiful and the piteous story of Paradise and the Expulsion."

I have also had three letters on this subject. One of these letters has no other

signature than the line at the head of this letter. And it is well; for the author, be he who he may, would have had a line from me asking permission to use that letter instead of this of mine; for it is better than anything I can hope to write to-day.

But my "fellow-gardener" is, or was, more fortunate than I from the first, and that may account for the perfect fineness of his work. For I was not born with an inordinate love of the beautiful, as my fellow-gardener seems to have been. So far from that, I can recall many harsh and violent acts of mine, both toward man and beast, and even toward the inanimate things of this beautiful world.

Neither are other men born to a sure and tranquil love of beauty in the inanimate world, as a rule. Nations certainly never were suddenly born to a love of the Edens of this earth. The Greeks, the greatest gardeners—you remember that Alexander the Great, so far from sitting down and weeping by some impossible sea, planted nearly all of Persia in trees from Greece—the Greeks, I was going to say, had hard work in keeping themselves up to their lofty standard of perfection in things beautiful. They, like the children of Israel, were always going out after strange gods, driving out their dramatists and poets and poisoning their philosophers and lovers of the truly beautiful; just as the world has been doing in some fashion ever since. For the mass, the mob of mankind, is always ignorant, often vicious, and so the teachers have been and perhaps ever will be derided and crucified.

You see clearly, then, that it is for the mass we must toil, my "fellow-gardener." You and I have no right to sit down and indite letters to each other, "swap lies," as Lincoln would have called it, and congratulate ourselves that we have entered into the temple of the god of the beautiful and stand there in high places worshipping together. We must keep our feet level to the solid land; pick in hand and hoe in hand, we must minister at the altar in the open air each day before those who are asking the way to the door of our temple.

An old sinner once said to Lorenzo Dow: "I should think you would stop trying to preach. You have been trying to preach for five years now and I never yet heard of but one man that you converted."

"Glory be to God!" answered Lorenzo Dow; "let every man convert his one man and all the world will soon be converted." And the great exhorter took courage and kept on, converted this old sinner, and I guess did much good before he died.

As for myself, I cannot say certainly that I ever had but one genuine convert and disciple that I knew personally. I found him in a great rage with his horses. He was driving a stage up and over a mountain in Oregon. I helped him up the hill. The sun was going down, and such a sunset!

While the poor battered and bruised horses rested a spell, I, without thinking of reaching the man's heart, called his attention to the white clouds in the valley below, the black woods about us, and the wonderful glory and golden halo of the dying day far away toward the sea; the peace, the majesty, the sublimity of the world before, below and about us! The man said nothing at the time, and indeed I said almost nothing, much less than I am saying now, for I had only to look below, about, beyond, and have him do the same and see and understand. Words are a dreadful impertinence at times like this, and are to be avoided as far as possible.

But I met this stage-driver years after, in other lands, and he told me that he never passed that place from that time without stopping his horses and taking off his hat.

I did not ask the gray-headed old stage-driver, now a very wealthy and influential man, but I can safely assert that he never after that time either pounded or swore at his horses.

The truth is, this love of the beautiful, whether it is the love of a single flower or the love of mountains, massed and piled-up mountains in all their tremendous majesty and crowned in the golden inheritance of the dying sun, is simply the love of God and man, of beast and bird and flower. But the flower simply is the bud, the beginning; the mountains, the stairway, by which the soul ascends and walks into the presence of the Eternal God.

Anyhow, if we are going to do any very great good to others, we must not only build our little Edens, make at least one little spot of this earth more beautiful than we found it, but we must leave the gates of Paradise open and the fences down.

We never read or hear another single word about Paradise, good or bad, after the gates were closed.

And this brings us face to face with a very important and practical matter. Why have any fence or wall at all? All over this State

we are to-day building little parks in our young cities. Let there be no wall, no fence, no gate. The flowers, plants, trees to be grown there belong to the people. Trust the people with them; especially do they belong to the poor the poor who toil and have no gardens or flowers of their own. Let there be no fence, no gate against such people.

They tell a pretty story in Jerusalem to this day about an officer who was driving some poor out of a garden at sunset.

"Why do you drive these poor people out?" asked a lone, and sad, and silent man by the gate.

"They are the poor and they must be gone, for the king comes after sunset, and we don't want to have the poor here then."

"Will you give them to me? I will take them into a garden of my own."

"Certainly; take them and welcome."
And so the lone and sad man took the poor on a hill and showed them the unfenced gold, and glory of the sunset, the spars and bars, and bolts of fire in the west, the vast sweep of skies, and the coming out of the kingly stars on the awful porch of heaven.

And as this man who had stood by the gate spoke to them his voice was sweeter than the flutes of those who danced in the garden before the king; and his raiment shone like gold in the light of the dying sun that reflected on the hill. And all these poor—God's poor—were filled with unutterable love and content.

The lone and silent man who had stood watching by the gate as the officer drove the poor people forth from the flowers that had grown out of the earth for them—because they had so little else—that man was Jesus Christ.

Ah! there is so little of this earth, so little of the heavens, that even a king can fence in!

My "fellow-gardener," let us not try to fence in any of it at all, so far as we can avoid it. Let no park in this one vast Paradise out here by the great sea have any sign of fence about it. Let even private flower-paths and lawns lie open to the people. Do you think they will pull the flowers? Try them.

For half a century New York and Philadelphia kept tall iron pikes and huge, ugly padlocks about the city parks. Ten years ago Dorman B. Eaton, the author of the Civil Rights bill, went to the capital of New York with a bill to tear down those hideous iron pike fences around Union and Madison squares. A dozen of us scribes remained in the city to say the truth for the right.

The fences came down. And the flowers? It a single flower has been pulled, it has not been reported by any one. No; the people, God's people, the people whom Jesus Christ found being driven out of the garden, are very careful of their flowers.

So take down every fence in town, so far as you can. If you could fence in a single star, a single bit of blue heaven, a breath of wind, or an odor of the sea, why, there might be some sense in your fence. But as things are, banish it from about your door. It is an impertinence; a barbarism; a relic of the old baronial and feudal days in England when robbers rode to battle singing,

"Let him who dares to get,
And let him keep who can."

The Catholics have a beautiful custom, in Spain especially, in Mexico as well, of leaving all their churches open to all people at all hours.

If we are going to spread this religion, this love of the beautiful, if we hope to proselyte the world and get it back to the old Greek glory in the beauty of man and beast and bird and flower, let us, like the Catholics in Spain and Mexico, leave our churches and our temples open at all times to all people.

Of course, this commercial age, this age and day of money-getting in which we have been projected upon earth, is a hard one. But it is not nearly so hard as an age of wars, and many another worse thing that might be mentioned. Nor must you forget the fact that many of these money-getting people are fine gardeners. As to whether they truly love the flowers, is another matter. But if they are trying to love the flowers, that is much indeed. No man can "walk in his garden," no man can rear a single flower, without feeling more or less its influence for good; for a love of form, color, fragrance, all induce that which is fine and refining. These things, which are so often Christ's texts, are always and forever God's syllables of speech to man.

There is something pitiful in looking back over the path of the world for green places in the history of man; so few are the oases, so rare are the places of rest, after "the Lord planted a garden Eastward in Eden."

But we find that the Jews, like the Greeks, were wondrous gardeners. We have

grapes and grain and fruits and harvest feasts, from the time that men were "sent to spy out the land," up to the time of the scene in the garden beyond the brook of Cedron. Nearly two thousand years of persecution during which time no Jew dared till the soil, drove this brave and industrious people from the plow forever, as it would now appear. The soil of Greece has been worn away and washed into the sea. I sat near Athens one season, an invalid, waiting, watching, praying for the flowers. They came at last—little bits of spindling spikes not much bigger than pins and not taller than a finger's length.

But these two mighty people—the only two that are really remembered in history, if we omit the Romans, for they were gardeners too—look at Cincinnatus and his cabbages—laid the corner-stone of state in the garden and the grape-field.

On the maps of the world you can cover these two places, Athens and Jerusalem, with the tip of your finger, and yet in your heart, in all history, they cover more than all the rest of Europe and Asia together.

They were lovers of the beautiful; this love of the beautiful and the true gave them poets, and their poets have not permitted them to be forgotten.

It was the law in England till lately to challenge, for cause, any man who was or had been a butcher when a jury was being called to try a man for his life.

I think if I was on trial for my life, and cared to preserve it, I should ask each juror if he kept a garden and cherished flowers; and I should accept no one who did not spend at least a portion of each day with these voiceless ladies of God's household.

JOAQUIN MILLER.

Oakland, Cal., Oct. 15.

Old Age.

[Written for the RURAL PRESS by MRS. L. P. J. HERRING.]

A letter from an absent friend inquiring if I was "getting gray and feeling old," set me to inquire of myself if I was; truthfully answered, I say no. I am only in my infancy in universal knowledge, but just taking my first steps in right-doing; am in the alphabet in spiritual learning; only beginning to see the possibilities of helping others over rough places I know of. I hope I am not getting old when I am just beginning to enjoy living. It takes 50 years of this life to learn how to live; to get our boys and girls big enough to be companions and a help to us. One wants to see how the world will get along when we are looking on, instead of being ourselves in the turmoil of life. Then these thoughts came to me: Does the spirit grow old? If it gains in knowledge which is power (not weakness, as age means), surely, then, it grows stronger, more powerful and able to overcome difficulties. That is to be desired, not to be regretted. What is there about old age that mankind dreads? Is it the mere physical decay, the inability to do a good day's work, the loss of youth's freshness and beauty, or the usual querulousness and feebleness of the aged—its boasting of "the good old days of its youth" and consequent evil days of the present? Why this antagonism between age and youth, amounting to a dread and alarm on the one side, and a contempt or pity on the other?

I have often felt the truth of the old saying, "Young folks think old folks are fools, but old folks know young folks are fools." Why this state of things should exist I cannot understand, unless we old folks are to blame, and I believe we are, friends; first for getting old, second, for seeming or acting old.

If the spirit don't grow old, then we should not allow the material part of us to show age, save in looks. Our feelings and thoughts we can control and subject to our will. Keep them young and in harmony with the rising generation. Cultivate young friends, sympathize, and help them to do their best. Counsel them lovingly by our own failings. Live in the present and future, not in the past. If the hair is silvering, don't grieve about it, but modestly accept the halo of age as a gift and a sign of worthy work in past years. If the cheek shows signs of Time's finger-tips and the eye grows dim, keep a cheerful smile and bright look on cheek and eye, and both wrinkles and dullness will be overlooked.

Nothing will make old age more beautiful than health, cheerfulness, honest work, and a holy purpose in life, and for all mankind. Keep a pure faith in God and a deep love for good and truth. Never think or act as if we knew it all, for our education is but commenced in this life. Progress is the watchword of the spheres. Our added years but teach us how little we know and how much there is to learn. Life is one grand "kindergarten" where old and young are forever children learning life's lessons. Let each strive who best shall learn their task and do their duties, unconscious and not caring whether Father Time marks our heads white, gray or black.

A WOMAN sold her washtub to a party of riflemen for a target. They paid her \$1.50 for it, and after they had gone home she went out into the field and brought it back as good as it ever was.

Liquor and Liberty.

EDITORS PRESS:—I think that excepting the coin used in bribes, the most common argument now in favor of the liquor traffic is the "personal liberty" plea. With people who regard liberty as a national birthright, this plea is well chosen for effect, especially in cases where liberty sympathies and liquor sympathies connect by way of the stomach on the pocket. There is something a little peculiar in the common manner of presenting this plea, which is, as if "personal liberty" and personal rights were the same thing; as if "personal liberty" were an independent unconditional sovereign right. I notice that liberty is as really connected with crime as with good deeds. Murder and treason are an exercise of "personal liberty" but not of personal rights. I should think every human being entitled to liberty in doing good but none in doing harm, and I cannot understand that wrong-doing has any right of liberty, or liberty any right in wrong-doing. If the liquor traffic is beneficial it must be right and entitled to liberty; if harmful, it must be wrong, and no wrong can have any rights. This manifest assumption of "personal liberty" rights looks like a design to appeal to liberty sympathies in a way to drop out of notice the distinction between personal liberty and personal rights; to hold attention aloof from investigation of relation of the liquor traffic to public interests, the relation of liquor freedom to drunken bondage, of licensed whisky to prohibited crime. It should be borne in mind that all government is an abridgment of liberty, and as all good tendencies need no restraint, we have no use for government but to suppress wrong tendencies and thereby protect the right. Does the liquor traffic deserve protection for the good it does or deserve suppression for the harm it does? Of all persons whom our Government protects, none whoop louder for liberty than the anarchist. The greatest anarchical power on earth, and one that is doing most to corrupt and subvert our Government to-day, is this liquor traffic that calls so loudly for "personal liberty." Do any doubt this, let them ask themselves if they ever knew an honest election where liquor interests were at stake and liquor sympathizers plenty.

What other power breaks and defies law as does the liquor traffic? How much of its present privilege has it secured by other means than fraud and bribery? How many total abstinents are to be found in the anarchist rabble? What proportion of crime and prison life come of liquor liberty? San Quentin reports 80 per cent; police courts show more than that.

THOUGHTOGRAPH.

Saved by Her Bustle.

We don't believe history has chronicled a more singular escape from death than occurred in Redwood canyon last week. The male sex, who are an unfeeling lot taken altogether, have severely criticised bustles, which is a most important part of the female wardrobe, but after reading this thrilling episode should "forever hold their peace." A handsome young lady of sweet 17 arrived from Arizona a couple of weeks ago, and spent a very pleasant visit with friends in the above canyon. One evening when the head of the family was away, the milking naturally fell on the female portion of the household. The Arizona fair one at once offered to do her share, but the aunt protested. The protest was of no avail, however, and shortly afterward she started for the corral, milk pail in hand, a typical Maud Muller. The young lady was just in the act of milking when a ferocious bull spied her and at once started on the warpath. It was a critical position, and, as the bull came charging at her with lowered horns, with blood in his eye, the young lady quietly dropped on the ground, face downward, and lay as still as death. This maneuver was something new for the bull, and he was for a moment n nplussed, but he soon recovered from his surprise and made for the prostrate maiden; and had it not been for that bustle, the young lady never would have lived to tell this exciting experience. The bull gored that tenderly framed air-castle, called a bustle, until it gave way, and he retired with the trophy. The aunt saw the charge and was about to run in to assist, when the brave girl called out to keep back, or else both would be killed. As it turned out, the bull, after discovering the bustle, concluded that he had made a slight mistake and retired from the battle. Had the young lady started to run, the bull would very likely have soon overtaken and killed her. Hereafter all young ladies should have an extra bustle in reserve when they go into the country and play the milk-maid act. —*Haywards Journal*.

A CHRYSANTHEMUM SHOW, in aid of the Woman's Exchange, is to be held in this city by the lady managers of that worthy enterprise the second week in November. The exhibition will take place at the Union Club building, Post and Stockton streets, the corner room on the ground floor having been kindly offered to the ladies for the purpose.

THE man who can pass the warning notice, "paint," without testing the matter with his finger to see if it is dry, has sufficient will-power to give up drinking.

YOUNG FOLKS' COLUMN.

The Brave Girl by the Sea.

[Written for the RURAL PRESS by DOLLIE BROOKS.]

Helen Gray lived with her father in a little cottage facing the ocean. She was a rosy-cheeked maiden about 16 years of age, brave and fearless. She had one brother, Charley, who was some years older, but he had run away and gone to sea, and her mother afterward died of grief. Helen would never refuse to accompany her father to a wreck.

One day she sat looking out of the window waiting for her father to return from the village, where he had gone to make some purchases. She saw by the sky that a storm was gathering. On came the great black clouds. Flashes of lightning could be seen, followed by peals of thunder. Helen saw something dark out upon the waters. By the help of her father's spyglass she found it to be a ship on the rocks fast going to pieces, and the poor sailors were clinging to broken spars and planks. Could she save any one? She might try, any way. Helen took her shawl, tied it around her head, and rushed out in the storm toward the cape where the wreck was. Before leaving, she hastily wrote a few lines for her father, saying:

"There is a ship on the rocks off the cape and I have gone there to try and help them. Don't worry for I will soon be back."

HELEN.

She reached the cape and clambered down over the rock to where the sailors and wreckage were being washed ashore.

Already several lifeless bodies were being dashed on the rocks, and she was grief-stricken to think she had come too late to save any one. But soon another body rolled in on the waves and she thought she could discern some movement or struggle, so she sprang down off the rocks as the wave was about to carry it back again; she seized the clothing and pulled it above the receding wave.

Just as Helen laid the body down, she thought she heard footsteps, and on looking around saw her father with a friend. Mr. Gray, having read the note, became very much worried, and immediately started for the cape. Helen was somewhat surprised at seeing them, but did not for a moment forget her charge.

"Have you any spirits in your pocket, father?" she asked. He put his hand in his pocket and drew out a flask which Helen took and placed to the sailor's mouth, but he was too weak to drink.

Mr. Gray picked him up, and between the two men they carried him home and placed him on a little cot. They were very busy with the sailor for a while, Mr. Gray giving him spirits, Helen chafing his hands, and the other man rubbing his feet.

After awhile he opened his eyes and asked: "Where am I?" When he had talked a little, she found him to be her long-lost brother.

I will not try to describe their meeting, but it was a joyous one. A stranger looking in the window that evening would have seen a very happy fireside; but there was one empty chair. How happy it would have made their mother, had she lived to see her lost son again.

Vanden Station.

A Good Dog.

A family in Woodland has a shepherd-dog that they would not sell for a heap of money. A few mornings since, the *Democrat* says, the mother was busy in the house about some important work, while the four-year-old daughter was playing in the back yard, her only companion being the family dog. Soon the dog came to the door and began to bark furiously, rearing up against the door, as if to force it open. The lady tried several times to drive him away, but it appeared to make him the more persistent. At last she went outside, to see if she could not pacify him. As soon as she opened the door, the dog started toward the back yard, barking and looking around, as if to give her to understand that she must follow. She had not gone far before the screams of her daughter made her aware that there was some meaning to the dog's peculiar actions. She hastened in the direction of the screams, and soon found the child had climbed upon the picket fence, and fallen in such a manner as to catch one foot between the pickets, and there she was hanging, head downward, when the mother arrived. She soon extricated the child from her perilous predicament, and, aside from a scraped ankle, she received no material injury. It would be hard to pile up money enough to buy that dog.

"WHAT ARE YOU GOING TO DO?"—Polly Larkin puts this anecdote in the *Petaluma Courier*: "What are you going to do when you grow up?" said one of a group of little girls the other day. "Me? Oh, I guess I'll get a certificate and teach school." "I'm going to learn to be a doctor," said another one. "My father says I'd make a good one. I set and bandaged a little chicken's broken leg yesterday, and I put a piece of sticking-plaster on a scratch on our old cat's nose this morning and you ought to have seen her buck." It went the round; one was going to be a milliner, another a copyist, and so on until it came to the last rosy-faced little sprite, and her answer was the best of all. "What are you going to do?" "I'm going to learn to help my mother," was the reply.

GOOD HEALTH.

A SIMPLE CURE FOR RHEUMATISM.—A correspondent of the *English Mechanic* says: Let all of "ours" know the following: My wife has suffered occasionally with acute rheumatism in her feet, with painful swelling, completely taking her off her feet for many days at a time. The following remedy was recommended recently and tried, and took away the agonizing pain in less than 15 minutes, and she can now walk very fairly, and in a couple of days she will be able to button her boots and walk without a stick or crutch. One quart of milk, quite hot, into which stir one ounce of alum; this makes curds and whey. Bathe the part affected with the whey until too cold. In the meantime, keep the curds hot, and, after bathing, put them on as a poultice, wrap in flannel and—go to sleep (you can). Three applications should be a perfect cure, even in aggravated cases.

SPINAL DISEASES.—Children are peculiarly liable to those ailments in which the spinal nerves or base of the brain are more or less involved. In view of that which has gone before it is unnecessary to dwell further upon the propriety of placing the bodies of little ones suffering from cerebro-spinal disturbances in that position best calculated to avert undue determination of blood to the base of the brain and spinal cord—that is, to keep them in as elevated a position relatively as is practicable, upon the same principle as we would raise an inflamed foot or hand above the rest of the body to relieve congestion. Of course it will be seen that, so long as the prone position is occupied, all that is possible in this direction has been compassed.—*Babyhood Magazine*.

CIGARETTES AND EYESIGHT.—The greatest enemy to the eyes of young men is the cigarette. Recently a disease has appeared among smokers which is dangerous, and after careful investigation the best of authorities, who for a long time were at a loss to understand the peculiar malady, have traced it to the small paper-covered tobacco sticks. It is now known as the "cigarette eye," and can be cured only by a long treatment. Its symptoms are dimness and a filmlike gathering over the eye, which appears and disappears at intervals. If young men continue to smoke cigarettes excessively they may expect to be afflicted by this troublesome disease, and it is not relieved by spectacles.

DISINFECTING THE HANDS.—The question, "How shall the medical practitioner disinfect his hands?" which has been often discussed, seems to have been completely and satisfactorily answered by Dr. Foster of Amsterdam, who has made some careful research bearing upon the question, and who asserts that the only absolutely reliable preparation is that recommended by Dr. Koch of Berlin, which consists in a solution of corrosive sublimate, in the proportion of from 7 to 15 grains in two pints of distilled water. The simplicity of the process and unquestionable prophylactic qualities of this disinfectant will go far to recommend it with surgeon and general practitioner.—*The Medical Register*.

PNEUMONIA.—It is generally supposed that pneumonia is due to the accidental penetration of specific microbes into the system; but the observations of M. Jaccoud, a French student of the subject, show that the disease really results from the development, under favorable conditions, of microbic germs permanently present in the system. A chief condition of such development is a sudden chill which explains the frequent coincidence of lung affections with abrupt changes of temperature.

PURE AIR AND EYESIGHT.—English physicians say that a form of opththalmia, caused by the vitiated atmosphere arising from overcrowding, has been practically banished whenever sanitary improvements have been introduced. Pure air produced immediately better eyesight.

COLD DRYING.—A blacksmith at Haywards, according to the *Haywards Journal*, has demonstrated that a blast of cold air is just as effective in drying fruit as a hot blast. His experiments were made in a room adjoining his forge. Directly back of the room occupied by the forge is another apartment, which is used for drying fruit. The cold blast comes from the blower that supplies the wind used in the blacksmith's furnace. The fruit is placed on trays inside of an inclosed frame, and the cold air blast is then turned on. The action of the air is soon noticed, and the fruit is found to be completely dried. Samples of prunes, apricots and apples are shown which were dried two years ago by this process, and which are still in a perfect state of preservation. People in this part of the State are very generally familiar with the great evaporating power of our cold autumn north winds.

A HYGROMETRIC PAINTING.—A weather prognosticator and amateur artist of Prague recently painted a landscape colored with the salts of cobalt. These colors are very sensitive to moisture, and are made still more so by mixture with gelatine. With increasing moisture in the atmosphere, the blue heavens of the picture assume a dirty red hue, and the green grass and foliage, the yellow background, etc., are also strikingly changed in color.

DOMESTIC ECONOMY.

FRUIT HONEY.—I have been reading of the Swiss pear honey, and the ambition seized me to attempt something of the kind at home. The baskets of glowing Sheldon pears in the pantry were a picture, but a vanishing one, as they were melting with ripeness. Three quarts of pear juice were soon simmering in the stone pot in the oven. All night they slowly reduced, and in the forenoon an hour's boiling brought them to a syrup of honey which surpassed all expectations. The three quarts of pear juice yielded nearly a quart of delicious honey, pale, clear, sweet, with fruity flavor, which I won't call an improvement on that from the hive, but it is an agreeable variety from it. Early pears are very rich in sugar, and it may be profitable to fix their transient sweetness in this way. It has been kept three months from the making, unsealed, and the flavor is even better than at first. It was clarified by straining the juice through flannel and removing a few spoonfuls of froth in boiling. Not a grain of sugar was put in. The honey is the pure juice and sweetness of the fruit. This pear honey comes in very nicely at the close of summer, and furnishes one of those standbys of the store-closet which are such great helps to the housekeeper, who likes to keep up a good table. An American breakfast in autumn, with delicate Adirondack griddle cakes, or the first buckwheat cakes and pear honey, finishes very nicely.—*Vick's Magazine*.

[Other fruit-juices might give satisfactory results, if treated in like manner.—EDS. PRESS.]

WATERMELON SYRUP.—A writer in the *National Farmer* says that those who have never eaten it have no idea how delicious and pleasant flavored watermelon syrup is; it is next to maple syrup, and far superior to the best sorghum molasses, having none of its strong taste. Press the juice out of the melons in any way convenient; it will be about like maplesap or sweet cider; then it is boiled in about the same way as maple sap is made into syrup. Every farmer knows how to grow them. One thing—freely use coal-tar water on the growing crops to keep off bugs and worms.

APPLE MERINGUE.—Prepare six large, tart apples for sauce. While hot, put in a piece of butter the size of an egg. When cold, add a cup of fine cracker crumbs, the yolks of three eggs well beaten, a cup of sweet milk or cream, a little salt, nutmeg and sugar to taste. Bake in a large plate with an undercrust of rich paste and a rim of puff paste. When done, take the whites of the eggs, half a teaspoon of white sugar and a few drops of essence of lemon; beat to a stiff froth, pour over and put back into the oven to brown lightly.

FRICASSEE OF EGGS.—Take some hard-boiled eggs, cut them into quarters, yolks and whites. Heat some gravy seasoned with shred lemon peel, parsley, thyme and grated nutmeg. Put in the eggs together with a piece of butter rolled in flour; shake it gently over the fire till properly thickened; garnish with yolks of hard-boiled eggs, chopped small.

GRAHAM BISCUIT.—Three cups of graham flour, one cup of wheat flour, two large teaspoons of baking powder well mixed with flour; rub in two large tablespoons of butter, a little salt, half a cup of sugar, one beaten egg, and enough sweet milk (cold) to make a soft dough, roll out, cut with biscuit cutter, and bake immediately.

LEMON PIE.—One teacup of boiling water, two tablespoonfuls of cornstarch, cooking until a thick paste. Add one cup of sugar, piece of butter the size of an egg, and set to cool. Stir together the yolks of two eggs and the grated rind and juice of one lemon. Mix all together; bake quickly. Frost when done.

ICE CREAM CAKE.—One cup of sugar, two eggs, one-half cup of sweet milk, one and a half cups of flour, piece of butter the size of an egg, three teaspoonfuls of baking powder. Cream for cake: One-half cup of sweet milk, three teaspoonfuls of powdered sugar, one teaspoonful of cornstarch, boil until thick; flavor with vanilla.

COTTAGE CAKE.—Three-fourths of a cup of butter, one cup of white sugar, one and one half cups of flour, four eggs (yolks and whites beaten separately), one tablespoonful of sweet milk, one and one-half teaspoonfuls of baking powder, a little salt; flavor with lemon. Rub the baking powder into the flour.

SUET PUDDING.—Chop fine three ounces of beef suet, same quantity of bread crumbs, small pint of flour, pinch of salt. Mix well, then add one teacup of preserves and enough water to make it soft; then put in a floured bag and boil three hours. Any fruit can be used instead of preserves if preferred.

POTATO SALAD.—One quart of small potatoes, two tablespoonfuls chopped onions, two of chopped parsley, four of beets and enough of any of the salad dressings or clear vinegar to make it slightly moist; to the latter, if used, add a little melted butter. Keep in a cool place until ready to serve.

RAW TOMATOES.—Skin the tomatoes by putting them in scalding water for a minute, allow to cool, cut into slices and squeeze a good lemon over them.

FRIED CAKES.—Two eggs, two cups of sugar, six tablespoonfuls of melted lard, three teaspoonfuls of baking powder, one and one-half cups of milk.

The Week.

The Thanksgiving Proclamations are out and nearly a month is given to get ready for the annual family festival. There is much to give thanks for in California this year; there are many reasons why the gatherings should be large and joyous. We have had a good year—a great year in some respects—with no general calamity, no wide distress. Those who have lands find them worth more than a year ago, and if for some reason crops have been less in amount, values have often compensated. It is to be hoped also that in moral and intellectual affairs, individually and collectively, there will be found progress fit for thanksgiving. Wherever definite reason for exultation does not appear, let hope and trust shed their light; coming events may cast effulgence, not a shadow.

Still the rains delay, and their coming is anxiously awaited to quench the ruinous fires which are still raging in the Coast Range mountains from point to point. Great destruction of property has been occasioned already, and fears will not be allayed until the ground is well soaked with rain.

The Portland Butter Fiasco.

In our last comments we left the Portland crusade against California butter hanging upon the results of the analysis of the second sample which the Oregon Dairy Commissioner produced as the butter which he obtained in a California box. This sample was apparently quite different in appearance from that sent down for analysis at first. The analysis in Prof. Rising's laboratory showed that it was bogus and a very clumsily made counterfeit at that. The same state of affairs was shown by the microscopic examination. The manner of obtaining the two samples, which we have already mentioned, may be repeated in this connection. In our issue of Oct. 15th, we said:

The authenticity of the sample first sent to Professor Rising seems clear enough. At the time the Dairy Commissioner took butter from the California boxes, the commission merchant sent rolls at once from the same boxes and had them sealed up in tin cans and handed them over to other parties to keep, in case any question should arise concerning the purity of the material. These sealed cans were held by disinterested parties until they were opened for analysis by the chemists. The testimony that these were the facts seemed conclusive. On the other hand, the Dairy Commissioner testified that he took the butter and kept it in his cellar until he handed it over to the Portland chemists which he employed. Thus it becomes a question to determine if the analysis should show one pure and the other adulterated, which butter the merchant was really selling.

This is really the question as it now stands. The sample which the Dairy Commissioner brought forward is really bogus; the sample taken and held as described above was genuine. It now becomes a question for the court to decide which sample represented the butter for which the Portland merchant was arrested for selling. The case came on for trial in Portland on Monday, and the Associated Press telegram concerning it is as follows:

One of the pending California butter cases came up to-day and was continued to Friday at the request of the prosecution. The defense think their case has been strengthened in the interval since the last trial. They claim that the Dairy Commissioner has been acting in bad faith and changing samples. At the recent trial the evidence all went to show that the butter was of a whitish color. At the close of the evidence, and before the disagreement of the jury, the Dairy Commissioner brought butter which he said was from the same roll pronounced impure by local chemists, and this was given to Professor Rising. The latter now reports it impure, highly colored and a poor article, even of imitation. Meanwhile one of the local chemists has examined a roll like the one in question and from the same box, finding it pure. It is expected that the case will be disposed of Friday.

Thus it appears that the defense will claim that the sample supplied by the Dairy Commissioner is not the butter under question at all, but that a change of samples has occurred. The Dairy Commissioner will have to make a very clear showing that he has the right sample and that he did take it, as alleged, and kept it so that substitution could not be made. It is very unlikely that he can produce any such chain of evidence, and in all probability the cases will be dismissed. This result will not be satisfactory at all, because it will not give the clear vindication to California butter which it should have. The fact that the Dairy Commissioner would not produce his sample until clearly forced to do so, and that he then brought out something which contradicted the testimony already given of the appearance of the butter, which was sworn to be light, while he produced a nasty, highly colored mixture, goes to give his side of the case an ugly look, and if his own townsmen do not hesitate to charge him with fraud, we do not see how he can expect Californians to be any more gentle with his reputation.

DEMAND FOR ANGORA.—The Texas Angora breeders seem to be finding a good market for their increase in Mexico. The Texas Farm and Ranch publishes a note from W. M. Landrum of San Antonio (who we suppose is our old-time Watsonville breeder) in which he says he "has sold and delivered to W. B. Colte, Mexico, \$21,500 worth of Angora goats since March last—7000 fine shearing ewes and 66 pure bucks—the best selected outfit in America. I will slaughter over \$5000 worth before Christmas, making a total of over \$30,000 worth of goats handled during the year. Who says there is nothing in goats? One man says he will petition the next Legislature to take out the star and p u a goat

in the State flag. The goat has saved the lives of thousands this year in west Texas, who ate the meat and sold the hides for bread during the drouth." We recognize in this note something of Mr. Landrum's old-time enthusiasm. He always went the whole goat or none, and we are glad he is waking up the Texans and Mexicans. Some of our breeders can perhaps take a point from his method of booming the business.

The State Board of Trade.

This organization, planned to extend information about California and induce desirable immigration hither, seems to be progressing vigorously with its work. The headquarters on Second street, near Market, are being supplied with a very creditable display of imperishable products, and many visitors attend to see the sights and gain information about the State. The support of the Board is growing and representatives from new counties are constantly gaining admission to the Executive Committee. Descriptive pamphlets are being distributed at the ferries and hotels to visiting strangers, and much seems to be doing to call the attention of people to our resources and the chance for investment in their development. Work is being done at longer range by encouraging exhibits of California products and in other ways. An effort is now being made to secure stop-over privileges on emigrant's tickets, as are given east of Ogden. This would no doubt distribute the immigration better and suit all parties better, both those who come and those who have good land to locate them on. The Immigration Association at No. 10 California street, is pursuing its accustomed work. Its display of products has been greatly increased since the fairs. Its valuable collection of maps and descriptive matter is being constantly conned over by intending settlers.

Real estate matters are active. Enterprises and projects to people individual tracts of lands here and there have become so numerous that space cannot be found in which to enumerate them. Where one such thing was underway a few years ago, there are a hundred now. The result is, on the whole, satisfactory, and every district which wakes up and raises its voice loud enough to be heard is securing attention.

Travel to this State is enormous at present. The Sacramento Bee says:

The railways are totally unable to carry the multitudes who are thronging to the State. Passengers bound West have to wait their chances for a seat, and are not unlucky if their delay does not exceed more than three or four days. The Santa Fe is compelled to run three sections of its overland daily, and then the facilities for getting into the State are causing much complaint. The Southern Pacific over its two transcontinental lines is pouring in about 1000 people a day, so that it is safe enough to say that the total influx from all sources is about 2500 daily. We may expect this to continue for about 60 days, and that means 150,000 new people in the State. Of these, it is not likely that less than 100,000 will remain and become permanent residents.

It may be thought that counting two-thirds of the arrivals as permanent settlers may be large, but our observation leads to the conclusion that it is moderate. Although those who come intending to remain may be much less, those who finally do find their way here, and bring friends with them to remain, is much greater. California wins on sight as a general thing.

MANUAL TRAINING in common schools is rapidly becoming a matter of general interest, and is being adopted in many of our cities and large towns. The New York Board of Education, after a careful investigation in Europe, have resolved to introduce it into the public schools of that city. The new system will include carpenter work, or the use of wood-working tools.

REDUCING THE OIL PRODUCT.—It is stated positively that the oil-producers in Pennsylvania have agreed upon a general suspension of drilling in the oil regions, competition having reduced prices until "there is nothing in the business," with an excess of 20,000 barrels daily beyond requirements.

A FISH-HATCHERY is promised on Donner lake if the citizens of Truckee will put up a \$200 building, and subscriptions to that end are being taken.

The lumber landed at Port Harford for inland shipment since Oct. 1st amounts to 2,000,000 feet.

High-Toned Gambling.

There is hardly anything connected with commercial and business operations in general which is so demoralizing to legitimate business and the best interest of the people as the unmitigated and rascally gambling operations of unscrupulous speculators, which has become so common within the past decade. The exposition and denunciation of such schemes should be considered as matters entirely within the province of all periodicals devoted to either the industrial, commercial, moral or social interests of the people. It should be made a special point with such journals to denounce all such operations as illegitimate, as no better than open gambling—if anything, worse. When any man or set of men, or any corporation, or any number of corporations, band themselves together with the view of controlling any of the great necessities or even conveniences of life, or any of the great highways of commerce or intelligence, such action should be denounced as a high-handed wrong, and if it is not illegitimate under our present codes, it should be made so by special statutory enactment. The people should demand this of the next Congress, and should be satisfied with nothing short of it. The matter should be agitated at once and continually until relief is obtained from all combinations of bankers, railroad and telegraph managers and "dealers in 'Change," on all the monetary, commercial and other necessities and conveniences of the people.

In this connection, we would call the attention of our readers to the following extracts from a recent communication from F. V. Powderly, the well-known conservative head of the Knights of Labor. Mr. Powderly writes as follows:

This country has, within a brief period of time, witnessed the failure of a gigantic scheme to rob the people under the shadow of law, or, rather, because the law is silent as to the method by which gambling in the necessities of life should be punished. True, the rogues who attempted to corner wheat and coffee were not entirely successful—they sustained some of the losses which they had hoped to inflict on the country. The panic in the coffee market did not cause such a rush to lay in large supplies as was anticipated.

Although millions of dollars changed hands during the corner, not a pound or an ounce of coffee changed owners. Coffee not yet ripe in the field was sold, resold and gambled in at the Exchanges in New York and Chicago. Coffee that sold for 25 cents on one day went up to 30 cents in 24 hours; not because the article was of a better quality or any scarcer than it was on the day before; not because the owners of the coffee demanded a higher price for it, but because the stock gamblers had willed it, and their will, for the time, was law.

It is estimated that the losses of those directly interested in the wheat deal will reach \$5,500,000. The losses to the coffee thieves will exceed \$4,000,000. Two gangs of thieves were engaged in manipulating the coffee market. One of them realized \$5,000,000 on the deal and then quit in time to save it. Their "pals," the other coffee dealers, more greedy, kept on until their schemes exploded, and, taking fright, they stopped short at a heavy loss.

The men who cleared the \$5,500,000 deliberately robbed every man, woman and child who uses wheat. In comparison to these men, Dick Turpin and Sixteen-String-Jack were honest men. Even Jesse James had a more merciful way of robbing people. The men who raised the price of coffee and tried to take advantage of the necessities of the people go unwhipped of justice. Is it not time to appoint a commission to inquire into this refined method of robbing the people, so that a law can be passed to punish those who gamble in food while others starve for want of it? Is it not high time for the consumers and producers of this land to inquire why swindlers, dealers in futures, and men who understand the villainous art of cornering breadstuffs should levy tribute on the bone and sinew of the land to satisfy their greed and avarice?

An attempt was made in the last Congress of the United States to regulate the commerce of this country. The influence of the railroads was so potent in Washington that the interstate commerce bill was shorn of its strength, and it passed into law in such a form as to enable the railroads to make it appear that it was a blow at the rights of the people. The end in view is to have the next Congress repeal the law, on the plea that Congress or the people cannot regulate or even interfere with the railroad system of this country.

The people must remember that "eternal vigilance" is the price of equitable rates of transportation, whether of person or freight; and instead of allowing the interstate commerce law to be repealed, it must be amended in the interest of those for whom the railroads were built.

The prisoners at Walla Walla are on a strike against working in shackles, and are living on bread and water.

Fruit-Growers' Convention.

The November conventions of fruit-growers are now fixed horticultural events of the year. They come after the fruit has been gathered and sold, after the bug-fighting for the year is finished and the results discernible, after the fairs are over—in fact, just in a corner of the year which can be most profitably filled with discussion and conference concerning the lessons to be drawn from the season's experience. We are quite sure that any one who has shared in the deliberations of one of these conventions will desire to attend another, if possible, both because of the pleasures of social converse with others pursuing the same line of thought and work, and because of the valuable suggestions which can be gained from the essays and discussions.

Two years ago the convention was in Los Angeles and the distance prevented many of our central and northern county fruit-growers from attendance. It is a better arrangement which now provides for semi-annual conventions—one in the spring at the south and one in the fall at the north. In accordance with this arrangement the convention last November was held in Sacramento, and it was a large and excellent meeting. It was then decided, at the eloquent invitation of Gen. Vallejo, to assemble this year in Santa Rosa—the beautiful, thriving county-seat of Sonoma county. The formal call of the State Board of Horticulture for the meeting has been made, and we urge all of our fruit-growers, who can, to arrange to be present. The convention will open at 11 o'clock A. M. on Tuesday, November 8th, and will continue in session four days. The citizens of Santa Rosa and the members of the State Board cordially invite fruit-growers and those interested in kindred pursuits to be present at said convention and participate in its deliberations. Every effort will be made to insure a large attendance, and it is to be hoped the meeting will be one of interest and profit to all. The State Board of Forestry has accepted an invitation and will be in attendance.

An exhibition of fruits, etc., will be made by the people of Santa Rosa and vicinity. All those having new fruits and inventions of value to horticulturists are requested to exhibit them.

The Southern Pacific R. R. Company will allow return tickets from all points on their lines to San Francisco—provided a receipt for the ticket purchased be taken at starting point. This will be countersigned by the secretary at the convention, and entitle the holder to a return ticket at one-third the regular rate. Visitors will find ample hotel accommodations, etc.

The semi-annual meeting of the California State Board of Horticulture will be held at the rooms of the board, No. 220 Sutter street, S. F., on Monday, November 7th, at 10 o'clock A. M. The board will adjourn in the afternoon and proceed to Santa Rosa, to attend the Convention of Fruit-Growers.

ARIZONA INDIANS.—In Gov. Zulick's annual report it is stated that the Navajoes are the most prosperous, intelligent and enterprising tribe in the Territory, and doubtless the healthiest in the United States. They number about 15,000 souls and are increasing. It is estimated that they own 20,000 horses and 1,000,000 sheep. The Apaches, who occupy San Carlos reservation, containing about 2528,000 acres of the best agricultural land in the Territory, are as a race, lazy, thievish, murderous and seemingly incapable of civilization. So long as the Apache Indians are suffered to remain within the borders of the Territory, just so long will her peace be insecure and her progress retarded.

Mt. Shasta.

We present on this page a view of Mt. Shasta and its adjacent foothills. The necessity for anything like a detailed account of this mountain and its surroundings in this article, is superseded by the full, accurate and graphic description thereof from the pen of Dr. Henry Degroot, which appears in another part of this paper. Dr. Degroot writes from personal observation, having lately spent much time in the region of country by him so faithfully depicted. The Doctor is, in fact, familiar with our entire California Montana, about which few others have written so much or so well.

While we will not here attempt any further delineation of the features of Mt. Shasta, let us try and impress the reader with a just sense of its magnitude by comparing it with other notable elevations, the most of which are familiar to all. Standing on the water-front of San Francisco and looking at Telegraph hill, it seems a conspicuous object, though less than 300 feet high. Ascending this hill and looking around, we see on every hand others so much higher

RAPID INCREASE OF WEALTH.—Chauncey M. Depew of New York made a speech before 200 doctors of medicine at a recent banquet given by the College of Physicians and Surgeons to celebrate the completion of the new medical building erected in that city through the munificence of Wm. H. Vanderbilt. He spoke of some of the proper uses of wealth, as follows: "For the first 75 years of our country's existence our one need was money to develop mines, railroads, telegraphs, steam, electricity and inventions, and thus develop our unequalled natural resources. Fifty years ago there were not three \$10,000,000 men in the country, and not 10 \$1,000,000 men in New York. The man who had an income in excess of liberal living for that reason alone had distinction, superiority and social power, and the one ambition was for money. Now rich men are so common that in itself wealth confers no power. The nation has more wealth than it needs for its development, and the millionaire is estimated by the use he makes of his money. Nobody asks him to divide his wealth, but everybody expects him to feel and act as if his possessions

Kaffir Corn and Other Sorghum

EDITORS PRESS:—I send by this mail a sample of Kaffir corn from a field that I have grown this season. The patch was sown in the Kaffir corn and dura sorghum; the late frost killed the dura, and I thought, at the time, the Kaffir corn also, so I replanted the Blounts Prolific corn, when, to my surprise, the Kaffir came up, made a good growth, and has borne well, thus showing its hardiness.

Kaffir corn is a variety of sorghum cultivated for both forage and grain that has been extensively grown in Georgia, and is equally adapted to the climate of California. The plant grows from four to six feet high, is stocky and erect, with wide foliage. It bears from one to four heads of grain on each stalk. These heads are long and well filled out with plump white grain, slightly flecked with red spots. Kaffir corn, in common with all sorghums, possesses the quality of resisting drought. This quality makes it of especial value in our dry climate. It will yield paying crops of corn and forage where corn utterly fails. When ground, it makes a flour very similar to that of wheat. I look upon it as the best of all feeds for poultry, and I do not believe a better grain for fattening broilers can be grown, as it strikes a happy medium between wheat and corn. The culture is the same as for field corn.—E. H. SCHNAEFFLE, *Murphys, Cal.*

We are very glad to have this note on the growth of Kaffir corn and the splendid specimen which accompanies it. We are especially

interested because we watched closely an experiment made on the University grounds at Berkeley in which the Kaffir corn was grown in comparison with several sorghums, and careful accounts kept of the cuttings made of each. The seed of the Kaffir corn was distributed in small test lots last year both by our State University and by the U. S. Department of Agriculture, and we presume, because of the value which is found in the plant, the seed will be offered by the State University again this year. Of course only small packets for trial can be had;

for growing on a commercial scale the seed must be purchased of growers or of seedsmen.

As Mr. Schnaeffle's note brings up the subject in a striking manner, we shall add to it the review by Mr. Wickson, of the University experiment, which is found in the last report of Prof. Hilgard. It is as follows:

The plant named Kaffir corn was grown from seed donated by Dr. J. H. Watkins of Palmetto, Georgia. It is a member of the sorghum family, bearing a seed resembling the white dhoura, or Egyptian corn. The plant is, however, of different habit, bearing its seed stem erect, and being generally of a more stocky growth. It proved with us of slower development than the other sorghums mentioned in the table above; but its growth late in the season, as shown by the table of second cuttings, was very creditable, surpassing in this respect the "Rural Branching Sorghum" or "Millo-maize," as it is generally called at the South. A superiority which is claimed for the Kaffir corn at the South is that it sends but one stem from the ground (thus leaving a stubble, which is easily handled), and branches freely at the top. In our experiment it stooped out somewhat, and also showed a disposition to branch at the top. The growth, after cutting, was very good. The table above shows its second growth heavier than some of the tall sorghums. The grain is very large and fine, and was borne in larger amount than is usual for the sorghum family in this location. The variety certainly seems worthy of trial beside the common Egyptian corn in those parts of the State where the latter yields well, and is becoming popular as a grain and forage plant. We receive many notes of the successful employment of Egyptian corn as a substitute for barley for horses, and wheat for chicken feed.

The growing interest in sorghum as a plant for summer and fall food for milch cows seemed to make desirable a sowing of a collection of the leading varieties in the market, both to test their comparative value and to give the many visitors to the University grounds an opportunity of examining their growth. The piece of ground selected had been used for cereals for a number of years. It is rather deficient in drainage, and could not be worked until quite late in the season, and even then was not brought into very good tilth. The seed of seven varieties of sorghum was obtained at the East, and was sown in drills three feet apart May 5, 1886. A good stand was obtained,

MOUNT SHASTA AND SOME SCENES IN ITS VICINITY.

that the eminence we occupy sinks almost to the level of a mole-hill by comparison. To the south and southwest appear San Bruno and Mission Peak, each something over 1000 feet high. To the northwest, ten miles away, stands Tamalpais, its top 2600 feet above the ocean that washes its western base, while still further off to the northeast Mt. Diablo looms taller than any of these, its summit having an altitude of 3856 feet. Gazing on this towering mountain the beholder is impressed with its stupendous proportions, and were he to go over and climb to its top and thence survey its environs he would enjoy a solid satisfaction, conscious that he had performed a great feat and seen a great deal, as would, indeed, be the case.

But, if, now, this Mt. Diablo, so called because of its rough and forbidding aspect, could by any means be taken up bodily and be dropped in the Piedmont region of Shasta, it would disappear altogether, being so overtopped and hidden from sight by the foothills of the Great North mountain. Such is Shasta, which, aided by the cunning of the artist, we have here reproduced, albeit in a puny way, and for a description of which we refer the reader to the much longer article before alluded to.

JAMES TRAYNOR of Marysville, who has been largely interested in farming thereabout for two decades, and has been a leading grain-buyer the past five years, was struck with paralysis on the 9th, and died five days later at the age of 60. Noted for devotion to the agricultural and commercial interests of the community, his truthfulness, square dealing and generosity had made him many friends, and his death is greatly regretted.

carry with them a trust. Its proper administration is his only opportunity to secure the good opinion of the community. If he simply schemes and hoards he loses all that makes life worth living—the respect of his neighbors here; the approval of his Maker hereafter."

HANDS OFF.—The New York *Herald* is one of the few Eastern papers which realize that the Hawaiian Islands are to the Pacific Coast what Cuba is to the Atlantic. The United States has declared that it will oppose the possession of Cuba by any other European power than the one which now holds it, not because the products of Cuba are valuable, but because a first-class naval power in possession of that island would be a constant menace to our ports. By the same rule the Hawaiian Islands should be maintained either in their independence or under the protection of the United States. With these islands in possession of England this coast would be menaced in the same way that the Atlantic coast would be with Cuba in possession of a great naval power. The United States is strong enough to take and declare its position in relation to the Hawaiian Islands. As the *Herald* says, it will save Americans of two or three generations hence from very serious complications if we have a plain understanding now with England, and all other countries that may look upon these islands as desirable possessions, to the effect that this Government will not permit them to pass into other hands without such protest as it is in our power to make.

HORSE-THIEVES are troublesome about Albuquerque, and would-be lynchings are after them in the mountains.

but the plants grew rather slowly at first. As the weather became warmer the growth was accelerated, and the collection made a very good showing for our climate, which is too cool for the best results with plants of this family. No irrigation was given. Portions of each plot were out in different stages of growth, and the results of the weightings are given in the following table:

VARIETY.	Weights of Sorghum—Varieties Cut at Different Stages of Growth.			
	First Cutting, Before Heading, Out, Aug. 10.	Second Cutting, "In the Dough," Sept. 10.	Third Cutting, "In the Dough," Sept. 20.	Average Height of Plant at Maturity.
Household...	16,370	18,580	17,400	74
Seaward's Hybrid...	4,930	17,600	17,600	74
Rural Branching...	11,600	21,750	21,750	74
Chinese Impee...	13,000	22,400	22,400	74
Early Orange...	31,000	22,700	22,700	74
Early Amber...	22,300	22,700	22,700	74
Kaffir Corn...	25,500	22,700	22,700	74

Second growths started quickly after each of the cuttings noted above, and a very fine growth was made without application of water. In some cases the second growths headed out, but the proportion of leaf to stem was much greater than in the first growth. The following weightings were made of second crops:

VARIETY.	Yields per Acre of Second Growth of Sorghums.			
	Second Cut, Aug. 10, 1887.	Second Cut, Sept. 10, 1887.	August and September.	October.
Household...	17,800	3,204	46,755	60,200
Seaward's Hybrid...	15,664	5,304	46,755	60,200
Rural Branching...	9,612	1,434	46,755	60,200
Chinese Impee...	22,072	4,638	46,755	60,200
Early Orange...	14,302	1,065	46,755	60,200
Early Amber...	14,302	2,885	46,755	60,200
Kaffir Corn...	12,104	3,204	46,755	60,200

The above are all weights of green fodder, immediately after cutting. The columns which combine the two cuttings from the same plants at different dates, contain interesting data, and indicate that one must study the growth of the varieties carefully to secure two cuttings of maximum amount, and that the ratio between the cuttings at fixed dates is not constant. For example, the highest result with Chinese Impee was gained by cutting in August and November, while with the Early Amber there was more weight secured by cutting in September and December. The full significance of the results noted in the last two columns of the last table can only be understood by gaining more light from future experiments.

Feeding experiments carried on to test the preference of cows for either of the varieties named above showed that the Chinese Impee was eaten fully, while of all the other varieties there were butts of the cane left, from a foot to 18 inches in length.

Another plant, grown in the same plot, but not weighed because of its slower growth, was the Pearl millet (*Penicillaria epicata*), which has been mentioned in previous reports of this institution. It made a very good growth of blade and stem, and a large crop of heads. The cattle were very fond of it, and ate it up clean, the green seed heads as well as the leaves and stems.

OREGON STATE FAIR.—The official canvass of receipts and expenditures connected with the State Fair held at Salem, Oregon, last month, shows that there was received, including \$5000 from the State, \$22,349.50; paid on account of premiums and expenses, \$17,529.46, leaving in the treasury, \$4820.04. About \$3500 more of old indebtedness will be paid off.

THE streets of Olympia, W. T., are full of Indians returning from the hopfields, and the merchants are reaping a rich harvest.

The Mountains and Canyons of Northern California.

A Future Recreation Ground and Sanitarium of the State.

[Original—By DR. HENRY DE GROOT.]

That California is a country possessed of great agricultural and mineral resources, a fine climate and many other natural advantages, are facts that have long since and everywhere become well known. Most intelligent persons, both at home and abroad, are pretty well informed as regards the extent and productiveness of her gold-fields and her wheat-fields, her orchards and her vineyards, and have even heard something of her deep-fissured and steep-walled valleys, her majestic mountains, her far outstretched plains, her orange groves and her great forest growths. In almost every spoken language these things have been written about and published far and wide, the several convocations, civic, soldierly or industrial, held during the past few years in the metropolis of the State having served to gain for them a more general recognition and a wider notoriety. And so California, as regards these, her more salient features and obvious sources of wealth, stands to-day one of the best-known, not to say well-advertised, countries on the face of the globe. And well does she deserve all that has been said about the extent of her mineral resources, the grandeur of her scenery, the excellence of her climate and the fruitfulness of her soil. In describing these and much more that might be claimed for this State, glowing as have been most of the accounts given of them, not often have these accounts been much overdrawn, so little likely is any one to employ the language of exaggeration when speaking on this subject.

But in all that has been so said and written, we conceive that one of the most noteworthy advantages pertaining to this country, and one that will in the years to come constitute to a large class of visitors its greatest attraction, has received too little attention, having very often been but slightly alluded to or wholly overlooked—this advantage and special feature of attraction consisting in the fact that California, by reason of her peculiar climatic conditions, is destined to become the great recreation-ground and sanitarium of the whole world. While this feature may not so much add to the permanent population of the State, it cannot fail to greatly promote her material prosperity, by inviting hither that very considerable and almost always wealthy class who go abroad in search of health, pleasure, recreation or rest. These be the people who, by their presence, enrich a country hardly less than they who come to stay and to toil.

Such being the case, it may well be inquired where in this broad Hesperian land, with its manifold climates, its varied products and its diversified scenery, shall be found the most suitable place of abode for these strangers who, in numbers multitudinous, are at no distant day coming here to sojourn—some to make temporary homes and even perhaps tarry for many days. What locality, if any, promises to combine the most advantages for a retreat of this kind, the wants, tastes and desires of the greater number of these visitors being consulted, for, in determining such point, these are matters not to be overlooked or lightly considered. There will come to this retreat tourists and scientists, health-seekers and sight-seers—those in quest of adventure and those in quest of mere recreation and pleasure. Some will require means and opportunities for excitement and exercise, while others will delight in quietude and repose. There will be the admirers of the soft and subdued and of the rough and imposing in nature. There will be those prone to climb mountains or perform other feat of endurance and daring for the purpose of invigorating their bodily powers or exhilarating their spirits, with those, again, who will seek to reach these ends by methods less heroic and exhaustive. Not a few will find their delectation in hunting and fishing; still more in bicycling, horseback or buggy riding, games, athletic sports, etc.

Such popular haunts in order to accommodate every class of guests, must, therefore, compass a great deal; more, in fact, than we can hope to find in any one locality even in California. The best that can be done, then, is to look after and if possible discover the place that seems to meet in largest measure these several necessities and requirements. That place will, in our opinion, be found

In the Vicinity of Mount Shasta.

Standing near the northern border of the State, and about which there extends a vast area of wild and broken country wherein the rugged and the sublime, the picturesque and the beautiful, are strangely intermingled.

In endorsing so fully the eligibility of this spot, it is not our purpose to underrate the attractions to which many other localities in California may justly lay claim as places of public resort. We are only speaking of a remote, primeval and unfrequented district, which, taken as a whole, seems to possess great capabilities in the above direction. It is not pretended that this region excels in every particular all others in the State. There are

here forests of big trees, but none so gigantic as those that stand in the Calaveras or the Mariposa grove. There are here chasms, dark and deep, yet none so profound as the Yosemite abyss. There are here waterfalls, but none so lofty as those that precipitate themselves into that awful gorge, nor are the medicinal properties of the mineral springs, of which there are a number scattered through these hills, so well established, perhaps, as are those of Paso Robles, Gilroy, or the Geysers.

But the Big Trees of Calaveras and Mariposa are things to be visited, looked at and left, few caring to stay there very long. The vale of the Yosemite is a unit with views comparatively restricted, it being impossible to see much of interest outside its walls. There, too, a short stop generally suffices, while the warm and the medicinal springs are more for the invalid than for the scientist, the tourist or the traveling public. Of the more populous portions of California, with their dust and din, the seeker after quiet and repose will often tire. Often will he long for a place where he can escape from the noisy world, with its whirl of fashion and its roar of business. To such this north country, with its many climates,

Its Towering Mountains and Its Billowy Hills.

Its freshness and beauty, will present a happy retreat. Though exceedingly picturesque, not very high nor yet very steep are these hills on the west. The dead plain of the Sacramento rising at first into gentle undulations, swells further on into long, sweeping waves, which, gathering force as they proceed, break in great billows about the base of Mount Shasta. The innermost of these hills, though several thousand feet high, sink into mere knolls beside the great central cone, the top of which reaches an altitude of 14,444 feet above the level of the ocean.

Springing to such regal height out of this girdling sea of hills, snow-capped Shasta stands the most conspicuous, symmetrical and imposing of all our California mountains. Seen a long way off from either the north or the south, it takes the shape of an almost perfect pyramid, its double summit, formed by the breaking away of the rim of the crater once at its top, not being seen. The views obtainable from many parts of this mountain are not surpassed in extent or grandeur by any to be had in the Alps or the Andes. Shasta is seen to best advantage from the railroad after we have passed it going north, it being in sight from the cars all the way up to the Oregon line. So seen, we have an almost perfect view of the highest portions of the mountain.

Coming up the Sacramento valley from the south, the traveler little heeds the first glimpse he gets of Mount Shasta, so like a hazy cloud hanging on the verge of the horizon does it appear; not until he has approached it nearer and it begins to take on the shape of a vast pavilion standing against the sky, does he note it more closely and feel moved to inquire what it is.

Not difficult should it be for the mind devout to see many of the divine attributes typified in this imperial mountain, so suggestive of vastness, majesty and power. Far uplifted, spotless and alone—immutable, the same to-day, yesterday and forever—the great white throne seen by him of the Apocalypse—the rest land dreamed of by the recluse and saintly—the heaven longed for by the austere pilgrim and the stern covenant—so awe-inspiring, cold and pure.

Equally varied, if not so far-reaching, inspirational and grand, are the views presented in the tumult of hills that constitute

The Piedmont Region of the Mother Mountain.

And which, it may safely be affirmed, are without a parallel in the great Cordilleras of either North or South America, there being here so much that is subdued and beautiful as well as majestic and grand. Many of the landscapes are little short of an enchantment. Eroded by a thousand streams and tumbled into every conceivable shape, there is among these billowy hills nothing wanting that the most exacting lover of nature could desire. Intermingled with them are cliffs and bluffs, and softly rounded knolls, and dells so gently curved and deftly shaped that even the unimaginative might believe "the fairies had come of a moonlight night and scalloped them out with their dainty fingers." There are here stretches of stately forests, and clumps of trees and scattered groves with delicate shrubbery, and clouds of wild vines along the water-courses. There are walks and alamedas with generous sweep but not too prim or over-symmetrical. There are sunny lawns and irregular glades opening far into the woodlands, all of which man well may envy though he cannot imitate. Turn where we will, something new and charming, magnificent and startling, opens to the view, Shasta everywhere visible, appearing a very presence, so seemingly near and impending. There is about this mountain a fascination not readily dispelled. Gaze upon it much as we will; climb it to its top—not an easy task—and yet we regard it with the same reverential feeling as at first.

Leaping in cascades down its cold sides are streams innumerable, which, eddying about mossy rocks, go rippling over their pebbly beds or linger in deep, placid pools on their way to the sea. And there are here sounds to soothe and delight the ear, as well as objects to interest the mind and please the eye. The murmuring waters

sing perpetually a song of peace, while every pendant leaf of the pine, moved by the passing breeze, becomes a harpstring musical with the glory of the mountains.

The Climate and the Woods, With Their Health Giving Odors.

The climate of this region is simply perfection. So healthful are the conditions that here, if anywhere in the world, Hygeia might be expected to make her home. The very atmosphere is a tonic. There lingers not in it the least germ or taint of disease. There is hardly an acre of malarial land within a hundred miles of this spot. In so far as temperature is concerned, this can be so readily varied by change of altitude that one may pass in the course of a few hours from a region of perennial flowers to one of perpetual frost and snow. The air, except in higher mountains, is balmy and springlike, being everywhere laden with the incense of the piney woods and redolent of health-giving odors. Many of the trees, besides so exhaling a balsamic fragrance, bear soft and poetic names. There is here the madrona and the sweet-gale myrtle, the silver fir and the incense-bearing cedar. And shrubs there are, too, with equally pleasant and euphonious names, such as the manzanita, the chemical and the wild syringa; some of these shrubs giving out also delicious perfumes, their forms and their foliage being withal exceedingly beautiful. Moreover, some trees and flowers there are in this little explored and pristine field of botanical research that remain unknown and nameless, the man of science having not yet been there to classify and name them. It will be a joy to some to find growing by the streams in this wild and virgin region the sycamore or plane tree, the buttonwood of their boyhood days; also the quaking asp, with its slender trunk and its ever-tremulous leaves.

The water that runs among these hills is purity itself. Coming from the melted snow about the sources of the streams or falling from the clouds, it is free from any mineral, vegetable or other deleterious substance whatever. There are here, as elsewhere in California, but two seasons, the wet and the dry. The former, which is the winter season, commences usually about the middle of November and extends to the end of May, during which time there are from 15 to 25 continuous rainy days, the rest of the precipitation occurring in the shape of gentle showers, which in February, April and May are apt to fall only at considerable intervals. The annual rainfall ranges from 50 to 60 inches, hardly more than one inch of which falls during the dry season. There are 50 partially clear and over 200 wholly cloudless days during the year. Not over five or six inches of snow ever falls in the lower valleys of this region, nor does it often lie for more than a few days at a time. Ice more than an inch in thickness seldom forms here. On the foothills the snowfall is greater, increasing everywhere with altitude reached, the fall on the higher mountains varying from 20 to 40 feet every winter. Thunder and lightning are rare and withal so harmless that they are regarded as curious and interesting phenomena. No lives have ever been lost here, nor has any person or property ever been injured, by earthquakes. Cyclones, tornadoes and destructive gales of wind are things unknown.

Its Manifold Capabilities and Its Probable Future.

After having visited every one of the more noted pleasure retreats, seaside homes, mineral springs and sanitariums of California, we are constrained to say that in our judgment this realm, so engirdling, Mount Shasta meets the requirements of a great popular resort as fully as any other place in the State. Arrived in these sylvan retreats so suggestive of action, so inviting to repose, visitors of every class and kind, however varied their wants, capricious their desires or opposite their tastes, will each be likely to find here what he most longs for. The strong, opportunities for exercise and adventure, the effete for excitement and the scientist for study, while the over-worked, the weary and the crushed will find cry out, "Alabama! here let us rest."

Not difficult is it to forecast the horoscope of this great solitude at the North. We foresee for this now sparsely populated and little disturbed realm, the abode of loneliness and silence, the work-ground of the adventurous painter, the dreamland of the poet, an early change of scenes and conditions. We foresee the time, not far off, when, its fame having been spread abroad, the peoples of all lands will be turning their footsteps hither; when great hostels and elegant villas and cottages on all the more eligible sites will be erected; when wagon-roads and bridge-trails and serpentine walks will be laid out and built; when rustic bridges will span the streams, and arbors, and baths and bowling greens and tennis lawns, and all the other devices that tend best to facilitate exercise, insure comfort and health and to promote recreation and amusement, will here be provided. We foresee, in the not much more distant future, a time when the lumberman, the vine-grower, the orchardist and others of economic habit, will begin to invade this beautiful wilderness; when the cabins of settlers will multiply on every hand; when the shriek of the locomotive will be heard in these hills and canyons and the voice of a many-toned industry will pervade all the land.

This hill country, including the whole of Northern California and Southern Oregon, has

been made easy of access through the construction of

The California & Oregon and the Oregon & California Railroads.

Now just completed. It can be reached either from Portland or San Francisco in about 12 hours' ride by rail, the journey from either leading through countries as rich in agricultural wealth and as varied in scenery as any on the continent. Going up from San Francisco the traveler passes through the rich agricultural counties of Contra Costa, Solano, Yolo, Colusa and Tehama, and the almost equally rich mining county of Shasta. For nearly 200 miles in the valley of the Sacramento he rides through an almost continuous wheatfield, the only interruption consisting of orchards and vineyards laden in their season with the choicest of fruits. Coming from Portland the traveler is for more than 100 miles in the fertile valley of the Willamette, no less famed for its wheat farms and its orchards than the Sacramento, the next 100 miles coming south covering a region of diversified hills and valleys, some portions of it rich in mineral and agricultural resources, and the whole well adapted for growing almost every kind of fruit, grapes included.

The Fairs.

Santa Barbara—19th District.

To supplement the account of the Santa Barbara county fair, given by our local correspondent in the PRESS of 8th instant, we add the list of awards in agricultural and allied departments:

HORSES.

THOROUGHBREDS—Stallions, 1st, "Accident," G. W. Leland; 2d, "Lightfoot," Ephraim Allen; mares, "Maggie Barnes" and "Lucy S.," Mr. Hunter.

ROADSTERS—1st, mare, "Florence P.," H. W. Lawrence; stallion, "George W.," A. C. J. Wilson; 2d do, "St. Patrick," and mares, "Lucy" and "Polly," A. W. Buell; stallion, "Volante," E. C. Durfee; stallions, "Selim" and "Dashaway," E. A. Hollister.

CARRIAGE HORSES—Horse, "Topsy," A. W. Buell; double team, "Diamond" and "Bob Burns," H. G. Pierce; mare, "Maggie," W. E. Johnson; sucking colt, "Fox," A. Martin; do, (mare) S. F. Moore; do, (horse) T. M. Lewis; stallion, "Don Patricio," I. K. Fisher.

ALL PURPOSES—Best mare, 3-yrs-old and upward, "Millie," A. Doty; 2d do, "Mollie," Wm. Robinson; best sucking filly, "Topsey," E. P. Sawyer; best stallion, "Compromise," and 2d do, "Richmond," S. Hobbs; sucking horse-colt, "Dunois," F. T. Underhill; mare, 3-yrs-old and upward, "Kate," A. H. Phelps; stallion and 5 colts, "Ben Archer," mare, 2-yrs-old, "Queen," and 2d, filly, 2-yrs-old, "Princess," F. M. Lewis.

SADDLE HORSES—Horse, "Chief," C. D. Patterson; horse, "Bob," Wm. Smith.

DRAFT HORSES—All premiums to T. Phillips save the following, viz.: Yearling, "Montebelo," A. Doty; mare, "Belle," J. F. Moore; filly, "Sukey," M. Van Robbins; stallion, "Chief," C. Murphy.

MULES AND JACKS.

Best span mules, "Pete" and "Joe," M. Van Robbins. Best jack, "Jack," F. T. Underhill.

CATTLE.

DURHAM—Wm. Swift.

JERSEYS—E. J. Packard.

GRADES—2-yr-old hfr "Christmas," J. M. Hunter; cow, "Juvy," W. Robinson; cow "Queen," E. Stratton; hfr "Blacky," W. N. Lee; cow "Belle," and calf, W. J. Stafford.

SWINE.

Boar "Jack" and sow, S. G. Oliver; "Butler" and sow "Lady Mayheyn," A. H. Phillips; litter pigs, sow and pigs, boar, J. A. Faulding.

POULTRY.

Pigeons, H. F. R. Vail; Guinea pigs, Bertie Hunt; canaries, Mrs. M. A. Spring; chickens, E. J. Packard; ducks, Jas. Delaney; chickens, Wm. Swift.

FARM PRODUCTS.

Best sample rye, E. H. Hollister; yellow corn, white corn, A. Martin; corn on stalk, T. S. Collis; English mustard, Geo. Bassenger; squash, H. Langman; largest and best-flavored watermelon, G. M. Williams; onions, John Spence; carrots, H. Langman; tomatoes, G. M. Williams; Mangel Wurzel beets, H. Langman; lima beans, T. S. Collis; tobacco, Mrs. Keppen; bale barley hay, E. H. Hollister; sunflower, C. N. Leet.

FRUIT.

Best display by one person and grapes, G. M. Williams; best apples, pears, peaches, Wm. Jackson; oranges, strawberries, J. E. Shephard; blackberries, C. N. Leet; lemons, G. C. Packard; ex. assorted jellies and jams, and ex. domestic canned fruit, Mrs. G. C. Packard; ex. jellies, apples, pears and guavas, Mrs. L. G. Oliver; pickled olives, Mrs. M. A. Spring; dried fruit and nuts, E. J. Knapp; display grapes from Sespe (Ventura Co.), Cyrus Kenney.

PLANTS AND FLOWERS.

All premiums to John Spence.

MISCELLANEOUS.

Exh. packed butter, L. G. Oliver; single roll butter, E. P. Sawyer; honey in comb and extracted honey, J. Archer; saddle and harness, S. Loomis; agricultural implements and farming machinery and farm wagon, W. A. & T. S. Hawley.

Bishop Creek—Eastern Slope.

Among our Agricultural Notes, Oct. 8th, there was a brief report of the second annual fair held at Bishop Creek, Inyo Co., the last week in September. We now give the awards for products of agricultural and allied industries, as published by the Register:

HORSES.

THOROUGHRED—Stallions—3-yrs-old, Olds &

Co.'s "Truckee," 2-yrs-old, A. H. Allen's "Andy," 1-yr-old, A. Friedline's "Gibraltar Jr."

GRADED—Stallions—3-yrs-old, A. Welch's "Flamingo" 2d; 1-yr-old, T. F. A. Connelly's "Inyo," mares—3 yrs and upward, W. Rowan's "Belle," 2 yrs old, E. Powers' "Julia," 1-yr-old, W. Rowan's "Minnie W."

ALL PURPOSE—Gelding, B. T. Williams' "Jim," stallion, A. J. Shipley's "Pat," brood mare and Norman colts, W. Rowan's "Belle."

MATCHED TEAM—E. M. Clarke's "Pass" and "Lize."

DRAFT HORSES—Stallion, 3-yrs-old, W. Rowan's "Albion," matched team, Rowan's "Belle," and "Pet," pair draft mares, G. Sanger's "Edith" and "Lucy."

CATTLE.

DURHAM—Bull, 1 yr and upward, J. H. Muller's "Switzer Boy No. 3," heifer, A. Clark's "Washoe Princess," graded heifer, J. H. Muller's "Kate."

JERSEY BULL, B. H. Yandell's "Doctor."

SWINE.

Poland-China and Berkshire sow and 3 pigs, Producers' Union.

POULTRY.

White Leghorns, W. O. Moroney; Light Brahms, Mrs. W. H. George; Brown Leghorns, W. McDonald; Houdans, Mrs. A. J. Murphy.

GRAIN AND VEGETABLES.

Wheat, oats, alfalfa seed, A. Thompson; sweet corn, D. Olds; field corn, Wm. Powers; sweet potatoes, W. T. C. Elliott; potatoes, J. Haas; parsnips, C. Kennedy; carrots, A. Thompson; beets, T. F. A. Connelly; watermelons, tomatoes, A. Van Fleet; cabbage, R. Hilton; peppers, B. S. Glover; cucumbers, L. P. Yandell; canteloupes, A. Clark; beans, white, V. Sherman; onions, A. A. Cashbaugh; squash, S. J. Newlon; pumpkins, W. Bulpitt; beans, bayou, T. Goodale; cotton plants, tobacco, S. T. White; cauliflower, Wm. Smale; castor beans, Mrs. Enloe; egg plant, Tom Kee; peas, Mrs. Shannon; peanuts, hops and kolarabi.

FRUIT.

Apples, C. R. Thompson; pears, Jas. Shaw; peaches, S. G. Sneden; grapes, W. T. C. Elliott; dried apples, Wm. McLaren; raisins, W. P. Bailey; hard-shell almonds, Mrs. King.

MISCELLANEOUS.

Butter, cheese, R. Love; lard, Mrs. W. McLaren; display honey, Mrs. Shaw; ham and bacon, W. McLaren; watermelon syrup, S. T. White; comb honey, W. G. Watson; canned fruit, Mrs. W. T. C. Elliott; flowers, Virginia Arison.

EQUESTRIENNE CONTEST.

First prize, Miss Nettie Olds; 2d, Miss Alice Meads.

Independence—18th District.

The First Annual Fair of the Eighteenth District Agricultural Association, after repeated postponements, was formally opened at Independence on Monday, October 10th, and continued throughout the week. While the new pavilion was in building, a good many criticised the judgment of those who were having it made so spacious, but what with the varied and plentiful output from orchard, field and mine, and the throngs of visitors day and night, the experiences of fair week convinced the people generally that the structure must be enlarged before another autumn. Although attendance and exhibits from Alpine and Mono counties this year were scanty, yet the number of strangers in town was rather unexpected, the people of Owens valley were out in force, the weather was fine, no accidents occurred to mar the general enjoyment, and the sum total was a satisfying, nay! exhilarating success.

The mineral exhibits were rich and diverse; but to enlarge upon them does not come within our province.

The horse parade on Thursday, including draft and all-purpose animals, roadsters, carriage and saddle-horses, was a display of surprising excellence. The ladies who took part in the equestrian contest evinced a degree of skill that made the deciding upon their relative merits no easy task for the judges.

Among the products exhibited by W. L. Hunter was a sack of buckwheat as good as that grown in any Eastern State; also very fine rye, and peanuts on the vine; and his big sweet potatoes, as well as those of G. W. Parrish, were noticed with admiration.

T. J. Goodale of Fish Spring showed wheat in the sheaf, remarkable for the size of the heads and plumpness of the berries. It was raised with little irrigation and makes the best of flour. He also displayed some varieties of seedling apples which he has found profitable in Owens valley. They are large, high-flavored, handsomely colored, good keepers and prolific bearers.

From Lone Pine came a fine display of fruits. Mrs. Kate Stewart sent several varieties of apples, etc., and a handsome lot of canned fruits; Mr. S. Zam showed grapes in variety, the bunches very large; John Lubken sent some fine apples; Mr. and Mrs. A. C. Harvey made an agricultural exhibit, which was very novel and effective. It comprised peaches, strawberries, green beans, sweet potatoes, peanuts, figs, grapes and a variety of the harder fruits and vegetables, disposed upon a monstrous sagebrush 12 feet 8 inches high, which grew upon the same ground. "It showed at a glance, and most forcibly, what can be raised upon the sagebrush lands of Owens River valley, with industry and intelligent cultivation."

Mrs. Sallie Bell of Big Pine made a fine output of apples, pears, figs and walnuts. Miss Rachel Bell had a lovely display of flowers.

Our old contributor, Wm. Muth-Rasmussen, made a showing of honey and apiarian implements, very interesting and instructive to every one who handles bees. It embraced every-

thing used in the business, from comb-foundation to marketing package. We append the usual

Awards—Horses.

STANDARD TROTTERS—Best stallion, 3 yrs and upward, "Roderick," G. Sanger; colt under 1 yr, "Flash" and special, "Lady Nelson," W. S. Enos.

ROADSTERS—3 yrs and upward, "Bismark, Jr.," M. Muldoon; 2-yr-old, "Valentine," J. S. Gorman; roadster and family, "Bismark," M. Muldoon; team, W. S. Enos.

GRADED—Mare, 3-yr-old and upward, "Jessie," G. Sanger; carriage team, Mrs. W. S. Enos.

ALL WORK—Stallions, 3-yr-old, "Prince," W. R. Tibbetts; 2-yr-old, "Young Hero," J. H. Dodge; 1-yr-old, "Billy," E. Robinson; Mare, 3-yr-old, "Snider," W. S. Enos; 2-yr-old, "Belle," J. Vagt; mare and colt, "Nellie," E. Robinson.

SADDLE—1st, "Wade," W. S. Enos; 2d, "Chappell," E. Robinson.

DRAFT—All premiums to G. Sanger, except best 2-yr-old stallion, "Ted," W. S. Morton; and family, "Lady Clyde," W. S. Enos, and special for colt, same.

MATCHED TEAMS—Mares or geldings, or either, 1st, "Hero" and "George," J. H. Dodge; 2d, "Prince" and "Frank," Goodale.

SWEEPSTAKES—Stallion, any breed or age, "Roderick," G. Sanger; mare, any breed or age, "Lady Clyde," W. S. Enos.

JACKS—All awards to J. E. Shepherd.

CATTLE.

GRADED—Bull, "Tom," J. H. Dodge; bull calf, J. Brown; cow, 3 yrs old, "Cherry," 2-yr-old, "Silkie," and heifer calf, "Jamie," all by A. N. Bell.

SHEEP, GOATS AND SWINE.

Graded Merinos—E. Robinson. Angoras, H. Bellows. Boar and sow, J. Vagt; Berkshire, (spec.) E. Robinson.

POULTRY.

Wyandottes—Mrs. H. L. Clark; Plymouth Rocks, J. Baxter.

GRAIN, VEGETABLES, ETC.

Flour, A. N. Bell, 100 lbs. each wheat, barley and corn, T. J. Goodale; oats, W. R. Tibbetts; 50 lbs. alfalfa seed, C. A. Walter; sack buckwheat, W. L. Hunter; sk rye, John Baxter.

Sweet potatoes, tomatoes, G. W. Parrish; Early Rose potatoes and any var. potatoes, W. J. Lake; parsnips, cabbage, canteloupes, S. A. Densmore; carrots, onions, A. C. Harvey; beets, squash, J. Vagt; turnips, J. Baxter; pumpkin, watermelons, W. L. Hunter; red peppers, A. Rossi; white beans, pink beans, T. J. Goodale; best display agric. products, S. A. Densmore.

Butter, J. Baxter; lard, Mrs. Allie R. Brown; honey, apiary display, Wm. Muth-Rasmussen; fruits in jars, Mrs. Kate Stewart; hams and bacon, J. Vagt.

FRUITS, ETC.

Best apples, J. W. Symmes; 2d do, J. Baxter; pears, Mrs. Sallie Bell; peaches, E. Robinson; plums, Wm. Walker; quinces, grapes, J. W. Symmes; 2d grapes, A. C. Harvey; dried apples, J. Baxter; dr. peaches, Wm. Walker; display dried fruits, S. A. Densmore; Rhine wine, S. Zaun.

HONORABLE MENTION.

Was also made of the following exhibits, many of which were not entered for premiums: W. L. Hunter, rye and corn in ear, potatoes; J. S. Gorman, oats; J. Baxter, alfalfa and corn, egg plant; J. Kispert, corn in ear; C. A. Walters, corn and wheat; S. A. Densmore, corn, new var. wine and vinegar; J. Vagt, green corn, 2d crop; W. R. Tibbetts, oats; A. C. Harvey, green beans and excellent agr. display; F. Albers, Early Rose potatoes; H. L. Clark, Kohl Rabi; W. J. Lake, cauliflower; Wm. Walker, apples, plums in alcohol; E. Robinson, wheat, corn, apples, pears, fruit in alcohol, sundried raisins; Mrs. McCall, apples; J. W. Symmes, pears; J. Seely, apples; T. J. Goodale, apples; J. Vagt, apples and pears; A. N. Bell, pears.

LADIES' TOURNAMENT.

1st, Mrs. J. J. Stewart; 2d, Miss May Shepherd; 3d, Miss Emma Duval; 4th, J. Roeper.

Death of J. N. Lund.

J. N. Lund, the well-known poultry fancier, having trodden upon a nail and wounded his foot, died of lockjaw at his home in Oakland on Tuesday, Oct. 18th, aged 43.

Mr. Lund was a native of Schleswig, but came to America when quite a young man. After passing a dozen years in New York and Chicago, he came to Oakland some 12 years ago and lived there up to the time of his death. A carpenter by trade, he was perhaps more widely known as an active member of the California Poultry Association and as proprietor of the Piedmont poultry-yards. He leaves a widow and two daughters.

AMERICAN POMOLOGICAL SOCIETY.—At the recent biennial meeting of this honorable association in Boston, P. J. Breckmans, the well-known Georgia horticulturist, was chosen to the presidency made vacant by the death of the lamented Marshall P. Wilder. The choice of Mr. Breckmans will give general satisfaction. Dr. J. B. D. Stillman of San Bernardino was chosen vice-president for California. The meeting was a great success. We expect to refer to it at greater length hereafter.

SAYS the Kittitas (W. T.) Localizer: The green grass is several inches high. That, with the old throughout the bunch-grass regions, will make good feed for the stock before the winter sets in. All kinds of stock are looking well.

THE PORTLAND MECHANICS' FAIR closed last Saturday night, after a successful run of 2½ weeks. The display is said to have been quite up to those of former years, while the attendance was larger than ever before.

MARVELOUS CHANGES.

What the Future Will be to Those who Refuse to Believe.

Is this country unconsciously undergoing a wonderful change, is the change to take place before we are aware of the fact, and when it has taken place will we wonder why we did not see it before it was too late?

Those that see the changes early avail themselves early, and thereby receive benefit.

The shrewd iron man sees the iron interest transferred from Pittsburg and Pennsylvania to Birmingham, Alabama, and in his far-sightedness sees the furnaces in Pennsylvania torn down and deserted for this new and prolific field. It is claimed by the iron men of Alabama that the low price at which iron can be produced there will revolutionize the iron interest of the world.

We have seen the grain-growing centers of this country shifted to the West. We have seen the pork-packing industry flit from Cincinnati to Chicago, and from thence to Kansas City and Omaha. Southern cotton mills undersell New England and American markets, and challenge the world.

We have seen, and are seeing, all this take place before our eyes, and know that other changes are taking place equally as prominent, and we wonder as we behold them. Ten years ago the insurance companies only required an analysis of the fluids when they were taking insurance for very large amounts. To-day no first-class company will insure any amount unless they have a rigid analysis of the fluids passed, and if any traces of certain disorders are apparent, the application is rejected. In their reports they show that the death of 60 of every 100 people in this country is due either directly or indirectly to such disorders. The Brompton Hospital for Consumptives, London, England, reports that 60 of every 100 victims of consumption also have serious disorders of the kidneys.

Among scientists for the treatment of this dread malady the question is being discussed:

"Is not this disorder the real cause of consumption?"

Ten years ago the microscope was something seldom found in a physician's office; now every physician of standing has one and seldom visits his patients without calling for a sample of fluids for examination.

Why is all this? Is it possible that we of the present generation are to die of diseases caused by kidney disorders? or shall we master the cause by Warner's safe cure, the only recognized specific, and thus remove the effect? It is established beyond a doubt that a very large percentage of deaths in this country are traceable to diseased kidneys. For years the proprietors of Warner's safe cure have been insisting that there is no sound health when the kidneys are diseased, and they enthusiastically press their specific for this terrible disorder upon public attention. We are continually hearing its praises sounded.

This means wonders!

Cannot the proprietors of this great remedy, who have been warning us of the danger, tell us how to avoid a disease that at first is so unimportant, and is so fatal in its termination? Are we to hope against hope, and wait without our reward?

The most significant of all changes, however, that we of to-day can note is this radical change of view to which the public has been educated: It was formerly thought that the kidneys were of very small importance; to-day, we believe, it is generally admitted that there can be no such thing as sound health in any organ if they are in the least degree deranged.

SEND STAMP FOR

80-PAGE ILLUSTRATED CATALOGUE of Guns, Pistols, Cartridges, Powder, Shells, Air Guns, Hunting Coats, Leggings, Loading Implements, Base Ball Goods, Lawn Tennis, Boxing, Fencing and Gymnasium Goods, Dumb Bells, Hammocks, etc.

The Little Giant Gang Plows.

DOES IT PAY For a man and team to plow all day, turning a furrow 14 inches wide, when the same man, by using one more horse and a **LITTLE GIANT GANG**, can turn a furrow 30 inches? To take four weeks doing a piece of plowing that can be done just as easily and as well in two weeks? To be behind with your plowing and work, because you are wasting one-half your time, although working hard all day?

REMEMBER That the **LITTLE GIANT GANG** is the greatest TIME-saving as well as a LABOR-saving PLOW. It has three levers, giving it plenty of adjustment. That it can be adjusted to any depth and width of cut while in motion. That it is the strongest and best braced GANG PLOW made, and will not get out of line. That the beams are heavy and made of high-grade steel and cannot spring.

POINTS. 1. These plows are strong, being thoroughly braced and well made in every respect.

2. The main lever regulates the depth only.

3. By means of the (short) Leveling Lever, the plow can be instantly adjusted, without stopping the team, thus keeping the plow always level on hilly as well as smooth ground, and insuring good work.

4. The (center) Landing Lever is a feature that will be fully appreciated by the practical dealer or farmer, for with this, if one horse is inclined to crowd, you can at once favor him without stopping, and thus maintain a straight uniform furrow. This lever also saves a great many changes of hitch when you want to take more or less land.

5. The doubletrees or equalizers are supported by means of an attachment on the cross clevis, so that in backing up they are not under the horse, but entirely out of the way.

The Little Giant Gang will do more work with less horse flesh, and do it better, than any other make of Plow in California. Try one, and if not as represented, return at our expense.

GOULD'S SPRAY PUMP.

This Pump we have got up expressly for spraying vines, fruit trees and other shrubbery infested with the destructive insects which inflict so much injury in orchards, vineyards, etc. It has been adopted and recommended by the State Horticultural Society. The working parts are constructed entirely of brass, and will not be affected by the corrosive solutions used in them. **THE BAMBOO EXTENSION** is an admirable invention. The operator of the Pump, by the use of this extension, can get to all parts of the tree while on the ground; also saving himself from getting his hands and face burnt from the solution. Send for Catalogue and Special Prices.

(Cut Copyrighted 1887.)

BATCHELOR & WYLIE

ARE NOW OFFERING

ROLLER GRAIN DRILL & CLOD CRUSHER COMBINED,

19½ feet in width, coupled in three sections, one of which is shown in cut below.

1. CANNOT CLOG IN ANY KIND OF TRASH.
2. REQUIRES ONLY SIX HORSES AND ONE MAN TO OPERATE.
3. WILL SOW FROM THIRTY TO FORTY ACRES PER DAY.
4. INCREASES THE YIELD FROM THIRTY TO FIFTY PER CENT.
5. READ THE ANNEXED LETTER AND WRITE US FOR PRICES.
6. SEND IN YOUR ORDERS IMMEDIATELY, AS THIS SEASON'S STOCK WILL SOON BE EXHAUSTED.

BATCHELOR & WYLIE,

37 Market Street, San Francisco.

FOWLER, Fresno County, Cal., November 4, 1886.

MESSES. BATCHELOR & WYLIE—Gentlemen: I thoroughly tested your Roller Drill last year, and it is with pleasure I report the result. I sowed a portion of the land with grain from the plow, covering it in the ordinary way; another portion was sowed upon the plowed ground and covered as thoroughly as possible by cross harrowing; another portion was sown with your Roller Drill, using only about TWO-THIRDS as much seed per acre as was sown on the other pieces, and I can safely say, that sown with the Roller Drill produced at least twice as much as that sown the other way.

JAMES M. ROBERSON.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

SEND FOR TESTIMONIALS.

MANUFACTURED BY

BOOTH & LATIMER, San Luis Obispo, Cal.

Special Terms on Quantities in Bulk.

Patented Jan. 23d, 1883.
For Sale by all Wholesale and Retail Dealers.

The Pears Which Were Lost.

EDITORS PRESS:—In your last issue I read a letter by Mr. W. C. Blackwood. Perhaps I did not express myself right (as I am not master of the English language) when I said that the fruit was not "marketable." When he sent it to me I stated in conversation that in handling the fruit two or three boxes were broken and some of the fruit fell out on the floor, when I discovered that a great many were very small, rusty and not very fine-looking pears; some were rotten in the center of the boxes.

I also stated that the fruit was not packed according to the instructions of my circular. The boxes were large and closed tight. I did not open the boxes nor examine them when they came. I stored them away just as they came, though I saw from some small cracks on the top of the covers that there were yellow pears among the green ones, and I called the attention of Mr. S. Heywood and some other party who was present, to the fact of my observation. I also told Mr. Blackwood when he came to order them to the market. I showed him just the same way where I saw from the little cracks of many boxes, and pointed out where the yellow pears could be seen.

Bartlett pears are the most difficult fruit to keep, and when once they have turned little yellow you cannot preserve them any length of time. I am really very sorry that Mr. Blackwood has sustained such loss.

By the bearer I will send you a box of fruit, among which you will find Bartlett pears of the first crop and other kind of fruit which I have kept some two months, and others over that length of time, and they have been long out of market. I desire you to examine and judge how they have been preserved and if they are marketable.

I. ALLEGRETTI.

West Berkeley, Cal.

[We examined the fruit closely. We found the Bartlett pears of good fresh color, flesh firm and of excellent flavor, with just a sign of breaking down at the core. The plums were very good indeed, and were quickly eaten up by the bystanders. The yellow cling peaches were good-looking on the outside and firm to the touch, but on cutting open the flesh was found to be of light chocolate color. A yellow freestone peach was good inside and out and of good flavor. Mr. Allegretti claims that his experience has taught him that each fruit has its proper period of life under storage. He says a cling peach will keep in first-class condition four or five weeks; after that it apparently begins to extract color from the pit and the flesh becomes dark and loses flavor, although its texture does not break down. A freestone peach will keep in good condition longer than a cling. He says the period during which each fruit will retain first-class condition varies, and must be learned by experience. The preservation of the samples brought us seemed remarkable, considering the length of storage, being, as stated by Mr. Allegretti, two to two and a half months.—EDS. PRESS.]

From Northern Solano.

EDITORS PRESS:—The north wind has been blowing about two weeks, and everything is as dry and dusty as can be. The atmosphere is so full of smoke that a person cannot see any distance to speak of. A shower of rain would be welcome to everybody, except a few who have grapes out to dry.

Fruit shipping is about done for this season. A few who sent grapes East the last month have lost money. One gentleman who lives near here was East on a visit lately, and says he saw California grapes in almost every market, and they were retailed at from 15 to 25 cents per pound. These prices give somebody a much larger profit than the grower gets.

Dried fruit is not so high as it was awhile ago. One man here has about 14 tons of apricots, for which he has offered 16 cents per pound. Now he can get but 12½ cents. Another was offered 14 cents for unpeeled peaches and 24½ cents for peeled. Now they will not bring near that figure. It seems as if people ought to know that the prices paid for dried fruit were too high; poor folks could not afford to buy, and there was a great deal more than would supply the rich ones. To make a grand success of selling California fruit, either green or dried, in the Eastern markets, it must be sold at a price which laboring people can reach, and this can be done with a profit to all who handle the fruit if they do not want to get rich too fast.

Agents from the city canneries have been buying Muscat grapes here, paying \$20 per ton, the grapes to be shipped in large boxes.

A great many new buildings are going up in Vaca valley. The Broughton ranch was sold at auction last Saturday in small lots. A large crowd was in attendance, about 300 coming up on the excursion train from Oakland. The prices brought were satisfactory, running from \$70 to \$300 per acre. Some stock was sold. Horses went high, but cattle went low.

Most of our roads are summer-fallowed, and the roadmaster is busy plowing the rest as fast as he can. There is a large amount of summer-fallow between Vacaville and Winters, and 20 or 30 big teams are at work putting in grain.

Vacaville, Oct. 24th.

Contra Costa Fair Awards.

Awards for exhibits of live-stock, farm and orchard products, etc., were made at the recent Concord Fair as follows:

HORSES.

THOROUGHbred—2-yr-old and over, stallion "Lame Deer," B. S. Clark.

ROADSTERS—Best 2-yr-old stallion, "Coachman," Wm. Meese; 2d, Admiral Jr., W. L. McDonald; 3-yr-old mare, "Lulu," J. E. Durham; 2d do, "Leota," W. Lynch; single carriage horse, no name, J. D. Dixon; 2d, "Dolly," C. Sharp; 1-yr-old mare "Puss," Seth Cook; 2d do, "Belle," J. Coats; matched span carriage horses, "Blaine and Logan," F. L. Emerson; 2d do, "Eliza and Knox," D. F. Majors; 3-yr-old stallion "Milpitas," S. Sota; 2-yr-old-mare, J. Coats; 2d do, "Silk Stocking," J. Cantua; 1-yr-old stallion "Richards," J. Conway; 2d do, "Dude," Geo. Denking; 4-yr-old mare "Clip," Geo. Stark; 4-yr-old stallion, "Ohio Boy," L. P. Baker; 2d do, "Conductor," N. Clanton; colt "Bonnie Belle," B. S. Clark; span mules "Darkey and Lucy," G. T. Wiles.

SPECIAL PREMIUMS RECOMMENDED—2-yr-old

FRONT ELEVATION

Thanksgiving Day.

The following proclamation has been issued by the President:

The goodness and mercy of God, which have followed the American people during the past year, claim their grateful recognition and humble acknowledgment. By His omnipotent power He has protected us from war and pestilence, and from every national calamity. By His gracious favor the earth has yielded a generous return to the labor of the husbandman, and every path of honest toil has led to comfort and contentment. By His loving kindness the hearts of our people have been replenished with fraternal sentiments and patriotic endeavor, and by His unerring guidance we have been directed in the way of national prosperity.

To the end that we testify our gratitude for these blessings, I, Grover Cleveland, President of the United States, do hereby designate Thursday, the 24th day of November next, as a day of thanksgiving and prayer, to be observed by all the people of the land. On that day let all secular work and employment be suspended, and let our people assemble in their accustomed places of worship, and with prayer and songs of praise, give thanks to our Heavenly Father for all that He has done for us, while we humbly implore the forgiveness of our sins and the continuance of His mercy. Let families and kindred be reunited on that day, and let their hearts with kindly cheer and affectionate reminiscences turn in thankfulness to the source of all their pleasure, and

A Neat Little Cottage.

Perhaps some of our readers who wish to build small cottages can take a hint from the designs which we give on this page. The plan is certainly neat and affords much room for the money which the construction would require. The sketches make the design fully intelligible, and will give all the data needed by the carpenter to make out his bill of materials and construct the cottage. In most parts of this State, the climate is such that the cost can be further reduced by putting in one chimney instead of two. The design is taken from the census of 1880, and is one of a number of styles of cottages provided for their operatives by the Willimantic Linen Co. of Connecticut.

Giver of all that makes the day glad and joyous, and in midst of our pleasure and our happiness, let us remember the poor and needy and unfortunate, and by our gifts of charity and ready benevolence, let us increase the number of those who with grateful hearts shall join in our thanksgiving.

In witness whereof I have set my hand and caused the seal of the United States to be hereunto affixed. Done at the city of Washington this 25th day of October in the year of our Lord 1887, and of independence the 112th.

GROVER CLEVELAND.

By the President.

THOMAS F. BAYARD, Secretary of State.

By the Governor.

SACRAMENTO, Oct. 20.—Governor Waterman to-day issued the following proclamation:

For the many blessings the Almighty, in His infinite mercy and wisdom, has showered upon the people of California during the past year, and in view of the great prosperity that has attended all the great interests of the State, I hereby appoint Thursday, November 24, 1887, as a day of thanksgiving and prayer, upon which day I invite the people to forego all business and assemble in their respective places of worship for the purposes above indicated.

A Statue of Lincoln.

A bronze statue of Abraham Lincoln was unveiled at Chicago Oct. 22d, in the park which bears his name, in the presence of 5000 spectators, and with circumstances of peculiar interest. The covering was withdrawn by little Abe, son of Robert Lincoln, and grandson of the great emancipator.

After T. F. Withrow, one of the trustees of the Bates fund which paid for the statue, had formally presented it to the Lincoln Park Board, and W. C. Goudy had responded, an oration was delivered by Hon. Leonard Swett, who was an intimate associate, both politically and personally, of the martyr President. In speaking of the character of Lincoln, he said:

"He was emphatically a child of the Republic and the product of our institutions. He was of the people and was the people's.... His character was that of greatness and extreme simplicity.... He never in his life got the better of his fellow-man in a trade, and never loaned money on interest. I never knew

him but once to borrow money or give him.... The sublime and crowning characteristic of Mr. Lincoln was his self-reliance. During the 11 years I was with him at the bar of this State, I never knew him, in the preparation of a trial or the perplexity of it in court, to turn to his associate and ask his advice."

With reference to his re-election to the Presidency, Mr. Swett remarked:

"I believe he desired the second nomination, because that involved an approval by the common people (whom he always loved and confided in) of the course which he had taken. Yet he would do nothing and would allow no friend to do anything to get it. He looked with indifference over the machinations against him in his Cabinet, and with indifference over the Senate and Members of Congress to the action of the common people, as expressed in their preliminary conventions and resolutions of State Legislatures, as though an electric chord of sympathy extended from him to them."

The orator also mentioned, as a remarkable and useful trait in Lincoln's character, that mental equipoise which is not to be disturbed by anything nor turned aside from its chosen pathway.

"Although prosecuting the war simply from a sense of duty, and not from a belief in its success, yet he kept right on and was never depressed by disasters nor elated by success. He seemed to comprehend the magnitude of the contest in which he was engaged more thoroughly than any one. In short he was the strong man of the contest, and the great man at Washington learned to gain renewed courage from his calmness, to lean upon his great arm or support."

"DON'T YOU WORRY."

How Shrewd Business Men Have Solved a Great Problem.

"Is there a fatality among our prominent men?" is a question that we often ask. It is a question that perplexes our leading medical men, and they are at a loss to know how to answer it.

We sometimes think that if the physicians would give part of the energy to the consideration of this question that they give to combating other schools of practice, it might be satisfactorily answered.

The fights of "isms" remind us often of the quarrels of old Indian tribes, that were only happy when they were annihilating each other.

If Allopathy makes a discovery that promises good to the race, Homeopathy derides it and breaks down its influence. If Homeopathy makes a discovery that promises to be a boon to the race, Allopathy attacks it.

It is absurd that these schools should fancy that all of good is in their methods and none in any other.

Fortunately for the people, the merit which these "isms" will not recognize is recognized by the public, and this public recognition, taking the form of a demand upon the medical profession, eventually compels it to recognize it.

Is it possible that the question has been answered by shrewd business men? A prominent man once said to an inquirer, who asked him how he got rich, "I got rich because I did things while other people were thinking about doing them." It seems to us that the public has recognized what this fatality is, and how it can be met, while the medical profession have been wrangling about it.

By a careful examination of insurance reports we find that there has been a sharp reform with reference to examinations (and that no man can now get any amount of insurance who has the least development of kidney disorder), because they find that sixty out of every hundred in this country do, either directly or indirectly, suffer from kidney disease. Hence, no reliable company will insure a man except after a rigid urinary examination.

This reminds us of a little instance which occurred a short time ago. A fellow editor was an applicant for a respectable amount of insurance. He was rejected on examination, because, unknown to himself, his kidneys were diseased. The shrewd agent, however, did not give up the case. He had an eye to business and to his commission, and said: "Don't you worry; you get a half dozen bottles of Warner's safe cure, take it according to directions, and in about a month come around, and we will have another examination. I know you will find yourself all right and will get your policy."

The editor expressed surprise at the agent's faith, but the latter replied: "This point is a valuable one. Very many insurance agents all over the country, when they find a customer rejected for this cause, give similar advice, and eventually he gets the insurance."

What are we to infer from such circumstances? Have shrewd insurance men, as well as other shrewd business men, found the secret answer to the inquiry? Is it possible that our columns have been proclaiming, in the form of advertisements, what has proved a blessing in disguise to millions, and yet by many ignored as an advertisement?

In our files we find thousands of strong testimonials for Warner's safe cure, no two alike, which could not exist except upon a basis of truth; indeed, they are published under a guarantee of \$5000 to any one who will disprove their correctness, and this offer has been standing, we are told, for more than four years.

Undoubtedly this article, which is simply dealing out justice, will be considered as an advertisement and be rejected by many as such.

We have not space nor time to discuss the proposition that a poor thing could not succeed to the extent that this great remedy has succeeded, could not become so popular without merit even if pushed by a Vanderbilt or an Astor.

Hence we take the liberty of telling our friends that it is a duty that they owe to themselves to investigate the matter and reflect carefully, for the statements published are subject to the refutation of the entire world. None have refuted them; on the contrary, hundreds of thousands have believed them and proved them true, and in believing have found the highest measure of satisfaction, that which money cannot buy, and money cannot take away,

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

AUCTION SALE

Standard Trotting Brood-Mares,

COLTS AND FILLIES,

Bred by G. VALENSIN,
ARNO STOOK FARM,

MR. R. B. MILROY,

TO BE SOLD

Wednesday, November 2, 1887,

AT 11 A. M., AT

BAY DISTRICT TRACK,
SAN FRANCISCO.

The young animals are chiefly the get of Sidney, son of Santa Claus and weaness. They include near relations to the great young stallions Valensin and Shamrock. Also colts and fillies by Buccaneer and Crown Point. They are decidedly the most superior lot of standard colts ever offered in California.

Catalogues giving full pedigrees and interesting facts as to performances of colts and progenitors may be had at Nevada Stables, No. 1336 Market St., or of

Some One Had to Do It.

The Chico Enterprise tells how a nuisance was abated in that place a few days since, thus: The nerviest little damsel in the burg was the one who rose in her wrath the other evening and administered a deserved chastisement to a swell loafer and masher, that shamed the men and will prove a warning to mashers here for a while.

A young lady well known in society circles, pretty, bright and a belle, was promenading with a young lady friend on Main street the other afternoon, when they were accosted by a well-dressed, handsome drummer, who has been hanging around the city for a month past. The soundrel smiled, tipped his hat and wished them good day. The indignant ladies turned and abruptly left him; but far from being abashed the bold young man resumed his undesired attentions again in the evening, and was again crushed by the now thoroughly aroused ladies. They consulted with each other and resolved that at the next attempt they would seek redress. Well, they did, and in a manner that the dude loafer will not soon forget.

He was sitting in front of the Union hotel with four or five boon companions, relating with great glee his numerous catches and also that he had a couple of Chico fair maids on his string. A few minutes after the ladies appeared. "Now boys," he said, "watch me catch them." They had passed and were about ten feet away, when he called out: "Ah, there, sweetness! Yes, pet." At the first word, the handsomer of the two ladies turned and started toward him. Thinking the conquest completed, he rose to meet her, when—one, two, three—he received three straight blows in the face from a dainty little fist, that sent him sprawling over the chair. "Take that, and that, you contemptible cur," exclaimed the lady, as she laid a riding whip over his head, face and shoulders until the craven coward begged for mercy. Amid the jibes and laughter of the bystanders, he took refuge inside the hotel, and early next morning left the town.

The unanimous sentiment of the community sustains the young lady in her brave action. She is made of the right stuff and deserves credit for the summary way in which she disposed of the blackguard. It was a severe rebuke to the manliness of the men who permitted the thing to occur, and it is time something was being done to fire out all such loafers.

"Oh, had some power the giftie gie us
To see ourselves as ithers see us!"

Few women want to appear sick, and yet how many we see with pain written on every feature, who have been suffering for months from female weakness, and who could easily cure themselves by the use of Dr. Pierce's "Favorite Prescription," to be found at any drug store. This remedy is a specific for weak backs, nervous or neuralgic pains, and all that class of diseases known as "female complaints." Illustrated, large treatise on diseases of women, with most successful courses of self-treatment, sent for 10 cents in stamps. Address, World's Dispensary Medical Association, 663 Main Street, Buffalo, N. Y.

Thomas Carlyle.

The great Scotch author, suffered all his life with dyspepsia which made his own life miserable and caused his best and truest friends not a little pain because of his fretfulness. Dyspepsia generally arises from disease of the liver, and as Dr. Pierce's "Golden Medical Discovery" cures all diseases of this great gland, it follows that while all cannot be Carlyles, even with dyspepsia, all can be free from the malady, while emulating his virtues.

Unequaled—Dr. Sage's Catarrh Remedy.

S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 26, 1887.

The past week has witnessed abroad a stronger and advancing market for wheat, under a freer consumptive call and a stronger holding. To-day's cables are as follows:

LIVERPOOL, Oct. 26.—Wheat—Strong. California spot lots, 6s 2d to 6s 5d; just shipped, 3s 9d; nearly due, 3s; cargoes off coast, turn dealer; on passage, advanced about 3d to 6d per qr; French country markets, firm; wheat on passage to Continent, 160,000 qrs; wheat and flour on passage to U. K., 1,519,000 qrs; wheat in Paris, quiet; flour, rather easier.

Foreign Review.

LONDON, Oct. 25.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: The values of native wheats and country flour are unchanged. Supplies in provincial markets are variable, and prices are steady. The sales of English wheat for the past week were 61,123 quarters at 29s 9d per quarter, against 60,159 quarters at 26s 9d during the corresponding week last year. Trade in foreign wheat is quiet. Supplies of South Russian are arriving freely. Dealings at Liverpool are firmer. Flour is steady and prices are a fraction stronger. Corn is in small supply and values are hardening. Oats, beans and peas show a better tendency. To-day's market was inactive and values were firm. Flour was steady. Corn was strong; prices rose 1s. Oats were 3d to 6d higher. Beans and peas were 6d higher. Lentils were 1s to 2s dearer. Linseed oil was 6d lower.

Eastern Wheat Markets.

CHICAGO, Oct. 26.—Wheat—71½¢ for cash, 71½¢ for Oct., 72¢ for Nov., 73½¢ for Dec., 74¢ for Jan. and 79½¢ for May.

NEW YORK, Oct. 26.—Wheat—85¢ for cash, 83½¢ for Oct., 83½¢ for Nov., 84½¢ for Dec., 85½¢ for Jan. and 89½¢ for May.

California Products in Chicago.

CHICAGO, Oct. 22.—No change of importance is noticed in the California fruit market. Receipts are fair and the demand is pretty good for fruit in good condition. There were more or less grapes in rather bad order offered and these had to be discounted. Choice Tokays brought \$3 to \$3.50 per double crate and Muscats \$2.25 to \$2.50. Fall pears are firm and in good demand at from \$1.75 to \$2.25 per box. The demand for quinces is tame, and only the fine grades are held steady at \$1.40 to \$1.50 for small boxes and \$1.50 to \$1.75 for large.

Transactions in Cal. dried fruits are at present light and unimportant. New raisins are coming in and sell fairly; but in other lines trade is quiet, with moderate offerings and former prices asked. Peaches, sun-dried, in sacks, per lb. 13¢ to 14¢; do, evaporated, in sacks, per lb. 16¢ to 16½¢; do, do, peeled in sacks, per lb. 27½¢; apricots sun-dried, in sacks, per lb. 18½¢; do, evaporated, do, do, in sacks per lb. 15¢ to 17¢; plums, pitted, in sacks, per lb. 13½¢ to 14¢; nectarines, sacks per lb. 15½¢ to 18¢; raisins, loose Muscats, per box, \$2; do, London layers, per box, \$2.20.

Beans are steady and firm. Very few are coming from near by and new beans are being brought forward from California. These are quoted at \$2.07½ to \$2.10 per bushel, to arrive, and some of especially fine quality have been sold at \$2.25 per bushel, laid down here.

California Products in New York.

NEW YORK, Oct. 22.—Dried Fruit—Market continues quiet, with Cal. loose Muscat at from \$2.15 to \$2.20 per box.

Cal. yellow mustard seed, 4¼¢ to 4½¢ per lb.

Eastern Hoo Markets.

CHICAGO, Oct. 22.—Hops are held steady. There is a small trade, but nothing important doing. Stocks consist mainly of Pacific Coast. Pacifics, new crop, choice, 20¢; do, do, medium, 16¢ to 18¢; do, do, 1886, choice, 12¢ to 14¢; do, do, medium, 9¢ to 10¢; Pacifics, 1885, 5¢.

NEW YORK, Oct. 23.—Hops—The demand is light in new Pacifics; the stock is not sufficient in volume to establish prices. Coast crop of 1887, fair to prime, 15¢ to 18¢; 1886, common to good, 8¢ to 12¢; 1885, good to prime, 6¢ to 8¢.

Eastern Wool Markets.

NEW YORK, Oct. 23.—The supply of desirable domestic wools remains well in hand and holders look for an improving tendency. The demand, however, is erratic and stops short when an increase in prices is suggested. Among sales were 50,000 lbs fall Calif. at 19¢ to 21¢, 25,000 lbs Eastern Oregon at 20¢ to 22¢ and 100,000 lbs Territory at 21¢ to 23¢.

The Philadelphia market has ruled quiet, although there has been a large movement in fine fleeces at low prices. Territory wools are plentiful, but the demand for them is light and the market is still inclined in buyers' favor. Among sales were 1000 lbs Territory bucks at 12½¢ and 5000 lbs Territory fine at 18¢.

Boston reports a decline in pulled wools and a drop in scoured. Among sales were 46,000 lbs Calif. spring and Oregon and 13,000 lbs Calif. fall on private terms, and 435,000 lbs Territory at 20¢ to 24¢.

PHILADELPHIA, Oct. 25.—Wool is steady and unimportant.

BOSTON, Oct. 25.—Prices in favor of buyers. Fine Territory, 15¢ to 19¢; medium do, 20¢ to 24¢.

NEW YORK, Oct. 25.—Wool is quiet.

Local Markets.

BAGS—The market for standard Calcuttas is very strong, for both spot and forward delivery.

BARLEY—On Call, trading was, the past week, more active, with slight fluctuations at gradual hardening prices. It is generally claimed that the stock is being concentrated preparatory for an upward move. To-day's sales on Call are reported as follows:

Morning session: Buyer season—100 tons, 99½¢;

100, 99½¢; 100, 99½¢; 400, 98½¢; 100, 98½¢; 400, 98½¢; 100, 98½¢. Buyer 1887—100 tons, 89¢; 100, 88½¢; 100, 88½¢. No. 1 brewing, buyer 1887—100 tons, \$1.13; 200, \$1.13½ per cbl. Afternoon Session: Buyer season—100 tons, 98½¢; 500, 98½¢; 500, 98¢; 300, 97½¢; 800, 97½¢. Buyer 1887—100 tons, 88½¢; 100, 88½¢; 200, 88½¢; 100, 88¢; 100, 88½¢ per cbl.

BUTTER—The market is higher for fresh rolls, although at the close there is a weaker feeling, owing to slightly warmer weather. Pickled and firkin are in good supply, but gilt-edged is scarce.

CHEESE—The market holds to strong prices, under limited receipts and a continued good demand.

EGGS—The market is strong and higher, under light receipts and a good demand.

FLOUR—The market is barely steady, owing to continued free receipts of Oregon and also country brands.

WHEAT—The market on Call has been gaining strength throughout the week, with free transactions reported at slight fluctuations. In the sample market holders are firm, and shippers find themselves unable to buy round parcels of No. 1 white shipping corn at \$1.30, although reported by the daily press at \$1.25. On Call to-day the sales reported were as follows:

Morning Session: Spot—100 tons, \$1.32½. Spot, season's storage paid—100 tons, \$1.33½. December—500 tons, \$1.33. Buyer season—500 tons, \$1.45½; 200, \$1.45½; 1000, \$1.45½; 100, \$1.46. Buyer 1887—100 tons, \$1.35½; 200, \$1.35½ per cbl. Afternoon Session: Buyer season—100 tons, \$1.45½; 500, \$1.45½; 1200, \$1.45½; 200, \$1.45½ per cbl.

[COMMUNICATED.]

Market Information.

Cereals.

The visible supply of wheat on last Saturday was about 23,000,000 bu. less than on the same date one year ago.

Stock of barley in the principal markets of the United Kingdom is reported at 2,032,570 bu. against 1,354,910 one year ago.

It is now generally conceded that the United States and Russia will be the competitors for the European wheat trade this year.

Exports of wheat from India from April 1—the beginning of the crop year—to Oct. 15, were 21,460,000 bu., of which 10,960,000 bu. were to the United Kingdom and 10,500,000 bu. to the continent. The aggregate shipments for the same time last year were 30,312,000 bu.

The Northwestern Miller says that if the figures of competent statisticians and the opinions of astute observers are worth anything, as having a bearing upon the future of the breadstuffs markets, the month of December will witness a substantial advance in prices. So strong a combination of legitimate influence to bring about such a result has not existed for the past five years, yet in that period we have seen prices go as high as the most sanguine can reasonably expect them to go before the holidays. We do not look for a sudden nor for a heavy upward movement, and if it comes before the holidays, the season of dullness always resultant upon their interference with business may be expected to witness a material decline. The bull forces are so thoroughly demoralized as to preclude the idea of a sudden shouldering of wheat stocks, and a balloon-like upward flight in quotations, but those who expect to see present conditions and prices rule in December are likely to suffer grievous disappointment. The procession will move decently and in good order, but it must move, and those who fail to fall into line at the right time will speedily be numbered among the "killed, wounded and missing."

In a leading editorial the *London Times*, just to hand, remarks as follows: A week of genial weather has seen the conclusion of agricultural harvesting in all but the latest North, where on the hills considerable breadths of corn are in shock and there still remain patches to be cut. Autumn cultivation has had a most favorable opportunity; green cropping would grow still better; however, for a renewed douche of rain on at least the Southern and Eastern districts, where the land is yet too dry for the backward vegetation and also for the preparation of satisfactory seed beds for wheat. With a renewal of showery days, the season is just what is required for the forage supplies for the ensuing winter; root crops, cabbages and young seeds grow fast, and the clover plant has not been so generally destroyed by drouth as was at one time feared. The effect of the feed scarcity upon the stock markets still continues disastrous. Store cattle are disposed of at prices quite unprecedented in recent years; store sheep and lambs have been parted with at a decline of 8s or 12s per head below the figures common last year; and only the top quality of mutton realizes improving rates. The drouth has left its mark so deep that we shall not recover from it in a hurry.

W. E. Bear, writing from London under date of Sept. 27, says: At the middle of the current cereal year our Great Britain population will be about 37,500,000, and the consumption at 5½ bu. a head would amount to 206,250,000 bu. The available home supply will be about 64,000,000 bu., and we shall need to import about 142,250,000 bu. This seems to be the closest computation possible at the present time. Those who put our requirements of foreign wheat at less than this reckon the home crop to be larger than I do; but most people have already come down to the estimate I gave a month ago.

The United States' wheat crop of 1887 has been heretofore estimated at 430,000,000 bu., with 115,000,000 bu. available export surplus. The government Department of Agriculture, on October 10, reported a possible crop of 450,000,000 bu. The earlier estimates gave a surplus of 115,000,000 bu., including 25,000,000 from the Pacific Coast, leaving 90,000,000 bu. from Atlantic ports. The surplus is now increased to 110,000,000 bu. from Atlantic ports, of which 40,000,000 bu. have been exported within 14 weeks, leaving 70,000,000 bu. still available for export on October 1. Of this about 15,000,000 bu. will be required, without the United States, on this continent, leaving at this time 55,000,000 bu. available for Europe.

Oregon advises report farmers free sellers of wheat, with a large portion of the Valley wheat bought for San Francisco for milling purposes, and the Eastern Oregon wheat taken for export account. There were, at last advices, quite a number of vessels on

berth loading for Europe, with a still larger number chartered to arrive.

In this State large farmers who have not sold their wheat are reported to be holding for a better market, which is looked for after the turn of the year, if not before. The large tonnage in port disengaged, and a still larger tonnage to arrive, has weakened ships, and at the close it is difficult for iron vessels to get 27s 6d for U. K., against 31s 6d about one month ago. Continued dry weather in this State does no little in causing sellers to hold firm. Although the daily press quotes \$1.25 per cbl the highest figure for strictly No. 1 white shipping, yet it is known that \$1.28½ was bid for a round parcel by a shipper, and refused.

Barley continues to come in freely, notwithstanding which the market rules strong, at current quotations. It is claimed by some that a syndicate has been and is still buying in expectation that a higher range of values will rule soon. This opinion is based on the strong and strengthening market at the East, heavy consumption on this coast and farmers having very little in their granaries.

Eastern corn begins to come in more freely, but as yet it has no marked influence on our market. Californian corn is in light offering, which causes buyers to pay well up to obtain supplies. At the East the market is strong and active.

Buckwheat begins to move more freely, at from \$1.10 to \$1.40.

Rye is quiet, but steady.

Oregon and Washington Territory continue to send us liberal supplies of oats, which keep the market weak, although holders are slow in making concessions, except to save concessions. The quality of this year's crop appears to be better than last year's.

Fruits.

Apples are in heavy receipt, but the demand is large, better, if anything, than last year in this month. The quality, as a rule, is good. The market for the more choice hard keeping is firm, but defective are hard to sell.

Pears are in good supply, with a fair trade call reported.

Strawberries are in good supply, but blackberries are out of market.

Table grapes continue in liberal supply, causing the market to keep down. Choice varieties and good keeping are readily sold, but overripe are placed only at concessions.

Wine grapes keep well up. It is claimed that the hot drying winds a few days since, dried up a very large quantity on the vine. The different wineries are being run to full capacity, which absorbs about all coming to market.

Dried Fruits.

Receipts of dried fruits continue very heavy, causing large operators to bid down for all parcels not coming up to the standard. The demand is free, notwithstanding the heavy purchases made for forward delivery the forepart of the season. The stock of bright sun-dried peaches is light, but off color and uneven cured are in oversupply and only sold at concessions. Prunes continue in active demand, with all well-cured and evenly packed readily placed at full quotations. The market closed very firm. Currants are strong, with a higher range looked for, for the more choice, in sympathy with the improving market abroad, due to heavy purchases by France for the manufacture of cordials. Apricots are stiff.

Feedstuff.

Carrots hold steady at quotations, under a good demand.

Heavy receipts of bran and middlings, chiefly from Oregon, have broken the market, although the large consumption heretofore noted is continued.

Ground barley is steeper.

Hay is still higher, under a good demand and light receipts. The dry weather causes holders to ask more money, which is only met by buyers under protest. The supply in the country to draw from is light.

Hops.

The *London Corn Trade Circular* reports as follows: Now that the hop crop has been secured, calculations can be formed as to the probable supplies that will be required to meet the deficiency that will be experienced in the home wants. The annual consumption of hops in the United Kingdom is supposed to be about 600,000 cwt. The new crop has yielded, according to the estimates, from 390,000 cwt. to 400,000 cwt. so that there is a considerable shortage, even after allowing for the stocks held by the brewers. Toward meeting this deficiency, America will, it is stated, be able to export some 60,000 cwt., which will be considerably less than she exported during the season 1885-6. For the remainder we must look to the Continent, and it is thought that Germany, which will not have to export to America this season, will have a good surplus to ship to England, though nothing like the quantity she was able to spare last year for the American brewers. From Belgium also supplies can be drawn if necessary, but the hops produced in that country are said to be growing in disfavor with English brewers.

In our market trade is still reported light, owing to buyers' views being below sellers'. Some choice were placed at an advance on quotations; they were taken for home consumption.

Live-Stock.

Under continued free receipts, beef cattle and mutton sheep are still in buyers' favor. The quantity offering is unusually large, due to the scant pasture. In milch cows there is nothing to report. Hogs come in more liberally, causing packers to lower their bids. It is claimed that the heavy receipts are due to lessened feed and fears of rains soon. In work horses the market is overstocked, causing low prices to rule. Carriage and driving horses are wanted and find ready buyers at good prices. The former sell at from \$600 to \$1200 per span, and the latter at from \$200 to \$500, and in exceptional cases still higher.

The following are the wholesale rates of slaughtermen to butchers:

BEEF—Extra, 77½¢; first grade, grass fed, 6½¢ to 6¾¢ per lb.; second grade, 5½¢ to 6¢; third grade, 4½¢ to 5¢.

MUTTON—Ewes, 5½¢ to 6¢; wethers, 6 to 6½¢.

LAMB—Spring, 7 to 8¢.

VEAL—Large, 6 to 7¢; small, 6 to 8¢.

PORK—Live hogs, 4¼¢ to 4½¢ for heavy and medium; hard dressed, 6½¢ to 7¼¢ per lb; light, 4¼¢ to

4½¢; dressed, 6½¢ to 7¼¢; soft hogs, live, 3½¢ to 4¢. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Raisins.

The market for the better grades is very firm, with an active demand ruling. The consumption on this coast is largely increased, with the more choice in better favor, yet as a rule the consumptive demand is chiefly for the medium priced. The West is drawing quite freely, as is the East, where trade wants the better grades. In this market there is a wide range in quotations, due to the difference in the quality. The bulk of the country pack is poorly cured, uneven in color, and being, as a rule, in unattractive packages, is placed with some difficulty. Dealers receiving the indifferent packs report considerable difficulty in placing consignments except at low prices, and even then there is more or less trouble reported.

Vegetables.

Cabbages show a strong tone, with a higher range of values looked for. Tomatoes are without change, although receipts are light. Other summer vegetables are coming in more sparingly, which causes a stronger market.

The receipts of potatoes the past week were very heavy, in excess of market requirements, which caused values to go lower, but at the close a steadier, firmer tone is noted. The quality of this year's crop was never better.

Onions, if choice good keepers, suitable to fill distant orders, find a quick market, but soft are sold at concessions to the local trade.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way.....	329,596	252,777
In port, disengaged.....	99,072	72,000
In port, engaged.....	10,884	96,018
Totals.....	439,552	420,795

The above gives a carrying capacity as follows: 1887, 709,846 short tons; 1886, 670,144 short tons; showing an increase compared with last year of 61,702 tons.

Wool continues to move off freely at full prices, with extra choice desirable clips fetching a slight advance.

On Tuesday, four vessels were chartered to load wheat for U. K. at 27s 6d. About a month ago 31s 3d was asked.

Turkeys are firmer, at a slight advance. Hens and roosters are weaker, but ducks are higher.

In seeds there is nothing new to report; the demand being slow. Mustard is in good request for shipping to the East.

Honey continues to rule strong under light receipts and a good demand.

San Francisco, October 26, 1887.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

WEDNESDAY, Oct. 26, 1887.

List of U. S. Patents for Pacific Coast Inventors.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 250 Market St., S. F.

FOR THE WEEK ENDING OCTOBER 18, 1887.

- 371,659.—RIVETING MACHINE—Matthew Arnold, S. F.
- 371,729.—HAY LOADER—Arnold, Mitchell & Taliaferro, Hueneme, Cal.
- 371,660.—CABLE-RAILROAD CROSSING—E. B. Badlam, S. F.
- 371,666.—PIANO ACTION—V. H. Brown, Portland, Ogn.
- 371,819.—FEATHERING PADDLE—A. H. Carpenter, Stockton, Cal.
- 371,669.—RUBBER-DAM CLAMP—Oliver Carpenter, Oakland, Cal.
- 371,671.—SPlicing CABLES—John Collins, S. F.
- 371,673.—SPIRAL MOLDING MACHINE—J. H. Culver, S. F.
- 371,555.—ANTI-INDUCTION DEVICE—Jas. Curran, Portland, Ogn.
- 371,684.—FRUIT-DRIER—A. J. Hatch, S. F.
- 371,843.—BUILDING AND BRIDGE CONSTRUCTION—P. H. Jackson, S. F.
- 371,844.—BUILDING AND BRIDGE CONSTRUCTION—P. H. Jackson, S. F.
- 371,845.—PAVEMENT, SIDEWALK, ETC.—P. H. Jackson, S. F.
- 371,693.—ANIMAL TRAP—J. S. McKay, Big Oak Flat, Cal.
- 371,696.—ELECTRIC ALARM CLOCK—S. P. Meads, Oakland, Cal.
- 371,711.—HYDRAULIC CONCENTRATOR—F. W. Robinson, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

FIRES IN STORAGE WAREHOUSES.—In speaking of the danger of fire in furniture storage warehouses, a New York insurance journal calls attention particularly to the hazard offered by the carpets which, during the summer, are stored in such quantities in these buildings. "If a surveyor," it says, "finds greasy rags about a factory, he immediately makes a note of it, and usually grows so nervous about the presence of the little incendiaries that the owner promises never to have another such about the place over night again. Greasy rags are known to be very dangerous; they will condemn almost any risk. Dirty carpets are greasy rags, and when they are rolled up, put in an airy place and well covered over with kindling-wood in the form of light furniture, what wonder is it that they burn up? One of the worst elements of fire hazard known is ever present in furniture storage warehouses, and what is more, it cannot be guarded against."

It is Very Gratifying

To receive such assurances as the following, which comes to us from a correspondent in Tulare county, who has long been a reader of the RURAL PRESS:

Your paper is not only very readable, and invaluable in giving information upon agricultural and horticultural subjects and to the stock and poultry-breeders, but it has proven itself to be thoroughly on the square, always exercising equal fairness between all parties and sections in its reports and publications.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature. Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

H. M. NEWHALL & CO., SHIPPING AND COMMISSION MERCHANTS,

309 and 311 Sansome Street, San Francisco, Cal.

Agents for Growers and Manufacturers. Charterers of Vessels for all Trades. Agents for the Mexican Phosphate and Sulphur Company's Products. General Insurance Agents.

Have correspondents in all the chief cities of the United States, Europe, Australia, India, China and the principal islands of the Pacific. Purchase goods and sell California products in those countries.

General Agents for the Pacific Coast of NATIONAL ASSURANCE CO., of Ireland; ATLAS ASSURANCE CO., of London; BOYLSTON INSURANCE CO., of Boston, Mass.

PERCHERON HORSES. FRENCH COACH HORSES.

More Imported and Bred than by any other Eight Establishments.

511 PURE-BREDS Now Actually on Hand.

Experience and Facilities Combined for Furnishing Best Stock of Both Breeds at Reasonable Prices.

Separate Catalogues for each breed, with history of same. Say which is wanted. Address

M. W. DUNHAM, WAYNE, DU PAGE CO., ILLINOIS.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1). \$0 25
- 2.—World's Cyclopaedia, 794 pages, 1250 illustrations; (exceedingly valuable). 50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt. 50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated. 25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations. 05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new." Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by M. Stafford. 25
- 10.—Life Among the Apaches, 12 pages, stiff cloth. 25
- 11.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application. 25
- 12.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.). 05
- 13.—European Vines Described, 63 pages. 05
- 14.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable. 50
- 15.—Architecture Simplified, 60 pages. 05
- 16.—Mother Bickerdyke's Life with the Army, patriotic and ably written; 168 pp., cloth, \$1.00. 50
- 17.—Ropp's Easy Calculator, cloth, 80 pp. 25
- 18.—How to Tell the Age of a Horse. 05
- 19.—Percheron Stud Book—French—bound in leather, 192 pages (full price, \$3). 1.00
- 20.—What Every One Should Know; a cyclopaedia of valuable information; 510 pp.; cloth; (full price \$1). 50
- 21.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations. 25
- 22.—Needle Work, by Jennie June; 128 pp., 200 illustrations. 25
- 23.—Ladies' Fancy Work, by Jennie June; 152 pp., 700 illustrations. 25
- 24.—The Way to do Magic; illustrated, 60 pp. 10
- 25.—The Taxidermist's Manual; illustrated, 64 pp. 10
- 26.—Beautiful Pocket Review, entertaining and instructive; 35 pages (a handsome and pleasing present). 25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F. Inform your neighbors about our offers and paper. In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe. Send for free circular describing most of these premiums, and any further information desired.

Designs for Homes, Etc.

"Country and City Homes," by David Salsfield, architect, S. F., is an 80-page octavo book, designed to meet the wants of persons about to build suburban or village dwellings. It contains elevations, floor plans and concise descriptions of a score of houses, ranging from a plain one-story, three-room cottage, to spacious, elegant country and Eastlake city residences. There are also designs for schoolhouses, a small church and a county hospital, with hints to those who think of building, as requires the employment of an architect. Copies at 50 cents, paper, or \$1, cloth, postpaid, can be ordered through this office.

Buy a Binder.

This paper for six months or a whole year, preserved in our patent binder, will make a splendidly illustrated, large and valuable book for all time. A keepsake worth showing your friends and coming visitors.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation). CATALOGUE OF EUROPEAN VINES.—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA.—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL.—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA.—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, \$1. This book is the best general review of California soils, climate and productions in existence.

KENDALL'S TREATISE ON THE HORSE AND DISEASES.—Post-paid for 25 cents.

ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, five cents.

Law in Relation to Newspapers.

1. Subscribers who do not give express notice to the contrary are considered as wishing to continue their subscriptions.

2. If subscribers order the discontinuance of their periodicals the publishers may continue to send them until all arrears are paid.

3. If subscribers neglect to or refuse to take their periodicals from the office to which they have been directed, they are held responsible till they have settled their bill and ordered their paper discontinued.

4. If subscribers remove to other places without informing the publisher, and the papers are sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take periodicals from the office, or removing and leaving them uncalled for, is prima facie evidence of intentional fraud.

6. Any person who receives a newspaper and makes use of it, whether he has subscribed for it or not, is held in law a subscriber.

7. The postmaster who neglects to give the legal notice of the neglect of a person to take from the office the newspapers addressed to him, is liable to the publisher for the subscription price.

Any one who desires this paper discontinued to his address will please pay up in full with the order, in compliance with the above-quoted law, when notice is sent to this office.

MR. A. ROMAN, so long and favorably known upon the Pacific Coast as a bookseller and publisher, has just opened a real estate and land office at 27 Post St. in this city. Success to our old friend in his new role!

A CINNAMON BEAR six feet seven inches in length was caught in a trap on Mount St. Helena recently.

A WOMAN FARMING.—Mrs. Hannah Mook is a widow about three-score years of age. She owns 80 acres of land near Buena Vista, and has a quarter of it cleared. She raises various agricultural and horticultural products, and gets two crops of hay a year from her meadow. All the work about the place, except the cutting of the hay, is done by the enterprising old lady, who lives there alone and appears to enjoy herself amazingly. She finds a ready and remunerative market for her crops. She clears about \$1000 a year from the ranch, and says she could earn much more if she had the strength and activity of her younger days. Yet great able-bodied, overgrown hulks of men who have just as good land as Mrs. Mook's, say that they cannot make farming in Nevada county pay. If they worked less with their mouths and more with their hands, and didn't spend any more time loafing around street corners and saloons than Mrs. Mook does, they would become prosperous and respected citizens in due time.—*Nevada City Transcript.*

TEMPERANCE IN THE ARMY.—The records of the Judge-Advocate General's office at Washington, it is said, show a decided yearly decrease of the drinking habit among army officers. A prominent attaché of the above-named bureau attributes these gratifying results to the restrictions upon sutlers at the army posts, and to the good work done by temperance advocates throughout the country. Speaking from personal observation, he said that during his recent vacation he stopped at several posts, where he had an opportunity to observe the habits of the officers. At one of them, 17 were stationed, of whom 13 were strictly temperate and the other four moderate drinkers. At another place, 10 out of 13 were total abstainers. In the opinion of this officer, there is less intemperance in the army than among a like number of professional men in civil life.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Important to Tree Planters.

One hundred and twenty-five thousand Fruit Trees for sale at a bargain, consisting of Apple, Pear, Peach, Apricot, soft and hard-shell Walnuts; also 2000 Fan-Leaf Palms. Sales will be made in lots, or the Nursery and stock will be sold on the most liberal terms as to price and payments, or will be exchanged for real estate. Inquire of J. M. Hixson, Real Estate Agent, 75 N. Spring street, Los Angeles, or address the proprietor, Milton Thomas, P. O. Box 304, Los Angeles, Cal.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Money Loaned

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., room 3.

Farmers and Viticulturists, Attention!

FERTILIZE! FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota. h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1/2 pound to 1 pound each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

FRANK BROTHERS,

GENERAL AGENTS FOR

319 and 321
MARKET STREET,
SAN FRANCISCO.

THE NEW MODEL GANG, TWO, THREE OR FOUR FURROWS,

The McSHERRY GRAIN DRILL,

THE BEST,
MOST RELIABLE AND
LEADING DRILL.

WITH ITS UNRIVALED FORCE FEED

It sows all kinds of Grain and Grass Seed, Oats and Barley as well as Wheat, and sows MORE REGULARLY than any other Drill, whether the grain be large or small-sized. It DOES NOT BUNCH, break or crack the grain.

IT CAN BE REGULATED IN A MOMENT to sow any desired quantity per acre, with CERTAINTY of getting that quantity in the ground.

It NEVER CHOKES UP in the feeding arrangement, as is the case with Drills regulated by rendering the discharge openings larger or smaller. It sows EQUALLY WELL ON ALL KINDS OF LAND, hilly or level, and it is immaterial whether the horses are driven fast or slow. This Drill must and does sow the same quantity of seed with each revolution of the feed wheels.

It SOWS ALL THE GRAIN OUT OF THE HOPPER, and with the same evenness and regularity when the last grains are going out as when the hopper is full.

It has High Wheels with Wide Tires, giving great bearing surface on the oil, and enabling the Drill to pass over the loosely pulverized earth lightly.

It has Long Hoes of improved style and shape, with strong, wide, and polished steel points, working well in any soil.

AGRICULTURAL IMPLEMENTS, BUGGIES, CARTS. HARNESS, Etc.

No. 38 Plow is made especially for our California Vineyards.

The above prices do not include Wheel or Jointer.

We are prepared to furnish Steel Points, also Slip Nose Points for Gale Plows.

CAUTION! CAUTION!

We carry a full line of Shares, etc., for these Plows, made by the Gale Manufacturing Company; as much of the success of a plow depends upon the Share, we caution all purchasers of the Gale Plows to be sure to get Shares directly from us or our agents, and not be imposed on by bogus goods.

Rev. Dr. O. C. Wheeler.

We give on this page the portrait of a gentleman who has achieved eminence in several walks of life in this State, and is one of our best-known citizens. We present the portrait and comment upon Dr. Wheeler's work from a different point of view than any of his recent biographers have chosen. We pass beyond his important church and educational work—they have been frequently described—and note his services to the industrial interests of this State, of which, no doubt, most of our readers are unaware. These services were rendered early, just when such services were of the highest importance, and many of those who have come to California during the last 25 or 30 years have never heard of them.

Dr. Wheeler was born in the rich agricultural region of Western New York, and, though he started out at the age of 21 to educate himself for the university, he never lost his liking and interest in the agricultural arts. He came to California in February, 1849, as the first Protestant missionary and built the first Protestant church in San Francisco. His fame as an orator spread fast, and he was selected to deliver the first Fourth-of-July oration ever delivered in San Francisco. Stress of pulpit and platform effort resulted in an affection of the throat which compelled a change of activity for a time. It was then that enterprising and progressive agriculturists began to feel the need of an opportunity to display their products and to acquaint themselves with each other's doings. There had been creditable displays under private enterprise, but the call was for a State Agricultural Fair. This was organized and Dr. Wheeler, though then out of the State but returning to it after an Eastern visit for needed recreation, was chosen Secretary. His work in this capacity for several years is that which we would specially signalize in this brief paragraph. If one will examine the reports of our State Agricultural Society from 1856 to 1860, he will be surprised with the important work done by the society during Dr. Wheeler's term as secretary. Everything was new and strange. There was a most earnest desire to know what was actually true about the California marvels in fruit and in mines. The society appointed "visiting committees," who went from place to place through the State recording the growth of tree and plant and live-stock, the methods employed in their culture, and noting, also, the development and production of the mines. The greater part of this important work was done by Secretary Wheeler, and it was said of him that he had "gone up every tree and gone down every mine in California in pursuit of information." These reports show it. They show the springs of all the greatness we have since attained in our various agricultural industries. Their practical value in extending important cultures at the time, and their historic value as showing what was actually done in those days and by whom, are both well-nigh inestimable. We have read those reports through and through, and the insight

they show into novel conditions, the recognition of factors which have since become of the greatest practical importance, and the discrimination with which the statements were made, have all given us a most sincere respect and regard for the master mind which guided their preparation.

Dr. Wheeler has done greater works since

THE ROUND VALLEY TROUBLE.—For some years past there has been trouble brewing in regard to squatters occupying land within the Round Valley Indian Reservation, and a few weeks since the U. S. authorities took active measures for their removal, and Gen. Howard, under instructions from the War Department, sent Captain Shaw with a de-

Beet Sugar.

The announcement that a grand beet-sugar enterprise is to be speedily inaugurated in this State naturally has attracted much attention from the farmers of California. It has long been known by the reports of Prof. Hilgard, supplemented by the statements of Prof.

Wiley after his visit to California, that there is a vast area of this coast suited to the production of a good sugar beet. This being the case, there is anxiety on the part of people in the different parts that the enterprise now being planned should be located in their several neighborhoods. To such it will be consolation to know that it is the plan of the projectors of the enterprise to establish perhaps as many as 20 beet sugaries contiguous to areas suited to produce good beets. It will be the function of these local sugaries to work up the beets each of its own district and the crude sugar thus obtained is to be shipped for refining to one large centrally located refinery, where the raw sugar from all parts will be put into marketable form. Each sugarie will then have its outfit for preparing the beet, extracting the juice, and vacuum pans for concentrating the juice and obtaining the raw sugar. At this point the local manufacture ceases and shipment is made to the refinery.

We are assured that this will be the plan, and that it will be in order for those who would like to grow beets to plan toward that end. We suppose it will require joint effort among the farmers in a locality so that the company can be assured that acreage enough will be sown to warrant locating a sugarie. We understand that Mr. Spreckels is desirous of meeting the farmers of other localities, as he has planned to meet the Watsonville people on Saturday of this week, and his chemist is ready to examine and report upon the fitness of any locality. We do not speak by authority in the matter, but such, we understand, is the fact. We shall be glad to have the benefits of the enterprise well distributed, by affording a market for the beets, which can be well grown in many localities, and the plan we have outlined seems to be one way to do it. Of course the field is open for capitalists, or for co-operative concerns to enter the business too, if they are inclined, and they have the assurance of Mr. Spreckels' practical belief in the business, in addition to all that has been already set forth by others. The plan now proposed seems to provide the capital for the factory and a market for the beets, and places upon the farmer only the cost of production. It is to be hoped that the arrangement will work well, and that a price will be set upon the beets which will give growers a good margin of profit.

FOREIGN CONTRACT LABOR.—It is stated that Senator Stanford and a French viticulturist, named Janssen, have entered into a contract, by the terms of which 100 skilled laborers are to be imported from France, to work upon the Senator's ranch at Vina, for \$30 per month and board.

OSGOOD CHURCH WHEELER, D. D., LL. D.

those early days which his biographers love to dwell upon, but in the industrial history of this State his fame is secure upon the results of those few years which perhaps he looked upon merely as recruiting strength for his chosen life-work. Dr. Wheeler is evidently one of those men who can only find rest in action. Fortunately, he has still many years of such life before him. Whatever may be his chief work, he may be trusted to retain his love for agriculture as a calling, and his zeal in promoting it as an industry. A token of these facts may be had in his recent contributions to our columns concerning a very rapidly advancing portion of Arizona.

tachment of troops from the Presidio to eject the trespassers by force, if necessary. Thereupon the Superior Court of Mendocino Co. enjoined the Captain from removing the sheepmen; but he, as under military orders, disregarded the injunction. The sheriff then procured a bench warrant for the arrest of Capt. Shaw for contempt of court, and a collision between the civil posse and the U. S. troops seemed imminent. The threatened conflict has, however, been happily averted by dispatches from Washington, authorizing Gen. Howard to withdraw the soldiers, pending the proposed transfer of the difficulty to the United States courts for settlement.

HORTICULTURE.

California Fruit-Growing in 1887.

The following is the report of Dr. John Strentzel of Martinez, Chairman of Fruit Committee for California, to the American Pomological Society at the biennial meeting for the year 1886-'87. The copy is furnished at our request for publication in the *RURAL PRESS*:

I beg to present a bird's-eye view of the advancement of fruit culture in California. The progress is rapid, owing to the facilities of intercourse by railroad travel spreading broadcast all desired information regarding the unique climate of the Pacific Slope, the richness of its virgin soil and the wonderfully multifarious resources, which attract the accumulations of Eastern capital to be freely employed in building up homes, embellished by all the resources of art, as resting-places for the lucky ones to enjoy life under most pleasing conditions.

With this transference of wealth, the energy of the old settlers is stimulated to substitute the varied fruit industries for the primitive routine of grain-growing. Close study is required in a careful selection of varieties most desirable for popular demand, to supply less favored regions with the most delicious fruits in Pomona's gift. We find the sunny, sheltered spots nourishing citrus fruits, unconfined to the southern part of the State, but extending along the Coast Range and the tributaries of the Sacramento and San Joaquin rivers to the northern boundary of the State, dispelling the old myth of the golden garden of the Hesperides, for our thermal gardens are found on a line of 800 miles, tendering a home to the tree clothed in living green, star-decked and crowned with gold.

Vineyards by the thousand acres now cover slopes formerly used for grazing. The raisin industry is extending with unexampled rapidity, doubling up during last year. Our wine is gaining favor and it is not questionable that sound table wines will be the potent means to reduce the use of ardent spirits and the twin habit in evil, that of tobacco. We find the olive bending under a load of fruit on saplings three to four years from planting.

The mulberry in its silk products, it is hoped will one day, in the near future, rival that of France and Italy.

The process of drying and packing figs, so well adapted to or carried on in small home-steads, is constantly improving and expanding.

Necessity, the great inciter to invention, is converting the fruit of many thousand prune trees to rival the French production.

It was feared that this year's crop of apricots, unusually abundant, would go to waste, but as the season passes we find them all utilized by exporting in the fresh state, by canning, and without enough left to supply demands for the dried fruit.

Owing to the great difficulty of drying pears, luscious Bartlett's crowded the market, and considerable quantities have been wasted; at present they are in short supply and at advancing rates.

Through efforts mainly of Mr. Hatch of Solano the production and dissemination of very choice quality of almonds is assured.

The process of common grafting now recognized as practicable with walnuts will expand nut-growing to a most lucrative industry. The Allegritti process of preserving fruit is gaining recognition, and promises to be the means of protracting the keeping of fresh fruit. By the happy blending of the interest of the grower with that of transportation companies, over-production has been measurably averted by securing daily conveyance at reduced rates. Carloads of our surplus fruit are now distributed to the Eastern markets, finding a ready sale, and the demand is increasing.

It would be idle to enumerate the quantity of work done. If those of great faith and unlimited resources have planted by the thousand acres, there are many thousands by the 10 or 20-acre plantings overtopping the resources of the millionaire and converting individual efforts with the most favorable results to humanity.

The accompanying biennial report of the California State Board of Horticulture offers statistics of reliable value and original essays upon fruit culture.

Shipping Qualities of Kelsey Plum.

EDITORS PRESS:—On page 300, Oct. 15th is one of your very interesting journal, in report of California State Horticultural Society, I notice the following under head of "Kelsey Plum":

A letter was read from H. E. Vanderman, chief of the division of Pomology, U. S. Department of Agriculture, to Prof. Hilgard, in which he spoke very highly of specimens of the Kelsey Japan plum which had been sent to him. They arrived in perfect condition, though sent in a close box by mail.

Two of these specimen plums were sent from Washington to me by Prof. Vanderman. They were received on the fifth day of this month, October. They were received by mail in close box in good condition; measured seven inches in circumference. At this writing, Oct. 23d, one of them is in perfect condition and promises to keep an indefinite time. This is certainly a wonderful keeper. The Kelsey plum has been fruited at several points in Texas. My experience with these specimens has most thorough-

ly proven its value as a shipper. The only trouble we fear in Texas is the early blooming of the Kelsey. This season it was killed in North Texas by the late frosts.

The American Horticultural Society will hold its next meeting in California, I am told. I am to attend this meeting and see the horticultural greatness of your State. J. M. HOWELL, Dallas, Texas.

[Mr. Howell is proprietor of the Dallas (Texas) Nursery and horticultural editor of the Texas Farm and Ranch. We are glad to have his letter and hope he will not fail to visit California.—EDS. PRESS.]

THE IRRIGATOR.

A Question of Water Rights.

EDITORS PRESS:—I would like your opinion, through the columns of the PRESS, of which I am a subscriber, as to what would be the probable decision of a court of justice on water rights under the following conditions:

First, the water consists of springs which rarely ever flow off my land (it being very open and porous), sinking very soon after flowing a short distance from the springs.

Second, all the land, at the time the ditch was made (about 18 years ago), was unsurveyed Government land. At the time the ditch was made one individual held and claimed by possessory title the whole tract. Soon after making the ditch he sold his possessory claim to the party which I now own, not making any reserve of water privileges in the quit-claim deed to the party buying. Soon after he sold his home place, not making any mention of said ditch or water right. This place has been sold and resold several times, but no mention has ever been made in any of the deeds concerning this ditch. In the mean time the party which I own was sold three times, my husband being the last purchaser. Nearly three years ago he (my husband) forfeited a homestead title to his piece of the original tract. During all this time the water flowed continuously through this ditch, except at such times as we used it all in irrigating our crops, which would be about two or three weeks each year.

This summer the party now owning the property of this individual made complaint to me about using all the water in irrigating a crop of potatoes which we were growing. I told him that I did not recognize, and never had recognized, that he had any right to any of the water of my place. He thereupon laid an injunction upon me, forbidding me to use over half of the water. The injunction calls the springs, which are well defined, "natural reservoirs." There are two natural water channels running through my place, and all the springs are located between them. So to convey the water away from my place, it was necessary to make some fluming in order to cross one of these channels. These channels unite very soon after leaving my place. They cannot be considered any other than wet-weather gulches, as the water only flows in them in the rainy season. None of the water from the spring flows into these gulches.

These are the facts as briefly as I can state them. I shall be thankful for your opinion, and, after the matter is settled in the court, if you think it will be of any interest to the readers of the PRESS, I will give you the result.

Oct. 18, 1887.

SUBSCRIBER.

[We understand the matter is now in the courts. We shall be glad to know the result.—EDS. PRESS.]

Irrigation in Stanislaus County.

EDITORS PRESS:—In these days of humbuggery, fulsome adulation and man-worship, it is refreshing to pick up a paper like the *RURAL PRESS*, which advocates labor and encourages the varied industries of the country. One can hardly find a paper in the United States that has not displayed headings and blazing puffs of baseball games, yacht-races, prize fights and horse-races, all in bold capitals. In my youthful days the newspapers devoted their columns to arguments in favor of material progress, of those industries that increased the value of the raw material, and increased the value of commodities and the nation's wealth. How many baseball games and yacht-races will make the nation rich? It is a maxim of political economy, that there must be more produced than consumed, or the nation will get poorer. The producer is now seldom mentioned in the daily papers, and not one out of ten knows where the great industries are located which add to the country's wealth. These signs of the times betoken no good to the nation at large.

But I began to write about one country. Well, there are two great enterprises on the tapis now: two irrigation ditches blocked out which, when completed, will make the county, the State, the nation, and the individual richer. These districts are created under the "Wright" irrigation law. The Turlock district embraces about 175,000 acres and the Modesto district over 100,000 acres, which, if irrigated, will be increased in value one hundred fold.

Though I am in favor of this enterprise, yet there are those who think the law unconstitu-

tional. They hinge their faith on several clauses in that instrument, among which are:

ART. I, SEC. 11.—"All law of a general nature shall have a uniform application."

ART. I, SEC. 14.—"Private property shall not be taken for public use" unless the money is paid up, etc.

ART. I, SEC. 16.—"No law impairing the obligation of contracts, etc., shall be passed."

ART. I, SEC. 21.—"No special privileges shall be granted, etc."

ART. I, SEC. 25.—"Subdivisions 19 and 20, in regard to exclusive privileges and exempting certain property from taxation."

Also, ART. 11, SEC. 4, in regard to uniform laws. Also, ART. 12, SECS. 4 and 8, in regard to corporations and their power.

Also, ART. 13, SEC. 1, in regard to the taxation of all property.

And, finally, in regard to the doctrine of riparian rights, claiming that the water cannot be used from a river if it deprives land-owners adjoining the river below of the water to which, by law and custom, they are entitled.

An attempt has been made to get rid of these dissatisfied parties by changing the boundaries of the district and shutting them out. But if I read the "Wright" bill correctly, there is no provision in it authorizing a change of boundary after the people have fixed that boundary by a vote. I wish there was such a provision for them. Oakdale and vicinity, which was shut out, might get a chance to be taken in again. There is much nice, level land around Oakdale, indeed, better suited for irrigation than any land in the district, as it is now formed.

Oakdale may yet be benefited, as the Modesto company is surveying a feeder to the main canal by taking water from the Stanislaus river, and the Modesto company might be induced to sell water to the people here, though it is questionable whether they can do this under the "Wright" bill. The main supply of the two companies is taken from the Tuolumne river up near La Grange. The two companies are to build a joint dam, which will furnish water for both districts, provided there is water enough in the river for that purpose.

Another legal question will arise about using the water. There are other companies who have bought the old mining ditches and flumes, and they claim the right to use the water first. There are always "thorns among the roses." The more is the pity, for this irrigation question is one of the most important issues that has arisen for many a day in our country. I hope to live yet to see this wilderness bud and blossom as the rose, and I hope to see this State and nation yet turn their attention to production, and not to the encouragement of pastimes and sports.

S. B. M'C.

Oakdale, Oct. 22, 1887.

THE STABLE.

Picking Out a Good Horse.

There is no work required of any horse, no matter how menial the duty may be, where intelligence, honesty and kindness will not be of material value, says the *Sporting Life*. Well-marked fullness of brain, half-way between the eyes and the setting of the ears, accompanied by breadth and fullness immediately back of the ears, are always connected with kindness of disposition and associated with ambition. If there be fullness in front and narrowness back of the ears, there will be a kindly disposition without ambition. If the development be the reverse of this, there will be an absence of kindly intentions with marked vicious tendencies. The ear is largely a fancy point, yet the manner in which it is set on and its motion furnish clear indications to experienced horsemen, and to other horses, of the character of the thought.

The ears have a language well understood by other animals, and when this is added to the expression of the eye, the whole story is pretty clearly told. As regards the neck, its peculiarities mainly minister to the fancy, and while the points touched upon are not necessarily keys to the breeding of the animals, the neck, to a considerable degree, is. While the neck may be said to be merely a flexible member, placed between the shoulder and the head for the purpose of carrying the latter, and enabling the horse to seek the way clearly to the right and left, and reach the ground, or the branches overhead, for food, that part of which it attaches at its base, the shoulder cuts a very important figure in the horse's value and durability, no matter what character of service he is assigned to. As is well known generally, the more upright shoulder is preferred for draught, because the force is required to be expended in a forward, horizontal direction, while the slanting shoulder throws the force of the exertion upon the lower part or shoulder point.

If a horse is selected, therefore, with a slanting shoulder, and put to drawing loads, it would be found that the horizontal effort will throw the lower portion of the collar upward against the lower portion of the neck, pressing the wind-pipe, creating distress in breathing. But for road work, speeding or for the saddle, no matter how worthy the animal may be in other respects, the upright shoulder prevents efficient service, and it matters not how attractive the horse may be in other ways, he cannot put himself into a form that is prevented by make-up, nor show a swinging gait and good reach, likening his fore-

leg to a pendulum, with this restriction in its movement, because not swinging freely forward and backward at its proper attachments.

In selecting a horse for any other purpose than draught, a very wide breast should be avoided, for in most cases a horse with this formation will paddle when he trots, a defect which should confine him to slow draught. For active service the breast should not be over medium width, and the forelegs should be reasonably close together. Between the forelegs and close up to the body the space should be so filled with muscle as to form an arch rather than to show a wide space, as in the case of a draught horse. An arm wide at its junction with the shoulder, rendered so by full development of muscles on the rear and anterior portion of the arm, should always be sought, for the opposite formation is always attended by want of precision, power and activity in the movements of the forelegs.

THE APIARY.

Controlling Fecundation of Queens.

Economic entomology is a term so much used of late in connection with killing injurious insects that the popular reader may forget that it includes the culture of beneficial insects as well as the destruction of injurious. Prof. C. V. Riley, as U. S. entomologist, therefore is giving earnest attention to the busy bee and the silkworm as well as to the pestiferous scales and other plant destroyers. The investigation into matters connected with apiary practice has been carried on under Prof. Riley's direction by N. W. McLain, and we give herewith his report on controlling the fecundation of queens, etc.:

The improvement which has been made in mechanical devices and methods of management by the scientific and practical apiarists of the United States during the past 25 years, has resulted in establishing the claims of the industry of bee-keeping to a place among the various branches of rural husbandry which are the acknowledged sources of a nation's wealth. Improvements in the art of bee-keeping and in the devices by which the art is practiced are continually being made, and the degree of advancement made in the past is an earnest of the progress awaiting development in the future.

Improvements in the devices and methods of management and importing races of bees reported to possess desirable qualities and characteristics, have chiefly absorbed the attention of American bee-keepers. It is not strange that reliance has been placed upon these resources as the means by which the best results were to be realized, rather than upon a persistent and skillful application of the laws of heredity and descent, and dependence upon the influence of intelligent selection and skillful crossing as a means for developing the highest attainable standard of excellence in the bee, the chief factor of permanent advancement.

The difficulties attending the control of the process of reproduction; of applying the laws of heredity and descent, and securing the influence of persistent, intelligent selection in breeding bees, have appeared to be almost insurmountable.

The very persistent efforts which have been made to improve the bees of the United States by yearly importations of the best races in their purity have also been attended with serious drawbacks and hindrances. These bees, bred for countless generations in the foreign habitat and under climatic conditions widely different from ours, are here submitted to conditions of domestication for which they all ill adapted. Any modification and adaptation of habits, instinct, and physiological structure which may have been secured by breeding a few succeeding generations under the altered conditions and requirements incident to domestication in the United States, have been lost with each fresh importation of ancestral stock, and the work of securing the variability and adaptability of instinct, habit, physiological structure, and functional capacity essential to domestication here, must be begun *ab initio*.

That some practical method might be discovered by which the process of reproduction could be controlled, has long been the hope of all progressive apiculturists. With the control of fecundation assured, progress in scientific apiculture would be rapid and permanent.

In obedience to your instructions, I have continued my experiments in striving to discover a practical method by which the fecundation of queen bees may be controlled. This I have endeavored to accomplish by two different methods, in both of which I have been in a degree successful. During the past summer, however, a drouth set in in May, almost with the beginning of the breeding season, which was said to be the severest and most protracted known in this locality for 25 years. No rain fell during 11 weeks, and during the four weeks next succeeding the 11 weeks without rain we had but three light showers, scarcely sufficient to lay the dust, practically resulting in an unbroken, all-consuming drouth 15 weeks in duration. Under such conditions I found it impossible to bring many of my experimental tests to a successful issue.

Having discovered last year that it was possible to introduce the drone sperm into the

spermatheca of the queen-bee during the term of orgasm, by artificial means, and that fecundation was practicable by such means, I attempted to perfect a method by which this could be done with ease and certainty. For the purpose of holding the queen-bee in position for introducing the drone sperm, I made what I call a "queen clamp," which consists of a block of wood two inches square and four inches long, in one end of which is an opening in size and shape like the upper two-thirds of a queen cell, with the small end up. This block is sawed in two in the middle, leaving half the cell-shaped opening on either half. Grasping the queen by the wings or thorax, I place her in one half of the cell-shaped openings and carefully close the other half over her. I then place a rubber band around the block and stand it on end. This leaves the queen in position, head downward, the lower half of her abdomen protruding, and confined in such a manner that she cannot receive any injury.

For the purpose of appropriating and depositing the male sperm I used a hypodermic syringe. I removed the sharp injecting needle, and in its place substituted a nozzle having an opening of sufficient size to admit a knitting-needle of medium size. Over this nozzle I slipped a small, smooth tube, drawn to a point so small that the opening in the small end is not more than half as large as that in the nozzle. After selecting the drone I wish to use, I grasp the head and thorax between the thumb and finger, and by continued pressure cause him to perform the expulsion act. I then remove the queen in which the spermatozoa are massed and squeeze the contents into a very small glass receiver, an eighth of an inch in depth and diameter. I then add a drop of glycerine diluted with warm rain-water, and take up the spermatozoa with the syringe, using the wide nozzle. I then slip the cap having a fine, smooth point over the nozzle and inject the spermatozoa into the vulva of the queen. The queen, which has been held in position by the clamp while the preparations were being made, naturally bends the abdomen downward whenever so confined. The vulva is easily opened to admit the point of the fine nozzle-cap when the abdomen is lifted up straight. Of 27 queens treated by this method the last week in May and the first week in June, six proved to be successfully fertilized. After that time, although I was persistent in my efforts to succeed, and made many and repeated trials, I met with success only occasionally.

Another method in which I succeeded in fertilizing a few queens in May, before the bees began killing the drones, was in the manner described in my report last year. I took a number of young queens from nursery cages, clipped their wings, and introduced them to queenless nuclei. When they were seven days old, orgasm being well progressed, I placed them each in turn in a queen clamp, and, holding them back downward, I picked drones from a comb taken from a populous hive, and caused them to expel the generative organs, and selecting those in which the contents appeared of the color and consistency of albumen, I placed drops of the seminal fluid upon and in the vulva of the queen, which were eagerly received. After the introduction of the drone sperm these queens were treated by the bees as fertile queens, and in one or two days assumed the appearance of fertile laying queens, and in from three to six days began to lay fecundated eggs.

The fact that I did occasionally succeed in fecundating queen bees by these methods, which proved upon trial as prolific as any queens I had which had been naturally fertilized, queens which I had hatched in an incubator and in nursery cages, whose wings I had mercilessly clipped as soon as they had crawled from the cell, and which I knew had never been upon the wing, seemed to furnish reason to hope that I would be able to discover a method that would be uniformly successful. The hope of reaching this much-desired result made me persist in the face of discouragements incident to experimental work in breeding bees during the prevalence of a protracted drouth. I am by no means discouraged by the partial success now realized. On the contrary, I am hopeful that under more favorable conditions better results may be obtained, and until other and untried resources fail, I shall not feel warranted in abandoning effort.

Observation and experiment lead me to believe that drone bees differ in degrees of procreativeness, and that the development and exercise of the procreative faculty are under the control of the worker bees.

First, there appeared to be drones of the impotent sort. If such be taken between the thumb and finger, no pressure short of crushing is sufficient to expel the sex organ. When forced to position external to the body, or if removed by a dissection, the organs are found to be nearly or quite empty, the few spermatozoa being massed in a hard lump, and but little mucus being present, and that little watery and clear and having no consistency.

Another sort of drones are those in which the mucus surrounding the spermatozoa is thick and curdy. With this sort I have not been able to fertilize a queen. The procreative principle is present in quantity, but the element in which it may be liberated and floated into the organs of the queen appears to be wanting.

A third sort of drones are those in which the sex organs are completely filled with spermatozoa and an abundant supply of albuminous fluid. It is only with this latter sort that I have been able to succeed in fecundating queens.

The facts observed seem to warrant the belief that it is the prerogative of the worker bees to determine the degree of development and dominate the function of the drones as they do the succeeding generations of workers and queens, the superior intelligence of the workers ordering the entire economy of the hive. During the first half of the severe and protracted drouth of the past season I was able to rear a few drones by resorting to the usual methods employed for stimulating drone rearing, but one-third of the entire number proved, on trial, to be of the sort which I believe to be impotent, and nearly all of the remaining two-thirds were of the second class, not more than 5 or 10 per cent of the entire number being furnished with the albuminous liquid necessary to enable the drone to voluntarily perform the expulsion act and complete the function of copulation, the filling of the spermatheca of the queen; for I am led to believe that the presence of this fluid, more than any odor or other influence from the presence of the queen during orgasm, excites in the natural frigid drones the sexual desire and assists in the execution of the expulsion act, and furnishes the element in which the spermatozoa are floated into the spermatheca, and also that the workers intelligently and purposely determine the sexual development and dominate the fitness, the desire, and capacity of the drone, as they do the physical development, the fitness, the desire and capacity of worker and queen bees for the natural performance of their individual functions; that is to say, if drones are reared during a drouth by artificially approximating the condition under which the desire for drone rearing normally arises, only a small percentage of the number will be sufficiently furnished with the food essential to complete sexual development, the counterpart of which is seen in a less degree in the rearing of worker larvae; and, further, if there is a failure of honey, or if for any reason the swarming impulse is absent and no emergency exists for the forming of a new colony, very few of the sexually mature drones are supplied with the food elements essential in producing the secretion which excites sexual desire and supplies the agency by which the spermatozoa are freed and floated into the spermatheca, the counterpart of which is seen in the refusal of the worker bees to copiously supply the queen with the rich glandular secretion essential to oviproduction whenever their instinct warns them that oviposition should cease and that further brood-rearing would only be a waste of energy, resulting in a generation of consumers and non-producers, for the queen is only a mother, and in no sense a majesty—only a machine, not a monarch. Other facts in my experience might be mentioned in support of this belief.

On October 15th Mr. Otis N. Baldwin of Clarksville, Mo., wrote me that he had met with success in practicing the method of fertilization described in my report of last year, and that he had discovered that drones were of three kinds, namely, "dwarfed, immature and ripe." As directed by your letter of instructions of November 5th, I went to Clarksville and interrogated Mr. Baldwin concerning his experience and observations, and I herewith give the substance of his statement made in reply to my questions. He said:

"I first go into my nursery and take the queens and cage them. I then go to the hive of drones and pick out as many as I think I may need, and then proceed in the manner you describe in your report of 1885. I believe the whole secret of success lies in the drones, and I am not able to tell how old the drone must be, or how the right condition is brought about, or whether it was originally intended that only a very small percentage of drones should be capable of fertilizing a queen. I have, however, discovered that there are three kinds of drones. First, the drone which, when squeezed, burst with apparently dry organs of generation. Second, drones which burst with an abundance of seminal fluid resembling a mixture made by adding bromides to a silver solution. Third, drones which bursting show a fluid resembling albumen. With the two former kinds I have not succeeded in fertilizing a single queen. With the latter I have fertilized over 200 queens the past season, with but few failures after I found out the difference in drones. I carefully grasp the thorax of the queen between the thumb and finger of the left hand, and with the right I pick up the drone which I have selected and press the thorax and abdomen of the drone until the generative organs are expelled, using as many as I need until I find one in which the color and consistency of the fluid suits me. Sometimes only a few of the right kind can be found in as many as 100. I place a few drops of the male fluid upon the vulva of the queen, which is eagerly received, using one, and only one, drone for each queen. I have fertilized queens by this method that were not a day old, and others more than 15 days old, and, after clipping their wings, introduced them to their colonies, and they began laying in from six to eight days, and were satisfactorily prolific.

"As nearly as I could tell, those fertilized early were more prolific than those treated after they were ten days old, but the right condition of the drone is very essential. It is very difficult to get drones ripe enough before the first half of May and after the first half of August, but during June and July this method may be operated with gratifying results. Queens fertilized by this method and directly introduced into a queenless colony are rarely ever molested by the bees. I clipped the wings of the first 20 or 25 queens that I succeeded in fertilizing by this method, and, finding the method worked to my satisfaction and with but few failures, I clipped no more wings."

The experience here detailed, as far as it relates to the procreativeness of drones, is an agreement with the facts within my own observation already set forth. The claim that a very large number of queens were successfully

fertilized as set forth, and that, too, with but few failures in the whole number attempted, is lacking in the element of absolute certainty and completeness of detail which would entitle it to acceptance as of any scientific value. Mr. Baldwin assured me that "there could have been no mistake about it;" but in order to effectually guard against all possibility of the test being abortive, all the queens claimed to have been artificially fecundated should have had their wings thoroughly clipped before they were liberated. But the fact that the repeated successes were realized when the young queens were clipped upon being taken from the nursery cage, never having an opportunity to bear their weight upon their wings, is an encouraging step in advance toward the solution of the most difficult problem in practical bee-keeping. Another season, with the presence of favorable conditions, will determine the practicability and value of this method.

Fertilization in Confinement.

Realizing that natural methods nearly always possess advantages over artificial methods, I determined if possible to gain control of reproduction by the fertilization of queens in confinement. That some inexpensive and practicable method might be devised by which the natural mating of queens in confinement could be secured, has very long been hoped for by all progressive apiarists. Very many attempts, in a variety of ways, some of which involved the outlay of considerable sums of money, have been made, but difficulties apparently insurmountable were encountered.

I removed the queens from six colonies which I had confined in the house for experimenting with bees and fruit—a house 10 feet by 16 feet, 8 feet high, partly covered on the sides with wire cloth, a wire-covered sash in the gable, and large screen wire-covered doors in each end. These were strong colonies, which had been confined in this house for 30 days and had learned the location of their hives, and from these the bees flew daily in great numbers, returning frequently to their hives. Into these six colonies I introduced virgin queens hatched from cells which I had placed in wire cages. In each colony the virgin queen was placed without being removed from the cage in which she was hatched. In due time they were accepted and liberated. The day these queens were five days old I liberated about ten drones near to the entrance of each of these hives. These drones were brought from hives in the apiary, and upon being liberated most of them persisted in flying against the wire-covered sides and windows in the gable, and but a few ever entered the hives. Here again there was frigidity or disability apparent among the drones. When the young queens flew from the hives seeking a mate they mingled among the drones, crawling over them and caressing them with their antennae, meeting with no response. These queens, with one exception, seemed to have no difficulty in getting the location of their respective hives.

The result of this trial was, one queen of the six was fertilized, and after she had laid eggs with regularity in two-thirds of the cells on both sides of one frame, after clipping the queen's wings, I removed this frame, with the queen and adhering bees, to a nucleus in the yard, and from the eggs laid in confinement worker bees hatched in due time, and the queen continued to lay as long as the nucleus was fed, there being nothing in the fields for the bees to gather. All the eggs laid by this queen were fecundated eggs. Being convinced that as far as the queens were concerned the difficulties in the way of success were not insurmountable, and that the main trouble was that the drones had not been furnished by the workers with the glandular secretion or the food suitable for producing the albumen-like secretion which I had been led to believe essential to produce sexual desire and to assist in the performance of the copulative act, from these same colonies I removed the remaining unmated queens, and to each I introduced another virgin queen as before.

I then went to a distant apiary and secured an unusually strong colony which was under the swarming impulse. A few queen cells were being built and a moderate supply of drones was present. This was late in the season. This colony had not cast a swarm during the year, and was the only one I could find, after considerable search and inquiry far and near, having any drones; and probably owing to the excessive drouth only an occasional one of the number examined had been prepared by the workers for the procreative function. I took this colony home and placed it in the wire-covered house at the end opposite that in which the virgin queens were located. I clipped the wings of the old queen so that she could not leave the hive, and upon being liberated the workers and drones of this hive made less effort to escape than those brought in from the apiary near by, and soon seemed reconciled to their new surroundings. The workers soon learned their location and drones were soon to be found in nearly every hive in the house. The result of this trial was that three of the six queens were fertilized, and as soon as they had each laid 500 or 600 eggs I clipped their wings and then removed them, together with their colonies, to the yard and fed them, and all the eggs laid by these queens produced worker bees. I am much encouraged by the success so far realized under conditions so unfavorable.

With the return of spring I hope to follow out your suggestions and continue the test,

using a large wire-covered inclosure for the queen; with hives so arranged on the sides that the worker bees may have unobstructed flight, while the drones and queens, being restrained by means of queen-excluding zinc placed before the outside entrance to the hive, may fly and mate within the inclosure and readily return to the hives from whence they came. If practical control of reproduction can be secured by so simple and inexpensive a method—and the facts from my experience as given above seem to warrant the conclusion that this is true—then the Rubicon of scientific apiculture is passed.

POULTRY YARD.

A Successful Method With Fowls.

EDITORS PRESS:—I have neglected to answer your request for an account of how I raised my chickens.

They are not shut up in pens, but have the run of an orchard and barnyard. That may be a great advantage above those who do not have the ground for such a run.

I use no incubator, but let the hens do the work instead. By being careful to look every day or two to see that all is well, I generally have good hatches. This can be done when hunting the eggs in the evening. If other hens will persist in laying in the setting nests, I mark the eggs with the date of the day they were set. Then I know what are setting eggs and when they will hatch.

I find the best time for hatching from December to April or May, when green feed is plenty and there is less trouble with insects.

I put the chicks and mothers in a pen for a few days or a week. Then there is not so much danger of their getting hurt by the larger ones.

The food is principally cornmeal, mixed with warm water or sour milk, sometimes a sprinkling of red pepper and salt. I feed no wheat or grain to chicks. I found it would bind up their bowels until they died, but when six weeks old it did not hurt them.

If one has it, Dutch cheese is a good relish, for both old and young. Also a plenty of green feed; alfalfa is one of the best plants for green feed.

The big fowls have shelled corn, grain and cooked potatoes, sweet or Irish; one seems as good as the other. They relish all scraps from the kitchen. On a farm, one can find plenty of small potatoes and poor fruit to cook, which makes a change in their food.

I scatter lime and ashes and sometimes sulphur in their roosting-places and about the yards where they dust themselves. Sometimes in early summer mites will trouble them, but lime and sulphur drive them out.

I put a little asafetida in their drinking water to prevent diseases spreading. The only disease among mine is what I call sorehead. It is a swelling on the head between the eyes and mouth. In a few days it bursts from the eye or mouth and runs a very thick yellow matter. Could you or some one else give a remedy?

Santa Barbara.

JENNIE HIGGINS.

[Readers will remember the statement of Miss Higgins' success with fowls which was given in the RURAL of Sept. 10, 1887.—EDS. PRESS.]

November Notes.

Chicks hatched in September and October should, during rainy weather, be confined in dry covered runs or sheds; if with hens, a number of broods may be kept in a comparatively small shed by cooping the hens. If in brooders, not more than 40 should be allowed to each brooder. Sufficient heat should be kept up to keep the brooder warm during the day as well as at night, and the sand or other material used on the floor of brooders should be cleaned or changed night and morning.

If the adult fowls have been well cared for during the molting season, and well fed, with an increased proportion of heat-producing food up to the first of November, they will be in prime condition to withstand the chill of frosty nights and rainy weather, which will penetrate to the bones of fowls that have been poorly fed before the rains come, no matter how much may be fed them during the cold weather, and many will take cold and die or be all winter getting over it. Besides, hens in prime condition may lay more or less now when eggs are highest.

Fall-hatched chicks intended for market in January and later should have unremitting care from the shell until large enough to ship. A little neglect now and then will wipe out all the profit of the enterprise. They must be kept warm, given the sunshine when there is any, and fed all they will eat (and no more) regularly as clockwork.

Air-slaked lime and carbolic acid, both valuable to the poultry-yard as disinfectants or deodorizers, make a splendid insect powder if mixed in the proportion of a teaspoonful of liquid acid to a gallon of lime. On account of its cheapness, this powder may be used quite liberally in nests in the dust bath, and on adult fowls, if necessary. It is also said to be a remedy for "gapes," by placing the chicks in a box covered with muslin, and dusting some of it through the muslin.—California Cackler.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Sacramento Pomona Grange.

EDITORS PRESS:—In looking over the record of the Sacramento County Pomona Grange, I find it started with 59 charter members, and they have since initiated 22, making 81 live members, of whom 48 are females, 33 males. They are distributed at various points in the county, as follows: Sacramento, Florin, Elk Grove, Galt, Brighton, Routers and Richland.

At the meeting in July the following report was submitted by the Grangers' Picnic Committee:

Receipts as reported in file.....\$513 25
Disbursements.....276 20

Balance on hand.....\$237 05

Also, Bro. G. C. McMullen offered the following preamble and resolution:

WHEREAS, We, the Grangers and farmers of Sacramento county, feel the need of a system of insurance, and are desirous of forming an organization whereby we can secure property at much lower rates than we are now paying, therefore be it

Resolved, That a committee of five be appointed by this Pomona Grange to formulate a plan of organization and system of insurance to be submitted to this Grange for action at our next regular meeting.

Accordingly a committee of five was appointed as follows: Thos. McConnell, Chairman; Wm. Johnston, E. Green, A. M. Plummer, D. Reese.

At the last meeting of the Pomona Grange held in Grangers' hall, Oct. 29th, the above special committee was called upon, but as the chairman had been absent East, no plan had been formulated, but some of the committee had devised an outline and at the call of the chairman some definite action will be taken, and a full report be submitted at the next meeting.

Bro. Geo. W. Hack having recently returned from the East, brought with him some papers and by-laws from Michigan; also the W. L., Dan'l Flint, had some important papers sent him from over the hill. These two were added to the committee, which is a strong one, and we look for some good plan that will operate well on this coast, and we trust be beneficial to the Order at large.

The Grange took some action in regard to collecting fruits, etc., to be sent East for the use of the National Grange, which will soon convene at Lansing. The Grange appointed the old committee on "County and State Exhibits," which will go to work and gather what they can to forward this week. The expenses will be met by the Grange.

One application of membership was received; two members took the fifth degree. The secretary was ordered to procure badges and jewels for members and officers; also to have a requisite number of copies of constitution and by-laws of said Grange printed.

The W. M. received a communication from the N. W. M. in answer to the former's inquiry as to which degree the business shall be worked in. The latter stated always in the fourth.

The subordinate Granges in the county keep up a good interest so far as heard from. Sacramento Grange will soon have a Harvest Feast and promote a class to the fourth degree. I understand a lively program is in preparation for making the day one of pleasure as well as profit.

All came back well repaid from the State Grange, having had a rich time among the young as well as the advanced. G. T. R.
Sacramento.

The City of Lansing.

Lansing, the capital of the State of Michigan, is the place chosen for the meeting of the National Grange, which begins on the 16th of the current month. The city is in Ingham county, at the junction of the Grand and Cedar rivers, 85 miles westward from Detroit, 37 miles north of Jackson and 208 miles northeastward from Chicago.

Its site was covered with forest in 1847, when it was selected for the seat of Government. In 1859 Lansing was incorporated as a city; in 1860 its population was somewhat over 3000; in 1880 it had grown to 8300, and has now close on 10,000 inhabitants. It is on the line of the Detroit, Lansing & Northern R. R., where that crosses the Chicago & Lake Huron R. R., and the Jackson & Saginaw R. R., and is the northern terminus of a branch of the Michigan Southern R. R., connecting with the main line at Jonesville.

The city contains a beautiful Statehouse, 15 churches, a State library of 40,000 volumes, two national banks, a savings bank, a high school, the State reform school, the Michigan State Agricultural college, an opera-house and manufactories of flour, lumber and bricks, barrels, artificial stone, sash, doors and blinds. One daily and four weekly newspapers are published.

THE Lincoln Grangers' hall has been replastered overhead, the sides calcimined and new carpets and furniture supplied, all which is considered a great improvement.

Victory Through Organization.

[By M. WHITEHEAD, National Lecturer.]

Another complete victory of organized farmers in the Grange has been achieved by the Patrons of Husbandry of Vermont. The Interstate Commerce Commission has decided in favor of the State Grange in its case against the Central railroad of Vermont, for its violation of the fourth section of the law in charging more for a short than a long haul. Farm products were being carried from Canada and distant points to the Boston and other Eastern markets over this road and right through the State for less freight than that charged farmers for the same service over a shorter distance. The decision is a righteous one and will be of vast benefit to the farmers and other shippers of the State. The Commission has ordered an immediate reduction of local rates to at least the through charges. The railroad cannot raise its through charges without losing that business, hence a reduction is made of about 33 per cent on local rates, or one dollar saved out of every three heretofore paid.

There is no way by which the Central Vermont can avoid complying with the order of the Commission. The reduction in the local rates that must follow will consequently be due to the State Grange, and will make a saving that will be worth a great many dollars to every farmer in the State. If in return farmers not now members of the Order do not rally to its support, it will show that they are not awake to their own interests. It is the greatest single achievement that has been accomplished by the Grange in any of our Eastern States. Other work is yet to be done. Organize, farmers.

This is one more proof of what farmers can do in a good cause if they will but organize and act together. Vermont is a small State—one of the smallest in the Union—but a small proportion of her farmers, about 2000 in all, are members of the Grange; and yet this compact, determined little band has brought the greatest corporation in the State to its knees, under the wise and just provisions of the Interstate Commerce law, secured after years of effort by the National Grange, and farmers organized under its banner in all parts of the United States.

If one small State can do so well through the Grange organization, what vast results for their good could be accomplished by the great agricultural States in other portions of our country, if farmers generally would see their interests, and unite in the Grange for mutual protection and advancement.

The Work Going On.

Brother J. D. Huffman has for several days been preparing for shipment a fine exhibit from San Joaquin county to the National Grange. We received a telephone message, Saturday afternoon, that San Jose Grange had resolved to take hold of the matter at once. When San Jose Grange puts its hands to the plow, it means lots of good work.

Bro. Cyrus Jones has returned from an Eastern journey and is working as earnestly and effectively with his Grange co-workers as ever.

Word comes from Sacramento that a splendid effort will be made by a committee of Pomona Grange. They can secure a good exhibit by themselves, no doubt.

The time is short, but from what we hear from various parts of the State, we are confident that the ball is now well rolling, and that the display at Lansing will not be wanting on the part of California Granges. A regular fruit car will be run from Sacramento. We hope to receive and publish a full list of all the articles sent.

Views of scenery and remarkable products and curiosities, which may tend to give information of our section of the Union, should be sent in the carload, or mailed in time to reach Brother Overhiser, in Lansing, by the 15th of November. Let every Grange and each Patron who can, forward something.—*Patron.*

Birthday of the Grange.

We suggest that each county, or district, having a number of subordinate Granges, unite in jointly celebrating the birthday of the Order on Saturday, the 3d of December, (the anniversary coming on Sunday this year). For instance, the Granges of Sutter and Yuba Counties might unite at Yuba City, or any other more convenient location; San Joaquin and neighboring Granges at Lodi or Stockton, and so on throughout the State. We think such Patrons as cannot attend a general meeting, should one be held in Oakland, should have arrangements made in advance for appropriately commemorating the day in their own Grange. There is no Grange in the State, we think, but that by a little painstaking on the part of a committee, could carry out a programme of exercises that would do credit to any assemblage on the memorable occasion. Let us hear from all Granges on the subject.—*Patron.*

We Have Been to the State Grange.

MESSRS. EDITORS:—Another convocation of Patrons, another roll-call of the State Grange answered, and while the ayes of most of the old stand-bys were recorded, new names were called, new Masters and new Matrons joined the circle, and from the ring of their responses these memberships will be no weakening powers in this Pacific monument that is being reared to the glory of Pomona, Ceres and Flora.

Patrons of the Atlantic seaboard, this infant colony of Grangers afar off on the Pacific shore to you send greeting, and while we gladly open to your messenger ships our barring golden gates, and greet your flying steed, the locomotive, as he finds his way around our serrated mountain heights, and count California's years in comparison with those of our older sister States, even as the months of the prattling babe are to the years of the venerable greybeard, yet we vie with you in zeal and love to our cause, though numbers must perforce fall short in the balance.

Santa Rosa opened wide her doors, gave the welcoming hand, and friends from the north, south, east and west met as many, having in view the one good of all; differences, of course, but these were soon hewed into harmony with words of argument and reason.

Perhaps the most startling variance was upon the woman suffrage question, which had its ultras both of ayes and noes. Sisters, old and young, took up the gauntlet against themselves, supplementing their words by their vote, but despite a very outspoken no the ayes were victorious, and the coming woman has the Godspeed of the California State Grange.

Life is like unto the growing grass today and to-morrow it is cut down; by this reaping holocaust of death is pierced the great Beyond, whose unfathomable shores are brightened by the severed links of many Grange homes.

One evening was given to memorial services for those who since our last pilgrimage to Marysville had gone to their long home. Hon. D. Wyatt Aiken, of South Carolina, who in the early rising of our Order, and when our whole country was in an upheaval to its very center, said to the honest tillers of the soil, "We know no south, no north, no east, no west, but one undivided country, as was the heritage of our forefathers, and of the swords of brother and brother, be ours the mission of turning them into the plow and pruning hook, and be ours the burden and pleasurable duty to make the four points of the compass vie each with the other in beauty and wealth of the soil, and meet in one common measure of fraternal thought."

These verified facts in the growth of the Order, for which this brother placed himself on record, was supplemented by words of tribute from our Past Masters, who had not only grasped his hand but profited by his earnest, consistent Grange work. Such records give rise to silent, prayerful thought, to longings that our each life labor may be as rich and fruitful in fraternal work and sympathy as was that of our revered brother Aiken.

Our own State dead were not forgotten, and the scroll of their memory was brightened by many heartfelt words. Music, sweet and low, helped deepen the spell of sadness, and the mystic wail of the "Sweet By and By" almost charmed us into forgetfulness of the narrow confines of this tearful present.

As usual Pomona, with her attendants, Ceres and Flora, commanded the homage of many brave sons and bright daughters, and when these initiates had paid court to Pomona's shrine they were led by the Santa Rosa brass band to tables filled with the fruits, flowers and nuts of our fabled land. Sister Roache as Pomona, in her own happy manner, made an earnest appeal on "equal rights," after which equal rights was exemplified by patrons and friends eating, talking and dancing till the wee, sma' hours warned drooping eyelids of the loss of beauty sleep.

Patrons, your sheaves are being gathered, your fruits are being transported across the continent, supplementing in agricultural relays the almost fabulous golden tales that were written by the pickaxe and cradle in the days of '49. In fact, our Golden Gate is always open to the denizens of every clime, and the Patron household holds her doors ajar, beckoning the farmer and his family to cast their lines in these pleasant places, to join in that mission of making two blades of grass to grow where but one grew before, and join with us in that triumphant refrain of "Labor" and its wondrous echo of rest:

"Thrice blessed, rather is the man, with whom The gracious prodigality of nature,

The balm, the bliss, the beauty, and the bloom,

The bounteous providence in every feature, Recall the good Creator to his creature, Making all earth a fane, all heaven its dome!

To his tired spirit the mild heather bells
Ring Sabbath knells;
The jubilate of the soaring lark
To chant of clerk;
For choir, the thrush and the gregarious linnet;

The sod's a cushion for his pious want;
And, consecrated by the heaven within it,
The sky-blue pool a font.

Each cloud-capped mountain is a holy altar;
An organ breathes in every grove;
And the full heart's a psalter,
Rich in deep hymns of gratitude and love!"

MRS. MARIA B. LANDER.

Martinez, Oct. 24, 1887.

TO P. OF H. AND OTHERS.

The following circular was hastily written and circulated on Saturday last. We hope all who can will aid in the important enterprise.

To Pomona and Subordinate Granges, County Boards of Trade and Kindred Organizations:

Through the California State Board of Trade the S. P. R. R. will afford free transportation for a full carload of agricultural and other products of California for exhibition at the National Grange, Patrons of Husbandry, which opens in the State Capitol buildings in Lansing, Mich., on the 16th of November.

Ex-Senator Wm. Johnston, who represented the State Grange, as Master, at the National Grange in 1886, made a small collection of California dried fruits, nuts, raisins and other products, which attracted so much attention that the National Grange resolved to invite and provide for displays of agricultural products from all the States of the Union, hereafter.

The exhibit made by California Granges last year elicited a large amount of correspondence from various parts of the U. S., from home-seekers, many of whom evidently have their eyes and hearts attracted to our Pacific side. So much encouragement having been received, W. L. Overhiser of Stockton, present Master of the State Grange, and Representative to the National Grange, has taken it upon himself to make extra efforts to have an exhibit this year which will both please and astonish the thousand or more leading and representative Grangers who will doubtless be present, as members or visitors, at the National Grange, whose ten days' sittings partake largely of a social, literary and educational character. Many of these representative farmers and their wives are correspondents of daily and local newspapers in the various agricultural sections of the Union, therefore it is believed that this is one of the best opportunities yet offered for extending thorough and practical information of the true character and worth of the soil, climate and other superior advantages of the Pacific Coast.

The exhibit will be accompanied by a thoroughly competent and reliable assistant of Worthy Master Overhiser, so that all exhibitors can rely upon their exhibits being properly and effectively displayed, explained, and in every way well cared for.

All articles should be accompanied by the name and full address of the exhibitor and producer, the name and other particulars concerning the article exhibited. A duplicate of the same memorandum should also be furnished to the California State Board of Trade, No. 12 Second St., San Francisco.

Photographs, books, pamphlets, etc., containing really desirable information, will be received and distributed in reasonable quantities.

All exhibits should be addressed to W. L. Overhiser, care of E. K. Alsip, Sacramento, in time to be received, without fail, by the morning of Nov. 6th.

Fail not to use your best efforts, immediately, to have your section well represented, as it is desirable to have California make a good exhibit, and one which represents the State as generally as possible. Make the trial anyway.

On behalf of the Patrons of Husbandry of California and the welfare of our State.

Yours truly, A. T. DEWEY,

Secretary State Grange of California.

No. 220 Market street, S. F., Oct. 20, 1887.

P. S.—Articles can be sent by mail or prepaid by express as late as Nov. 9th, addressed W. L. Overhiser, Master of California State Grange, Lansing, Michigan.

G. N. WHITAKER of Bennett valley, the Democrat says, has just received his appointment as statistical correspondent of the Department of Agriculture at Washington. Mr. Whitaker's reputation as a practical farmer and prudent business man is a guarantee sufficient in itself that the duties of the office with which he has been honored will be carefully and satisfactorily discharged.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

TREES AND BUGS.—Oakland *Enquirer*, Oct. 25: Horticultural Commissioner A. D. Pryal has been making an annual inspection of the orchards of this end of the county to see how the farmer is faring in his eternal warfare with insect pests. Mr. Pryal finds that in the orchards whose owners make a business of selling fruit, the bugs are kept pretty well in subjection, the orchardists finding it pays to wash and spray their trees. But there are numerous small orchards around Oakland in which the insects swarm. The owners of a few trees, who do not raise fruit to sell, seldom take the trouble to fight the insects, and in consequence the bugs hold high carnival. To stir these people up and make them go after the bugs is the principal part of the Commissioner's work. Codlin moths and several species of scale abound.

FRUIT SHIPMENTS.—Haywards *Journal*, Oct. 29: There were 37 carloads of fruit shipped from San Lorenzo station this season, aggregating 10,650 boxes, being an average of 450 boxes to the car. Thursday the largest carload of the season was shipped, consisting of 540 boxes. The crop of pears last year was much greater than this, but the superior size this year made it more profitable by one-third. The largest shippers were E. T. Crane, 2533 boxes; H. W. Meek, over 1300; T. Bridge, Fruitvale, 1000. J. C. Anderson has shipped over 3000 boxes since cherry season, including all varieties.

Butte.

CITRUS FAIR.—Chico *Enterprise*: The Oroville people are pushing their citrus fair with a vim, and it has been decided that holiday week—from Dec. 26th to 31st—shall be the date. A large tent is to be erected in the courthouse square, 50x100 feet, and the orange trees growing in the yard will be inclosed in the tent. This of itself will be a novel sight.

Fresno.

HEREFORD IMMIGRANTS.—Fresno *Expositor*, Oct. 26: L. Dow Scott, who arrived here with his family from Illinois last week, has just received ten head of fine thoroughbred registered Herefords from that State. Mr. Scott has been breeding fine stock in De Witt county for a number of years, but concluded to make Fresno county his home and go into the business of raising fine cattle. He had two fine cows and eight calves shipped here, and will locate them near Selma for the present. This breed furnishes good milkers and fine beef cattle.

PUTTING IN GRAIN.—An immense area of land is being sown to grain; in fact, almost the entire country from about four miles east of town to the hills, 20 west, as well as north and south.

Humboldt.

RED CLOVER.—Petaluma *Courier*, Oct. 26: T. C. Putnam of Vallejo returned last week from a visit to Humboldt county. He brought with him a bunch of red-top clover five feet in length. He saw several thousand acres of this clover growing on and near the banks of the Eel river, some of which was seven feet in height from the ground. It keeps green all the year round, and dairymen have an abundance of the best of fresh feed in fall or winter the same as in the summer. Mr. Putnam saw some Danes who own small farms in this red-top clover section who said they could easily keep a cow in good condition on an acre of such feed as he saw. The soil is a rich sediment, and, before being cleared, was chiefly covered with alder and willow trees.

Lake.

RAVAGES OF FIRE.—Gravelly Valley Cor. *Clear Lake Press*: Standing on the summit of Mt. Hull, one can see from 100,000 to 200,000 acres of as fine pine land as lies in the State; but if forest fires rage for a few weeks more as at present, this whole area will be devastated. Much of this territory has not been burned over for 10 or 15 years, and a fine growth of young pines has sprung up; in many places the second growth exceeding in quality the larger timber. Where these forest fires do not rage fiercely enough to destroy the larger trees, all this younger growth will be deadened and incalculable damage done, hastening the time when our beautiful forests will be but an expanse of worm-eaten stubs. It would be better for future generations if our Government, instead of prosecuting those who take timber from public land for necessary purposes, would spend the money in ferreting out and punishing those who wantonly set the fires that cause such widespread destruction on our mountain sides.

APPLES AND SPUDS.—Avalanche, Oct. 27: L. Sailor is ahead on potatoes at the Farmers' Exhibit, having brought in one potato that weighs 4½ pounds. Thos. Porteus has brought in seven different varieties of apples in fine condition, which are as follows: Hubbardston Nonpareil, Swaar, King of Tompkins county, Baldwin, Golden Russet and two varieties of Spitzenburgs.

Lassen.

A LAKE VANISHES.—Susanville *Mail*: The drying up of Honey lake leaves uncovered a stretch of country 12 by 25 miles, but whether it will ever become valuable for farming purposes is doubtful. At present the lake-bed is covered with alkali from the sixteenth part of an inch to four inches in depth, and a thick

growth of salt grass is springing up away out from what was once the shore. So much water from Susan river is used for irrigation that very little ever reaches the lake, and the water from Long Valley creek is all taken out. Bereft of these supplies, Honey lake will hardly be able ever to show up again—at least this is the notion entertained by settlers along its shores.

WILD HONEY.—The woods west of town are full of wild bees. A large amount of honey has been secured by the successful bee-hunters.

Los Angeles.

RAIN ON RAISINS.—A. H. Millar of Olive writes the *Orange Tribune* as follows, Oct. 24: Mr. Bennett, living just south of Nathan Fletcher's, had his Muscats out, uncovered, in all our last rain. After the storm, as it still looked like rain, he stacked up his trays, thinking it would still do some good if more rain fell. They remained stacked up some 48 hours, and then were spread out to dry, and, to his surprise, the raisins were not discolored, as were those not covered or stacked up. My theory is that the sun, if allowed to shine on the wet raisins, discolors them—the stems particularly. If this is the fact, we need not, after this, so much dread the rain.

Placer.

MOUNTAIN CROPS.—M. & I. *Advocate*: Mr. Bartlett, at Blue canyon, 4500 feet above the sea level, raised a fine crop of corn and potatoes this year. He sold 100 dozen of corn and 2500 pounds of potatoes, aside from what he used, and all from a small tract of less than two acres.

GOOD KEEPING PEARS.—Auburn *Republican*, Oct. 26: At Lander last July, J. E. Dawson gathered 40 or 50 Bartlett pears from a young tree on his ranch, and, wrapping each one carefully in paper, put them away in a bureau drawer. When picked, they were not quite ripe, yet somewhat riper than those usually shipped to market. They ripened nicely and he has them all now in perfect condition. Not one of them shows a sign of decay, and they look as if they might be kept a long time yet. The tree on which they grew has never been irrigated.

BEGINNING TO SOW.—The Lincoln ranchers began sowing grain on summer-fallow about a week ago, but the acreage will not be quite so large as last year. However, if the rains come early, so that plowing can be done in time, the total acreage of grain for 1888 will be larger than the past season.

San Bernardino.

CUCUMBERS ENOUGH.—S. B. *Index*: As an instance of what can be grown on our soil, and what a small area of ground will produce, we were shown a lot 50x50 feet, where this summer ten barrels, 52 gallons each, of cucumbers were raised. Besides this amount, Charles Lindner, the owner, has supplied the tables of the Pearl restaurant with this vegetable for the past three months.

San Luis Obispo.

REMARKABLE DISPLAY.—In speaking of the recent fair at San Luis Obispo, the *Tribune* says: A specially instructive exhibit was that made by J. V. Webster from the Huer-Huero. We noticed last week the superb growth of hops, which are pronounced as fine as can be grown in the State. Mr. Webster made a fine exhibit of forage plants also, and informed us that his sugar-cane produced 144,000 pounds to the acre, and sorghum 175,000. His fig trees show a growth of six feet this year, and peach trees of the same height from the bud in March last. He also presented fiber flax, squash, beardless barley running 75 bushels to the acre, millet, peanuts, very fine grapes, cotton, etc. Mr. Webster's work so far is largely experimental, but his efforts have met with the greatest success, and the next season he proposes making sugar and syrup and cultivating extensively hops and other products that it is demonstrated can be produced on the Huer-Huero to perfection.

Santa Barbara.

WALNUTS.—Santa Barbara *Press*, Oct. 21: Frank E. Kellogg brought in town yesterday a \$300-load of walnuts from his ranch in Goleta. The walnuts were raised on ten acres of ground, and the trees were only six years old. About 200 tons of beets were also raised on the same ground this year.

LOMPOC MUSTARD.—Record, Oct. 15: McKay bought over 2000 bags of English mustard last Saturday at two cents per pound. The biggest yield of mustard yet recorded is handed in by Mr. Tolliday, renter on the Manthie tract, where he says he thrashed and sacked 37 sacks per acre on the best portion of his land. At two cents per pound, he receives \$74 per acre, and at the price paid last year it would amount to \$106 per acre. Who will dare say such land is not cheap at \$150?

Santa Clara.

DON'T LIKE CARP.—Los Gatos *News*, Oct. 28: The lake reservoir being nearly empty, the water company is taking advantage of it to exterminate the carp, which are about as desirable to keep the water clean as a drove of hogs would be, since they burrow in the mud and keep it in a state of agitation. Further, they are worthless for the table, unless kept for awhile in clear water and fed on clean food, such as ground barley or other grain.

MOUNTAIN GRAPES.—San Jose *Times*, Oct. 21: D. C. Feely of the Santa Cruz mountains raises table grapes of magnificent size and delicious flavor. The *Times* has seen samples of his Purple Damascus, Cornichon, Flame Tokay,

Large Bloom, Emperor, Bowker and Rose of Peru. The quality and appearance of these fruits are unsurpassed, and would make an Eastern visitor believe he had struck Paradise sure. Mr. Feely has 18,000 vines in his vineyard, besides an orchard of 10 acres. He intends to send a carload of grapes to Chicago for cold storage, to see how that will work. These mountain grapes will alone make a fine advertisement for Santa Clara valley.

Santa Cruz.

GETTING OUT STUMPS.—*Courier-Item*, Oct. 29: John Uebler, a German farmer of Corralitos valley, has during the past three years grubbed up, on his little farm of 24 acres, 400 redwood stumps, most of them large and many of huge proportions. His method of getting rid of them is to dig a trench about six feet wide all around the tree, to the depth of three or four feet, by which all the main roots are cut away from the stump. The stump is then blown to pieces with giant powder and removed, the cavity refilled and leveled over. The present appearance of the land where the giant redwoods grew in former years, bears no resemblance in its well-tilled and productive fields to the primeval forest.

Shasta.

BEEF AND POTATOES.—Cottonwood *Index*, Oct. 27: Turner, Sigourney & Cox brought down a band of fine beef cattle from Goose lake, 18 carloads of which were shipped Sunday. They will ship about the same amount to-day. Otis Smith sent us seven Irish potatoes which he dug from his place near Shingletown that weighed 12 pounds, the largest nearly four pounds. They were raised without irrigation. Al Logan brought in 13 sweet potatoes Monday that weighed 30½ pounds, the largest weighing over four pounds and measured 18 inches in circumference.

Solano.

THE ISABELLA AS A RESISTANT.—Suisun *Republican*: The phylloxera has ravaged the vineyard of F. S. Jones, Green valley, to a considerable extent, and he is setting out olive trees where he has uprooted his old vines. He says that the Isabella vine has not yet been attacked by the phylloxera, and he intends to graft on that stock if it continues to withstand this scourge.

Sonoma.

GRAPE PRICES.—Santa Rosa dispatch to *Chronicle*, Oct. 27: The grape harvest in this section is about at an end. The prices paid for grapes have been very unsatisfactory to raisers. Mission grapes have sold as low as \$9 per ton. The average prices paid for all varieties will not exceed \$14 per ton. Many producers declare their intentions to crush their own grapes in the future, thereby rendering themselves independent of the combinations of wine-makers to keep prices down.

Tulare.

COUNTY JOTTINGS.—Delta, Oct. 27: Very little grain is being shipped to the bay compared with the amount that was being sent forward at this time last year. The mast is said to be very good in some portions of the foothills, but is somewhat spotted. Nevertheless a large number of hogs will be kept there during the fall and winter. Wild geese are becoming quite plenty and are frequently heard flying overhead in flocks. The lake is well populated with them.

LAND-OFFICE BUSINESS.—Delta: The figures following show the amount of business transacted at the land office in Visalia for the three months ending September 30th, and during no quarter before has the business reached such proportions: There have been received from 13 commuted homestead entries, 1878.89 acres, \$4297.23; from 31 pre-emption claims, 4823.44 acres, \$12,575.58; from 64 private entries, 20,730.95 acres, \$25,913.21; from 105 timber-land entries, 16,131.71 acres, \$40,329.19; from 48 original desert land entries, 22,636.56 acres, \$8378.20; from 1 final payment on desert land, 640 acres, \$640. The total number of acres taken up, therefore, is 64,458.87, for which the land office received the snug little sum of \$99,220.12. At that rate the large amount of land which was formerly held by the Government will soon all pass into private ownership, and when this vast amount of land is all brought under cultivation we will see a prosperous condition of affairs here the like of which was never dreamed of even by the "oldest settler."

Yolo.

PRICES AND SHIPMENTS.—Woodland *Democrat*, Oct. 27: The price of beef cattle in this county is not a paying one to the producer, being only 2½ cents on foot, and a good-sized steer will not bring over \$30 or \$35. Hogs are a little better—four cents on foot, which is more than they were worth at any time last year. The price paid for the second crop of grapes is from \$8 to \$10 per ton, which seems very low, but doubtless is as much as the wine-men can afford to pay, considering the price they receive for the wine. The shipping business at the depot has been quite lively of late in cattle, sheep, hogs, wine, brandy, grapes, fruit and other products of the soil. But little wheat has been shipped, as the holders refuse to sell at present prices. Large trains of empty cars come up the road and return heavily loaded with the products of this valley, which is a healthy business sign.

Yuba.

ALMONDS A PAYING CROP.—Marysville *Appeal*: The almond crop of the orchard owned by R. H. Hoskin has been picked and shipped

to S. F. Mr. Hoskin says: "My crop this year was exceedingly light; only 120 weighing 6840 pounds, were taken from trees, which is very light for 45 acres. The market price at present is 13 cents per pound, and the cost of picking, hauling and care is about one-fourth, which will leave me about \$675 profit for the year's work with the almonds. Of course the old land has brought in a return, but you can see that almond-growing, even with a very poor crop, is more remunerative than all the wheat that could be put in the same acreage. . . . Where new trees were near the Languedoc the latter gave a surprising yield. I only put in three hard-shell and three new paper-shell trees, and they have grown nuts very prolifically within the last year. In them I think there is more profit than in the favorite varieties."

NEVADA.

CATTLE MOVING.—Reno *Gazette*, Oct. 25: A train of 22 carloads of cattle passed through today from Winnemucca, shipped by L. Godchaux, and en route to the California ranch of M. Brandenstein & Co. for pasture. Owing to the scarcity of hay in Paradise valley, consequently upon diverting the water of the Humboldt from its natural channel by large landowners, feed is very scarce in that region; hence the large shipments to the lower country.

MULES FOR CALIFORNIA.—Gazette, Oct. 27: J. F. Shaeffer of Gridley, Cal., passed through Reno yesterday with 19 head of the choicest mule flesh that has ever been shipped from the sagebrush country. They were three-year-olds, 17 hands high, and when they have attained their growth will tip the beam at 1500 pounds. They were purchased of Geo. W. Crum of Battle Mountain, and were sired by the celebrated jack "Munyon," for which Mr. Crum paid \$1700 four years ago.

SHEEP AND WOOL.—J. B. Hollingsworth, a leading sheepman of Eureka county, has recently purchased 80 head of Spanish merino rams of W. Williams of Colusa county, Cal. Mr. Hollingsworth reports a very prosperous wool season in Eureka county, although the price paid for wool is so low. He has been offered 18 cents a pound for his clip of 45,000 pounds, but refused, as he is confident the market will be stronger ere long.

WILD RICE.—Silver State, Oct. 21: The Legislature last winter made an appropriation for the purchase of wild rice seed, with a view of sowing it in the streams and lakes of Nevada. Fish Commissioner Cary has been informed that 26 bushels of it has been shipped to his address from Port Hope, Wisconsin, where it sells at \$1.50 per bushel. The directions for sowing are as follows: Put the rice in coarse linen bags and sink it in water for four hours before sowing. It will be pretty well soaked by that time. Sow from boat; all seed that is good will sink to the bottom. Sow in water from six inches to six feet deep, soft mud bottom, low marshy places, where it is covered with water the year round if in lake; in bags if in river, out of current as much as possible. The best time to sow is just before the water freezes up and the ducks are all gone.

OREGON.

SWEET POTATOES.—Rogue River *Courier*, Oct. 28: The sweet potato is a very desirable table vegetable, and one that can be grown profitably with a little care in starting. E. Dimick had a very good crop this year. His plan is to start the tubers in some kind of hot-bed and then transplant to the garden. All that is then required is a little cultivation, keeping the ground mellow, etc. Our thanks are due Mr. Dimick for a nice basket of sweet potatoes.

APPELATEG VEGETABLES.—This week Mr. A. J. Williams of Bammers Creek brought us a cornstalk over 12 feet high. The ear was 8 feet from the ground and about a foot long, well developed and with a particularly long tooth. The variety was not mentioned. Mr. G. A. Bunch, also of Applegate, brought us sugar beets weighing 8 and 10 pounds, and Mr. O. Sargeant, from the same neighborhood, a mangel wurtzel weighing 13 pounds.

WASHINGTON TERRITORY.

HOP INTERESTS.—Assoc. Press dispatch from Tacoma, Oct. 22: There have been shipped to date from this point on account of Puyallup valley growers only 1222 bales of hops, the smaller portion of which is consigned to parties in London, England. An Eastern order for a carload of choice hops, on immediate delivery, was filled last week at the rate of 14½ cents per pound; while some smaller lots have been closed out to local buyers at 13 cents. Many prominent growers have been agitating the formation of a hop-growers' union. The opinion prevails that a combination exists with dealers and brewers to beat the market until the growers are forced to sell. No evidence, however, has been obtained to sustain this view, excepting the general concurrence in the belief that the world's markets are short. Ezra Meeker, the largest individual grower in Washington Territory, who claims to be posted by private advices from England, says prices are sure to go up, and has advised growers to hold on.

O. H. SANFORD, whose term had expired, has been reappointed Horticultural Commissioner by the San Diego supervisors.

The Way It Is Said.

The sultan awoke with a stifled scream; His nerves were shocked by a fearful dream. His wise men assembled at break of day, And stood by the throne in solemn array. And when the terrible dream was told, Each felt a shudder, his blood ran cold; And all stood silent, in fear and dread, And wondering what was best to be said.

At length an old soothsayer, wrinkled and gray, Cried: "Pardon, my lord, what I have to say. 'Tis an omen of sorrow sent from on high; Thou shalt see all thy kindred die." Wroth was the sultan; he gnashed his teeth, And his very words seemed to hiss and seethe As he ordered his wise men bound with chains, And gave him a hundred stripes for his pains.

The wise men shook as the sultan's eye Swept round to see who next should try. But one of them, stepping before the throne, Exclaimed in a loud and joyous tone: "Exult, O head of a happy state; Rejoice, O heir of a glorious fate! For this is the favor thou shalt win, O sultan, to outlive thy kin."

Pleased was the sultan, and called a slave, And a hundred crowns to the wise man gave. But the courtiers, they nod with grave, shy winks, And each one whispers what each one thinks. "Well can the sultan reward and blame; Didn't both the wise men foretell the same?" Quoth the crafty old vizier, shaking his head, "So much may depend on the way it is said."

—New Orleans Picayune.

In a Pullman Sleeper.

[Written for the RURAL PRESS by FANNIE I. SHERRICK.]

It was a gay party that boarded the night train at St. Louis, bound for the long journey overland to San Francisco, and a large party, too, for beside the bridal couple, May and Harry, who were in that ecstatic state of bliss which ignores the presence of third parties, there was Emma, the bride's pretty sister, who had been first bridesmaid at the four-o'clock church wedding, and Susie and Bella, Mary's cousins, who had also been bridesmaids, and their mother, Aunt Katherine, who made a charming background for her lovely twin daughters. Then there was Will Tracy, who had been first groomsmen, and who, society whispered, was devotedly attached to the bride's dark-eyed sister, and his friend Arnold Fleming, who went to join his father in the mercantile business in Los Angeles.

At Reno they were to meet Uncle John, the good angel of the family, long interested in the mines of Nevada. He was the traditional wealthy bachelor uncle, always helping the family matters over financial difficulties, giving the girls sweet surprises in the shape of lovely trinkets gathered in his travels, and dropping in unawares upon the family banquets with his pockets stuffed full of good things for the babies. He had none of the traditional crustiness of the typical old bachelor, either, and his nieces adored him, wondering that no good woman had appropriated this paragon, yet rejoicing thereat exceedingly.

A right merry party they were, just fitted to make one another happy during that six-days' journey overland.

Not a thing had been left undone to assure the bride's happiness. The traditional old shoe had been thrown after the departing carriage, the bride had worn her mother's wedding veil, and no rain had fallen upon her wedding day. What more could a happy bride demand?

And aside from all her supreme happiness and these favorable auguries, May Harmon felt all the satisfaction that a society girl feels in having had a successful wedding chronicled by the newspapers as the grandest event of the season. What more ecstatic bliss for a mortal maid than eight bridesmaids, all dressed in pink satin, and eight flower-girls strewing roses in her pathway, to say nothing of her own creamy satin gown embroidered with seed pearls, and a train longer than herself? What triumph to walk down the long church aisle, the cynosure of all eyes and the envy of her dear 500 friends, and to lead the bridal cortege out of the church to the triumphant strains of Mendelssohn's sublime wedding march. And then to be described in the evening papers as "a fairy-like creature with lovely brown eyes fringed with long lashes, teeth like milk-white pearls, and a swan-like throat;" to be acknowledged as the loveliest bride of the year, and to have half-a-dozen former beaux sending their broken hearts in the shape of the costliest wedding presents.

No wonder her cup of vanity as well as happiness was full to overflowing; and yet May was at heart a sensible, sweet-dispositioned girl who would probably make the most loving and devoted of wives. Her vanity was due to a foolish mother's training and the flattery of society rather than to any innate love of display. She had been worshiped from her cradle, and,

as her mother said when she entered the carriage to be driven to the church, "the loveliest girl that ever breathed."

And she was not the only one who was happy, for there were several romances budding about her, and two people at least who looked forward to their long journey overland and their visit to Yosemite and the other far-famed wonders of California with joyful anticipation.

It is astonishing how quickly one begins to feel at home in a sleeping-car, and how soon passengers find their congenial fellow-travelers. After a few days the overlanders find themselves united much as one jolly family party. The parcels, valises and satchels all seem to fall naturally into place, the colored porter assumes a benign aspect much as the head of the family, showing his white teeth whenever there is the remotest possibility of falling heir to fugitive quarters, and the ladies lounge and gossip and read much as they do at home.

There was one exception to this general friendliness, however, in this instance—a tall, pale woman attired in deep mourning, who occupied a berth at the far end of the sleeper. She seemed engrossed in her books and thoughts and oblivious to those around her. Her face sometimes wore an indescribable look of joy and sorrow mingled, though her habitual expression was a sad one. It was as though a lifelong sorrow had been crowned with a sudden joy.

"I am sure she has a romance," Emma said one morning, as she lounged on the pillow the porter had just taken out for her, with the curtains pulled down to exclude the glaring sunlight. Emma had a decided penchant for finding out people's romances and she had been speculating on this fellow-traveler's history ever since they had left St. Louis. She had noticed her then, sitting with her elbow on the window-sill, her dark eyes looking a little sadly upon the crowd thronging the Union depot. She seemed quite lonely then and preoccupied.

"Don't be foolish, Em," said May, who was not possessed of her sister's curious fascination for other people's romances. "She may be the most commonplace individual in the world."

"No!" Emma shook her pretty head until her solitary earrings flashed all the colors of the rainbow. "She is a woman with a history. Such lovely creatures, with figures like goddesses and magnificent dark eyes, do not go through this world without leaving their impress upon the hearts of men, and I am certain hers is a strange story."

May absolutely laughed. "You should have been a *bas bleu* and written stories for the periodicals," she said with the most exasperating unconcern. She was too much wrapped up in her own happiness to be looking for broken hearts and unwritten tragedies by the wayside. "Really, if it were not so absurd," she continued, "I would believe you capable of conjuring up romances about Uncle John next."

"He may be bringing you home an aunt from the Fiji islands next," retorted Emma, much to the amusement of Susie and Bella, who were as eager for romance as herself.

"What did she say to you last night?" demanded Bella, with eager eyes.

"Well," said Emma, who enjoyed such an enthusiastic audience, "our conversation was mainly of books and not of people. She is very cultured and speaks German and Spanish fluently. I was afraid to air my smattering of language in her presence. She read to me a little from the French of Lamartine, and her accent was superb."

"Perhaps she's a teacher," suggested Bella.

"No," Emma scorned the idea.

"Or maybe a lady's companion," chirped Susie; but Emma squelched the idea without ceremony.

"You will be making her a book agent next," she said with indignation. "I am sure that she is well-born and that her history is tragic. Doubtless she has had an unhappy marriage and a separation."

"Nonsense!" interrupted Aunt Katherine, who had been dozing over her favorite poems. "You are three foolish children who ought to be playing with your dolls instead of talking about matrimony and imagining vain romances about people you never met before."

So the subject was dropped for a time.

When they left Ogden, all were enthusiastic in their praises of Salt Lake as the road wound around it. The sun was just setting. It was a glorious sunset, the tall, misty peaks looming up across the blue waters tinged with the blood-red colors of the fading sun.

The lake is so mysterious and beautiful, no wonder it appeals to the imagination of all travelers. Silent and motionless it lies with its shadowed walls. No waves disturb its azure swell, no ships sail upon its bosom. What human hand can lift the dusky veil that hides the past and reveal its history? In ages past it filled the land, yet no man can tell us how it rose and fell, nor how it swept backward at some stern command. In sullen pride it sleeps guarded by the purple ranges that fade away at even-tide into the dusky twilight.

In a brief time our little band of travelers sat at the windows enjoying the quiet glory of the scene, but soon the dusk hemmed them in, shutting out the misty peaks, the shadowy shore and the great plains stretching out before them, and they left the darkness of the night to enjoy the genial brightness and luxury of their fast-moving home.

The lamps were lit and there was a glitter of reflected lights and a richness of coloring that was quite pleasing to the tired travelers. There

are few prettier sights than a palace sleeping-car at dusk, and surely none more comforting to those who travel overland. Whirling through the darkness, shut in from the outer world by a frail mechanism of steel, wood, glass and iron, it gives one a sense of nearness and companionship with his fellow-travelers that is as delightful as it is comforting.

Far ahead is the great iron monster puffing and snorting and flinging his scorn to the rain and the winds as they meet him. Away he flies through the country, past lonely farm-houses, through the valleys and over the mountains, dragging his precious freight with him. He is throbbing with life, yet dull to the lives about him. Little he knows of the aching hearts, the romances and the sorrows, the loves and the follies he carries with him! His mission is a glorious one, to speed through the land on lightning wings, freighted with the messages of joy and woe, to brave the winds and defy the storms, to conquer the stern old mountains and join with his swift-winged power the lands of the East and West. He knows not sorrow, he knows not woe, yet the night-breezes whisper strange tales as he plunges through the darkness and he bears with him ever the burden of humanity, the immortal souls who find a thought for him even in their supreme joys and their darkest despair.

But one would have thought there was never a care in the wide world had he gazed into the interior of that palace car as the train swept through the darkness. The dazzling mirrors reflected bright faces, and above the roar of iron wheels rose the melody of fresh young voices and the plaintive music of Emma's guitar.

Then Tom, the colored porter, brought his banjo and sang some of those sweet songs from the South which never fail to touch the heart. All his African soul seemed to vibrate in those tender melodies.

At the sounds of the "Swanee River" the pale lady came silently and joined the circle. Her face wore the look of one who hears again long-forgotten melodies—Emma fancied there were tears in the dark, dreamy eyes. She put forth her hand and drew her near. She longed to love this woman, though she could scarcely tell why.

Looking upon her tall, slender figure, her lovely features clear cut as a cameo, and her dark eyes with their half-veiled passionate fire, one could not wonder that Emma had said "She's a woman with a history."

"I am sure she is a Southerner," Emma said an hour later when Tom was making up the berths and she and Bella were in the stuffy little dressing-room putting up their bangs in curl-papers, "for she seemed so moved by those Southern songs."

"Yes," said Bella, sleepily, brushing out her luxuriant Langtry bangs before the mirror. "She has lovely eyes and such a figure. She always reminds me of those ancient Greek goddesses."

Emma laughed. "You dear little stupid," said she, with her mouth full of hairpins, "did you ever hear of a Greek goddess in mourning?"

"Well, no," reflected Bella, contemplating her cousin thoughtfully. "I don't suppose Madame Niobe or Miss Venus traveled around the country with half a dozen Saratogas as my cousin Em does; yet, if history tells the truth, some of these divinities might well have worn mourning for their sins."

"How logical the little puss is growing," laughed Emma, kissing her good-night, and retiring to her berth just in time to escape a lecture from Aunt Katherine, who did not approve of curl-paper matinees and could never see what girls could find to talk about until midnight.

The next day, after a long and dusty ride over the alkali plains, they arrived in Reno. The girls could scarcely restrain their impatience to see their uncle, and he did not disappoint them, for scarcely had the train halted at the depot before he was on board. The girls nearly smothered him with caresses, but his arms and heart seemed large enough to hold them all.

When they set him free once more, he turned aside from them all and walked down the aisle to where the strange lady sat drinking in the scene with eager eyes. To their utter astonishment, she flung her arms around his neck, and he held her in a long, tender embrace. Dumbfounded they beheld the meeting.

"Well!" cried Emma, when she had recovered her breath, "has Uncle John made a mistake, or does he intend to share his affections with the whole trainload?"

But that gentleman came very calmly to the front. "Allow me to introduce you to my future wife," he said, coolly.

"Wife!" There was a surprised chorus of feminine voices.

"Yes; a minister waits at my residence, and a wedding supper for you all."

Aunt Katherine and the twins could only gasp for breath, while Emma and May looked at one another, laughing and crying in one breath. It was the sensation of a lifetime.

Uncle John rather enjoyed their emotional surprise for a moment; then he said, smiling:

"My bride will give you our romance at our home. Tell the porter to bring your traps to the carriages as quickly as possible."

The lady in black was nearly overwhelmed with affectionate greetings for a few moments, which she seemed to welcome. She was quite as surprised as they to know of the new relationship, for she had never dreamed that the "Uncle John" so frequently spoken of was the

man who had won her supreme love. Emma could scarcely believe it was not a dream, it was all so delightfully surprising and romantic. She felt almost ready to write a novel. She had been longing to get into somebody's romance; in fact, had been making a desperate attempt to conjure up one between Susie and Arnold Fleming; but he was so dreadfully prosaic and weighed two hundred. It was discouraging, and Susie was such a babyish sort of girl! She cared more for chocolate caramels than for nice young men with rich papas in Southern California.

In the brilliantly illuminated parlors of Uncle John's handsome home, his sister and nieces learned for the first time the romance of his life. It was the same old story of love eternal as the hills, yet which will always be as beautiful as they, for the springtime of every heart brings renewed verdure.

She had been the daughter of a wealthy Southern planter. At the close of the war they had removed to the North. They had resided in one of the lake cities, and here, when not much more than a mere child, she had met John Marsden. An attachment sprang up between them which proved lasting. But they were both young and poor.

"Make your fortune," had been her father's answer to the young applicant for his daughter's hand, "and you may have her." Ardent and earnest, the young lover had set out for the far West. Before 30 years of age he was a rich man. But fate is sometimes cruel. In the meantime she had been forced into an unwelcome marriage by her father, who was ambitious for his daughter's future.

Her husband was a senator, and she moved in the highest circles of Washington society, but it was always with an aching heart. Day and night her soul longed for that absent lover who had been wronged so cruelly. A faithful wife she had been, yet a desolate, unhappy woman.

Her husband had been dead nearly two years ere John Marsden learned of her widowhood. When he did, he had written in his eagerness a second offer of marriage. She had accepted his love and acceded to his wish to be united without delay. Neither had expected such happiness as had come to them, and it was in the hush of a great joy that they stood united at last in one home. It was as if a deathless love had conquered fate.

"I know I shall not sleep a wink to-night," said Aunt Katherine later in the evening. "My nerves have been completely shattered. I don't see why folks can't be married rationally and not shock their relatives into a nervous fever." But in spite of her groanings over Uncle John's lunacy, as she termed it, there was no one who rejoiced more sincerely in his happiness than she.

Two weeks later they were all in the Yosemite Valley enjoying that wonderland of nature.

"Cousin Em," interrogated Bella, swinging lazily in a hammock under a giant oak one dreamy afternoon, "what do you think happened this morning?"

"Couldn't guess," answered Emma, laconically, looking up from the ferns she was ascertaining. "After the events of the past two weeks, my brains are not equal to the emergency."

"Arnold Fleming proposed to Susie and me jointly. He says he don't know which one he likes best, but we can draw straws and settle the matter between us."

Emma laughed. "And your answer?"

"I told him if he would reduce himself 50 pounds we would consider the matter."

Emma buried her face in the velvety grass and almost shouted. How very comical this absurd little Bella was.

"Good!" she cried, wishing that every one could be as happy as she was; for had not her blonde lover whispered something that was very, very sweet in the moonlight the night before? She would always remember it with the music of the white-foamed falls and the harmony of the tall pines that swept through the narrow, granite-walled valley.

She whispered a little of her happiness to Bella as the sun went down behind the South Dome, leaving a crimson trail upon the far white peaks.

"I will have a 4-o'clock wedding," she said grandly, "and you and Susie shall be first bridesmaids. And if you are both madly in love with Mr. Fleming," she said naively, "we can leave you in Salt Lake City on our return."

Bella smiled with all the arrogance of one who had never met her fate. She pretended to scorn all lovers. Yet she went to bed that night dreaming of orange-blossoms and a romance begun in a palace sleeping-car.

CIGARETTE SMOKING.—The Chicago Mail, in speaking of this vice so prevalent in that city, warns parents in this wise: If your sons smoked tobacco the result would be bad enough, stunting to their growth, enervating to their nerves, and blinding to their minds, but they do worse than that. They inhale the poisonous odors of chemically prepared paper, opium, and the very poorest quality of tobacco. The effects of the prevalence of this vice among growing children will not be at once perceptible. There is just stimulant enough in the cigarette to create a demand for something stronger, and the effects upon the nervous system are just powerful enough to make that demand a confirmed appetite before they are very far advanced in years. The time will come when the cigarette will not satisfy them. Then it will either be whisky or morphine.

Hygiene and Moral Courage.

In view of the discussion, at a recent Teachers' Institute, of physiology and hygiene, morals and manners, "Y. M." sends the Martinez *Item* extracts from the amended School Law of the State, with observations as follows:

CHAP. CXXIII, Sec. 1665.—Instruction must be given in the following branches, in the several grades in which each may be required, viz., reading, writing, orthography, arithmetic, geography, grammar, history of the United States, elements of physiology, and hygiene, with special instructions as to the nature of alcoholic drinks and narcotics, and their effects upon the human system, vocal music, elements of book-keeping and industrial drawing, and practical entomology.

SEC. 1667.—Instruction must be given in all grades of schools, and in all classes, during the entire school course, in manners and morals, and upon the nature of alcoholic drinks and narcotics and their effects upon the human system.

We all know that a teacher who properly governs his or her school has more psychological power over the children than the parents of the children themselves.

It is a sad fact that many parents are lacking in a knowledge of moral precepts, as well as the courage to execute them.

Nearly all parents who do set a good example before their children are willing and anxious that their children should be taught the truth with reference to health of mind and body.

Moral courage is necessary to the execution of any known precept.

Many children have inherited weak wills—the result of their parents having no control over their appetites and passions.

Hence, teachers having strong psychological powers over children with weak wills can, by constant daily efforts, instill into the minds of the children not only knowledge, but moral courage.

The school law is just as explicit in the latter obligation as in the former.

Parents are toiling early and late to give their children an education. The State aids the poor to educate their children. The schoolteachers are the co-laborers for this self-same end.

The children of to-day are to be the citizens of to-morrow, the voters and law-makers.

Parents are not raising children for themselves alone, but for the State.

The State has a right to demand a return for the money she expends upon the public schools.

Is the principal object of an education simply to pass a creditable examination by the mere use of memory, or shall we see the boys and girls of to-day become honest, thrifty and thoughtful men and women, using their knowledge of mathematics, science and art for practical, every-day benefit?

Without strength of character, a school education is often an aid to evil.

Let all unite to put down evil in every form, and to forward the right use to knowledge; aiming to develop in the growing generation stronger and healthier bodies and better balanced minds than those of the present parentage, or the next century will be a rapid decline into a ruin of the most glorious government ever established upon earth.

HOW TO CHOOSE SILK.—A writer in the *Hartford Courant*, speaking of the various kinds of black silk, gives the following directions for detecting the spurious from the genuine article: Take ten fibers of the filling in any silk, and if on breaking they show a feathery, dry and lack-luster condition, discoloring the fingers in handling, you may at once be sure of the presence of dye and artificial weighting. Or take a small portion of the fibers between the thumb and forefinger, and very gently roll them over and over, and you will soon detect the gum, mineral, soap and other ingredients of the one, and the absence of them in the other. A simple but effective test of purity is to burn a small quantity of the fibers; pure silk will instantly crisp, leaving only a pure charcoal; heavily dyed silk will smolder, leaving a yellow, greasy ash. If, on the contrary, you cannot break the ten strands, and they are of a natural luster and brilliancy, and fail to discolor the fingers at the point of contact, you may well be assured that you have a pure silk that is honest in its make and durable in its wear. Good silk must be soft and heavy, but it must never be gummy or stiff. Ladies prefer a gros grain because it is fashionable; but they will have it light, though "full in the hand." They do not look so much at the grain as at the gloss they pull out of it. If this process of investigation is not allowed, they pinch the specimen on the cross, then pull it in a contrary direction. If the crease looks like a fold in paper, they reject that piece; but if it smooths out and disappears they are secure. They also imperceptibly touch the sample with the tip of the tongue, for the presence of iron used in dyes is thus detected. As regards the color of black, there are very unreliable green-blacks and dun-blacks. A black, singularly enough, and without the slightest desire to appear ridiculous, should be blue. The raven's wing has a blue haze over it. No one not in the business can know how difficult it is to get a glossy blue-black. A dead black is not such a feat. Cheap qualities of silk would not reward the manufacturer for his time, therefore a brown or green-black are of finest fiber. There is not a more useful investment to be made than money expended for a really good black silk.

YOUNG FOLKS' COLUMN.

Dora.

A Story for Girls.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

"Dora! Do—"

"Well, what is it, Belle?" said Dora, suddenly appearing in the doorway. "Don't rouse the neighborhood. One would think you were trying to sing a scale and didn't know how."

"Oh, you dear, snappish old thing!" I laughed; "if you live long enough you will be exactly like your Aunt Johanna."

"Belle," said Dora, a change creeping over her face like a cloud, chasing the mischievous light from her eyes and the quizzical pucker from her pretty brow—for Dora was pretty—"do you really think I shall ever be like Aunt Johanna? Sometimes I am afraid of it myself.—when I feel particularly hateful."

"You are never really hateful, Do. You are the oddest, brightest, dearest girl I know, and I love you. Can't you go over to the pinery with me this afternoon?"

"But there are all those little cotton trousers to be made," she answered ruefully, "and if Aunt Johanna should return to find I have taken a holiday without permission, she would say, 'You have no sense of duty, miss.'"

"O Do, don't make such a face! Come along. We will have just a little run, and a little breath of air and a little chat. You can sew twice as fast when you come back, and make up for lost time. How dreadful it is that you must be always stitching away on those horrid old things!"

"Well," said Dora, shading her brown eyes with her hand, and looking longingly across the meadow to the green fringe of woodland beyond, "we won't stay long, and I'll tell her of it; that will clear my conscience. I have been sewing so steadily all the afternoon," she continued, as if to herself, in self-defense, "I'll go, and if she scolds me, it will only add one to the sum of my experience. One is a small matter, comparatively," with a queer little laugh.

So we plunged, I, the tempter, and Dora, the sinner, into the heart of the warm, still afternoon.

Dora was an orphan. Her mother had died during her infancy, and when she was 11 years old her father married again. He was an artist—a grave, absent-minded man, very gifted, but simple and childlike concerning worldly things. He was always poor, and the thrifty little Dora had early learned to manage for papa and to depend upon herself. They had been very happy together, the artist and his small housekeeper, until Mr. Dartmouth, concluded that he wanted a second wife.

Mrs. Blanden was a widow with two daughters and some money. She was rather handsome, and could be pleasing when she tried to conceal the undercurrent of vulgarity which was natural to her. She thought it would be very nice to marry a gentleman of Mr. Dartmouth's genius. It would be more difficult to explain his preference for her. Perhaps he believed that, having fatherless daughters, she would be kind to his motherless little girl. Some said her money attracted him, but this was a calumny. He was much too large-hearted and innocent to have been influenced by mercenary motives. They were married, and Dora's troubles began. He did not live long, and his daughter, like a modern Cinderella, was left to the mercy of her step-mother and sisters. I do not mean that she had to scrub and cook and clean, but when things went wrong it was always "Dora." Dora was in everybody's way, and the quondam Mrs. B. complained that it was a hard matter that she should have the support of a girl who was "nothing on earth to her!"

Dora did not sit down in the ashes humbly waiting for something better. She fretted under a sense of injustice and grew sullen and rebellious. Her step-mother finally discovered that the "wretched, naughty child" should be sent to her grand-aunt Johanna, who, according to the good lady's opinion, "should be made to look after her own flesh and blood." Now Aunt Johanna was not a fairy godmother. She had not heard of Dora until her nephew's widow wrote asking her to take the girl.

"I am glad," thought Dora. "I shall have some one of my own to care for." But when the grim old lady's answer came declaring in effect that she would accept the charge, not because she wanted to, but "from a sense of duty," Dora cried a little and felt more lonely than ever. Her aunt was not fond of her from the first; indeed she was fond of nothing in this world unless it were her cat. Her heart seemed closed to all gentle influence and tender feeling. Yet the stern old lady had her own little romance buried somewhere in the depths of youthful memories. She had loved Dora's grandfather and had never been able to forgive her sister for having married him. Their only child, the artist, she had never seen, but had been for years leading a secluded life in C—, our pretty country town, where it was that Dora came to her.

With all her hardness, Aunt Johanna had her good qualities. She was thoroughly honorable. She tried to be strictly just, frequently sacrificing herself, and more frequently poor Dora, to her "sense of duty." In some respects she was very charitable—that is, she gave liberally to the needy, and spent most of

her time in making up various garments for them which her "society" assisted in distributing. Though she was not beloved in her little world, she was at least very generally respected. Her niece had been with her now for nearly four years. They had been very busy and not altogether unhappy years for Dora. In the morning she had her painting, for she had inherited much of her father's talent, and while Aunt Johanna depreciated it as a useless gift, she let her have lessons because, as she would say contemptuously, "It's the only thing you're good for." The mornings were well enough, but the afternoons—oh! the long, summer afternoons!—so monotonous indoors with those interminable garments forever on hand, so beautiful over there in the pinery where there were wonderful mosses, and buds, and a brook that sang too! How pleasant to spend an hour there sometimes, where Aunt Johanna's sense of duty would be almost propitiated, and Industry would be rewarded with a taste of freedom. Poor little Industry! She had very few such rewards.

When Dora and I returned from the "pinery" on this particular occasion, it was later than we had imagined. Dora knew she had not done just the right thing in leaving her work, and was prepared for awful consequences, especially as Aunt Johanna had reached home before her, and would be therefore the more incensed to have found the garments scattered about the sitting-room in a state of maddening confusion.

The glass door which opened on the veranda was ajar, and as we passed we could see her sitting very white and still in her favorite arm-chair, her pet, the yellow cat, stretched out near her in a patch of sunlight that streamed in through the western window.

I stood outside on the steps watching and listening for the storm I felt sure would follow, but Dora walked quietly in with a calm courage which surprised me.

"O Aunt Johanna!" she began, "I know you will be angry, but I was so tired of—" here she paused, for there was that in the old lady's troubled countenance which showed that something more serious than Dora's delinquencies was affecting her.

"Sit down, girl," she said, in her stiffest manner. "You may as well know the worst. The firm in which most of my money was invested has failed. I shan't have a dollar. The roof must be sold over our heads. I don't suppose it will hurt you much," she added, almost with a sneer. "You can go back to your step-mother, doubtless. For my part, I shall enter a charitable institution. I can hope for nothing better at my time of life, and"—with a sudden break in her voice—"I am quite alone."

She did not ask for sympathy; evidently she did not expect it. She told her story as if it were a lesson she had been schooled to repeat. Only the slight tremor in her tones as she concluded betrayed that she suffered. As she said, she felt she was in her poverty what she had chosen to remain in her wealth—alone, but with this difference, her self-sufficiency was failing her.

"O Aunt Johanna!" cried Dora, "you are not alone. You have me. O Aunt Johanna! I have always wanted your affection. When I am 18, you know," kneeling by the old lady and clasping the wrinkled hand in her own smooth, young fingers, "there will be a small sum coming to me from my mother's brother. You shall have it all, dear, and I can teach drawing, and—and take in sewing if necessary," with her little laugh. "I am so glad you taught me to sew! Dear, dear auntie, how good you have been to me in all these years, and I have so tried your patience."

"Dora," said honest Aunt Johanna, with a sob in her throat, "I did it from a sense of duty."

"But now, dear," asked Dora, timidly, "we shall love each other, shan't we?"

Aunt Johanna made no direct reply to this question. She put her hands on Dora's shoulders and looked straight into the brave, dark eyes for a moment, then she said in a low voice: "I believe you are like your grandfather, my dear. I never saw before that you were so like your grandfather." The scales had fallen from her eyes in regard to many things.

Dear, unselfish, noble-minded Dora! She was the staff of the old lady's age. All of her little plans were successfully matured, for "God helps those that help themselves," and so do kind hearts and willing hands.

They went to live in a cottage where there were plenty of flowers and sunshine, and they were much happier than they had been in the larger house. Aunt Johanna is gradually softening under the influence of Dora's affection, and if she is sometimes her old, querulous self, Dora is ever patient, "because," she says, "I know she loves me."

COFFEE acts upon the brain as a stimulant, inciting it to increased activity and producing sleeplessness; hence it is of great value as an antidote to narcotic poisons. It is also supposed to prevent too rapid waste in the tissues of the body, and in that way enables it to support life on less food. These effects are due to the volatile oil and also to a peculiar crystallizable nitrogenous principle, termed caffeine. The leaves of the plant likewise contain the same principle, and the inhabitants of the Island of Sumatra prefer an infusion of the leaves to that of the berries. Its essential qualities are also greatly changed, the heat causing the development of the volatile oil and peculiar acid which gives aroma and flavor.

DOMESTIC ECONOMY.

APPLE DUMPLING.—Three teacupfuls flour, two heaping teaspoonfuls of baking powder, one tablespoonful of butter mixed well through flour, and one teaspoonful salt. Mix with sweet milk to a dough stiff enough to roll out upon the molding-board. Roll into a sheet half an inch thick, spread with chopped apples. Roll dough up as you would roll rolled jelly cake. Pinch ends well together, so juice cannot escape. Place in well-buttered steamer and steam one and a half hours. Serve with cream or milk and sugar, or hard sauce.

LAYER CAKE.—Two cups sugar, one-half cup butter, three-fourths cup milk, three cups flour, four teaspoonfuls baking powder, whites of eight eggs beaten to a stiff froth, and put in last little at a time. Jelly for above: One-half pint milk, place vessel holding milk into boiling water. Beat one egg, one-half cup sugar, large one-fourth cup flour together, and then stir it into the boiling milk; flavor when cool. Spread between layers and frost the top.

SODA CAKE.—One pound flour, one-half pound currants, one-fourth pound raisins, one-fourth pound butter, six ounces sugar, two ounces orange peel, two ounces almonds, one teaspoonful of carbonate of soda, flavor with essence of lemon; add milk enough to make cake rather stiff, and put in one-half a nutmeg.

PEACH PIE.—Line a deep pie-plate with good, but not rich paste. Fill with pared peaches, stoned and cut in halves. Sweeten well, and if the peaches are not soft add a little water. Cover with rich paste and bake. This is a delicious pie if eaten on the day it is baked.

MOCK MINCE MEAT.—One and one-half cups powdered crackers, one cup each molasses, chopped raisins and vinegar, two cups sugar, one-half cup warm water, same of melted butter, one cup currants if desired, one teaspoon each of cloves, cinnamon and nutmeg.

EXCELLENT BUN.—Take one quart of flour, mix with it one-half teaspoonful of salt, three teaspoonfuls of baking powder, mix thoroughly. Then rub in one-half cup of butter, four eggs, one pint of milk. Pour the batter into gem pans and bake in a quick oven.

BREAD FRITTERS.—Cut thin, round slices of bread, butter them very lightly, spread with jam and stick together in pairs. Fry in boiling lard, after dipping in a batter of one egg, one pint of milk, a pinch of salt and flour enough to make a pancake batter.

SOUR MILK BISCUIT.—One quart of flour, two level teaspoonfuls of soda, two large tablespoonfuls of lard, two cupfuls of sour milk. Mix with the hand as bread dough, only not so stiff. Roll out about an inch thick, cut and bake in a moderate oven.

COCOANUT CREAM CANDY.—Three cups of white sugar, water enough to dissolve it, and a pinch of cream of tartar. Boil ten minutes. When nearly done, add one cup of cocoanut. Spread on buttered paper and cut in squares.

SAUCE.—One cup of sugar, half a cup of butter, one even teaspoonful of flour, two tablespoonfuls vinegar; beat all well together; pour over it one pint of boiling water, and let it come to a boil. Spice with nutmeg to taste.

ROASTED QUAILS.—Pluck, draw, and singe them; wrap in vine leaves and slices of bacon; wrap in buttered paper; if the paper burns put on more, roast them until well browned, and serve them on pieces of toasted bread.

WILD GRAPE JELLY.—Boil and strain the grapes; to one pint of juice allow three-fourths of a pound of sugar; boil the juice about 20 minutes, heat the sugar and add the juice, boil five minutes and put in tumblers.

CREAM SPONGE CAKE.—One egg beaten in a cup, fill with sweet cream, one cup sugar, flour enough to make a stiff batter, heaping teaspoon baking powder; season with vanilla or lemon extract, just as you choose.

FRIED CHICKEN.—Cut up the chicken, and salt and dip in flour; have a dripping pan with plenty of boiling lard, into which lay the chicken; put in a well-heated oven; fry brown on both sides.

SPICED FRUIT.—Four quarts of ripe fruit, three and one-half pounds of brown sugar, one pint vinegar, one teaspoonful each of cinnamon, allspice, cloves, a little nutmeg. Boil one hour.

BROILED TRIPE.—When the tripe is well boiled, cut in pieces that can be accommodated upon the gridiron and broil quickly. Season with plenty of butter, salt and pepper to taste.

OMELET.—Beat eight six eggs, add one cup milk, two tablespoonfuls of flour, one teaspoon baking powder well mixed with the flour; season with salt and pepper and fry in hot lard.

SNOW CAKE.—One cup of white sugar, half cup of butter, one and a half of flour, half cup of sweet milk, teaspoonful of baking powder, whites of four eggs; flavor with almond.

STEWED POTATOES.—Pare and cut into lengthwise strips, cover with boiling water, and stew 20 minutes. Turn off nearly all the water, put in a cupful of cold milk with salt.

GRAHAM COOKIES.—Take two cups of sugar, one cup of sour cream, half a teaspoonful of soda; mix quickly, roll rather thin, and bake in a moderate oven.

APPLE WATER.—Roast some half-dozen apples, when cooked pour over them a pint of boiling water. Mash and strain them. Add sugar or honey.

The Week.

All reports are of activity everywhere. The "excursions" are arriving in rapid succession, and a wonderful throng of people is rolling in out of the snow and ice and chilling blasts of the Eastern winter. Those who are good at analyzing these masses of humanity, declare that there is more of the "come to stay" element than usual, and the records of real estate transfers in the different towns and counties certainly show that there is much buying being done. A good arrival of mechanics, chiefly carpenters, is noted, and this is a good thing for builders, for there is a vast amount of lumber issuing from our mills and a great call for men to make houses of it. Railroad extension, ranch subdivision and general notes of settlers and settlements are the chief notes of the industrial music in the air.

There is great activity in the grainfields in parts where dry sowing has proved successful practice. Dry plowing and seeding summer-fallow is employing all available men and teams. Late fruits are being gathered, and certainly there can be no complaint of this year's harvest-time. It is just according to rule, and when it begins to rain, the prophet says, it will be no shower. The only objection to delay is the anxiety for drenching out the fires which have continued during the week, and in some localities have done great injury. The rain will indeed be welcome to farmers still under menace by the flames.

The Larger Pests.

Quite a vigorous campaign has for years been in progress, with State countenance and aid, against the lesser pests which beset our fruit-trees and vines. Much still remains to be done to bring this menace to our horticultural interest under control, and yet it must be acknowledged that great progress has been secured.

It is quite time that there were better provision made for the reduction of other pests as well as those of the orchard and vineyard. The sheep-grower should be aided in the repression of the scab by the passage of proper scab laws and provision for their enforcement. This has been found important in other wool-growing countries. Quite a strong effort was made to secure it for California at the last session of the Legislature, but our sheepmen have not yet learned to pull together to secure their ends, as the orchard and vineyard-men do, and the measure fell through for lack of popular pressure upon the Legislature. Better results should be had in 1889.

Then, too, there should be better arrangements for the repression of the larger pests which seem now becoming more numerous and more aggressive. There has been very wide complaint during the last year of coyote. Flock-owners are subscribing money to add to the bounty which is paid in some counties, and though considerable numbers are killed, there are still many to beset our flocks and seriously reduce the woolgrowers' rewards for his labor and investment. Rabbits are multiplying very fast in spite of all the efforts made to destroy them, and they levy a heavy tribute upon pastures, grainfields, and upon orchards and vineyards. Other similar pests are worthy of attention. It seems to us that there should be a careful and systematic effort made to reduce these foes of the industry and wealth of the State. Very much could be done if a good commission with a competent executive officer should study the destruction of all these vermin, and take the lead in repressive measures. Unless something effective is done, we shall have to sustain a constant and heavy drain upon our resources and free investment in improvements and productive enterprises will be checked.

There is much for us to learn of State work against vermin in the experience of other commonwealths. The Australian Colonies perhaps stand at the head in such undertakings. There was a general meeting of delegates from the different colonies a few months ago, and in the course of the discussions much interesting information was brought out. It was stated that up to the end of 1884, Queensland had expended over \$350,000 in destroying marsupials, no less than 6,000,000 scalps of kangaroos and wallabies having been paid for. New South Wales is spending \$500,000 a year in fighting these same pests, and on the whole there seemed to be a slight reduction in their prevalence. During 1885 it was stated that 855,676 kangaroos, 506,372 wallabies, 922 wild pigs, 5878 hares, 8474 native dogs, and 55 eagle hawks had been killed. These wild dogs and tame dogs did about equal amounts of sheep killing—the loss from both together being about \$250,000. New Zealand has been paying \$1,000,000 a year in killing rabbits, and the destruction of value by rabbits up to the end of 1885 is estimated at \$25,000,000. These pests eat the new grasses on the pastures, so that the sheep suffer in loss of wool, the ewes are unable to provide milk for their lambs, and ranges do not carry more than one-tenth as many sheep as they did before the rabbits multiplied to the present extent. By the expenditure of money in destroying rabbits, it is now claimed that in some districts the carrying power of the land is rising again, and the yield of wool and lambs increasing.

It was reported from Tasmania that the numbers of sheep had declined 250,000 and the wool export 323,000 pounds, because of the rabbit nuisance. The percentage of lambs used to be 70 to 80; now it is only 50 to 60 per cent. During the six months ending June 30, 1885, there were 1725 men employed killing rabbits, and they destroyed 2,841,911; during the last half of the year about the same number of men killed about one-third as many rabbits.

There seems to be some progress being made in turning the pelts of these pests to some account. Tasmania sold 2,872,896 rabbit skins

for \$112,860. In South Australia, where the warfare against the pests has been long continued, the kangaroos have become so much reduced that their hides have sold at about \$20 per dozen, and the paying of scalp money has ceased for the present.

After the presentation of reports, of which we have given but a few leading items, the delegates had a long discussion of repressive measures. There seemed to be a general feeling against the hiring of hunters and trappers, as they seemed disposed to make their places permanent. The use of phosphorized oats, the introduction, multiplication and conservation of animals that prey upon the rabbit, and the employment of rabbit-proof fences made of wire netting at least three feet high, and set into the ground so as to prevent burrowing, seemed most in favor. The cost of the approved style of fence was put down at \$150 per mile.

Of animals destroying the rabbit, the ferret is most largely employed, especially in New Zealand. The wildcat and tame cats turned loose are also rendering good service. Weasels and polecats also do good work, but their liking for poultry is against allowing them to multiply. Within fenced land the use of bisulphide of carbon and the digging out of burrows are regarded as best, and legislation making such treatment compulsory was said to be necessary.

Late advices speak of a "rabbit annihilator" which has been tried in Victoria with very gratifying results. It is apparently a new apparatus for using carbon bisulphide. The device consists of a rotary fan, with an air-tight vessel of tin in front of it. This vessel contains carbon liquid, in which is immersed an endless woolen web, running over a pair of rollers. The blast from the fans, passing over this endless web, saturated with the poisonous liquid, forces the deadly fumes through a nozzle and rubber hose into the pest-harboring burrows. The machine weighs 26 pounds and is carried by two handles. It was applied to natural burrows at Bacchus Marsh, Sept 21st, and dead rabbits were afterward taken out at depths ranging from 12 to 30 feet. We hope this method will prove highly helpful in ridding our Australian neighbors of the ravaging rodents. The use of bisulphide by simply pouring in the holes is an accepted way of killing squirrels in this State.

CONDITION OF THE CATTLE INTEREST.—Col. Colman, Commissioner of Agriculture, addressed the Cattlemen's Association at Kansas City on Monday of this week. He said that the cattle industry of the country, representing \$1,200,000,000, was under a cloud of misfortune at present, but he was satisfied that the population of the country was increasing far more rapidly than its beef supply, and that this circumstance would rectify matters. He then proceeded to read a semi-official statement of the work of his department in fighting the pleuro-pneumonia. In regard to the needs of the Bureau for the next year, Mr. Colman said that about all that was necessary was a sufficient appropriation, as work was progressing smoothly and systematically. It has been estimated that this cattle disease in the past 45 years has cost Great Britain \$500,000,000. It exists there to-day in almost as bad a form as it ever did. They have strong laws, but they leave the execution of them to the local authorities. Col. Colman believes that there must be heroic treatment to stamp out the disease, and for this purpose Government funds are needed. A quarantine has been declared against cattle from Scotland and the association applauded when Col. Colman said it might be necessary to quarantine against all Europe.

WAS IT THE COCKLEBURS?—J. M. Bassford, Jr., recently reported to the *Breeder and Sportsman* the death of several valuable horses and cattle in his neighborhood from some obscure cause, but in the course of his description mentioned the growth of cockleburrs in the pasture. W. Meese of Danville writes his belief that the cockleburrs were the cause of the deaths, and says: "I have lost a great many hogs by eating young cockleburrs, when they first come up, while they are young and tender, before they get the second leaf. I have lost as high as 50 head in 24 hours after turning out of the pen, on a sandy lot, when they were just coming up above the ground. They are deadly poison, worse than strychnine." What experience and observation have our readers?

Another Roll of Portland Butter.

The dairy sensation at Portland is assuming the form of a serial. We have had almost weekly chapters. The story reaches a climax this week, but may not close with it. Since our last issue, according to the telegrams, Mr. Dunbar, who was arraigned for selling false butter, was unanimously acquitted of the charge by the jury. The State had no new evidence for the second trial. The defense claimed that the butter which the Dairy Commissioner took and had analyzed was not what he procured from Dunbar; also that the sample given Professor Rising to take home and analyze was not California butter, but some manufactured here by a chemist employed by the commission. The decision will also end all the cases brought by the Commissioner against sellers of California butter.

This is a climax, and must be taken as indicating the purity of California butter, but it seems likely that the matter will not end at this point. It was telegraphed from Portland on Tuesday of this week that the parties arrested by the Commissioner and acquitted by the jury now propose to move actively against the Commissioner. The following is the telegram:

An information has been filed before the Grand Jury charging Albert Sunderland, State Dairy Commissioner, with perjury in connection with the recent trial of the State against Dunbar, charged with selling adulterated butter. The basis of the complaint is that the commissioner obtained a roll of butter light in color from Dunbar, and the samples he gave to the chemists were highly colored. Sunderland claimed that butter will gain color by exposure or in time. The sample he handed to Professor Rising of California was highly colored. Stearine fat was distinctly recognized and oils not thoroughly mixed, and the microscope failed to show the presence of ordinary butter crystals. Local chemists testified that Sunderland handed them a light-colored article, and it was 90 per cent pure butter. The conclusion is forced that he gave the local chemists one lot and Rising another, and neither that obtained from Dunbar.

This is the statement. Of course it is not known whether the Grand Jury will indict the commissioner or not. It is likely if the confusion in the samples can be explained that no indictment will be found.

There is another part of the dispatch from Portland which does not altogether suit the California reader. It is as follows:

Among dealers and many people in Portland the view that these prosecutions are for the purpose of warring on California butter more than to see that justice is done, gains ground.

Governor Penney insists that the California article is bad, but has had his faith shaken somewhat lately. The costs in the last case were over \$1000, which the State of Oregon will have to pay. The merchants will not touch California butter now until the whole question is thoroughly settled. They are tired of putting up money to defend themselves, while California puts up nothing for testimony.

The last sentence is decidedly in error. The fact is that the Dairy Exchange of San Francisco acted promptly and liberally in the matter. They put forth every exertion to secure evidence in defense of the purity of the California butter which some of the members shipped to Portland. They paid for the analyses upon which the Portland merchant was acquitted and the expenses of all the witnesses who went north to testify at the trial. They seem to have done everything possible to maintain their business integrity and the reputation of the California product.

The boycott on California butter which is charged upon the Portland dealers we do not consider of much importance. There is not a very great amount sent there, anyway, and at this time of the year none. We do not fear but that if there is money in California butter when the time comes around for our large production next spring, there will be merchants in Portland to sell it.

VISIT OF GRAPE EXPERTS.—Prof. Viala of France and Prof. F. Lamson Scribner of the U. S. Department of Agriculture, whose coming to California was mentioned in the *RURAL* a few weeks ago, have concluded their work and have returned eastward. They visited a number of vineyards and wineries and apparently made good use of the time they had at their disposal.

PINK EYE is said to have developed among the horses in San Diego stables; but it is in a mild form, so far, and only a single fatal case is reported.

The Hawaiian Islands.

The Island Kingdom is our near neighbor. It is closely allied with the commerce of this country, and its people are rapidly falling in with American thought and ways of doing things. Queen Kapiolani was kindly received in this country last summer, and the Masonic excursionists to the islands were most hospitably entertained. Hawaii is within easy sail of San Francisco; palatial steamers ply to and fro with the rhythm of a weaver's shuttle, and the growing number of tourists and excursionists may be the first threads in a loom that may weave these people in one common destiny with our own land.

Although so near, and so much has been written about this wild, weird, unique conglomeration of paradise and perdition; its volcanoes, lava, lust and leprosy; its emerald seas, cocoa groves, mango trees, coral reefs, and many other interesting features, the country is still a marvel. Abraham Fornander, in his valuable contribution to history and ethnography, "An Account of the Polynesian Race," in treating of the traditions and genealogies of the Hawaiians, shows conclusively that we can trace back the history of this people for nearly a thousand years. He tells of interesting movements that took place in the islands of Polynesia about eight or nine hundred years ago, and of numbers of remarkable voyages that were made from one part of the great Archipelago to the other, showing that the art of navigation was more advanced than among the natives of a subsequent period. Voyages were made to points distant 2000 miles or more, and were so well directed as to be comparatively free from danger. It is in these voyages of the old Polynesian navigators that may possibly be found the solution to the vexed question of the peopling of America. There is no doubt about the unity of the origin of the Polynesian race, as their language or dialects abundantly prove. Even to-day an Hawaiian and a New Zealander can readily understand each other, although their respective countries are separated by a distance of upward of 5000 miles. Now, if the Polynesian seamen of the early period above mentioned could safely steer their barks from the Friendly and Samoan to the Society and Marquesas islands, and from all these to the Hawaiian group, there is no reason for supposing they did not voyages till farther east and reach the shores of America.

Through the courtesy of Mrs. Wm. Johnston, well known to readers of the RURAL through her entertaining letters describing the Masonic excursion to the islands last summer, we are permitted to present our readers with an en-

graving of one of the Government buildings in Honolulu, and a glimpse of the lava beds that have to be passed over on the way to the great volcano.

Business Failures and Success.

There are many who think that because a man has happened to fail in his business under-

It has been truly said that the paths of some of the world's greatest men, both living and dead, were marked with financial disaster, and they achieved success in the end only by liberally exercising this one quality of "grit."

Peter Cooper failed in making hats, failed as a cabinet-maker, locomotive-builder and grocer. But as often as he failed he "tried again,"

Home Industries.

It must be evident to every thinking American that our very existence as an industrial people upon our present labor basis depends upon multiplying our domestic industries rather than diminishing them. Every new industry and every extension of an old one that can be maintained, and which supplies a want needed by the people, is a gain in every way—in giving employment to workingmen, in keeping profits at home by paying wages to our own people instead of those of other nations, in using our own instead of foreign raw material and tending in every way to make us as a nation industrially independent of the rest of the world. Of course the policy here outlined includes farming as well as manufacturing and mechanical enterprise. The farmer is thus doubly benefited—first, by being protected from foreign cheap labor, and secondly, by having a home market at his very door. As a contemporary has most truthfully said:

"The very highest form of national life is that which exists with the widest possible diversification of industry. England suffers to-day because she has intensified her manufactures and neglected to cultivate her soil thoroughly. Ireland and India suffer because they have agriculture without manufactures. We give our people a chance in every direction, and so we possess the highest prosperity and the most robust national life."

What has been said above in relation to nationalities is equally true of isolated States like California and other States and Territories on the Pacific Coast. We should strive, as far as practicable, to establish and support our own industries. We should manufacture our own boots and shoes, our own clothing, and especially all other industries, the raw materials for which can be produced upon our own soil. In so doing we save a double transportation across the continent, and give employment to our own wage-workers. It is only by such a policy that we can hope to build up an industrial empire upon the western slope, which we all so much desire.

WALLA WALLA WHEAT IN ENGLAND.—Col. F. J. Parker, who was commissioned by Gov. Squire to represent Washington Territory at the American Exposition in London, and has lately returned to Tacoma, says he found that Walla Walla wheat makes a large proportion of the London bread.

ACKNOWLEDGMENTS.—We are indebted to Hon. Leland Stanford for a package of recent Government publications relating to the industrial affairs of the country, which we shall find very valuable for reference.

GOVERNMENT BUILDING, HONOLULU, HAWAIIAN ISLANDS.

A GLIMPSE OF THE KILAUEA LAVA BEDS, HAWAIIAN ISLANDS.

taking he should be pronounced of "no account." There are many things in the business world that may bring about a failure which no human foresight could have anticipated or prevented. The simple fact of a "failure" should not be set down to the disadvantage of any man. It is the circumstances connected with the failure which should be taken into account in estimating a man's ability or honesty. Even if a man fails more than once, he should not be unqualifiedly condemned. The person who has never failed cannot possibly know whether he is possessed of the requisite amount of "grit" to constitute a successful business man.

until he could stand upon his feet alone, and crowned the victory by giving \$1,000,000 to help poor boys in time to come.

Abraham Lincoln failed to make both ends meet by chopping wood, failed to make his salt in the galley-slave life of a Mississippi flat-boatman. He had not wit enough to run a grocery, and yet he made himself the grandest character of the 19th century.

Horace Greeley tried three or four lines of business before he founded the *Tribune*, worth to-day \$1,000,000.

Patrick Henry failed in everything he undertook until he made himself the orator of his age and nation.

DEVELOPMENT MATTERS.

Joaquin Miller's Open Letters.

To the man who is waiting for the "boom":

A great many years ago a great man, the greatest man in all England, arose in his place in the House of Lords to address his peers on the subject of England's foreign policy.

He began his speech thus: "Shall I tell you how to maintain the integrity and the power of England at home and abroad forever?"

Every head was turned that way, and the great peer continued: "Shall I tell you how to make England and the English language the Eone land and the one language of the earth?" eagerly every face reached and turned toward the speaker. He took half a step forward in the narrow and prescribed little crescent wherein the peer of England transacts his official work, with the top of his hat for a desk, and reaching his long, bony finger far out toward the faces that reached toward him, he hissed, "Get land! get land! get land!" Then, clenching his two fists so tightly that he almost buried his nails in his palms, he shrieked, "Get land! get land! get land! and never let go a single handful of sand!"

I have not set this speech and scene down in detail or at all exactly, for it would take too long. I only give the substance and the spirit of the policy which was born there and then and which has made England what she is to-day. All over the world and at all times this one idea is, and long has been uppermost, "Get land! get land! get land! and never let go a single handful of sand!"

It is the national policy and it is the individual policy, both abroad and at home, whether under the British flag or the flag of another nation; this one vast and vehement idea is uppermost; Get land! get land! get land! and never let go a single handful of sand!

And now, my friend, you who are waiting for the "boom," shall I tell you how to bring a "boom" right to your door and keep it there for generations? I will tell you exactly how to do it.

But in the first place let me tell you that I hate "booms." They are bad for the country, bad for buyers, bad for sellers, bad for everybody, and most especially are they bad for the man who simply sits by and waits for a "boom." I hate "booms," "boomlets," "boomers," and all of that ilk heartily. The "boomer" never yet built a house or planted a tree; and he never will. He sits by and watches and waits for something to turn up. My friend, "a watched pot never boils." Go to work!

Meantime I will tell you how to secure your much-desired "boom." The method is simple. It is the great Englishman's recipe for maintaining the integrity of the British Empire: Get land! get land! get land! and never let go a single handful of land.

But this beating the bush for a "boom," this swapping half-dollars, this persistent and fabulous lying, which your new and most numerous real estate dealers indulge in, is simply ruinous; ruinous to yourselves most especially. It would be hard work to ruin a land like this. But if it could be ruined at all, I think the real estate dealer, this meddlesome and audacious "middle man," could do as much toward it, almost, as a first-class Italian earthquake.

No, don't misunderstand me now. There are real estate dealers and dealers in real estate. Gold and brass look much alike. You can hardly tell the difference at first sight; but the difference is great. And the difference is about as great between the legitimate real estate agent and the mushroom man who has two or three lots on a ten-cent margin and is sitting by waiting for a "boom." This idle and irresponsible "real estate agent" has suddenly become a very numerous nuisance.

When a man rushes out on to the sidewalk, sweeps out a big dry-goods box, creeps inside of it, labels his big dry-goods box a "real estate office," and sits down to wait for the "boom," I want to see his box blow over. And, really, if the wind would only blow half as hard as he blows, there would be but little left of his dry-goods box, or him either, before the full of the moon.

I was pleased to note the construction of two very elegant and spacious churches in East Oakland last month, and I spoke to my pastor about it recently, remarking that Oakland, good as she was, was growing better every day.

"No; growing worse every day."

"Why, how is that?"

"Well, those two new churches were needed badly enough, I can tell you; for the liars have suddenly become so numerous and their lies so large that we had to build those two spacious structures to contain them."

"You alarm me! What? who?"

"The new real estate dealers."

When will man learn that he rarely if ever deceives anybody but himself? The cold, frozen fact is when a man sets out to deceive the world he is about the only man in it who is really and truly deceived.

The loud-mouthed man who is working up his "boom" is simply an impertinence; he is an insult to the State, and he is a very, very serious damage to it. Let this nuisance, so far as it may be, be abated.

But the people are coming in spite of all his froth and Fourth-of-July nonsense. They are coming for the very solid and very simple rea-

sons that I briefly set down in my letter to the New York Herald.

Here are two letters, two out of 23 of nearly the same dates. I give them because they are brief, refreshing in their simplicity and ignorance (a sawmill at Oakland!) and because they are sincere and come from honest men of honest little towns of which few folks ever heard. The greater number of such letters come to me from the West. Four of the 23 mentioned above came from Wisconsin.

WALTHAM, Mass., Oct. 4, 1887.

Mr. Joaquin Miller—DEAR SIR: I must ask you to pardon me when I send you this letter, but I am besieged with a multitude of questions about the land you mentioned in your last letter in the *Rural Press*—near Oakland, and the two questions I would like to ask are: What chance would a man with \$5000 cash have to locate near Oakland to start a sawmill? Then, would a man with \$1000 or \$1200 do anything by establishing himself in the poultry-raising business?

We want to leave here, 60 of us, some time in November, but have not got things arranged as yet so we can get away. Some are desirous of getting near San Francisco and go into the truck farming or raising vegetables for the markets. We have not found any information in regard to that in any of the circulars that we have secured.

Hoping I have not intruded on your time too much, and that you can conveniently favor me with a little information as desired, I am, dear sir, Most respectfully yours,

259 Moody street.

SAM'L A. CHRISTIE.

And here comes a party of flying tourists all the way from New Jersey. The leader of the other party wants to put up a sawmill in Oakland; but it is clear that the people from New Jersey never yet have heard of Oakland—at least, they express no desire to go hunting in the woods, nor do they express one tremor of fear from prowling savages. Surely, surely they have never yet heard of the new dealers in real estate that now infest the forests of this wild region, that has not even a sawmill, called Oakland!

SOMERVILLE, N. J., Sept. 28, 1887.

Mrs. Miller gives me your address. In May, 1888, I want to take 50 to California. That now is your land. Present plan is to go via Canadian Pacific to Vancouver, south to San Francisco, then East. Where should I stop, if at all, save at Tacoma, Portland and San Francisco and then Salt Lake. We will have only 35 days in all. I do want to see your land, as you would have me, but as that is impossible, should I stop, save as above named? Would Eugene City, Mt. Shasta, Sacramento or any other spots pay for a 24 or a 48 hours' stop-over? I must arrange far ahead with hotels, etc., and also suit 50 people as well as myself. Answer.

A. V. D. HONEYMAN.

My California friend, in town or country, keep away from the horde of "middle men," and keep your land in your own hands. The people are coming, and they are not fools. Don't treat them as if they were by turning your property over to some loud-mouthed loafer who stands on the corner and howls up his "boom." He will frighten people away. Let him return to his original employment of drummer or book agent. Real estate is too royal for him; it is too kingly. The very word "real" is excellent Spanish and means "royal" or "kingly."

But the prodigal abundance of land out here has lost to us much of the imperial importance and dignity that ought to attach to royal estate.

In England a man is fairly content to make one per cent per annum out of the land which grows his ancestral oaks. He takes the rest out in his sense of possession and power. He feels that he is nearer the throne than the man who has no land. He can house and can feed the stranger. He has a home from which nothing but the hand of God can banish him. We ought to have, we are about to have, I hope, something of that feeling out here. I tell you proudly, land is worth a great deal more than you can cash it for in the market. Its title deeds, tracing back to the kings of Spain, or the highest power in the United States, bear the seal of dignity and character that should not be cheaply sold.

Twenty years from this date, ten? five? you will see such a chasm split open and yawning between the man who has land and the man who has not in this country as you never dreamed of.

Are you aware that within this year about all the Government land available for the plow passed forever from the hands of the Federal State? Well, it is a fact, and a fact that must be continually borne in mind when you come to cast up your balance-sheet and try to estimate the value of lands this year as against former years. Up to almost this date millions upon millions poured into the Federal treasury for lands. Suddenly these lands are all swept from the maps. They are in the hands of the people, the people who have got that grim old Saxon idea in their heads: "Get land! get land! get land! and never let go a single handful of sand!"

Of course, I don't mean all this literally. There is a lust for land that is base and miserly; it is a lust that should be despised. But I mean to say keep your lands well in hand, get more if you can, and hold on till your friends or your friends' friends come on from the States, then sell a part and sell at a good round sum in your own good time. If your young land agent wants a job, let him dig your potatoes.

Yes, the people are coming, and they are coming in spite of that brass band which San Diego has sent forward to frighten them away. They are coming in spite of all the multitudinous and multifarious lies that the land agents have told and are still telling about this tranquil and delicious dreamland.

But, oh, the idea, the impertinence of that

brass band! Still, as said before, the people will come for all that. There are Christians, still, in spite of the drum of the Salvation Army. And the claim of the land-blind and sand-blind people of San Diego that it is their brass-band energy that has started people to this coast is about on a par with the claim to Christian converts of the man who beats the drum under the red banner.

Dear, dear, delicious San Diego! If ever there was a tranquil spot on this earth—a place for love and lovers, a land of eternal afternoon, of absolute calm and content, of peace and rest and poetry—it is that bay and its serene and Sabbath-like environment away down yonder on the sunlit edge of Mexico. And yet that brass band! Not content with driving everybody daft in their midst, they have opened the thing out all over the States.

And the boomer strikes an attitude and shouts: "See what I have done! See what a fine climate I have made; fine seas, fine sunlight! Boom! boom! boom! let the band play!"

Oakland, Cal.

JOAQUIN MILLER.

PUBLIC AFFAIRS.

Tariff on Fruits.

EDITORS PRESS:—As the Annual Fruit-Growers' Convention will soon assemble in Santa Rosa, when probably a protective tariff on California fruits will be considered, it may be well to state in advance a few points on the policy and fairness of such a protective tariff.

The General Government now exacts duties on all fruits imported into this from foreign countries, not so much probably for the purpose of protecting the interests of domestic fruit-growers as for revenue purposes. Yet to the extent of this tariff of duties, the domestic fruit-grower has all the benefits of protection. In addition to interest, insurance, freights and commissions, the importer must pay the tariff duties on his importation before he can place his goods on our markets for sale. These tariff duties then enter into the cost of the fruit so imported. Upon the sum of these costs of the fruit the importer must make a commission on his sales, which is paid by the consumer, else the importation would be attended with positive loss to some one interested in the importation.

This fruit tariff is so light, however, that it does not sensibly affect the amount of importations. It is so light that the consumer in making his purchases makes little or no account of it; but the Government gets the revenue from the importation all the same.

Now, as the tendency of all imports on importations is to lessen importations and thereby restrict trade and commerce, it becomes a question of national policy how and to what extent these imports can be levied without injury to the trade and commerce of the country and without bearing heavily on the people generally.

It ought to be, and I assume is the policy of every well-ordered Government to guarantee equal protection to every branch of industry—to agriculture, to commerce, and to manufactures. To give to any one of these great industries peculiar and exclusive privileges without considering how the other great interests might be affected thereby would be dangerous legislation.

The commerce of the United States is largely concerned in the fruit trade, both green and dried. The imports of prunes alone, it was stated at one of the meetings of the State Horticultural Society, not long since, for the year ending June 30, 1887, were 90,000,000 pounds. To that add the imports of raisins, of dates, of oranges, lemons and other tropical and semi-tropical fruits, and the total value of the same amounts to many millions of dollars. Then the United States are very large exporters of dried fruits, apples and peaches, mainly to those countries which furnish us with the bulk of our prunes. This trade gives employment to many ships and men to man them, to merchants, clerks and factors, and incidentally to thousands who in one way and another furnish supplies.

Any legislation which would seriously and perhaps injuriously affect this vast trade ought to be approached with great caution. Would not the high protective tariff contended for by the California raisin and prune-growers seriously and injuriously affect this commerce? By such a high protective tariff the raisin and prune-growers hope and expect to materially lessen importations and thereby give them the control of the home market. Now is this fair, is it just? The people of Europe have raisins, prunes, more than they want. The people of the United States have peaches and apples, and soon will have dried apricots more than they want. A trade in these commodities to the mutual advantage of all has been carried on for years. Shall this trade be restricted and crippled in order to give the raisin and prune-grower of California a monopoly of the home market? This is what in effect he is contending for, although he may not be aware of the far-reaching consequences dependent on the adoption of the protection he contends for.

But does the raisin and prune-grower need any additional protection to what he now has? Is he not at the present time reaping rich returns in reward for his enterprise and outlay of capital? Has he not in the past years been growing richer and richer in prosecuting these

industries? His success has been so constant and so apparent as to induce others to enter upon the same industries in such numbers as to exhaust the annual stock of young trees in the nurseries of the State. Such being the fact, additional protection cannot in fairness and honesty be urged. But driven from that point, it is asserted that the old abandoned vineyard lands of France are now being planted to prunes, and that unless the importation of prunes be restricted the prune-grower of California will be compelled to abandon his orchard and resort to something else for a living. In reply, I will say, "Sufficient unto the day is the evil thereof." I think it will be time enough to pay our respects to the enemy when he puts in an appearance. In the meantime, if prices recede somewhat from what now prevail, more prunes will be consumed, trade and commerce will thereby be stimulated, and the prune-growers will still prosper.

The prune crop of California last year was about 3,000,000 pounds, or about one-thirteenth the consumption of the country. Now in view of this fact, is it not a little presumptuous to demand a high protective duty on prunes in order to lessen importations, and thereby advance the price of prunes to consumers, the more especially as nothing is offered the consumer in exchange for the special protection demanded? Higher wages to the laborer is not proposed. Neither is it proposed nor expected to guarantee the consumer any higher price for anything he may have to sell and the prune-grower may want to buy, than he probably would obtain irrespective of this increased duty contended for. It seems to me the spirit of an oppressive monopoly is conceded in this demand for an increase of duties on prunes and raisins. With equal reason and justice may the orange and lemon-growers of California demand a high protective tariff on those fruits of foreign importation, and all at the expense of the consumer for which no return is proposed. Let us continue to tarry at Jericho awhile longer and try to acquire evidence in the light of experience.

WM. C. BLACKWOOD.

Haywards, Oct. 31, 1887.

The Fairs.

The Downey Fair.

The forming of the Los Angeles County Agricultural Association in 1884 was so largely due to the farmers at and around Downey, that that was the place chosen for holding the fairs of the society. Their fourth annual exhibition opened the first Tuesday in October with a favorable showing in the various departments, although the occasion was saddened by the death of one of the most active directors, T. R. Tierce, an old and respected citizen of Downey, to whom Hon. A. E. Davis made feeling reference in his opening address.

The interior of the pavilion was profusely but elegantly decorated with evergreens and flowers, and the display of fruits and field productions is said to have excelled all previous ones, not merely in variety but also in quality and arrangement, showing that the interest grows from year to year.

Among the many exhibitors, W. H. Carter made a fine display of apples, including Fall pippins, New York pippins, Bellflower, Limber Twigs, Rhode Island Greening and a dozen other varieties. M. J. McGaugh had a conical stand, six feet high, supporting 31 varieties of apples and eight of pears, beside pomegranates and quinces. James Stewart's collection included 21 kinds of fine table grapes, 24 of apples, four of pears; also oranges, figs, quinces, corn, etc., all of his own growing. The peaches of H. Hood and T. L. Cooper, and the lemons exhibited by E. L. Barnett and J. W. Cate, each of whom had a large and varied outlay, were specially mentioned. In L. W. Houghton's extensive display of citrus and deciduous fruits were apples 15 inches in girth and weighing a pound and upward. But we can name only a few of the exhibitors.

Passing the tempting arrays of jellies, preserves, etc., the vegetable prodigies of Los Nietos and all that fertile neighborhood were well exemplified. There were corn-stalks 20 feet in height, on some of which were counted six well-matured ears, measuring up to 12 and 15 inches long, with 20 perfect rows of corn to the cob. Pumpkins and squashes, two yards in circumference and weighing 200 pounds apiece, were scattered about the hall, with six-pound potatoes that measured five inches through and 12 inches in length, and sweet potatoes, yellow, white and pink, from five to ten pounds each. Then there were cabbages, turnips, onions, etc., marvelous, indeed, to the Eastern visitor; and of sugar-beets, four monsters, exhibited by Mr. Fox, aggregated over 200 pounds, while other specimens weighed 75.

The live-stock entries were numerous and creditable. Among the horses L. B. Weller's magnificent Percheron "Vendee," imported directly from Norway, stood 16½ hands high and weighed 1675 pounds. A two-year-old stallion, out of L. J. Rose's "Del Sur," belonging to George Clark, and J. H. Leihy's "Capt. Clark," from "Capt. Jack," were greatly admired.

C. B. Woodhead of Fulton Wells had fine cattle of several varieties, among which was noticed a three-year-old Jersey bull, valued at \$1500. His sire sold at St. Louis for \$5600 when but one year old. T. J. Kerns showed a Jersey bull, also a fine cow and calf; and J. G. Chapman a beautiful Jersey bull calf. C. A.

Coffman had a thoroughbred Durham bull one year old, a noble fellow, also a fine cow, with a calf two months old, and a graded Durham cow. T. D. Cheney showed three imported and several California-born Holstein cows, together with a fine bull bred at Syracuse, N. Y.

For poultry J. D. James exhibited excellent Brown Leghorns, Plymouth Rocks and White Leghorns. Walter Pratt and W. H. Mason showed some guinea pigs, and John Hamerton nine specimens of English rabbits.

The races, the ladies' riding match and the baby-show we can barely mention. The list of awards that has reached us appears too incomplete for republication; and we will only add that the Los Angeles county fair of 1887 is averred by visitors to have been the best held yet under the auspices of the society, and great praise is accorded to the people of Downey and the officers of the association.

Contra Costa Fair.

The exhibition of the Contra Costa Agricultural and Industrial Association, which took place at Concord fair grounds, Oct. 3d to 8th, is highly spoken of by those who attended. The new pavilion, placed under spreading oaks near the west side of the track, is a great improvement on the old structure, and gives ample room for displaying not only field and orchard products, but the quilts, embroidery, pictures and fancy-work of the ladies.

Among the fine exhibits which drew special notice was that from Gen. Wagner's "Oak View Farm," embracing 60 varieties of fruit and grapes. R. C. Terry of Clayton showed this season's product of four vines, as follows: Mataro, 35½ pounds; Rose Chasselas, 49½ pounds; Sauvignon Verte, 52½ pounds; Berger, 54½ pounds. These vines are only five years old, and, being planted seven feet apart, average 840 pounds to the acre. Mr. Terry has 22 varieties of grapes in his vineyard.

E. B. Smith displayed fine Grenache, Golden Chasselas, second-crop Zinfandel, White Malaga, Mataro, Black Malvoisie, Petite Buche, Black Burgundy, Cabernet Malbee, Rose Chasselas and White Nice; and Siverio Soto's English walnuts were excellent.

The stock parade Wednesday comprised over 80 horses led by the handsome prize thoroughbred Lame Deer, followed by the magnificent Norman stallion Vienot, Seth Cook's superb Cleveland Bays, and many others named in the list of awards. The Polled Angus and Holstein herds, with one grade Durham bull, made up the cattle.

Besides those published in our last week's issue, we note the following:

Additional Awards.

HORSES—2d roadster, mare 4 yrs old, Nellie, W. Hawes; sucking colt, Allan C., W. Caven; draft stallion 3 yrs old, Napoleon, J. Cantua. Sweepstakes—G. T. Wilds, best pair work horses, 4 yrs old, Swift and Long; M. W. Hall, 2d do, Napoleon and Bonaparte; S. Cook, stallion for all purposes, 4 yrs old, Baron Hilton, and 2d do, Royal Studley; A. Boss, best mare, 4 yrs old, Nell; J. Coats, 2d do; D. M. Bollman, best mare, 3 yrs old, Betsey; Van R. Sherman, 2d do, Tony Oakes; A. Boss, best sucking colt, Lady; F. S. Swart, 2d do; B. S. Clark, best family colts with sire, Lame Deer.

AGRICULTURAL IMPLEMENTS—C. Jaquith, mowers, single plows, 6-horse gang plow, spring-tooth horse rake; M. Kirsh, wooden frame spring-tooth harrow, steel frame spring-tooth harrow; J. A. Bilz, light training cart, 2-horse and 1-horse vineyard plow.

POULTRY—Best exhibit poultry for breed, condition and variety, geese, Van R. Sherman; ducks, Mrs. A. Boss; bronze turkeys, E. W. Williams; Jap. geese, H. Miller.

MISCELLANEOUS—Best butter, T. Wagner; 2d do, Miss C. Durham; dried apricots, P. Wells; English walnuts, S. Soto.

Arroyo Grande Fair.

The three-days' fair held at Arroyo Grande, San Luis Obispo county, October 6th to 8th, was a genuine agricultural exposition, without races. The stock parade, however, was one of the main features, and the display of fine horses and cattle did credit to the breeders of the valley. There was keen rivalry, too, among the mothers of babies under 12 months old, and the stage in the pavilion Saturday afternoon was transformed into a general nursery.

This region has become famous for its fine apples and huge vegetables. J. F. Beckett, nurseryman, whose general display of fruits was adjudged the best, showed 45 varieties of apples, 3 of pears and 4 of peaches, besides grapes, figs, raspberries, almonds, blackberries and prunes.

Among the vegetables on view were pumpkins of 190 pounds weight, a 64-pound cabbage, a 69-pound beet, and a 5-pound onion, 23 inches in circumference. Silk of fine quality, made in the city of San Luis Obispo, was displayed. The flower show was spoken of as lovely. The visitors were many, and enthusiastic in admiring praise.

We append the awards, excepting for preserves and jellies.

Awards—Live-Stock.

DRAFT HORSES—Best stallion, not thoroughbred, 3 yrs or over, J. M. McGlashan; 2d do, H. D. Albright; stallion, 2 yrs old, F. M. Gibson; mare, 3 yrs old or over, H. J. Price; mares, 2 yrs old and 1 yr old, W. D. Sevier; sucking colt, J. Sheehy; matched team, J. V. Young. Special mention—Draft horses (two colts, 3 and 4 yrs old) J. M. McGlashan; draft horse, 2 yrs old, W. A. Henry; match team, for all purposes, F. M. Gibson.

ROADSTERS—Best stallion, 3 yrs old or over, P. Donohue; 2d do, yearling stallion, 2-yr-old mare and single carriage-horse, N. H. Fitzwater; best

mare, 3 yrs old or over, J. C. Barnett; 2d do, H. A. Conrad; sucking colt, E. F. Conrad; best span matched roadsters in harness, A. Phillips; 2d do, E. F. Conrad. Special mention—Best match team for all purposes, F. M. Gibson.

CATTLE—Thoroughbred Holstein—All awards, E. W. Steele.

ANGORA GOATS—D. F. Newson.

SWINE—Thoroughbred sow, Poland China, best grade boar, W. A. Henry; sow and pigs, J. V. N. Young; grade sow, S. M. Findley.

POULTRY, ETC.—Best general display, and trio, Light Brahmas, J. G. Stevenson; White Leghorns, Brown Leghorns, E. Leedham; Plymouth Rocks, G. O. Taylor; Buff Cochins, J. F. Gibson; geese, W. A. Conrad; Pekin Ducks, J. S. Lewis; Irish Setter pups, P. J. Black.

Grain and Vegetables.

Best 25 lbs common barley, W. A. Conrad. Rye, R. Farmer. Yellow corn and corn on stalk, W. E. Aholt. White corn, J. G. Stevenson.

Best 65 lbs small white beans, A. Phillips. Pink beans, J. G. Stevenson. Peas, J. Gregory. Largest sunflower, Jos. Gibson.

Best general display vegetables, best gourds, carrots, onions, sweet potatoes, largest cabbage, string peppers, J. V. N. Young. Largest and heaviest squash, R. Farmer and I. B. Records. (The two squashes weighed the same.) Five heaviest squash, H. J. Price. Best assortment table squash and best display cabbages, S. M. Findley. Six largest beets and heaviest Mangel Wurtzel beets, J. D. Roberts. Table radishes, T. B. Records. Potatoes, J. S. Lewis. Turnips, J. G. Stevenson. Display cauliflower, A. B. Hasbrouck. Largest cauliflower, H. Hess. Tomatoes, E. W. Steele. Cucumbers, C. Grieb.

Fruit.

Best general display, largest variety apples and plates Fall pippins, Jonathan, Roxbury russet, Ben Davis and Winesap apples, J. F. Beckett; R. I. greenings, E. W. Steele; Belle Fleur and Golden Russet apples, peaches, quinces, J. V. N. Young; W. W. Pearmain, Newtown pippins, Nickajack and Smith's cider apples and plums, J. Gregory; Baldwin and Vandever apples, G. O. Taylor; King of Tompkins Co. apples, E. Leedham; Skinner's pippins, blackberries, strawberries and Bailey sweet apples, W. N. Short; Seedling apples, T. Seeley; Spitzenbergs, Mrs. Grieb; pears, best 5 boxes apples, C. J. Mason; display grapes, A. B. Hasbrouck; plate grapes, H. Hess; oranges, J. Barnett; walnuts, Mrs. Kennedy; almonds, J. J. Monroe; display dried fruit, Mrs. E. W. Steele; pickled olives, D. F. Newsom.

Dairy Products

BUTTER—M. M. Olive. **CHEESE**—A. B. Hasbrouck, D. F. Newsom.

Plants and Flowers.

Best coll. cut flowers, most tastefully arranged bouquet, Mrs. G. O. Taylor; best and largest display house-plants, Mrs. J. L. Eddie; second do, Mrs. John S. Rice; gen. display trees and plants, J. F. Beckett; best floral design, Miss Rilla Young.

Stockton Fair Awards.

From the official report of the directors of the San Joaquin Valley (24 District) Agricultural Association, on premiums awarded at the fair lately held in Stockton, we make extracts as follows. Exhibitors are of Stockton, unless otherwise specified.

Horses.

THOROUGHBREDS—Stallions—Grover Cleveland, 3 yrs old, Matt Storms, S. F., \$25; Bolero, 3, D. J. McCarty, S. F., \$15; Surento, 1, same, \$10; Duke of Stanislaus, 1, S. Miller, Modesto, 2d, \$4. Mare or gelding—Adeline, 3 yrs old, D. J. McCarty, S. F., \$15; Narcola, 3, M. Storms, S. F., 2d, \$5; Rose-dale, 2, same, \$10.

ROADSTERS—Stallions—Hawthorne, 8 yrs old, L. U. Shippee, \$25; Lynwood, 7, P. Visser, 2d, \$10; Ebony, 3, C. Dorsey, Oakdale, \$15; Reliance, Jr., 3, J. K. Baldwin, Bellota, 2, \$5; —, 2, L. M. Morse, Lodi, \$10; Colonel, 2, S. P. Bailey, 2d, \$3; Pericles, 1, W. R. Bailey, \$7.50; Combination, 1, A. C. McDowell, Pleasanton, 2d, \$2.50. Mare or gelding—Charlie, 4 yrs old, C. H. Wakefield, \$15; Mag, 10, C. Lamasney, \$5; Bohemian Girl, 3, R. E. Stowe, \$10; Amy H., 3, S. Hewlett, 2d, \$3; Hawthorne Maid, 2, L. U. Shippee, \$7.50; Carrie Vernon, 2, J. A. McClelland, 2d, \$2.50; Flora, yearling filly, C. Lamasney, \$5.50; Sarah Vernon, yearling filly, G. W. French, 2d, \$2. Matched roadsters owned and used by exhibitor—Geo. and Lady Washington, R. C. Sargent, \$20; Lady and Mollie, J. F. Visser, 2d, \$7. Colts—Billy Vernon, trotting sucking colt, W. French, \$4; —, P. Visser, 2d, \$2; Flora, trotting sucking filly, L. U. Shippee, \$4; —, P. Visser, 2d, \$2.

ALL PURPOSES—Stallions—Comet, 12 yrs, S. Acker, Oakdale, \$25; Prince Blone, A. Clark, 2d, \$16. Two yrs old—Doctor, F. R. Shaw, Salina, Kansas, \$10. One yr old—Nephew, Jr., N. Nevin, \$9; Joe, J. C. Bowden, 2d, \$3. Sucking colt—Priam Jo, W. L. Morris, \$3. Mares 3 yrs old—Clara G, G. Erlich, \$10. Two yrs old—Nellie Vernon, A. Gross, \$7.50. One yr old—Victoria, Wm. Thomas, Douglas Flat, \$5; 2d, \$2. Sucking filly—Jennett, S. Hewlett, \$2.

DRAFT HORSES—Stallions 3 yrs old—Fasian, C. K. Bailey, \$25; Eureka, same, 2d, \$10. Two yrs old—Sir Francis, F. R. Shaw, Salina, Kansas, \$15; Arab, E. R. Elliott, Lodi, 2d, \$5. One yr old—Prince, J. Roberts, Irvington, \$9; Sampson, A. McCormick, Linden, 2d, \$3. Sucking colt—Roxey, A. B. Sperry, \$3. Mares three yrs old—Lady Smith, F. R. Shaw, Salina, Kansas, \$10; Jessie, U. Martin, 2d, \$4. One yr old—Francis, A. B. Sperry, \$5. Sucking filly—Vic, U. Martin, \$2. Match team (draft) owned by exhibitor—Princess and Milkmaid, A. B. Sperry, \$15; Princess Beatrice and Lady Smith, F. R. Shaw, Salina, Kansas, 2d, \$5.

CARRIAGE ANIMAL—Mem and Jack, R. W. Russell, \$20; Jim and Bill, C. Hunting, Acampo, 2d, \$7.

SHETLANDS—Matched span and saddle pony—J. D. McCarty, S. F.—special premium recommended.

Mules, Jacks and Jennies.

MULES—Spans, Mollie and Collie, L. U. Shippee, \$15; Dock and Sam, F. B. Haslam, 2d, \$5. Jacks, 3-yr-old, Big Tom, H. Hamilton, Grayson, \$25; Jim, T. P. Heath, 2d, \$10; 2-yr-old, Tomy,

L. U. Shippee, \$15; Frank, same, 2d, \$5; 1-yr-old, Washington Eclipse, Jr., L. Carter, Ceres, \$9; sucking jack and all jennets, L. U. Shippee.

Cattle.

DURHAM—All awards to C. C. Younger, San Jose.

JERSEY—Bull, 1-yr-old, Sneath, Jr., W. A. French, \$9.

AYRSHIRE—All awards to G. Bement & Son, Redwood City.

HOLSTEIN—All awards to F. H. Burke, Menlo Park, save 2-yr-old bull, Pio Pico, W. H. Mayes, \$15.

HEREFORD—All awards to Jas. Kay, Sacramento. **GRADED**—3-yr-old cow, Bessie F., W. A. French, \$10.

Sheep.

Cotswold ram, 1-yr-old, C. C. Younger, San Jose, \$10.

Southdown ram, 2-yr-old, Geo. Bement & Son, Redwood City, \$10.

Swine.

Essex and Berkshire boars, Black Dick, Berkshire, L. U. Shippee, \$10; Stockton Chief, Berkshire, A. B. Sperry, 2d, \$4. Sows, —, L. U. Shippee, \$9; Peggy, C. A. Stowe, 2d, \$3. Sow, Queen Bess and 8 pigs, C. A. Stowe, \$10.

Poultry.

Plymouth Rocks, L. U. Shippee, \$2.50; J. C. Bowden, 2d, \$1.25.

Brown Leghorns, W. A. French, 1st and 2d, \$2.50 and \$1.25.

Bantams, J. C. Bowden, \$2.50. Geese, Toulouse, Frank H. Burke, Menlo Park, \$2.50.

Turkeys, Bronze, L. U. Shippee, \$3; Jap., W. A. French, 2d, \$1.50.

FARM PRODUCTS RAISED IN DISTRICT NO. 2. Bale hops, J. V. Putnam, Clements, \$5. English walnuts, S. Y. Strait, \$2. Soft-shelled almonds, Mrs. Jos. Hale, \$2.

Vegetables.

Largest variety raised on ranch of exhibitor, Mrs. C. C. Castle, \$10. Largest exhibit of vegetables, fruit, etc., by one person, C. V. Thompson, \$20.

Grain and Grasses.

Thirty bunches grain not less than 7 varieties, and most artistically arranged display of grain, J. D. Huffman, Lodi, \$10.

Horticultural Department.

Largest and best collection apples, Mrs. E. A. Hill, Olanche, \$15; 2d do., Jos. Putnam, Clements, \$5. Collection pears, Jos. Putnam, \$15; 2d do., H. Quinn, Chinese Camp, \$5. Twelve quinces, L. U. Shippee, 1st, \$3; 2d do., Mrs. W. B. Harrison. Collection grapes, Geo. West, \$10; 2d do., W. B. West, \$5. Collection figs, L. U. Shippee, \$3; 2d do., F. Yost, \$1. Collection pomegranates, Mrs. B. Keef, \$3. Six figs, Mrs. J. C. Reid, Stockton. Largest and best exhibit fruit raised in the district by one person, J. Putnam, \$20. Dried prunes, Mrs. E. J. Lockett, Brighton, \$3; 2d do., Mrs. J. Hale, Brighton, \$1. Raisins, Mrs. E. J. Lockett, \$3; 2d, V. A. Lyons, \$1. Dried figs, Mrs. J. Hale, \$3; 2d, J. C. Reid, \$1. Dried plums, V. A. Lyons, \$3. Dried peaches, Bahach Plantation, Merced county, \$2; Mrs. J. Hale, honorable mention. Dried pears, Mrs. E. J. Lockett, Brighton, \$2. Dried apricots, same, \$2. Dried nectarines, H. S. Jory, \$2. Dried cherries, Mrs. E. J. Lockett, Brighton. Fruit preserved in spirits, Mrs. J. Hale, \$5; 2d, Mrs. J. C. Reid, \$2.50. Fruit preserved in sugar, Mrs. J. Hale, \$10; 2d, Mrs. J. C. Reid, \$5. Jellies, Mrs. J. C. Reid, \$5; 2d, Mrs. I. A. Reid, \$2.50.

Floral.

Flowering plants in bloom, E. C. Clowes, \$5. Collection ornamental foliage plants, same, \$2. Bouquets, same, \$2. Collection plants suitable for greenhouse, same, \$2. Cut flowers, Mrs. R. W. Russel, \$3. Hanging baskets, R. S. Bates, \$2. Ornamental grasses, Miss M. Marshall, \$2. Best and largest display floral pieces, same, \$15. Single floral piece, same \$3. The board awarded special premium to Mrs. R. S. Bates for floral display and exhibitions, \$10; 2d best display of pieces, Ladies' Committee of 100, \$5. Best single piece, Mrs. R. S. Bates, \$7.

Silk Culture.

Display cocoons, Mrs. J. D. Utt, \$8; 2d, Mrs. J. C. Reid, \$8. Reeled silk, same, \$8.

Agricultural Implements, Etc.

Best mowing machine and plow for all purposes, J. H. Condit; comb. clod-crusher, harrow and pulverizer, gang plow, farming-mill, cultivator, churn, Grangers' Union; fruit-drier, H. S. Jory; farm wagon for general purposes, M. P. Henderson & Son; hay press, grain-cleaning attachment for thrasher, and best display of agricultural implements by any one house, California manufacture, Stockton Combined Harvester and Agricultural Works.

Special Mention.

The committee recommend special mention and special premiums as follows: Trace and whiffletree guard, L. A. Lasher; grape crushers, S. Rothlis-burger; cleaner for combined harvester, Stockton, C. H. & A. Works; Triumph reaper, Excelsior sower, and 8 different plows, H. C. Shaw; plungers and valves for deep and shallow wells, John Jackson; pulverizer, D. Lubin, Sacramento; Golden Gate separator and picket fence, J. C. Bowden; machine for making fence, machine-made fence and fire escape, Charles Green; churn-dasher, Baxter & Goodfriend; coll. French walnuts, W. B. West; banana trees, Mrs. I. D. Hamilton; tobacco, A. Thornton, New Hope; dried strawberries and dried blackberries, Mrs. E. J. Lockett, Brighton; general display of fruit from one ranch Buhach plantation, Merced; watermelon cab-in 20x20 feet square, Ladies' Committee, Lodi; mountain quail, Rhodes; Redwood plank 6 inches thick by 55 inches wide and 17 feet long, H. C. Smith; county exhibit, San Joaquin county, \$150; steam irrigating pump, W. T. Garrett & Co., S. F. gold medal; horse-power or windmill pump, Fred Ruhl, \$40; 2d do, John Jackson, Stockton, \$20; 3d do, Root, Nelson & Co., Sacramento, \$10.

THE Pacific Coast Conference of Charities is to meet in this city December 13th and have a four-days' session at Union Square hall.

DEATH IN THE WATER.

IS THE ELEMENT WE DRINK DECIMATING THE PEOPLE?

How a Universal Menace to Health May be Disarmed.

A few years ago the people in a certain section in one of the leading cities of the State were prostrated with a malignant disease, and upon investigation it was found that only those who used water from a famous old well were the victims.

Professor S. A. Lattimore, analyst of the New York State Board of Health, upon analyzing water from this well, found it more deadly than the city sewage!

The filling up of the old well stopped the ravages of the disease.

Not long since the writer noticed, while some men were making an excavation for a large building, a stratum of dark-colored earth running from near the surface to hard pan. There it took another course toward a well near at hand. The water from this well had for years been tainted with the drainings from a receiving vault, the percolations of which had discolored the earth!

Terrible!

A similar condition of things exists in every village and city where well water is used, and though the filtering which the fluids receive in passing through the earth may give them a clear appearance, yet the poison and disease remains, though the water may look never so clear.

It is still worse with the farmer, for the drainage from the barn-yard and the slops from the kitchen eventually find their way into the family well!

The same condition of things exists in our large cities, whose water supplies are rivers fed by little streams that carry off the filth and drainage from houses. This "water" is eventually drunk by rich and poor alike with great evil.

Some cautious people resort to the filter for purifying this water, but even the filter does not remove this poison, for water of the most deadly character may pass through this filter and become clear, yet the poison disguised is there.

They who use filters know that they must be renewed at regular periods, for even though they do not take out all the impurity, they soon become foul.

Now in like manner the human kidneys act as a filter for the blood, and if they are filled up with impurities and become foul, like the filter, all the blood in the system coursing through them becomes bad, for it is now a conceded fact that the kidneys are the chief means whereby the blood is purified. These organs are filled with thousands of hair-like tubes which drain the impurities from the blood, as the sewer pipes drain impurities from our houses.

If a sewer pipe breaks under the house, the sewage escapes into the earth and fills the house with poisonous gas; so if any of the thousand and one little hair-like sewer tubes of the kidneys break down, the entire body is affected by this awful poison.

It is a scientific fact that the kidneys have few nerves of sensation; and, consequently, disease may exist in these organs for a long time and not be suspected by the individual. It is impossible to filter or take the death out of the blood when the least derangement exists in these organs, and if the blood is not filtered then the uric acid, or kidney poison, removable only by Warner's safe cure, accumulates in the system and attacks any organ, producing nine out of ten ailments, just as sewer gas and bad drainage produce so many fatal disorders.

Kidney disease may be known to exist if there is any marked departure from ordinary health without apparent known cause, and it should be understood by all that the greatest peril exists, and is intensified, if there is the least neglect to treat it promptly with that great specific, Warner's safe cure, a remedy that has received the highest recognition by scientific men who have thoroughly investigated the character of kidney derangements.

They may not tell us that the cause of so many diseases in this organ is the impure water or any other one thing, but this poisonous water with its impurities coursing constantly through these delicate organs undoubtedly does produce much of the decay and disease which eventually terminate in the fatal Bright's disease, for this disease, alike among the drinking men, prohibitionists, the tobacco slave, the laborer, the merchant and the tramp, works terrible devastation every year.

It is well known that the liver, which is so easily thrown "out of gear," as they say, very readily disturbs the action of the kidneys. That organ, when deranged, immediately announces the fact by sal-low skin, constipated bowels, coated tongue, and headaches; but the kidney, when diseased, struggles on for a long time, and the fact of its disease can only be discovered by the aid of the microscope or by the physician who is skillful enough to trace the most indirect effects in the system to the derangement of these organs, as the prime cause.

The public is learning much on this subject, and when it comes to understand that the kidneys are the real health regulators, as they are the real blood purifiers of the system, they will escape an infinite amount of unnecessary suffering, and add length of days and happiness to their lot.

STILL TRIUMPHANT!

OVER ALL COMPETITORS.

THE "NEW DEAL" GANG PLOW.

Manufactured by JOHN DEERE & CO., MOLINE, ILLS.

TWO,

THREE,

FOUR

—AND—

FIVE

FURROW.

EQUIPPED

—WITH—

EIGHT, TEN

—AND—

TWELVE-INCH

PLOWS.

Amongst other improvements, all Four Gang New Deal Plows are so constructed that the OUTER or REAR BEAM can be removed, thus making it a THREE GANG for use in first plowing, and READJUSTED to a FOUR GANG for second or cross Plowing.

FOR LIGHTNESS OF DRAFT, EASE OF MANAGEMENT, STRENGTH, DURABILITY AND QUALITY OF WORK,

The "NEW DEAL" is Without a Parallel.

GOULD'S SPRAY PUMP.

This Pump we have got up expressly for spraying vines, fruit trees and other shrubbery infested with the destructive insects which inflict so much injury in orchards, vineyards, etc. It has been adopted and recommended by the State Horticultural Society. The working parts are constructed entirely of Brass, and will not be affected by the corrosive solution used in them. THE BAMBOO EXTENSION is an admirable invention. The operator of the Pump, by the use of this extension, can get to all parts of the tree while on the ground; also saving himself from getting his hands and face burnt from the solution. Send for Catalogue and Special Prices.

Dewey & Co.'s Scientific Press Patent Agency { ESTABLISHED 1860

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S.F.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure the Liver and Kidneys healthy and the Complexion bright and clear.

THE VINEYARD.
Growing Table Grapes in California.

The State Horticultural Society met in this city Oct. 28th, President Hilgard in the chair. In connection with the reading of the minutes of the last meeting, Gilbert Tompkins called attention to statements made of the very small pits which some varieties of Japanese plums contain, believing this to be a feature to be considered in forming an estimate of their value.

Mr. C. E. Hathaway of San Lorenzo was elected a regular member; Mrs. J. M. Dyer of San Francisco, H. E. Amore of San Francisco and Noah G. Rogers of Los Gatos were proposed for election next month.

As remittances of dues from members had been slow to arrive, the secretary was given until the next meeting to prepare a financial statement for the year.

The election of officers for the ensuing year was had with the following result:

President, E. W. Hilgard; vice-president, A. T. Hatch; secretary, E. J. Wickson; treasurer, R. J. Trumbull. Directors—J. A. Wilcox, L. Coates, F. C. De Long, W. C. Blackwood, D. Lubin.

Memorial to Matthew Cooke.

As supplementary to the resolutions adopted at the last meeting, the following was unanimously adopted:

WHEREAS, The fruit-growers of this State owe the late Matthew Cooke a debt of gratitude as being the first intelligent leader in the battle against the depredations of insects; and

Whereas, His advice and counsel have saved the State untold millions; and

Whereas, It should not be forgotten that Mr. Cooke contracted the germs of his fatal sickness during the time of his holding the office of Horticultural Officer of this State through his ceaseless devotion to his duties; and

Whereas, We believe that the fruit-growers ought to give an expression of this gratitude worthy of his memory, therefore be it

Resolved, That a suitable memorial be erected on his grave, and be it further

Resolved, That a committee be appointed to take the necessary steps, and that a subscription list for the purpose be opened immediately.

Resolved, That a copy of these resolutions be forwarded to the bereaved family of the late Matthew Cooke.

W. G. KLEE, Chairman.

The resolutions were favored by several speakers. Mr. Tompkins remarked that the memorial could take a practical shape by fruit-growers subscribing for a good large number of Mr. Cook's work on "Insects Injurious to Fruit Trees, Vines, etc.," and Mr. Hatch approved this and added that fruit-growers should see to it that this work was in all school libraries, and the smaller work, of which a new edition is now being prepared, should be introduced in all public schools as a text-book. These remarks were regarded as suggestions to the committee, and upon motion of Mr. Lelong, a committee was appointed, with power to act, as follows: E. W. Hilgard, Gilbert Tompkins, W. G. Klee, B. M. Lelong and Leonard Coates.

Thanks to the Board of Horticulture.

Mr. Hatch introduced the following, which were unanimously adopted:

Resolved, That the members of the State Horticultural Society acknowledge with sincere thanks the courtesy extended to them by the officers of the State Board of Horticulture in the welcome to hold their monthly meetings in the elegant and accessible rooms of the board.

Resolved, That we express our sense of appreciation of the enterprise of the board in affording not only to our society, but to horticulturists generally, a headquarters in San Francisco befitting the importance of our great fruit interest, supplied with horticultural literature and museum specimens, and we can but express our belief that providing such facilities for gaining information will be of great and permanent value not only to our own citizens, but to the many desirable people from abroad who are now seeking homes in this State.

Table Grapes.

The President called up the regular subject for discussion, "Growing Table Grapes in California," by remarking the importance of the subject and the fact that the Grape-Growers and Wine-Makers' Association had so far found its time wholly occupied with other vine interests. He called upon W. W. Smith of Vacaville, who opened the discussion.

Mr. Smith grows table grapes only. His chief varieties are Flame Tokay and Muscats, though he has also Emperor, Chasselas Fontainebleau, White Sweetwater, Rose Peru and others. Out of 32 acres, 26 are given to Tokays and Muscats. The Chasselas Fontainebleau pays for shipment to the East, if shipped early; so does the White Sweetwater. The White St. Peters and Madelaine Blanche are earlier, but too tender for shipment. They are much alike, but the White St. Peters is a shy bearer. The Emperor is good and sells well late; so does the Cornichon.

In picking grapes for Eastern shipment, Mr. Smith picks 24 hours before packing, to let the stems wilt and to allow closer packing in the baskets. The grapes will then cling to the stems better. He packs in five-pound baskets, which go in single and double crates, the former holding four, the latter eight baskets. The double crate has cleats on the sides upon which the upper tier of baskets rests. The double crate is preferred at the East because nearer the size in which Eastern grapes are marketed, and

the grapes carry better because the crates are heavier and cannot be tossed about so much in handling.

The Tokay sells best at the East because it arrives better. The Emperor colors up better than the Tokay. In packing it is best to use scissors and clip out the greenest berries, as it gives the basket a better color. In the solid bunch of the Tokay it is also desirable to divide the bunch and remove from the interior the berries which are often crushed by the growth of the outer ones. It is also necessary to divide the large clusters to secure close packing. Second crop Tokays have looser clusters and are better colored than the first. Mr. Smith has a third crop of Tokays which he is now shipping, but it is not so well colored as the second crop.

The Emperor is pruned with long canes, say from three to three and one-half feet, and tied up to two stakes placed near together, say six to eight inches. They are tied up before the growth starts. After cultivation is over the vines are let down upon the ground, as the weight of the grapes would break the canes. The Tokay easily burns in the warmer parts of the State and should be planted on the richest ground so as to make plenty of foliage early in the season to cover the young grapes. They seldom burn except when fully exposed to the sun. This year the Tokays burned badly, being destroyed when the berries were large as peas. The Tokay colors even when covered with leaves. The presence of iron in the soil has much to do with coloring the fruit well, as Mr. Smith has found out by experience on his own place and by observation on Mr. Marshall's place near Napa, where are grown what Mr. Earl pronounced the finest colored Tokays he ever saw.

The profits on growing grapes for shipment are from less than nothing up to \$100 per ton. He shipped 50 crates of fine Tokays to St. Louis and all he received in return was a postal note for 85 cents for the shipment. Last week his double crates were selling at the East for \$3.75, which would net him \$2 per crate of 40 pounds of grapes, or \$100 per ton. His Tokays yielded this year about nine tons to the acre of first-class fruit for shipment. All the culls clipped from the branches in packing are dried and are worth something this year.

The Muscat has to be handled more carefully than the Tokay, does not travel East so well and does not sell so well. He prefers the close-bunched Muscatel (Blowers) to the loose and straggling clusters of the Muscat of Alexandria. He has also the Muscatel Gordo Blanco, which he believes was introduced by W. A. Sanders of Fresno. He does not value this grape so high as Blowers' Muscatel.

At least two-thirds of the first crop of Muscats of Alexandria and Muscatels we did not ship East, as they were too scattering on the bunch. We rubbed them off the bunch, ran them through a wheat fan to remove broken stems and packed them as loose Muscatels, whereas the Muscatels would be thick enough on the bunch to be good raisins. The Muscat grapes would be large and fine enough, but the bunches too scattering.

Pres. Hilgard inquired if it was *coulure* or whether it was the result of the hot weather on the vines, but Mr. Smith thought it was something in the habit of the vine itself. He is inclined to think that the Muscat of Alexandria wants another grape near it to make it set well. Another grape grown so sparsely in this State that it was seldom seen and one of the finest looking grapes in the State, is the Napoleon. If it could be got to set well, one could make a fortune out of it in a few years. It is very scattering on the bunch; almost impossible to get a full one. The Mission is not the grape to fertilize it with. Napoleon ripens with the Muscat of Alexandria. He had often tried planting other varieties near this Napoleon to get it to set well.

In answer to a question by the President as to distinctive characteristics that he recognized between the Muscats and Muscatels, Mr. Smith said the Muscat of Alexandria is rather oblong and of a greenish color; Muscatel is more round and more waxen in color. The Muscat of Alexandria is more oblong, tapers rather toward the end, while the Muscatel is roundish. The Muscat of Alexandria loosens easily from the stem, while the Muscatel is stronger. The Muscat has a bad fault, called "shanking;" one-quarter or one-third of the lower part or end of the cluster will die. Sometimes it does this when the grapes are two-thirds or half grown, and sometimes not until the grape is nearly ripe. All the grapes below where the stem dies have to be taken off and thrown away. That is a serious objection to the White Muscat of Alexandria. Do not know whether it is universal throughout the State, but it is in our valley.

The President remarked that it is often the case, and asked if there was any difference in the foliage.

Mr. Smith thought the difference so slight that it is hard to tell what it is away from the vine itself. In answer to difference of growth, said Muscat of Alexandria does not taper as much as the Muscatel, has longer joints. Muscatel has shorter joints and tapers like a black-snake whip, while the other is like a buggy whip.

The President inquired if he had had any experience with the Huasco. Dr. Manlove had reported favorably on it. The University had sent cuttings all over the State. Favorable reports had been received from Sacramento and unfavorable from Los Angeles.

Mr. Klee said they had been grown from

vines from the University by Mr. John R. Wolskill of Winters. The second year from the graft they bore a very large crop. He claims it is a better bearer; otherwise it is almost impossible to tell the difference. The same report seems to come from other sections. Mr. Cutter of Riverside has the same vines, and it is impossible to tell the difference. Presumably they are the White Muscat of Alexandria.

Mr. Smith remarked that being grafted on old vines, the growth might be stronger than from a cutting.

The President: The Huasco matures a little earlier than either of the other two, and objection is made that it has more seeds than the others.

Mr. Smith: If it is much earlier than the Muscat and Muscatel, it will be worth propagating.

The President: The Huasco grape was brought from Chili, and it was difficult to get it accustomed to the change of season. It first wanted to grow in the winter, but it gradually accommodated itself. It matures fruit in Berkeley, where the Muscat of Alexandria will not. Have you ever tried the Cannon Hall Muscat?

Mr. Smith: It does not succeed well in our part of the State. It is like the Muscat of Alexandria. I cannot succeed in getting anything like fine-bunched at all. The same experience is given by other growers. Mr. Cantelow, formerly one of the largest grape-growers in our section and in the State, could not get a bunch to set well; too much stem and no grapes. A few grapes would be large and fine, and all along the stem they would be as small as shot.

The President: Have you planted any Black Morocco in your neighborhood?

Mr. Smith: It does too well; bears too much. While the others do not bear enough, it will set a bunch at every joint as the vine grows. Now the first ones are beginning to get ripe, but cannot get enough to pack a box to ship East. The soil is very rich valley soil.

The President: They ripened long ago in the foothills. It does not require a rich soil.

Mr. Klee: It is subject to black knot. Vineyardists with rich soil have to graft them over again.

Mr. Smith: I have 10 or 15 vines and thought perhaps I could get a crate or two to ship East. The vines grow very much, and the grapes range all the way from large ones to smaller and smaller, but not a ripe one.

Mr. Buck wished to correct Mr. Smith. One would infer from his remarks that the Black Morocco is a late grape in Vacaville. We do not get the first crop, as it does not amount to anything. May not get a dozen boxes from the first crop; but afterward it can be found all the way from blossom to ripe fruit. Sometimes 25 vines will produce half-a-dozen boxes, but they will be all the way up from the stump to the end of the vine and all sizes from the blossom to ripe grapes.

The President: Possibly this might be remedied by longer pruning? Have you tried the Balkan, which is talked about so much in Fresno? It resembles Tokay, but has a longer, looser bunch. It is the one Mr. Montpellier has introduced. [Since the meeting Mr. Montpellier has shown us samples of this grape which have been in his desk in the city for six weeks and are still perfectly sound. Some berries have dried, something like raisins, but most are still fresh colored and excellent.—Eds. PRESS.]

Mr. Smith: I believe it is going to be a good grape; it is a fine-looking grape, large, loose bunch, and I think it will be a good shipper; if it is a good bearer it will be an acquisition.

The President: It must be a good shipper and is a good bearer. It has the advantage of not having densely packed bunches. We need more information in regard to it.

Mr. Buck being called upon, said that the Cornichon was a good bearer with him. Has 1400 vines, but they are not good bearers unless pruned long. The Purple Damascus bears as heavily with me as any other vines he had.

Mr. Smith thought the difference between his vines bearing and Mr. Buck's was simply in the pruning. He pruned long and I short, and that is the reason it is a light bearer with me.

Mr. Buck of Vacaville: As far as Muscat and Tokay are concerned, I think the Eastern market has changed materially in regard to the Muscat grape. Three or four years ago the Tokay grape was worth nearly twice what the Muscat was. This year there has been very little difference in the selling value in Chicago, while there has been a good deal of difference in the East. In the Northwest the people are educated to the fact that the Muscat is a better eating grape than the Tokay. Chicago is the best market for the Muscat grape we have. Others are better for the Tokay. Do not know anything about the Black Morello. There is one objection against dark grapes in shipping to the Eastern markets, as they prefer the light one. New Orleans is the best market for dark grapes. By dark grapes I mean those darker than Tokay, Emperor, Cornichon, etc. In regard to the Verdel, would let it alone.

The president inquired if it was too small in size.

Mr. Buck: No, it is a good size.

The president said the samples sent him had been small grapes.

Mr. Smith: The Verdel grown in San Jose is large; also in Santa Cruz mountains fair sized grapes as large as Emperor, etc., but not as large as a fine Muscat.

The president stated he was thinking of some Verdels exceedingly sweet but too small to ship to Eastern markets. It is a gray variety.

Mr. Klee said he had seen them very sweet in Southern California. The president said they belonged there.

Mr. Klee said they attained a fair size in the Santa Cruz mountains quite early, but are slow and late in ripening.

Mr. Tompkins said they were the largest and finest he ever saw there. They are not very solid; might not ship well any distance; seeds were so small you hardly noticed them in eating; skins were very thin. All that is against shipping them, but for eating qualities, where grown, it is a very fine grape. He ate them within a mile or so northwest of Glenwood.

The president thought it was a notable feature that so few of the grapes mentioned in this discussion have any taste to the palate; they all appeal to the eye. We will have to conform to the demand of the public for some years to come, but we must take into consideration also those who like to taste what they eat. The Muscat conforms more to the taste of those who are in the habit of eating their highly flavored Isabellas and Catawbas. We have a class of grapes not remarkable for their aspect.

The Verdel has a decided flavor. Chasselas and Cornichon have some flavor, but the Flame Tokay has as little flavor as it is possible for a grape to have. We have to please the eye, but the time is coming when we shall have to take into consideration the quality of the grape. One grape will not do to ship. It is the Malvoise. In the Santa Cruz mountains it is best of all.

Mr. Buck said one shipment had arrived in good condition, but it is so much like their domestic grape that it will not sell. Rose of Peru will bring a man in debt. You can load half a car with that, but will have to put in another kind of grape to bring you through without a loss on freight. The Malvoise ought to ship well, having a thick skin, probably not very juicy.

(Concluded next week.)

Ewer-McLennan.

Yesterday morning Mrs. Donald McLennan was married at the residence of her son, Mr. Frank McLennan, 1515 Clay street, to Mr. Warren B. Ewer, the well-known editor of the *Mining and Scientific Press* and the *Pacific Rural Press*. Rev. Horatio Stebbins was the officiating clergyman.

The wedding was strictly private and no cards were issued, for the reason that the bridal party left at once for the southern portion of the State. It is their purpose to make quite an extended trip to the most interesting localities south, as this is the first visit made there by the bride since the new growth and prosperity of all that region began.

The bride is the widow of the late Donald McLennan, who established one of the famous industries of the State, the Mission Woolen Mills, which marked a new and more prosperous era in the manufacturing interests of the coast. Through his long laborious years she was often to be seen riding through the business streets with her husband, watchful of his every interest. The groom is a pioneer who came across the plains in 1849.—*Daily Call*, Oct. 30th.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

E. J. TURNER, Hollister, Breeder of Percheron-Norman registered Horses and Roadsters.

FALL RIVER rises on the eastern slope of Mount Shasta and flows southeasterly into the Pitt river. That stream flows southwesterly from Goose lake through Modoc and Shasta counties into the Sacramento. There is heavy sugar-pine timber all about the Fall river's source, but near its junction with the Pitt there is a clear, wide, fertile section. Here the town of Fall River Mills is located, about 90 miles northeast of Redding and about 60 miles from Sisson's, on the California & Oregon line. At this town are the falls from which the stream takes its name. The water-power there is considered wonderful for its force and availability. A flour-mill and lumber-mill are already run by the water-power and there is plenty of room for more mills for other manufactures. About a mile below the rapids, nearly at the junction of the Fall and Pitt rivers, is the large fall. Here the river drops perpendicularly about 70 feet to the level of the Pitt river. It is here on the upper bank that the town of Fall River Mills is located. A raceway has been made across the peninsula by the town from above the falls to the Pitt river, and from this power for the flour-mill is secured. The town is located nearly at the point of a V, the rivers forming the sides. There is abundant opportunity for similar races or canals, either across the upper part of the peninsula above the town, or below it across the Fall river from above the fall, across the country down into the Pitt river below. There is believed to be here motive-power for over two miles of manufactories. The flow and fall, combined with the formation of the river-banks, present remarkable advantages for mill-sites. The power is said by those in a position to know to be fully equal—not by reason of the volume of water, but because of the way in which it may be utilized—to that of the falls of St. Anthony, which have been the making of the great manufacturing city of Minneapolis. Some idea of the capability of this fall and power may be gained when it is considered that the falls of the Merrimac at Lowell, Mass., have a descent of not more than 30 feet, and the falls at Lawrence are not greater than that. From various measurements taken, it was ascertained that the average flow of the river was 1619 cubic feet in a second. As Mr. Schuster put it: "One hour's flow would supply San Francisco for three days." The altitude of the falls is about 3000 feet.

A TRIBUTE TO THE BLACKSMITH.—J. Starkie Gardner, in a lecture before the Society of Arts, in England, pays the following tribute to the blacksmith: Those who have stood by the forge, and watched the sparks fly as the skillful smith deftly beats, and twists, and combines his iron, would think it the easiest of all crafts. But who standing by the side of a musician as he draws his bow across the chords of his violin, would consider the patient study and dexterity required before he is able to make it respond at will? As no practice or teaching can make a musician unless he have an ear for music, so can no one really excel in the manipulation of iron unless he possess special aptitude. His tools are as primitive as those of the sculptor, and with hammer and anvil, forge and bellows, a bench, a vise, and a few chisels, he has to produce out of the stubborn iron effects that may rival the work of the loom in delicacy, or form the massive entrance-gates to a palace or a park.

THE LONGEST TUNNEL IN THE WORLD, commenced in 1782 and finished in 1878, drains the Schemnitz mines in Hungary. It is 10.27 miles in length, or about a mile longer than St. Gothard, with a height of 9 feet 10 inches and a breadth of 5 feet 3 inches.

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 2, 1887.

General trade in farm products was fairly active the past week, with few changes in prices. Continued dry weather not only creates uneasiness but causes farmers who have not sold to hold their barley, wheat and hay more strongly. The European markets, for wheat, continue to show a strong tone, notwithstanding bear reports and no outward speculative movement. To-day's cable is as follows:

LIVERPOOL, Nov. 2.—Flour dull; holders offer moderately at 9s 2d and dull. Corn—Holders offer moderately; spot, 4s 7d and steady. November, 4s 6½d and steady. December, 4s 6½d and steady. January, 4s 5½d and steady.

Foreign Review.

LONDON, Oct. 31.—The *Market Lane Express*, in its weekly review of the British grain trade, says: English wheat values are hardening. Prices are 6d better. The marked falling off in deliveries in London tends to raise the tone. The sales of English wheat during the past week were 6537 qrs. at 30s rd, against 48,908 qrs. at 30s 3d during the corresponding week of last year. Flour is steady. Barley is in good inquiry and 6d dearer. The values of foreign wheat are maintained. Liverpool is quoted at 1d higher. Corn is in small supply at stiffening prices. There were six arrivals of wheat cargoes—three were sold and one remains. At to-day's market wheat was steady. Flour was firm. Oats were 3½d dearer. The prices of beans and peas were against buyers.

Eastern Wheat Market.

S. S. Floyd & Co.'s telegraph from their Chicago house is as follows:

CHICAGO, Nov. 2.—Wheat, weak and lower, due to the big local operators selling freely. They seem to think the Anarchist trouble will create an unsettled feeling in the money market, which will naturally depress values, market closing at lowest point of the day. Corn market, dull and neglected again to-day. Receipts of wheat at 7 primary points to-day, 327,557 bu. Shipments, 267,464 bu. Wheat—Dec. opened, 73½; highest, 73½; lowest, 73; closed, 73. May opened, 79½; highest, 79½; lowest, 78½; closed, 78½. Corn—May opened, 45½; highest, 45½; lowest, 45; closed, 45.

Eastern Wool Markets.

NEW YORK, Oct. 30.—Offerings continue to be made in very much the former general manner, owners of really attractive first-class wools putting out their samples with a degree of caution and an apparent inclination to keep their stock as closely in hand as possible, yet never really willing to miss a desirable customer. Some appear to have been successful in booking a fair number of orders lately, but on the whole it is difficult to find much that is really encouraging, and the market has a tame look generally. Among sales were 10,000 pounds fine Territory at 19 cents and 15,000 pounds Eastern Oregon at 20 cents.

PHILADELPHIA, Oct. 31.—There were a few Eastern buyers in the market last week, but their operations have not been on a large scale, neither in Territory clips nor in fleeces. Two or three local manufacturers are reported as having bought over 500,000 pounds of one-half and three-eighths unwashed combing in the Chicago market this week, because supplies in equal volume were not obtainable in this market. Among sales were 35,000 pounds Territory fine medium at 34 cents, 25,000 pounds Montana low at 22 cents, 100,000 pounds Territory fine and medium at 14½¢, 20,000 pounds fine Territory at 18 cents.

BOSTON, Oct. 31.—The market has been fairly active and the tone is very strong for certain descriptions. Among sales were 450,000 pounds Territory at 22½¢, 187,000 pounds California spring and Oregon on private terms.

Dried Fruits.

NEW YORK, Oct. 31.—The market is good for most descriptions. California raisins are wanted upon the spot, but there are few or none available. Current prices, \$2.15 to \$2.55 for three-crown, \$2.30 to \$2.50 for London. Raisin-packers of Malaga have this season adopted the old standard weight of 22 pounds to the box. This change has been brought about by the fact that no small portion of the pack there is consumed in Great Britain and upon the continent, and dealers in those countries are strongly opposed to the new system that was introduced last year. The 20-pound weight of last season was forced on packers by the growing opposition of California goods, as they felt it was necessary upon their part to protect their trade in this country by the adoption of a box quantity similar to that put up by those engaged in the industry on the Pacific Coast. Importers of Malaga goods now draw attention to the fact that they offer greater quantity per box than is contained in California packages, and at very little difference in price, and on the other hand California agents dwell upon the superior quality and put their three-crown loose goods against the two-crown of Spanish that are sold at about the same price. This is certainly a strong point in favor of Malaga, but California goods gained an enviable reputation last year and it will prove rather difficult to dislodge the domestic goods from the strong position in which they then established themselves. The fight for supremacy will, without doubt, be stubbornly contested, as both sides are determined in their action and reluctant to give way from a field from which such great advantages are to be obtained.

NEW YORK, Oct. 31.—Inquiries have been received from London soliciting quotations for California raisins laid down at that market. The inquiries at first were for consignments thither, but these being declined, the prices of goods are now asked for.

A later telegram from New York reports as follows: The market for raisins is animated, Cali-

fornian is scarce and wanted. The delay in making shipments is regretted, but fine parcels can yet obtain a holiday place. Malagas now coming 22 lbs to the box is an inducement to some retailers, but the quality will keep prime Californian from being dislodged to any marked degree. It is also thought that the cholera in the Mediterranean regions may work against the use of Spanish fruit.

Thirty-seven carloads of Fresno raisins were telegraphed this week to one firm. It should be understood, however, that only standard brands, like Coleman Flag and Riverside, realize extreme prices. Country packers and irregular parcels must take the chance of price as before.

Honey.

NEW YORK, Nov. 1.—California honey is quoted at from 8½¢ to 9¢ to arrive; Eastern spot, 6¢ to 10¢; comb, 10¢ to 17¢. The stock is moderate.

Nuts.

NEW YORK, Oct. 31.—California almonds have sold to arrive at 18½¢ for paper shell and 17¢ for soft.

Hops.

NEW YORK, Oct. 31.—There has been no material change in the market.

Local Markets.

BARLEY.—The market is unfavorably affected by the large stock and continued free receipts. On Call, options have been more freely dealt in, but at prices showing few changes. To-day's Call sales are as follows:

Morning Session: Buyer season—100 tons, 95¢; 100, 95½¢; 100, 95½¢; 600, 95½¢; 400, 95¢; 400, 95½¢; 1300, 95½¢; 1000, 95½¢; 1000, 95½¢. Buyer 1887—100 tons, 86½¢; 200, 86½¢; 100, 86½¢; 100, 86½¢; 100, 86½¢; 100, 87¢ c. Afternoon Session: Buyer season—300 tons, 96½¢; 400, 96½¢; 100, 96½¢; 100, 96½¢. Buyer 1887—200 tons, 87½¢; 300, 87½¢; 100, 87½¢ c. c.

BUTTER.—The market is poorly supplied with choice pickled and solid. In fresh rolls, receipts continue fair, but the warm weather is against shipping to distant points, and as local dealers confine their purchases to actual trade wants, the market is against sellers and very hard to report correctly.

CHEESE.—The market is only fairly supplied, causing a strong tone to obtain even at the high quotations.

EGGS.—Strictly choice are scarce and in demand. The market for all kinds is doing better.

FLOUR.—Cutting in prices is still reported, although leading millers are firmer in their views.

WHEAT.—The engaged tonnage in port is increasing. The sample market is stronger. On Call, trading in options the past week was more active, but prices showed few changes, hardly enough to tempt outside speculators to take an active hand. To-day's sales are as follows:

Morning Session: Buyer season—200 tons, \$1.45; 200, \$1.45; 400, \$1.45 c. Afternoon Session: Buyer season—200 tons, \$1.45; 300, \$1.45; 300, \$1.45. Seller season—100 tons, \$1.30 c.

COMMUNICATED.

Market Information.

Cereals.

In a letter to Denison B. Smith, Esq., Secretary of the Toledo Produce Exchange, J. E. Beerbohm states that his estimate of consumption of wheat in the United Kingdom is as follows: May, June, July and August, 1,925,000 qrs. per month; March, April, September and October, 2,125,000 qrs. per month; November, December, January and February, 2,325,000 qrs. per month, or a total of 25,500,000 qrs., and equal to 204,000,000 bu.

It is now very generally conceded that to the United States Europe looks for the bulk of the wheat supplies required, and consequently all statistical information bearing on the position in this country is eagerly devoured. Starting with July 1, 1882, when the wheat reserves of the country were evidently at a minimum point, and taking into consideration the crops, seeding requirements, exports and consumption, the Cincinnati *Price Current* reaches the comparisons herewith shown in tabular form, indicating the yearly and quarterly comparisons of supplies, exports, consumption and surplus of wheat. In this statement the unavailable reserves are reckoned as 50,000,000 bu., which is likely less than the actual quantity thus represented, but however this may vary from the exact facts in this particular, the comparisons hold good. For the crop of 1886, the *Price Current* accepts 485,000,000 bu. as more nearly representing the actual production than the official returns (457,000,000 bu.), in view of the reported export movement for the year, and the evidence as to consumption and surplus, taken in conjunction with the official statements of stocks of wheat on hand on March 1, which are in harmony with this calculation for the 1886 crop.

These exhibits show the following comparisons of total stocks of wheat in the country quarterly from 1882 to 1887, exclusive of supplies to cover seeding requirements:

	Jan. 1.	April 1.	July 1.	Oct. 1.
	Bushels.	Bushels.	Bushels.	Bushels.
1887	295,000,000	188,000,000	73,000,000	351,000,000
1886	377,000,000	186,000,000	81,000,000	402,000,000
1885	344,000,000	244,000,000	172,000,000	387,000,000
1884	274,000,000	184,000,000	92,000,000	447,000,000
1883	270,000,000	183,000,000	98,000,000	370,000,000
1882	222,000,000	134,000,000	50,000,000	381,000,000

If these figures for October 1 be approximately correct, the quantity of wheat available on that date, deducting 50,000,000 bu. as unavailable, was 301,000,000 bu., against 352,000,000 a year ago. The comparisons as to visible and invisible available supplies for October 1 are as follows:

	Visible.	Invisible.	Total.
	Bushels.	Bushels.	Bushels.
1887	30,000,000	271,000,000	301,000,000
1886	51,000,000	301,000,000	352,000,000
1885	45,000,000	272,000,000	317,000,000
1884	26,000,000	321,000,000	397,000,000
1883	27,000,000	293,000,000	320,000,000
1882	13,000,000	318,000,000	331,000,000

This line of calculation leads to 301,000,000 bu. of wheat available for all purposes exclusive of seeding, on October 1, out of which quantity the requirements for consumption during the remainder of the year, 9 months, will be 220,000,000 bu., leaving 81,000,000 bu. surplus for export, by reducing the sup-

ply at the end of the year to a quantity corresponding with the low point in 1882, or 58,000,000 bu. to end the year in the same position at which it began. The exports the past three months have been 47,000,000 bu. This implies 128,000,000 bu. for the export movement for the entire year to reduce supplies to the 1882 point, or 105,000,000 bu. for the year to end in the same position as it began.

These calculations are based on 450,000,000 bu. as representing the 1887 crop.

The New York Produce Exchange Reporter says: Every week's experience only strengthens our position in regard to the wheat crop of the world; it is very plain that it is short of requirements, and its importance should prompt very urgent and careful investigation. The consumption of the world is not stationary, the increase in the consumption annually is not less than 1¼ per cent for food, and for manufacturing purposes there is a marked increase in its use. Now that it is the cheapest food now in use, it cannot fail to have a larger consumption than hitherto. It would be absurd to say that there is no increase in the consumption of wheat-bread from year to year, and when other cereals, root and pulse crops, here and in Europe, fail, other food must be used to supply the deficiencies. The question is constantly asked us, what are the reserves of the world? After careful investigation throughout the grain-producing countries of the world, we arrive at the conclusion that the quantity held in reserve on September 1 was about 40 per cent of that held at the corresponding date in 1886, viz.: 87,000,000 bu.; hence the situation at this writing is of far more interest than usual.

On this coast the Portland, Oregon, market is reported quite active at a slight advance for wheat. Holders of Valley wheat are rather indifferent sellers, except at \$1.20 to \$1.25, of which the major portion is held at an advance on the latter figure. Millers are the chief purchasers. For Eastern Oregon, exporters are the principal buyers. The tonnage in that port loading and to arrive under charter is in excess of last year at this date. In our market there is very little doing, owing to holders' views being above buyers', but as charters are weak and the Liverpool wheat market is gradually strengthening, it looks as if a higher range of values will rule soon. The stock of wheat on November 1st was over 8000 tons less than October 1st, which shows that farmers' deliveries are almost nil.

Barley is gradually working into stronger position, notwithstanding the largely increased stock on hand, being now about 43,000 tons. The bulk of the stock is held against Call Board sales. Within a week there have been shipments to New York by way of the Horn as well as Panama, and a ship was chartered yesterday that will take considerable Brewing and Chevalier barley as part of cargo. This will relieve the market somewhat, even if we do not create activity. As the crop at the West was light, and the quality inferior, it is very generally conceded that the East will have to draw on this coast for the more choice grades, which will be more marked later on in the season.

Oats are steady with light stocks here, and receipts also light. The demand continues good, but the low price of barley operates against the market.

Corn is barely steady. Any selling pressure is met by lower bids from buyers. The supply of choice is light. At the East the market shows more strength.

Rye and also buckwheat are fairly steady, with a slightly improved demand reported for the latter.

Feedstuff.

Continued free receipts of bran and middlings from Oregon are against the market, and to place large consignments a slight shading on present prices would be necessary. The consumption continues free. Ground barley is steadier.

Choice grades of hay are wanted, and as receipts are moderate, buyers, at times, are compelled to pay an advance on top quotations. The other grades are also firm, although alfalfa fluctuates some.

Vegetables.

The past week has been notable for the steadiness of the market for potatoes. The receipts have been free, and so has been the demand. The large supply to draw from and favorable delivering weather keep dealers from trying to corner the market or advance prices.

Choice, hard-keeping onions continue strong, but off qualities are placed only at shaded prices.

Cabbages are higher and strong at the advance. Owing to continued dry weather, farmers are slow in selling, and as the demand is good only, high bids tempt sellers.

In root vegetables there is nothing new to report. Cucumbers are steady, as are tomatoes and other summer vegetables.

Fruits.

Choice apples suitable for filling distant orders are in good request, but poor or defective are hard to sell, except at concessions. The consumption is increasing.

Pears are in good supply, with the better qualities readily placed at full figures. Quinces are slow.

California oranges are expected to put in an appearance next week, but no free receipts are looked for much, if any, under 30 days.

Both table and wine grapes have fluctuated considerably the past week, the market being governed from day to day by the receipts. Compared with last year at this time, prices are much better.

Dried Fruits.

In the local markets dried fruits continue dull, with a downward tendency for peeled and unpeeled sun-dried evaporated peaches. Apricots are also in the dumps, and while no great reduction can be looked for, yet goods will drag for some 90 days, when we expect to see the market advance again. Prunes continue active, with high prices. The late advance in New York has stimulated the market somewhat here.

A reduction is made by the Southern Pacific Railroad in freights to New York.

Raisins.

In the local market, raisins continue an anomaly. Spot prices are very high in New York. It is impossible, however, to sell futures at the spot price. This is because large shipments are expected from Spain. The output in California will be a great disappointment. It was thought at first that it would be considerably larger than last year; then, on a re-estimate, it was thought that it would be about as large as last year, but the outcome will

probably be considerably below that of last year. As an evidence of this, last year Orange colony produced 175,000 boxes, and this year they will have to work hard to pack 50,000. Riverside's pack will probably be 25,000 less than last year. Of course, this is largely made up by the large Fresno production, but that will not be sufficient to overcome the large loss South.

The Southern Pacific railroad has reduced the freight on raisins to New York so as to allow Californian to compete more successfully with the imported raisins.

Live-Stock.

Beef cattle do not show any improvement in consequence of the continued free offerings. Only well-conditioned handy-sized bullocks that cut up without wastage fetch top quotations. The same remarks apply to mutton sheep. In hogs there is a free demand, but with heavy receipts packers bid down only to be followed by an advance as soon as receipts fall off. Mast hogs are not coming in yet, but they are expected to begin to come to hand some time in this month. In horses there is a continued dull, heavy market for work animals and railroad teams, but carriage teams and driving horses are wanted at the last-quoted prices.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7¢ to 7½¢; first grade, grass fed, 6½¢ to 6¾¢ per lb.; second grade, 5½¢ to 6¢; third grade, 4½¢ to 5¼¢.

MUTTON—Ewes, 5½¢ to 6¢; wethers, 6¢ to 6½¢.

LAMB—Spring, 7¢ to 8¢.

VEAL—Large, 6¢ to 7¢; small, 6¢ to 8¢.

PORK—Live hogs, 4½¢ to 4¾¢ for heavy and medium; hard dressed, 6½¢ to 7¢ per lb.; light, 4½¢ to 4¾¢; dressed, 6½¢ to 7¢; soft hogs, live, 3½¢ to 4¢. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way.....	324,696	252,780
In port, disengaged.....	84,117	72,000
In port, engaged.....	21,206	96,018

Totals..... 430,019 420,798

To get the carrying capacity, add 60 per cent to the registered tonnage as given above.

Throughout the past week, poultry ruled remarkably steady, with only the more choice conditioned fetching top prices.

In hogs there is very little of interest to report. Buyers, as usual, talk the market down and the daily papers help them by quoting prices low. The heavy shipments to the East and to England have reduced the holdings very materially. Choice grades are wanted at full prices.

Wool moves along at steady prices, choice desirable clips are readily placed, but the wool must be clean, free from seeds, of medium grade, strength and length of fiber and also lively; dead wools and defective wools are hard to sell.

Hog products are very strong for the season, with a higher range of values looked for, for both ham and bacon.

Honey, and also beeswax, are in light supply, and consequently are high.

Domestic Produce

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

RAILROAD AND LOCOMOTIVE BUILDING.—During the last 13 years the United States has doubled its railroad mileage, while in 20 years it tripled the iron roadways of 1867. That record is nothing more than a fair evidence of American growth and progress generally. We also beat the world in locomotive building, not only in the number turned out from our shops, but also in the running and wearing character of the machines. As an evidence of this it may be stated that we not only supply the large number of engines required for the constantly increasing extent of our railroads, but we furnish a large number of locomotives for foreign countries. There were 54 locomotives exported from the United States during the 11 months ending with May 31, 1887, compared with 51 during the corresponding period of the preceding fiscal year. During the same period car wheels were exported to the number of 12,248 and 9379 respectively.

A Great Manufacturing House.
No branch of the industries of this country has made such rapid strides in this progressive age as the art of Piano making, and none more deserves mention in this connection than the celebrated Piano manufacturers, Messrs. Wm. Knabe & Co., of Baltimore and New York. This firm commenced operations in Baltimore fifty years ago, and by their indomitable energy and striving always for the highest and best in their art, united with the greatest probity in their dealings, have worked up one of the largest business in the world in their line, and it is a well-known fact that no other firm in this country has done more to advance the American Piano manufacture to its present high state than the firm of Wm. Knabe & Co. Their factory is one of the largest in the world, and their business not only extends to all parts of this continent, including the Canadas, the South American States, West Indies, etc., but their Pianos enjoy a large demand in Europe, and the firm has active agencies at London and various points of the European continent. The Knabe Pianos have established their excellence wherever they have been introduced; the most eminent performers have given them the most unqualified approval, and they are as highly prized in the Parlor and school-room as in the concert hall.

THE SENSE OF TEMPERATURE.—Dr. Goldschneider lately presented and explained to the Berlin Physiological Society plates illustrating the topography of the sense of temperature. The sense of heat and cold was determined for the whole surface of the body, and arranged in a series corresponding to 12 degrees of intensity. As a general result, it was found that the sense of cold is more extended than that of heat; that both senses are more developed on the trunk than on the extremities; that the sense of temperature is less acute in the median line of the body; that the distribution of this sense over the surface of the body is quite different from that of the sense of touch; and that the points of exit of the nerves possess little or no sense of temperature.

Complimentary Samples.
Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Important to Tree Planters.
One hundred and twenty-five thousand Fruit Trees for sale at a bargain, consisting of Apple, Pear, Peach, Apricot, soft and hard-shell Walnuts; also 2000 Fan-Leaf Palms. Sales will be made in lots, or the Nursery and stock will be sold on the most liberal terms as to price and payments, or will be exchanged for real estate. Inquire of J. M. Hixson, Real Estate Agent, 75 N. Spring street, Los Angeles, or address the proprietor, Milton Thomas, P. O. Box 304, Los Angeles, Cal.

Easy Binder.
Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

Don't Fail to Write.
Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

BANDMANN, NIELSEN & CO, General Agents, San Francisco.

Farmers and Viticulturists, Attention!
FERTILIZE! FERTILIZE!
NITROGENOUS SUPERPHOSPHATE.
UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.
Dr. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:
Soluble Phosphoric Acid.....12.90 per cent
Reverted Phosphoric Acid......95 "
Insoluble Phosphoric Acid.....2.83 "
Potash.....2.23 "
Ammonia.....1.87 "
Nitric Acid.....2.95 "
The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.
This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.
Dr. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.
The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.
In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 1 pound each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.
FOR SALE IN LOTS TO SUIT,
On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the **MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or**

Free Coach to and from the House.
J. W. BECKER, Proprietor.

CHOIR LEADERS
Are invited to make the ensuing season their most successful one, by adopting one of Ditson & Co.'s books, which are most carefully compiled, and contain the newest works of the best composers.
AMERICAN ANTHEM BOOK. \$1.25 or \$12 per doz. Johnson, Abbey and Tenney. Please everybody. Large sales. Order with Ditson & Co.'s imprint.
DRESSLER'S SACRED SELECTIONS. \$1.50 or \$13.50 per doz. Very large and varied collection.
JEHOVAH'S PRAISE. \$1 or \$9 per doz. By L. O. Emerson, a New Church Music Book of the best character. Many New Anthems and Metrical Tunes. Other well known books with good Anthem Collections are—Emerson's **ANTHEMS OF PRAISE**; Henshaw's **LAUS DEO**; Palmer and Trowbridge's **SANTORAL**; Leslie's **VOX LAUDIS**, and the **SHEPARD CHURCH COLLECTION**. Price of each, \$1 or \$9 per doz.
Male Choirs or Quartets will find good music in
AMERICAN MALE CHOIR, \$1 or \$9 per doz., and in **Dow's Sacred Quartets for Male Voices;** \$2 cloth, \$1.75 boards.
Also send for lists of our 3000 Octavo pieces costing 5 to 10 cents each.
Any book mailed for Retail Price.

SOLE AGENTS FOR
WEBBER'S CELEBRATED

IRRIGATING PUMPS.
WE ALSO CARRY IN STOCK THE LARGEST LINE OF
MACHINERY
In the UNITED STATES,
Consisting of Wood and Iron Working Machinery. Pumps of every description.
ENGINES AND BOILERS
A SPECIALTY.

HORTON & KENNEDY'S FAMOUS ENTERPRISE
Self-Regulating
WINDMILL
Is recognized as the BEST.

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable habbitted boxes.
Positively Self-Regulating,
With no coil springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

TRUMAN, ISHAM & HOOKER.

LA DOW JOINTED PULVERIZING HARROW.

SUPERIOR TO ALL OTHERS, BECAUSE IT IS
Simple, Durable and Flexible.
THOUSANDS IN USE GIVING ENTIRE SATISFACTION.

POINTS OF SUPERIORITY:

It will do better work.
It is much easier for the team.
It is easier to manage.
It has a lever to change the angle.
It is not heavy on the horses' necks.
It has no side-draft.
It leaves no ridge at the center.
It has a wrought iron frame.
Its chilled bearings cause it to wear longer and work easier.
It is easy to ride.
It conforms to uneven surfaces perfectly.

It can be made rigid if desired. It has self-feeding oil cups. Best Disc Harrow in the world.

PRICE LIST.

No. 12 Cuts 6 feet, for 2 horses, has 12 16-inch discs, with weight boxes.....\$ 65 00
No. 16 Cuts 10 feet, for 4 horses, has 18 16-inch discs, with weight boxes.....100 00

State University Buildings.

We give on this page a view of two of the prominent buildings of the State University at Berkeley, which have not appeared in the engravings we have presented of the University site. The large building in the foreground is the Bacon Library and Art Gallery, taking its name from H. D. Bacon of Oakland, who furnished half the funds for its erection, the balance being provided by State appropriation. Mr. Bacon also made valuable donations of books and art works which are duly installed in the building. The Library building is fire-proof, solidly built and beautifully decorated. The style is modern Gothic. The western half of the main floor is divided into three large reading-rooms, in which are kept a large collection of current publications, and the rooms are also used by students in the intervals between their recitations or lectures. The western side is the one shown in the engraving. The eastern side is a rotunda which is the library proper. Handsome walnut cases, tier above tier, circle around the hall, each pair forming a cozy alcove with a window—retired places well adapted for reading or study, highly appreciated by the students. The rotunda has two galleries furnished like the main floor, which are reached by spiral staircases. The main floor is well filled with books, the first gallery is in an advanced state of occupation, and the upper gallery is reserved for future growth of the library. At present there are nearly 40,000 books in the collection. The librarian is Joseph C. Rowell, a graduate of the University and a most excellent officer.

The Art gallery occupies the upper floor of the building shown in the engraving. It has several notable pieces of statuary and excellent paintings, and plenty of room for any art treasures which may hereafter be given to the institution.

The building upon the left of the engraving is the Mining and Mechanic Arts College, a fine solid structure of brick trimmed with granite. The building is divided laterally into two portions by the halls, the south half being occupied by the College of Mechanics, in charge of Prof. Hesse, and the north half by the College of Mines, in charge of Prof. Christy. As might be expected, the visitor who enters the lower floor finds on one side rooms with lathes, planers, forges and steam hammers; on the other, rock-crushers and the various paraphernalia of assaying. The motive power is furnished by an engine situated at the center in the rear. Students in these departments do actual work under the direction of instructors, and manifest much interest in it. The upper floors of the building furnish space for lecture-

room, rooms for mechanical drawing and the like and offices for the professors.

The low building at the rear is also divided between the two affiliated colleges, the southern half containing most beautiful machines for precise measurement for testing the strength of materials, etc., and the north has a full mining outfit with rock-crushers, concentrators, etc.

The departments of the University which we have thus hastily mentioned are well worth a visit from all who take an interest in the progress of general and technical education.

BOARDS OF TRADE.—Since the organization of the State Board of Trade there has been a

Lumber Consumption the Measure of California Growth.

It has been remarked, and very truthfully, that the attainments of a people in civilization are denoted with much exactness by the amount of iron they consume, the force of this aphorism being increased by the fact that such consumption measures with almost equal exactness the present industrial condition of a people. While so generally sound, California seems to offer to this maxim some exception, for here it is the lumber rather than the iron we consume that affords the standard, if not of our civilization, at least of the progress being made in population

sprung up. The towns commenced to grow, the mud houses of the early settlers giving place to those of wood.

With this came a demand for more lumber, which demand has since kept even pace with the almost miraculous growth of that section. It was only after several years that this awakening in the south, first felt in San Bernardino and Los Angeles, reached San Diego. What it has since accomplished there may be gathered from the fact that the imports of lumber at that place, which amounted in 1885 to only a few million feet, were in 1886 increased to 39,000,000 feet, the importation having thus far the present year been swollen to 113,000,000 feet,

San Diego's growth in population and improvements, and the advance in the price of real estate both there and in the country adjacent, having been in about the same ratio as these increased importations of lumber.

As in the southern division of California this thing has happened, so in the central and northern parts of the State it is coming to pass. As there has never before occurred in this section such general appreciation of real estate values and such general industrial activity, so has there never before existed here such call for lumber, the consumption of which has for the past year been unprecedented in the history of California. Iron may best measure the progress of other peoples, but it is evidently wood with us!

LIBRARY, ART GALLERY AND MECHANIC ARTS COLLEGE OF THE UNIVERSITY OF CALIFORNIA.

general interest taken in its work in the interior cities. One gratifying feature of the local institutions which have been established is the interest taken by our leading business men. Salinas City recently organized a board of trade and elected Jesse D. Carr, ex-president of the State Agricultural Society, its president. From the Salinas Index, one of our valued exchanges, we find that the leading business men and capitalists of this section are giving this local board their united assistance.

PEANUTS IN THE "OLD DOMINION."—Of the 3,500,000 bushels of peanuts raised in 1886, worth about \$3,000,000, Virginia raised 2,500,000 bushels—five-sevenths—in half a dozen counties in the southeastern corner of the State. J. W. Johnson of Richmond claims that for fodder the vines are nearly equal to clover hay. Hogs will fatten on the nuts left in the ground. Peanuts are raised on land which will not grow corn, tobacco or wheat profitably.

THE new water-works at Templeton, San Luis Obispo county, are complete and the town is to be supplied with pure and excellent water.

POTATOES in Whatecom county, W. T., are yielding from 250 to 400 bushels per acre, which is considered good for a dry season.

and improvements. While we make as large a use of iron in proportion to our numbers as any other people, our consumption of lumber is comparatively greater, for our buildings are on this coast constructed almost wholly of wood. Not only so, but our wharves, bridges, fences, and, in some cases, even our street pavements consist largely of the same material, and this for the reason that in building we do not have to provide against extreme cold, while lumber is everywhere cheap and of excellent quality.

The truth of the foregoing remarks finds signal illustration in the recent history of Southern California, a section of the State, prior to the past few years, noted for its lack of enterprise, the cheapness of its lands and the paucity, not to say the poverty, of its population. There were no large towns, no railroads and but little business of any kind. If a cargo of lumber arrived at either Los Angeles or San Diego once a year, it sufficed for all the wants of those towns and the back country receiving its supplies from them. At last people from abroad, attracted by the fine climate and the rich soil, began to gather into that region. With their arrival land began to be inquired after, and a spirit of enterprise was awakened. Orchards and vineyards were planted, and other new industries

the San Jose Times, it is evident that Barbour & McMurtry of that city have been doing a good season's work with their *glace* fruits. During the height of the season they had 400 hands employed, but they were then chiefly occupied in drying fruit. At the present time they have 75 hands mostly at work on *glace* fruit. Mr. Barbour says the *glace* fruit is mostly shipped East, but the market in Australia is enlarging. Their largest market is New York, notwithstanding they there meet the competition of the French article in its full force. New York and Chicago are their distributing points for the East; and the consumption in Boston, which is supplied from New York, is increasing rapidly. Mr. Barbour thinks the Australian market may, within a year, be partially lost. Recently Mr. Robert Lester, who was for several years foreman of the canning shop in the San Jose cannery, left for Sydney, N. S. W., to start and superintend a cannery in that vicinity.

BEFORE THE SWINE-BREEDERS.—Prof. Law and Dr. Salmon of Washington and Dr. Frank S. Billings have been invited to make addresses at the Sixth Annual Meeting of the National Swine-Breeders' Association, to be held in Chicago on the 16th inst.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Carp, Catfish and Pout.

EDITORS PRESS:—I have been thinking for a long time of expressing my thanks to the person or persons who have directly or indirectly stocked our streams with the Missouri river catfish and the German carp. I have learned that the last-named fish got away, by accident, from a fish-pond in Napa valley. If so, the person who lost them has become a benefactor to the State wherever the Sacramento or San Joaquin rivers run. They must be very prolific, as the Sacramento appears to be alive with them, and there is no place that I have seen this summer but they are jumping out, and if any person understands catching them, he never need go home without fish. They are not as good eating as perch or trout, but their being so plentiful, makes them valuable as a food fish for the masses.

It is probably a fact that salmon are on the decrease in the Sacramento river, and to those engaged in fishing, the scarcity may work a hardship, but as none but fishermen caught them, the public is not so much interested in the salmon as they are in the fish that can be caught with hook and line. So while the fishermen are the losers, the public are gainers in the change of fish; for as the salmon appear to diminish, the catfish, carp and horned pout take their place.

The last-named fish is charged with eating the salmon eggs. How that is I am not able to say, but I do know the pout furnishes a good many tons of meat yearly in this part of the State; and good eating they are, too. I have often thought they were too plenty to suit the fishermen—it injured their trade, for not many will buy if they can catch enough themselves.

Of the catfish there appear to be two varieties, the blue and the black. The yellow is preferable to the black, at least we used to think so in Dakota Territory, below Yankton, where the writer has seen many a one caught. The objection to the black variety is the ponderance of head. The yellow, blue and white are long and slim, while the black is short and about half head, but the meat is good.

And now a few hints about catching and salting the fish might not be out of place. The catfish lives on the bottom and in the middle of the stream and in deep water, while the pout and carp seem to feed alongshore and are not so particular about the water being deep. Carp like plenty of brush along the bank and in the water. Carp will bite potato, beef, worms and fish, but appear to like pieces of small pike or scalefish. The catfish will bite beef or scalefish, but prefer the latter. Pout will always bite fish-worms. The best way to catch carp and catfish is to get a strong line and tie hooks on it two feet apart; fasten a weight to the end, throw it out into the stream and let it lie on the bottom. Pout is best caught with a line and pole.

Method of cleaning catfish and pout: Take them by the head and let their thorns pass between your fingers. Strip them down the back and then cut under the back fin toward the heart, and break the backbone. Then take hold of the bone with knife-blade and thumb and pull it out of its skin. If the fish is too large, strip it and pull off one side at a time, with a pair of nippers or a woolen cloth. After they are dressed, don't let a drop of water touch them. Salt them down dry and they will not spoil. I do not know how long they will keep, as I never saw any spoil, and I have seen them kept for six weeks; but if they are washed they will not keep two days in warm weather.

J. R. SPRINGER.

Woodland, Cal., Nov. 2, 1887.

The National Swine-Breeders' Meeting.

EDITORS PRESS:—The annual meeting of the National Swine-Breeders' Association, to be held in Chicago on the 16th inst., promises to be one of unusual interest. During the past year the membership has greatly increased, and breeders and feeders seem more than ever awake to the importance of united effort for the promotion of swine-breeding and pork-producing industries.

At the last meeting, swine-plague—the great hindrance to successful hog-raising in America—was one of the chief topics of discussion. No greater amount of value and practical information on the subject has ever appeared in so small a compass as in the published proceedings of that convention. The good resulting from the intelligent consideration of even one point of such vital importance to swine-breeders is of untold worth to the country. But the clouds of disaster from continual losses by swine diseases, which overhung that meeting, have broken into light rifts in the distant skies, or entirely passed away, and when the association meets again it will be to consider questions of a more pleasing and hope-inspiring nature.

Men may talk and write as they will of the cattle interest, the sheep and wool interest and the horse interest, but the fact remains that nothing on the farm can be reared at greater profit than good hogs. The remarkable change that is going on in the manner of feeding and the increasing demand everywhere for a better

quality of pork, will present fruitful topics for consideration at the coming meeting. The, as yet, unsettled question of how judging at the fairs shall be done, will also be discussed, besides many other points, which the large attendance promised will not fail to bring out.

It is needless to urge upon members, and those heretofore present, the personal advantages to be derived from attending these meetings. They know they cannot afford to be absent. To others engaged in swine-breeding, or in any way specially interested in the great meat-producing industries of the country, is hereby given a cordial invitation to be present at the coming meeting.

PHIL. M. SPRINGER,
Sec'y Nat'l Swine-Breeders' Association.
Springfield, Ill.

The Check or Bearing Rein.

EDITORS PRESS:—Much has already been written upon this subject in different parts of the world, and much more appears necessary, before owners of horses generally will conclude to abolish from their stables the use of the bearing rein.

Tight bearing-reins for horses cause the wearer much pain through cramping the animal's neck. This is where the bearing rein is carried from the saddle through a loop on the throat-latch, as generally used in England. In America, where it is taken straight up the crest of the neck and over the head to the bit, it is not injurious to the throat, but is equally severe and uncomfortable to the horse, inasmuch as it "gags" the corners of his mouth and causes him to be continually tossing his head to get relief.

This system is bad enough in carriage horses, but far worse as regards draft horses, for it is physically impossible for a horse to pull a heavy load (especially up-hill) unless he can get his head free, and so throw his full weight upon the collar.

Neither is it the "comfort" of the horse only which calls attention to this practice, but its health also, for tight-bearing reins are productive of many ills, among which may be mentioned poll evil.

In some parts no bearing rein is allowed. The animals walk with more freedom and do their work without pain. Let any humane person notice a carriage horse reined up while standing by the sidewalk. It is enough to make one grieve to witness the poor tortured brute endeavoring by various movements to get temporary relief.

A. B.

HORTICULTURE.

Meeting of the State Horticultural Society.

Last week we were obliged to give but part of the report of the meeting of the State Horticultural Society. The following takes up the discussion on table grapes at the point where it was dropped last week:

President Hilgard: There is another grape seldom seen in the northern part of the State, but which is raised largely in France—the Malaga. It is rather sweet and tasteless, but has been shipped from France to Chicago and arrived in good condition. Not a large amount will sell well, but to a certain extent it will.

Mr. Tompkins desired to know how long the Eastern grape season lasted. Mr. Buck said they have a way of keeping their grapes and storing them away so that they keep longer than ours do, into the winter even.

Mr. Tompkins desired to know when they marketed them.

Mr. Buck: Beginning at the south, they ripen by the 1st of September, and in the Lake Erie region and on the Hudson a little later. They have but little time in some localities between a ripe grape and a frost. More grapes are raised around Lake Erie than anywhere else.

The President thought we might adopt some of the ways they use East to keep grapes. They put them in paper bags partly to protect them and partly for the black rot. He used to keep them in that way in the East until Christmas.

Mr. Tompkins said, speaking of grapes ripening under foliage, they also colored well in paper bags.

President Hilgard spoke of the Cinsaut, a grape lately brought to this State, although the specimens were poor. It is a short-bunched grape and resembles the Malvoise in that it has a decided flavor, but not so decided as to make it like the Muscat. Every one who tries the grape is delighted with it. It is used as a shipping grape in France a good deal; if it cannot be shipped, it makes good wine. It should be tried more widely. It has been proved that it will not grow well on poor soils; it requires rich adobe soil. It gives 170 gallons of must to the ton. Mr. Wheeler, who planted the grape on gravelly soil, found it was not a good bearer, but it is a good bearer on rich adobe soil. Would recommend it for trial.

Mr. Cantelow of Vacaville was not acquainted with the grape. He thought the Verdel a large grape, and, if allowed to ripen, a very sweet one. White Tokay is not a marketable grape. It does not take in this market; never

tried it for Eastern markets. The Cornichon with him is a poor bearer when short-pruned. He never planted it very extensively, and never considered it a very good grape. No variety of grape is better than the Muscat. When asked which grape he preferred for general culture, replied the Muscat. His variety is a little different from those in his neighborhood. He bought cuttings from Mr. Delmas of San Jose. Few varieties better than this. He grafted all his grapes from that kind. He thinks it must be the Muscatel. The wood is thin and grape is a good bearer pruned either short or long. He has planted it extensively; it is liked both in this market and the Eastern markets.

A member spoke in regard to Tiensing grape. It is very sweet; it keeps for four or five months. He had them last for three months in a very dry place. They came packed to us from China.

President Hilgard stated that it was a grape that they had been unable to fruit at Berkeley, but the fruit is described as very long-bunched. He is told that this grape is allowed to run over trellises and trees in its own country. Our grapes have never set. It is an odd-looking vine. Leaves are full of prickles; no one would take it to be a grapevine. The stem is also full of hairs. It belongs to a different species and genus. We need further information on the subject.

We must pay a little more attention to the possibility of growing grapes that will answer for both wine and table like the Cinsaut. Plant so as to have choice between table-grape market and wine-grape market. Several varieties will serve thus and we should have few financial failures if we tried such varieties.

Mr. Buck spoke of grapes being in the Eastern market as late as the first of April in good condition. They were probably kept in cold storage of some kind before they were shipped there. They get them very late in the season. Our grapes have better keeping qualities than their grapes have. We could do the same with ours.

Mr. Coates desired to know what variety it is that comes from Spain and was kept so long in the Eastern market, especially New York and Boston and London. It is kept all through the winter. Was it the Malaga?

President Hilgard stated that it was understood to be the Muscat of Alexandria. It is packed in cork-dust, which takes away all the flavor and leaves its own.

Mr. Coates remarked that Dr. Strentzel of Martinez used carbonized bran. Tules have been used. Grapes have been kept for months at the East, and no reason why they should not be here.

President Hilgard: We do things in such a wholesale manner we have no time to devote to the little industries yet. Grapes must not be touched with the finger if they are to be preserved for any length of time. In Malaga they are picked by laborers who use shears that grasp the stem after picking it off or allows them to be held by the thumb and finger without touching the berries. We can use all that care, but it is a question as to whether it will pay, as labor is too dear. He had paid 75 cents a pound for Malaga grapes in the East about Christmas-time. In regard to carbonized bran, carbon is a very strong disinfectant and will take away all the flavor of the grape. Sugarine sawdust is the least objectionable, as it is almost entirely without flavor, but cork is considered the best. Found some years ago bark that could be used like cork from the Island of Jesso. Our cottonwood bark may answer for this purpose. This is one of the minute industries. We lose millions of limes and lemons every year because we do not make citric acid, and we have no manufactories for preserved lemons or extracts, etc.

Mr. Tompkins said bran caked around the stem of the berry and was objectionable.

Mr. Coates thought nothing had been said in regard to keeping the grapes alive, which was the most important thing of all. The acreage of bearing grapes is decreasing, particularly in this part of the State. Few vineyards are in as full bearing as formerly in the northern and central parts of the State, on account of the phylloxera. The demand will increase for all fruits if they can be shipped in good condition and we have low rates of freight. What stock can be renewed for table grapes, which make large, coarse wood and overgrow the stock? That is the principal objection to the *Riparia* family. The Tokay is often claimed to be resistant on account of its great vigor. He has seen vineyards of all varieties killed except the Tokay. Can find that almost anywhere. Some in Vaca valley have even used the Tokay as stock. The *Riparia* root is such a very small-growing stock that some trust to the *Vitis Californica*. The *Rum-tris* grows to a nice large stock in a few years, but is very objectionable on account of the suckers.

The President: Both in number and toughness.

Mr. Coates: Mr. Munson wrote me about a new Mexican grape.

Mr. Klee: It is called the Wooly *Riparia*. They think it is a distinct variety. The leaf is wooly. It is growing at the University.

Mr. Coates: It is a strong-growing variety, more so than the *Riparia*.

The President: The *Californica* has proved resistant in some parts of the State and non-resistant in others. They have had samples at the University put in holes from which the diseased vines were just extracted, and the vines are alive now and bear abundantly every year. They are on a very heavy, good soil. He is satisfied

that the *Californica* should be placed in rather a rich and heavy soil, and then it will resist. There is no reason to suppose that one grape is going to resist everywhere. You use different roots on different soils for orchard fruits; the same with grapes. To my sorrow, I have quite a quantity of *Rupestris*, and have a stand of about one-eighth of successful grafts. In *Riparia* about one-half, and *Californica* 98½ per cent. It is on rich and somewhat heavy soil; the same as I found *Californica* growing on the hills in Napa and Sonoma counties. I have no reason to change my opinion on this point. For the foothills, *Californica* would not be a success; other varieties should be used there. Had a conversation with Prof. Viala from Montpellier, France, in regard to resistant vines in France, where they have all kinds known. The *Californica* does not resist there. Upon inquiry, I found the soil was gravelly and rather poor. *Californica* will not resist in such soil. This subject of resistant stocks is a very important study which we have still to perfect.

Mr. Tompkins: On quite heavy land this *Californica* seems to resist well; is it so with other stocks? Do they resist on better soil?

Mr. Klee gave his observations on Mr. Thurbur's place in Pleasant valley. There are a few vines grafted on *Californica* root now living. All the rest were killed with phylloxera.

Mr. Klee thought there was so much difference in the adaptation of these different varieties. *Rupestris* grows large and vigorous in the Briggs vineyard.

The president thought *Rupestris* grows well only in light soils, but would not be successful in as many soils as *Riparia*; that the *Aestivalis* grows in any upland and lowland while the *Riparia* grows naturally on the lake bottoms and the *Rupestris* grows on the hill soils; no one vine will resist everywhere.

Mr. Coates desired to know about the parasites in vines.

President Hilgard thought a great many suggestions were needed yet to teach us what to do about resistant stocks.

Mr. Rixford said he had been told by Mr. Wheeler of Vaca valley that they have been grafting Tokay grapes on *Californica* to get better fruit.

Mr. Buck: In grafting on any of these strong-growing grapes you will find that the graft will root for itself unless you keep cutting off the roots.

The President: Graft on the surface; pull up the earth around it, and then afterward pull it away. *Rupestris* or *Riparia* especially. I do not believe in grafting underground.

Mr. Klee has about an acre of vines grafted on the *Californica*. They made a very strong growth, and gave no trouble whatever. In case of trouble they would have to be grafted above the ground. Nurserymen should take hold of this matter and have vines already grafted. If they had encouragement enough they might go into this business. They do that way in France. Graft them in the nurseries.

Mr. Cantelow had a large Mission vine on a trellis and wanted to change it. Put a number of buds into the canes of the previous year and every one grew. He puts away cuttings in a cool place, waits until the sap begins to come up in the vine, and then puts the buds in by common budding as with fruit trees. He put in quite a number and every one lived.

President Hilgard: Do you wait till the buds begin to swell on the vine?

Mr. Cantelow: I put in the buds just as soon as the bark will slip and before the sap runs too strong. You cannot do it in summer-time. I use no precautions and simply tie in the buds with string. I think a vineyard could be changed over in that way without any trouble at all. Never heard of it being tried before successfully. In lifting the bark at the right time you will find it will slip as easily as on a peach tree.

Seedling Fruits.

The President: The subject of next meeting will be "Seedling Fruits," as it is now too late to begin that subject. It is a very important subject and will probably occupy the whole of the time at the next meeting.

Mr. Allegretti addressed the society concerning the cold storage of fruits. He said each fruit seemed to have its "lifetime" in storage and after that it would lose color and flavor. Cling peaches last well for four or five weeks and then draw color from the pit and lose flavor; freestone peaches last longer. Plums keep for a long time and so do Bartlett pears—the last perhaps keeps best of all. He showed samples which had been wrapped in paper and some not wrapped. The fruit in paper was discolored on the outside, while the inside was good color; the uncovered fruit kept a good color.

Mr. Buck and Mr. Lelong called attention to the Convention of Fruit-Growers at Santa Rosa on Nov. 8th, and urged all to attend.

The society then adjourned.

Olive-Growing in California.

EDITORS PRESS:—California is a veritable land of wonders. Its gold deposits have yielded enormous wealth during the past 40 years, and now that they are approaching exhaustion its enterprising citizens are developing more permanent sources of material riches in the cultivation of their soil, which is wonderfully fertile, and which, thanks to the magnificent climate, the products of both the semi-tropical and the temperate zones can be reared. The culture of

the olive has become one of the regular industries of California, and it is reported that there are those who have as many as a hundred acres of olive trees, 80 of which are bearing, and that the crop this year in this particular spot will produce from 20,000 to 25,000 bottles of oil. Olive culture has hitherto been almost wholly confined to the countries of the Mediterranean basin, and the demand for the oil has always been in excess of the supply. It is well known that large quantities of cotton-seed oil have been sold and consumed in the United States as olive oil.

What the public requires is an assurance that the genuine article is to be had, when cotton-seed oil as a substitute must eventually go to the wall to the benefit of the producer and consumer alike.

A. B.

THE VINEYARD.

Decision on the Wine Stamp Law.

Henry Kohler was convicted in the Police Court of the city and county of San Francisco of the crime of misdemeanor, committed in violation of the provisions of an Act of the Legislature of the State of California, entitled, "An Act to prohibit the sophistication and adulteration of wine, and to prevent fraud in the manufacture and sale thereof," approved March 7, 1887. (Stats. 1887, p. 46.)

The salient provisions of the Act are as follows:

Section 1 defines pure wine for the purposes of the Act. Section 2 prohibits the using of deleterious substitutes in the fermentation, preservation and fortification of pure wines. Section 3 prohibits the use of materials injurious to consumers for the promotion of fermentation. Section 4 declares it to be unlawful to sell under the name of wine any substance other than pure wine, as defined by the Act. Section 5 makes an exception in the case of pure champagne and sparkling wine, so as to permit the use of sugar in sweetening the same. Section 7 provides for the printing and furnishing of labels by the Controller of the State, setting forth that the wine covered by such labels is pure California wine. Section 8 reads as follows:

"Sec. 8. It is desired and required that all and every grower, manufacturer, trader, handler or bottler of California wine, when selling or putting up for sale any California wine, or when shipping California wine to parties to whom sold, shall plainly stencil, brand or have printed where it will be easily seen, first, 'Pure California wine,' and secondly his name or the firm's name, as the case may be, both on label of bottle or package in which wine is sold and sent; or he may, in lieu thereof, if he so prefers and elects, affix the label which has been provided for in Section 7. It shall be unlawful to affix any such stamp or label as above provided to any vessel containing any substance other than pure wine, as herein defined, or to prepare or use on any vessel containing any liquid, any imitation or counterfeit of such stamp or any paper in the similitude or resemblance thereof, or any paper of such form and appearance as to be calculated to mislead or deceive any unwary person, or cause him to suppose the contents of such vessel to be pure wine. It shall be unlawful for any person or persons other than the ones for whom such stamps were procured to in any way use such stamps or to have possession of the same. A violation of any of the provisions of this section shall be a misdemeanor and punishable by a fine of not less than \$50, etc."

The complaint charged "that said Henry Kohler, being a dealer and bottler of California wines, did sell to the prosecuting witness, one Jasper, a bottle of California wine, which bottle when so sold did not have plainly or at all stamped thereon the words 'Pure California wine,' nor did it have in lieu thereof the stamp as furnished by the Controller of State."

Several questions are presented involving the construction of the Act referred to and its constitutionality. It is claimed by petitioner that the Act is not mandatory in requiring a pure-wine stamp to be placed upon pure California wine. The complaint did not charge petitioner with the sale of sophisticated or adulterated wine; it accused him merely of selling a bottle of California wine without having thereon the pure-wine stamp. It is claimed by counsel for the people that, under the Act referred to, dealers in wine are prohibited from selling pure wine without the stamp designated by the Act. Petitioner contends that, while the pure-wine stamp may be used, there is no penalty prescribed for a failure to use it. The Act is not objectionable upon the ground claimed by the petitioner that it embraces more than one subject, contrary to the requirements of Article IV, Section 24 of the Constitution, which provides that: "Every Act shall embrace but one subject, which subject shall be expressed in its title." However numerous the provisions of an Act may be, if they can be fairly considered as falling within the subject-matter of legislation, or as proper methods for the attainment of the end sought by the Act, there is no conflict with the constitutional provision above quoted. In any event, it is only where there is a clear violation of the Constitution that the court is justified in declaring it unconstitutional. The great object to be attained by the "Act to prohibit the sophistication and adulteration of wine, and to prevent fraud in the manufacture and sale thereof," must have been to secure the manufacture and sale of none but pure California wine. The first section defines pure wine; the second section prohibits the use of deleterious substitutes; the fourth section prohibits the sale of any but pure wine, and every penalty affixed is for the purpose of protecting those who make and sell pure wine, and for punishing those who make and sell im-

pure wine. Manifestly the provisions of the Act all fall within the subject named in its title, and are necessary and logical methods for the attainment of the end desired by the Legislature. The Act, therefore, is not repugnant to Article IV, Section 24, *supra*.

Now, is the Act unconstitutional because so unreasonable in its restriction upon the sale of wines as to deprive the petitioner of his property and liberty without due process of law? The power of the Legislature to impose such regulations for the conservation of the health of its citizens has been so often discussed and affirmed here that it is useless to reopen the question. The manufacture and sale of liquors of all kinds, the sale of pure milk, the inspection and sale of meats, and the control of laundries and slaughter-houses are all subject to regulation. Whatever construction may be placed upon the Act, it is difficult to see how a compliance with the law would injure an honest dealer in California wine.

A more difficult question is that which refers to the proper construction of Section 8. Is it mandatory in requiring a pure-wine stamp to be placed upon pure California wine? Is a failure to place such stamp upon pure California wine "a violation of any of the provisions of this section?"

All legislation directed against the adulteration and simulation of articles of food and drink is aimed at a common object—the preservation of the public health. The Court will take judicial notice of the evils preceding such legislation, and the mischiefs intended to be prevented thereby, the character and importance of the interests of the State which may be affected thereby and the usual course of business. A knowledge of these matters is often necessary to a full and fair understanding of the force and effect of the law, and is a valuable help in ascertaining its true intent and meaning. The growth of the wine-growing interests of this State is a matter of world-wide publicity. It is a well-known fact that California is the only State in the Union where the grape suitable for wine-making is cultivated in vineyards, and that her wines are rapidly growing in favor and rivaling in quality the table wines of foreign countries. With the progress and success of this industry there has grown up and increased the manufacture and sale of spurious wines, which are not only injurious to health, but detrimental to the wine industry. Several attempts have been made in Congress to prevent the trade in this cheap and unwholesome stuff, but without material effect. Finally, in 1886-87, when the evil had attained so great a magnitude as to attract public attention, the Grape-growers' and Wine-makers' Association of California presented a bill to the Legislature of this State, which, after being amended, was passed, containing the provisions above stated. The primary objects of the Act were doubtless to prevent the sale of spurious wine under the designation of "California wine," and to promote the public health. But there were other objects to be obtained incidentally. The wine-grower who produced good wine would not have to suffer the effect of a blending by the trade of his article of superior merit with an inferior one. It was evidently through the efforts of wine-growers, who aimed at a high degree of excellence in wine-making, that the first clause of Section 8 was inserted. Some expression on the part of the Legislature of the State was desired as authority for affixing a badge to their productions, by which the consumer could feel sure of the purity of the wine and the identity of the producer. That the words "desired and required" were intended to express rather a legislative wish and permission than a mandate is indicated, too, in the discordancy of the natural meanings of the words themselves. As words of legislative command they are singularly inappropriate and inconsistent. It is difficult to understand how it can be made a penal offense to violate simply a legislative desire. The word "desired" cannot be ignored in the construction of the Act any more than the word "required," and the former is at least as forcible in its expression of a request as the latter is in its expression of a command. The Act in all other provisions containing mandates and prohibitions is positive and forcible in its language. Thus it is noticeable that the same section further along provides: "It shall be unlawful to affix any such stamp," etc.; and again, "it shall be unlawful for any person or persons other than the ones for whom such stamps were procured to use," etc. Other sections of the Act use the same language—words which are ordinarily employed in expressing the mandates and prohibitions of penal statutes. We do not think it was intended that the sale of wines, admitted to be pure, should be circumscribed, limited or restricted. Such legislation is unusual. We know of no similar statute where anything more has been attempted than, first, to prohibit the adulteration and sophistication of food and drink, and second, if permitted, to compel the appropriate stamping and designation of such food and drink. The New York Pure-Wine law, approved in June, 1887, defines pure wines, half-wines and made wines; prohibits the sale of adulterated wines, and requires the stamping of half-wines and made wines; but it does not in any manner attempt to regulate the sale of pure wines. If the Legislature had intended to compel the use of stamps and labels on pure wine, it could easily have stated that the failure, neglect or refusal to use them was unlawful, and there would have been no ambiguity in its language. The fact that it is carefully stated in the

Act what shall be unlawful in other respects is strong evidence that the first clause of Section 8 was not intended to be obligatory. It is always to be presumed that the Legislature will express its intention in clear and explicit terms in prescribing the obligations for a violation of which a penalty is affixed. In cases of this kind, the limitations and restrictions should be plain and free from doubt. (Hill vs. Decatur, 22 Georgia, 203.) It is a general rule that statutes affixing penalties should be strictly construed and all doubts resolved in favor of the accused. (People vs. Tisdale, 57 Cal., 107.) When measured by the mischief contemplated by the Legislature, an additional reason is presented for giving to Section 8 a permissive scope, rather than a mandatory one, so far as the stamping of pure wines is concerned. The Act defines pure wine, prohibits adulteration and deterioration, prohibits the sale of impure wine; the Controller is authorized to furnish labels, and penalties are provided for the use thereof on other than pure wines. This seems to be the natural scope of the Act, and all that is necessarily indicated in its title. There can be no fraud in the sale of pure wine. The title is a part of the Act, and must declare its object; and in all cases where the legislative intent is ambiguous, judicial reference may be had to the title of the Act to assist in determining its meaning. (Weed vs. Maynard, 52 Cal., 439; Barnes vs. Jones, 51 Cal., 303.) We think, therefore, that the affixing of labels on pure wine is not obligatory, and that the proper construction of Section 8, wherein it declares that a violation of any of its provisions is a misdemeanor, is to impose a penalty for a violation of only those provisions which are therein specifically declared to be unlawful. It results that the complaint states no offense, and the petitioner must be discharged.

So ordered.

Vine Pruning.

EDITORS PRESS:—I have the care of a young vineyard of two acres. Last winter being the first time it needed to be pruned, and not being posted on the matter of pruning, I waited until my neighbors began to prune; then I took my shears and sallied forth to prune mine. That was in the latter part of January. I found the vines bled considerably. I stopped operations for a few days and waited for cooler weather, which came in February. I pruned then, but still many of the vines bled; some kinds very much; the Sweetwater bled most. We are in a warm location where we seldom have ice, only white frost now and then. Last winter the vine leaves were not frost-killed until in February. Now, it appears to me, it is not cold enough here to chill the flow of the sap. One point in particular on which I want to be informed is this: I find just now after picking the grapes that the vines do not bleed when I cut off a cane. I have tried it in different parts of the vineyard, and at different intervals for the last week. The question with me is, would it be doing the right thing to prune them now while they are as dry as a bone? Another point: Is it a good plan to paint over the wounds or cut ends made in pruning? I would be pleased to hear from any one who knows the things I seek after.

VINE-GROWER.

[The subject is open for discussion. Let us hear from you, friends.—EDS. PRESS.]

THE DAIRY.

Lucerne.

EDITORS PRESS:—The Lucerne Vale of Tulare county, known in former years as the Mussel Slough country, seems destined in the near future to establish a reputation for fruit-growing and raising fine stock not to be excelled by any section either east or west of the Rocky mountains.

A kind of oasis in the center of the great unwatered plain that almost surrounds it, and 17 miles off the main line of the S. P. R. R., the superior richness of its soil and the adaptability of its climate to the production of every kind of fruit grown upon the Pacific Slope, has but recently been demonstrated by practical experiments, though it has for years been known as one of the best stock-raising and wheat-producing sections of the State.

It was given its former name by stockmen in early days, because of the large quantities of mussels found in the bed of one of the usually dry sloughs that wound their way through this valley. But after the irrigation ditches had been constructed and the natural resources of the country became somewhat developed, the old name was thought to be a misnomer, and the much more appropriate one of Lucerne valley or vale was generally adopted, though some of the early settlers cherish an affection for the old title and are unwilling to give it up.

This little valley contains an area of about 200 square miles or 130,000 acres. It bounds

the lake of Tulare on the north, and was probably within the last century all a part of the bed of that lake. In fact, one-third of it has become uncovered within the last two decades, the waters of this mysterious lake having reached five miles on each side, or rather five miles all the way round it in that time.

I call it mysterious because it has no outlet, although there are several large rivers flowing into it, and where the water goes no one can tell, unless, as some believe, there is an outlet through to the ocean.

The soil of Lucerne seems to be mostly a decomposed sediment, bearing strong evidences all over the valley of its once having been a lake-bottom. It is of a porous nature such as I have never seen elsewhere, though I have traveled and experimented considerably in my lifetime.

This condition of the soil permits a seepage from the many irrigation ditches flowing through the valley, the water often forcing its way in this manner for a distance of half a mile. Flooding is not necessary in a single instance, and is never permitted by farmers and horticulturists who understand the nature of the soil, which is too heavy, in most cases, to bear irrigation by that method, and if it is indulged in the ground seldom fails to bake; but by the seepage method, running ditches of water 100 or 200 yards apart, this never occurs, and sufficient moisture can easily be acquired.

The towns of Lucerne are four in number, and named in the order of their size. They are: Hanford, Lemoore, Grangeville and Armona, the first-named containing a population of about 1200 people. On the 12th of July last the main business part of this place was completely destroyed by fire, the value of the property burned being estimated at \$200,000. It has since been rebuilt, and though the buildings destroyed were mostly superb brick structures, the new ones are in every case a marked improvement on the old. Several fine brick buildings have been added this season, notable among which are the Hanford Bank and post-office buildings, both of which would do credit to any city in the State.

Last August Grangeville suffered serious loss by fire, but the enterprising citizens of that beautiful village were not behind their neighbors at Hanford, and have already erected new buildings, larger and more substantial than the old ones, to supply the places of those burned.

The products of Lucerne in fruit, grain and stock have been quite satisfactory this season, and a large acreage of trees and vines will be added to her orchards and vineyards next spring.

Hanford, Cal., Nov. 1, 1887.

Oleomargarine.

The meeting of the National Butter and Egg Convention at Manchester, Iowa, last week, was largely attended. One session was largely devoted to the consideration of oleomargarine. Resolutions were adopted calling the attention of the Secretary of the Treasury to the necessity of a proper enforcement of the oleomargarine law by the revenue officers, also asking Congress for an appropriation to insure its enforcement. Another resolution adopted was one urging the States which have not already passed laws prohibiting the manufacture of oleomargarine, to do so at the earliest possible time.

The Iowa associations presented resolutions reciting that Revenue Commissioner Miller pronounces the oleomargarine law inoperative, and will recommend its repeal, and resolving that if the law is inoperative it is because of Mr. Miller's lukewarmness and refusal to enforce it; that no one will receive their votes for any Executive, Congressional or other office who is not squarely opposed to fraud against dairy interests; that there should be a sufficient tax on the sale of oleomargarine to create a fund to enforce the law against the fraud; that funds derived from the tax and from fines should be used in enforcing the law; that it is deemed necessary that Congress should pass a law providing for this use of the money. The resolutions were referred to a committee.

Warty Growths on a Cow.

EDITORS PRESS:—In the San Luis Obispo Tribune there is an account of a cow at Shepherd's which is interesting and amusing. It says: "The animal is affected with barnacles such as are seen on wharf piles and the bottoms of ships. All over her head, neck and fore legs there are thousands of these moving excrescences which rattle as she walks or shakes her head. They hang in masses over her eyes and under her jaws, and this extra weight must reach at least 50 pounds. . . . Barnacles on ships are common, but when they begin to form on decent, respectable cows, it is time to ask Nature what she means by it." Judging from the description and the location of these peculiar formations, I should be inclined to think that they are due to a disease of the skin producing papillary or "warty" growths. Cattle are frequently the subjects of warts. I have often removed immense masses by means of the actual cautery. This warty condition or tendency is peculiar to certain oxen. It is noticeable also in some human beings.

ROBERT J. DAWSON, V. S.

Gilroy, Nov. 2, 1887.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The National Grange Exhibit.

It is very gratifying to Worthy Master Overhiser and others interested in the enterprise that on so short a notice so much has been secured for a worthy representation of California at the National Grange exhibition of agricultural products.

The Farmers' Union, Brothers Keesling, Cyrus Jones and others of San Jose performed their duties with alertness, and we have no doubt effectively, and Santa Clara county will be grandly represented.

Brother Huffman of Lodi, Brothers Overhiser and Gratton and others of Stockton have not only obtained a large exhibit from San Joaquin county, but have secured generous contributions to pay the expenses of Brother Huffman to and from the National Grange.

Mr. Alsip of the State Board of Trade, Sacramento, who opened his store for the reception of articles prior to shipping on the car, has done exceedingly well in seeing that the car was properly loaded and started on Sunday morning. Brother Flint, the Grangers' Business Store and others at Sacramento, have acted promptly and sent forward an exhibit that will no doubt reflect credit upon the Capital City and county of our State. They have also done well in raising funds.

Brother Williams of Marysville, Sutter and Yuba Grangers have acted well their part, and those two counties will be duly heard from at Lansing. The *Patron* and *RURAL PRESS* offices have sent hundreds of copies of Grange and farming papers and agricultural pamphlets, with other printed matter for free distribution.

Napa, Contra Costa, Placer, Solano and Sonoma counties have contributed samples.

The managers of the different railroad companies who have given free and rapid transit for the car transporting the exhibit, Mr. Hatch, President, Mr. Brown, Manager, and Mr. Davies, Secretary of the State Board of Trade, and many of the members who favored the enterprise, are deserving of commendation for their active interest in this matter.

Bro. Huffman left on the afternoon train on Tuesday to follow up the car and see that the exhibit arrives and is properly arranged and carefully and impartially attended to for the benefit of all exhibitors.

Granges and Patrons should remember that articles can be sent by mail or express yet to reach Lansing in about six days, and that the National Grange session opens on Wednesday, the 16th of November, and is expected to continue about 10 days.

It is now contemplated that the exhibit at the National Grange will be forwarded for permanent exhibition at Chicago soon after the session of the National Grange. We hope to be able to give more particulars concerning the exhibit in our next.

Grange-Day Anniversary.

We hear from several quarters that this anniversary will be duly observed on Saturday, December 3d.

We hope to be able to announce in our next that Eden and Temescal Granges have completed arrangements that will insure a large meeting of Patrons of Alameda, Contra Costa, Santa Clara and other counties, and that many of the officers of the State Grange, Past Masters and other Grange speakers will come together for a general council and exchange of opinions regarding the year's Grange work before us.

In a note from Brother Overhiser on the eve of his departure for the National Grange, he mentions his belief that our efforts for the National Grange exhibit will prove a success and inspire further activity in our fieldwork; that he heartily joins with us and all Patrons for a steady and strong movement along the whole line.

The Worthy Master simply voices the sincere feelings of every good Patron throughout the jurisdiction, and we trust that it only needs the "know how," "to best work and do" for the Grange to make the work of the coming years more telling than any in the past.

While we are anxious for a general conference of Patrons at this time, we do not anticipate that such a meeting need prevent the holding of individual Grange anniversary meetings, or of county or district gatherings. There are many localities where the great body of Patrons cannot attend from a distance, yet no Grange or Patron ought to lose the pleasure and benefit of a good anniversary meeting, even if the meeting must be held a little earlier or a little later than the general meeting, should such be held in Alameda county.

Temescal Grange.

Temescal Grange conferred the degrees of Maid and Shepherdess last Saturday evening. The next meeting will be held at 1 o'clock November 19th, for work in the third and fourth degrees, and it is hoped there will be a full attendance of members and visitors. The Committee on Grange Birthday meeting with Eden Grange was fully empowered to act with Eden Grange, which meets on the 12th inst., and to announce final arrangements.

W. L. Overhiser.

We herewith present our readers with a photo-simile engraving of W. L. Overhiser, Worthy Master of the State Grange of California. Bro. Overhiser is one of the early and pioneer farmers of San Joaquin county, and has resided for many years on his large and well-tilled farm some nine miles northeasterly of Stockton. He has long been known as a progressive tiller of the soil and always ready to investigate and encourage the introduction of new and improved farm machinery.

He is a charter member of Stockton Grange, organized in 1873, and was its first Overseer and the second Master elected. He has never faltered in his devotion to the Grange cause, and during the past few years, it is safe to say, has volunteered more time and labor, gratuitously, in the work of the Grange of this State than any other Patron.

His labors in the Subordinate Grange, as well as in the State Grange, have been well supported by his faithful and devoted wife.

In the organization of the Grangers' Bank of California, in April, 1874, and the Grangers' Business Association soon after, Brother Overhiser took an active and leading part. He has

confidence and esteem of the fellow-citizens of his county and State.

Our representatives go to the National Grange well freighted with the friendship, good-will, and the full hope of their constituents that their mission as representatives to the National Grange will be fraught with pleasure and crowned with success.

State Lecturer's Bulletin.

Open Letter No. 2.

EDITORS PRESS:—On Saturday morning, Oct. 22d, Mrs. F. and myself started for South Sutter Grange, located at Pleasant Grove, about 18 miles from Sacramento.

After leaving the city limits and going about one mile across the American river, we pass four saloons.

I use the word *pass* advisedly and in somewhat a subdued tone, as I feel a little apprehension in regard to reaching our destination in safety. For be it known there is only one saloon between here and our point of debarkation. It is well known when an engineer is in a road where the water-tanks are far apart, he will see that the boiler is well filled before he starts. Now I had a sort of fellow-feeling come

good many of them, it seems as though I should be a competent judge.

The tables being cleared, I was put in a corner, and I poised and braced myself for an effort worthy the occasion. I had hardly time to state my text, when Bro. Overhiser, W. M. S. G., and Bro. Hull, Gatekeeper S. G., made their appearance.

Now, I said to myself, my wife must help me out of this dilemma. I paused and threw in a large period, until the two Brothers reached their seats by the Worthy Master. Then I stated with somewhat of a flourish that I always respected my superiors in office and power, and I was happy to introduce to South Sutter Grange our new W. M. of the State Grange, and he being fresh and full from the State Grange, would, no doubt, be willing to disgorge and prepare storage room for the new light that he will get at National Grange.

I tried to flatter the Gatekeeper, Bro. Hull, in the same way, but this was not a good day for flattery. After a few remarks from them I had to poise and brace myself again.

We had several nice speeches from members present, and this ended one of those happy reunions where whole families can come together on an equality, and work for mutual good.

One pleasing and hopeful feature of the Grange is that they bring their children along with their parents, and have a regular frolic.

Located in a district like this, with a little effort this hall should be packed at every meeting. You farmers that stay away from an organization like this know not what you lose. Bro. Hull returned to Sacramento, while Bro. Overhiser, Mrs. F. and myself spent the night with Brother and Sister Chandler. I had longed to visit this Granger's home, for I was satisfied his home would be as substantial as himself.

I do not envy Bro. Chandler's possessions or surroundings. I believe the brother and sister deserve all they possess. They have an extensive farm, large house, and a commodious, modern built barn. The walls of their rooms are hung with fine pictures; their tables are full of maps, charts, albums, etc.; their library is full of useful and instructive books; their daughters can play the organ or piano, and sing like the larks in the meadow. In fact, the whole surroundings partake of good sense, thought and culture.

May Brother and Sister Chandler live long to enjoy their well-earned home.

DANIEL FLINT, L. S. G.

Sacramento, Oct. 30, 1887.

[When Bro. Flint attends a Harvest Feast he is not only sure to carry out the declaration of purposes on such occasions, but, as "Out of the heart the mouth speaketh," he always proves the most able war correspondent in writing up the latest battle. The above condensed description of a good Grange home is no stereotype edition. It is always safe to stamp "original contributions" over the Worthy Lecturer's correspondence.—EDS.]

Yuba City Harvest Feast.

A New Pomona Grange.

EDITORS PRESS:—On Saturday, Nov. 5th, Yuba City Grange conferred the fourth degree with an old-fashioned Harvest Feast. Visitors from West Butte, South Sutter, Wheatland and North Butte were present with us and helped to make the day more pleasant. More than 100 brothers and sisters enjoyed the good things provided. Yuba City Grange is never wanting on such occasions.

An excellent literary program was given at the close of the Feast, and all seemed to enjoy it. The exercises were about as follows:

Music, Sister Fannie Hull; recitation, Sister Frisbee; music, the choir; recitation, Annie Stewart; recitation, Maude Woodworth; music, Sisters Dela and Mattie Walton; reading, Sister Lena Newkom; music, Brothers Louis and W. D. Woodworth and Brother Barr.

At the close of the literary program the subject of the organization of a Pomona Grange was brought up by the Master of Yuba City Grange. It was discussed by Brothers Partidge and Noyes of West Butte and Bro. Mahon of South Sutter and many other members. The opinion expressed was unanimously in favor of the organization proposed, and a petition for organization was circulated and signed by 45 Grangers present. This number will be increased to nearly 100 before the organization, which will take place on Saturday, November 19th. The meeting for organization will be held in the Grange hall in Yuba City at 1 p. m., and the members interested in this organization wish to take this opportunity to urgently invite all members of the Order in Sutter and Yuba counties to be present with us at that time, and to unite with them in making this undertaking a grand success. A Pomona Grange can be made a vast benefit to the Order and to the counties as well. It should be the center of Grange interest and Grange work, and we believe it will radiate a good effect upon all Patrons of Husbandry of our section of the State. O. E. WILLIAMS.

Yuba City, Nov. 7, 1887.

GRANGERS' PARTY.—The Santa Rosa Republican of Nov. 3d notices the giving of a social party the Saturday evening previous by a number of the Granger friends of Mrs. Saxton at her residence on Fifth street. Grangers, old and young, had gathered together, and an evening of social enjoyment was the necessary consequence.

Photo by Titler.

WM. L. OVERHISER, 'WORTHY MASTER' OF CALIFORNIA STATE GRANGE

since served on the Board of Directors of each of these leading Grange business organizations both honestly and faithfully.

He has also served as Gatekeeper, Lecturer and Overseer of the State Grange, and after long service and faithful trial was elected Worthy Master at the late session of the State Grange by a large majority on the first ballot, and will undoubtedly receive the undivided support of the Order in his arduous duties.

Bro. Overhiser left his home in Stockton on Tuesday direct for Lansing, Mich., where he anticipates arriving two or three days prior to the opening of the session on the 16th of November, his desire being to see that the California agricultural exhibit at the National Grange is properly arranged and in good order before the session opens.

While not so ready a debater as some of his predecessors in the National Grange, Brother Overhiser will win his way well into the affections of that body by his zealous, conscientious and dutiful labors in behalf of the welfare of our noble Order.

Sister Overhiser has presented to the State Grange, at different times, well-written sentiments of important interest to the Order. When called upon, she has always well responded to the duties placed upon her.

Their home is in the largest and one of the richest agricultural valleys in the world. It has some very delightful seasons and produces a great variety of agricultural and horticultural products.

Brother Overhiser is a Veteran Odd Fellow, a member of the San Joaquin Valley Pioneer Association, and has long enjoyed the con-

over me. It was a long, dry road, and we had nothing on board to keep down the dust or put out a fire. For one mile in my life I looked as innocent and straight ahead as I could. I did not dare to recognize these kind fellows that wanted to water my horses. This part of the country has become noted for turkey raising, and when I saw these sleek-sided red-headed fellows doing all within their power to fit themselves for a fine display in our markets this fall, my mouth watered so I forgot my thirst, and my eyes sparkled, and I wanted to go off in a dream of the goodies of Thanksgiving, Christmas and New Year.

We arrived about 11 a. m., and found a number present. Soon the W. M. called together, and after disposing of routine business, instructed a class of three sisters in the third and fourth degrees.

The officers went through their parts remarkably well, especially the Assistant Steward and Lady Assistant Steward.

There was a fair attendance, and I noted members present from several sister Granges.

Bro. Dewey, the next Harvest Feast you attend, I want you to go with your head very clear and your stomach very empty, and write a description of the table while you can smile and see the edibles; but before tasting them, I want it printed on a slip of paper, so that I can insert it in my letter, and save me the trouble of writing every time, for one Harvest Feast is an almost counterpart of another.

As you have not had time to print it, I will say that this display of the sisters' handiwork was not second to any previous effort. As I have had the gratifying pleasure of passing in a

sequence. Jumbo, cards and other amusements were furnished, and an excellent spread was made about 11 o'clock. Those present were: Mr. and Mrs. E. W. Davis and family, G. W. Davis, Mr. and Mrs. Newman, Mr. and Mrs. S. I. Allen, Mr. and Mrs. Strady, Mr. and Mrs. E. A. Rodgers, Misses Lumsden, Moore, Fannie L. Gamble, Messrs. Charles Bonner, W. Lumsden, W. and G. Rodgers and C. E. Gamble.

[From California Patron Nov. 2d.]

Semi-Weekly Market Reports.

The market reports heretofore given in the PATRON have been transferred in type from the columns of other San Francisco journals. The RURAL PRESS has been the only publication in San Francisco that has taken great pains in furnishing market reports specially prepared to meet the wants of farmers. From this time on we shall furnish special reports twice a week, made for the Patron up to Monday evening and for the RURAL PRESS up to Wednesday afternoon. These reports will be found a very valuable and important feature to our subscribers. They will be made as correct and accurate as information can be secured concerning the markets. The task of obtaining anything like full reports, and at the same time accurate, is a very difficult one. As full information as is possible to be obtained, and that can be relied upon, we shall give our readers.

We would be pleased to have suggestions from those interested in our market reports. If there is any suggestions that can be made whereby this department of our paper can be made more effective we shall be pleased to receive them.

By reference to this week's market report it will be seen that there has been a reduction made in the rates of freight eastward for raisins, nuts, etc.

Woman's Immigration Bureau of California.

This association was organized October 8, 1887, under the auspices of the State Grange of California. It is managed by a central committee of women of the Grange. Mrs. C. E. Kinney is President, and Mrs. Nellie G. Babcock Secretary. The Bureau receives respectable and intelligent girls arriving on this coast, provides suitable boarding homes and any desired business information. The pressing want of this State, in both city and country, is skilled domestic help. This Bureau receives for this department properly indorsed girls, or those giving satisfactory evidence of character, from the age of 12 to women of 35. All are examined as to their qualifications, and if necessary, their domestic or manual training supplemented through our auxiliary relations to the San Francisco Girls' Union. Respectable homes and suitable business guarantees are required of all members of this Bureau, to whom are sent its beneficiaries.

Strangers desiring the above advantages and protection are kindly requested to call at the office of the Bureau, No. 10 California street, on arriving in San Francisco.

[From California Patron, Nov. 9.]

To Issue Hereafter on Tuesday.

Readers will notice our paper is now dated Wednesday—three days earlier than formerly. Our latest forms will close on Monday night and be printed and mailed Tuesdays.

This will supply a Grange and farm paper in the middle of the week, making, with the Rural Press issued at the end of the week, the equivalent of a semi-weekly issue to those who take both papers. Try it.

SONOMA POMONA GRANGE has elected officers as follows: G. N. Whittaker, M.; W. W. Chapman, O.; E. W. Davis, L.; L. F. Chinn, S.; J. P. Whittaker, A. S.; S. M. Martin, C.; W. P. Crane, Sec'y; A. J. Mills, Tr.; M. Litchfield, G. K.; Mrs. J. M. Talbot, P.; Mrs. E. W. Davis, F.; Mrs. Nelson Carr, Ceres; Miss Emma Mills, L. A. S.

THE AMERICAN HUMANE SOCIETY met in annual session at Rochester, N. Y., Oct. 19th, with 50 delegates present. The several branch societies investigated during the year 121,653 cases of alleged cruelty to animals, and were able to relieve animals in 109,000 instances. Over 10,000 persons were arrested for cruelty to animals. The organization aided 31,000 children in investigating 32,000 cases of alleged cruelty to the young.

SONORA ORANGES are coming into market in Guaymas, and fruit-dealers from San Francisco and Chicago are buying the crops of entire orchards. Guaymas and Hermosillo are well pleased with the quality of the fruit, and prices range from \$8 to \$10 per thousand.

The State Board of Fish Commissioners have had issued from the State Printing Office the fish and game laws of California in pamphlet form.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

A CLIMATIC CURIO.—Oroville Register: It is a little curious that mountain butter, perhaps the richest in the world, will not keep so long in this climate as that made in the warmer parts of the State. It is the same with regard to vegetables, and the finest Plumas or Lassen county potatoes will not keep so long here as the second crop of Early Rose potatoes grown down on Feather river bottom-lands.

Contra Costa.

FIGURING ON FIGS.—Concord Sun, Oct. 29: On the Langenkamp place in Ygnacio valley, about two miles from Concord, stand 52 fig trees, covering barely $\frac{1}{2}$ of an acre. The trees are 19 years old, and for several years past have yielded from \$600 to \$900 yearly; but this year they have outdone their previous efforts, Geo. W. Langenkamp showing us his receipt-book which figures a total of over \$1000 from the 52 trees since their first crop in July. He says they are bearing all the time, and another crop coming on, and if nothing happens between now and Christmas, expects the total will foot up close on to \$1300. Three of the trees produce figs many of which average three to a pound. This ranch is not for sale.

Fresno.

SUGAR BEETS.—Fresno Expositor: Maj. M. Denicke, who has interested himself considerably in sugar-beet culture in this county, having last season furnished seed to a number of persons for testing, has arranged with Claus Spreckels for a lot of seed of an improved quality for testing the capabilities of our soil and climate. The seed will arrive here about the last of December, and will be distributed gratis—the only requirement being that parties will furnish sample beets for analysis from time to time. Mr. Spreckels, who has given the subject much study, says that ashy and sandy soils are well adapted to growing beets.

SWEET POTATOES.—J. H. La Rue, residing near Malaga, has left a large bunch of sweet potatoes, all grown upon one vine, at the office of Shafer & Bane. The bunch weighs 29½ pounds, and is very compact.

MOUNTAIN APPLES.—There are on exhibition at the Grand Central hotel some apples as fine as we ever laid eyes on, and in size they are giants. They were grown on the mountain ranch of Jonathan Lewis, near Fresno Flats. The mountains of Fresno county are well adapted to the growth of the apple.

GRAIN HAY is scarce in the county this year, and the price very stiff. There was probably more hay made this year than ever before, but there have been so many new horses brought into the county for the new settlers that the hay crop is not large enough to supply the demand.

Humboldt.

EEL RIVER APPLES.—Standard: Meyer Jacobson has placed on our desk some of the finest Newtown pippins, Spitzenburg and Golden Russet apples we ever saw. They were actually too pretty to eat—very large, lovely in color and of delicious flavor. We do not believe finer samples can be shown from any locality. They were grown on the steep hillside lands of south fork of Eel river, where Mr. Jacobson's ranch is located.

Kern.

MOUNTAIN APPLES.—Bakersfield Echo, Nov. 3: Mark Wyatt laid on our table this week some apples raised at his place near Kernville; also some from the neighboring orchard of "Jimmy" Morrison. They are of the same kind as those sent to the Mechanics' Fair this year. He could not give the names of the varieties further than that he called them the Moss apple because a Mr. Moss planted the trees from which these were grafted. There are three kinds, all large, smooth and rosy, admirably adapted to the winter trade. They are now very firm and Mr. Wyatt says they remain so for some months yet. One kind, he assured us, would keep until late in the spring. He has grown this fruit for a number of years near Kernville, but has never lost a crop by frost or other causes, although his orchard is several thousand feet above this valley. He is selling his fruit at the orchard at four cents per pound, and we are paying five cents for poorer apples from Oregon. We have never known good winter apples to sell for less than three cents per pound, and because of the scarcity at that figure, nine-tenths of the cellars in town have never known the odor that emanates from a barrel of this staple fruit.

Lake.

OLIVES.—Lakeport Democrat: Mr. A. H. Poe of Lakeview Farm has placed on our desk a small bottle of picked olives, which, so far as we know, are the first olives grown and pickled in Lake county. They are of the Mission variety and small but nice flavored. The tree on which they grew is six years old, over 12 feet high and four inches in diameter at the base. It had a few olives last year, and this year he pickled over 300.

Los Angeles.

ANTELOPE VALLEY.—Maynard Cor. Los Angeles Express, Oct. 22: We have had a fine rain, and everything around begins to put on a beautiful garb of green. Wheat and barley are coming up, and some stands as high as four

inches from the ground. Volunteer crops bid fair to equal, if not excel, the sowed grain. Plowing is the general work, and every one is busy. Messrs. Dingman & Maynard are shipping rabbits to Los Angeles three or four times a week, and the way they are thinning them out it looks as though the jack-rabbit question was settled—at least they settle thousands of jack-rabbits. Many people are coming into the west end of the valley to settle on the odd sections of indemnity lands lately reverted to the public domain, and a sprinkling of new settlers have arrived here and gone to work in good earnest.

Monterey.

A LONG-LIVED HEN.—A subscriber of the Democrat writes from Jamesburg concerning an old hen that for more than 17 years cackled and laid eggs on the ranch of John James of the Cachagua country, and died a few days ago. Until five or six years ago she was a good layer and was famous for raising many broods of chickens; but of late years she has only laid an egg occasionally and would not sit, thinking, no doubt, that she was old enough to retire from active business.

Placer.

RASPBERRIES.—Auburn Republican, Nov. 2: Nothing could better illustrate the mildness of our climate than the fact that one can now go into the garden of A. S. Whittemore at New-castle and pick red raspberries—not three or four scattered here and there, but plenty of them. Mr. Whittemore is gathering one and two cases of raspberries a day, which are being shipped by the Dryer, and they are as fine berries as ever went out of the Newcastle market.

San Bernardino.

GROWING FRUIT TO SOME PURPOSE.—Courier: Mr. Aplin has a fruit-ranch out in the north-eastern end of the San Bernardino valley. His comments upon his experience are very terse, but very illustrative of what can be done in this valley by the industrious and intelligent fruit culturist. "I have been six years," said Mr. Aplin, "in San Bernardino engaged in fruit culture. The first three I had not even a horse. This year, the sixth, I sold the produce of my little fruit-fields to Mr. Brooke for \$5350, of which something more than \$4350 was clear profit." Yet the farm is not a large one, and was, when first occupied by Mr. Aplin, both rough and rocky. Indeed, it is rocky yet. Now, actual achievements like this are what guarantee the permanency of what we call the San Bernardino boom.

San Diego.

TIA JUANA'S FERTILITY.—Cor. National City Record: We visited one vineyard where we were shown clusters of grapes weighing 6 pounds, and were assured that such were not at all rare. In one apple orchard we found 150 apples on a tree, measuring only 1½ inches in diameter near the ground; and another small tree, not as large as a broom-handle, had 10 fair-sized apples hanging on its branches. One hill of sweet potatoes, grown from a single plant, yielded 38 lbs. 8 oz., the largest weighing 23 lbs. and one other measuring three feet seven inches in length. Blood beets were found weighing from 30 to 60 pounds each, grown without either fertilizer or irrigation. On that portion of the ground not yet cleared we find a dense growth of weeds and brush, averaging about five feet in height, thus showing that the soil in its natural state is capable of producing a luxuriant vegetation.

San Joaquin.

OLIVES FOR THE NATIONAL GRANGE.—Stockton Independent, Nov. 2: Yesterday E. C. Clowes, the nurseryman, brought to this office two branches taken from five-year-old olive trees. One was literally covered with olives of the Mission variety, nearly ripe. The fruit on the second branch was of the Picholine variety, and was further advanced in ripeness. The Mission olives were grown in Antonio Lucca & Co.'s orchard, near French Camp; the other variety on H. S. Sargent's premises in this city. The branches will be forwarded to Lansing, Mich.

Santa Clara.

RAIN WANTED.—San Jose Times, Nov. 2: Grass is getting very short in the hills, and many of the cattle are beginning to show the effects. Nearly all are already getting thin and scrawny. The acorns seem to purge them, and this soon adds to their lankiness. The cattle-men want it to rain, and if it does not soon it will cost money to preserve their stock.

Sonoma.

HEALDSBURG HORTICULTURE.—Enterprise: H. W. Peck of the Laurel Dale nurseries, in addition to the fine persimmons left at Moulton & Mulgrew's office, has contributed some Spanish pomegranates that are the perfection of growth and much admired. With pomegranates, persimmons, olives, figs, Italian chestnuts, walnuts, pecans, almonds, oranges, etc., all flourishing to perfection in and around Healdsburg, we would like to know what locality is more entitled to a front seat.

Tulare.

DECREASE OF BIRDS.—Delta: The settlement of the country seems to have caused the emigration of many birds which were once numerous here. One of the most common was the crow, and during this season of the year and until nesting time in the spring they flew in flocks evenings to Tulare lake, where they roosted among the tules. Magpies, too, in thousands and fully a dozen species of hawk could be seen a few years ago. The

crow is becoming a rarity now, and it is only once in awhile that the chatter of the magpie is heard. The increase of the number of people in the valley seems to have lessened the number of these and several species of aquatic birds more than any other kinds.

Ventura.

EDITORS PRESS:—The Bee-Keepers' Association has not met in a long time, although it is still in existence. Having no crop of honey last season, there is nothing of interest to report. If we have a crop this year the bee-keeper will probably get a better price than in the last few years. There has not been much margin for the honey-raiser for a number of years, and this season's failure will help to clean up the surplus and leave the markets in better shape for the future. S. P. surveyors are now locating a railroad to this Ojai valley; so we hope ere long to hear the whistle of the locomotive, and then invalids can reach this haven for consumptives without the fatigue of a 15-mile stage ride.—S. C. GRIDLEY, Nordhoff, Nov. 6, 1887.

WALNUT SHIPMENTS.—Republican, Nov. 5: Mr. A. Levy of Hueneme purchased and shipped seven-eighths of the walnut crop of the county, amounting to about \$22,000. Yesterday he loaded the schooner American Boy with walnuts and beans, and the past week freighted the schooners Gualala, Reporter and Eliza Miller with like products.

Yolo.

TOKAYS FOR NEW YORK.—Woodland Democrat, Nov. 3: To-day Dr. L. B. Holmes, who owns 20 acres of vineyard near town, partially loaded a car with 350 boxes of grapes of the Flaming Tokay variety. The car will be filled at Sacramento, then go across the continent to N. Y. These grapes are of the second crop, but present a very good appearance. The vines are five years old and are said to be in a thrifty condition. The doctor thinks that considerably more grapes might have been grown had proper attention been applied. In conversation this morning we learned that a clear profit of over \$3000, or more than \$150 per acre, would be realized clear of all expense.

ALMONDS AT DAVISVILLE.—The present season Mr. Treat gathered as much as 150 pounds of almonds from many of his trees. Those on the Oak Shade are 20 feet apart, or something over 100 trees to the acre. With almonds at 15 cents, the price at present, there is a decent competence in one acre of our Putah Creek soil.

Yuba.

GLANDERS.—Appeal: There have lately been several cases of glanders among the horses in Marysville township, which has necessitated killing the animals afflicted. The disease has by no means become general, and as it spreads, being contagious, would be disastrous. Stock-owners are warned, so that they may be on the alert.

FROM GRAIN TO FRUIT.—Marysville Appeal: C. E. Williams, Sec'y of the Immigration Bureau, lately told a reporter: The past three years have been very good ones for grape-growers, and I think that \$40 per year per acre profit for all the raisin grapes grown in Sutter county and western Yuba is a small estimate. On my place I have work in the vineyard for two men the year round. For three months in the year, when the yield is good, I employ about 15 men. You thus see that 60 acres of vineyard will employ as many men for a longer time, as are necessary to operate a thrasher that handles the yield of thousands of acres. I know half a dozen farmers who will convert some of their fields into vineyards this coming season. There is no question but the farmers are recognizing the fact that fruit brings them in a return ten-fold that of wheat, and they are now preparing to set out orchards, either on a large or small scale. The Abbott & Phillips orchard, which had a yield from 210 acres this year, easily netted the owners \$100 per acre after the cost of growing, picking, packing and shipping had been deducted. That is twice as much as their land was worth a few years ago, but not one-tenth what will be asked for it five years hence.

IDAHO.

NOTES OF PROGRESS.—Bellevue Herald: The past summer has been one of hard work, but the future for the Alturas ranchers never was so bright. Trials have developed faster in fruit-raising, vegetable-raising, grain-raising and the product of the soil sufficient to console the hard-worked rancher who before had serious doubts of its fertility for so many purposes. Treemen now in the county have large orders from the country people, and from a list of 170 orders given an Eastern firm, now being delivered, 123 were for the country in sums between \$7 and \$210. Fruit trees and bushes are the favorites, and for the Herald to predict that Camas prairie and the valleys below Bellevue will in a few years give Wood River's larger fruit supply would not be out of the way.

NEVADA.

STORING WATER.—Reno Gazette, Oct. 21: Hon. J. B. Gallagher of Mason valley says he has a dozen men at work raising a dam at the Twin lakes, in Mono county, Cal., that will store sufficient water to irrigate all the arable land of Mason valley next year, and that ranchers there need feel no further anxiety on that subject until the acreage of the valley is much increased.

A California Year.

How do we know the spring has come,
In this pleasant land by the western sea?
Why the rainy days grow farther apart,
And the clouds before the north wind flee.
The gardens are blue with forget-me-nots,
The pepper trees scatter their berries red,
The hills with poppies are all aflame,
And linnets and meadow larks sing overhead.

How do we know when summer is here?
The sky is one vast, deep vault of blue,
Whence the sun pours down his golden flood,
Unchecked by a cloud the long day through.
Green fields are waving and orchards bend low,
Roses and jessamines hold riotous sway;
While tents are unfolding on mountain and shore,
And the life of the camper is blithe and gay.

What is the sign of the autumn-time?
Oh, then the vineyards their splendors show—
Muscat and Hamburgs and Flaming Tokay—
Never were clusters like these, I trow!
But the roadside trees with dust are gray;
Yellow and sere lie the hill and plain,
The water-courses are parched and dry,
All patiently wait for the beautiful rain.

But the winter? Ah, that is the strangest of all!
Instead of the north, the south wind blows,
The sweet south wind that brings the rain,
The pattering rain, not wintry snows.
And then the rivulets sing once more,
And the hills turn green, and the d-ar wild flowers
Awake from their sleep, while the furrowed earth
Grows young again 'neath the welcome showers.
—M. H. Field in *Youth's Companion*.

Polly Frost Argues Against Female Suffrage.

EDITORS PRESS:—How many things are happening these days! To be sure things are always happening, but of late years, since I began to realize I am growing old, an unusual number of things seem going on in the world. Solid rock is being tunneled through. Railroads are built through the hearts of mountains. Pedestrians have no longer to climb wearily up the steep hills of our cities, but only to seat themselves in the street-cars of the cable roads, and before they are through admiring the marvel of mechanism which has brought about such a municipal convenience, they find themselves at their destination. Whole cities are wonderfully lit up with electric lights. And the scheme of uniting ocean with ocean by canal has seemed so plausible that millions of money has been spent thereon. But among the strange things which have been happening in these last years, while my hairs have been whitening, and the lines writing themselves on my face, is the voices of many women crying out for the right of suffrage, demanding a redress of a whole catalogue of wrongs; the first of which, "taxation without representation," was (when our forefathers had a similar experience a little more than a century ago) so sore a matter as to cause a general uprising of all the men of the country. These women asking so earnestly for the ballot make so plain a showing of the case as to carry conviction to the minds of the unthinking. But men from their greater store of wisdom give such substantial reasons against female suffrage that women would not be supposed to gainsay them, were it not that the human heart and mind are stubborn things. Therefore, in a repetition of all this reasoning, lies my only hope, for "continual dropping will wear even a stone away."

One of the best reasons why women should have no voice in making the nation's laws, is that they cannot be soldiers. This seems to me to be a plain case. I am sure I claim to be as brave as other women, but when I was first married I got Tom to take the revolver to the barn, which resulted in its being stolen, but better that than that I should have been kept uncomfortable by it occupying a place on the closet shelf. That men are eminently fitted to be soldiers is proven conclusively by the common use made in these days of deadly weapons. No matter the state of one's morals, they may carry them at pleasure. Only last year a couple of spirited youths shot down a Chinaman on the San Joaquin river, who was quietly going about his own affairs. Many people were just at that time taking up the sand-lot cry, "the Chinese must go," and these young men were so filled with the patriotic spirit and so possessed with the soldierly quality of bravery as to shoot down an unoffending fellow-creature without hesitation. There does indeed seem to be much unnecessary loss of life caused by such indiscriminate carrying of firearms. Even little boys, who in my day would have been considered of too tender an age to be far removed from the maternal eye, are now allowed to hasten their advent into man's estate by their free use.

Women, it is true, have a fine record in our late war, in the hospital work, and other valua-

ble services they rendered. But no one would object to women doing such slight work as giving efficient assistance in the setting of broken bones, the dressing fractured skulls, staunching bleeding arteries, or caring for unsightly wounds, or, indeed, any of these small offices woman is by nature so eminently fitted to perform. But because woman takes no part in the firing off guns and cannons proves conclusively that she is not capable of helping make good, just laws. Of course the world admires the pluck of a Florence Nightingale, who, when failing to secure bandages for the wounded soldiers at the Crimea, sent for an ax and commanded the storehouse doors to be broken open, and took the bandages and other necessary supplies. And Lady Strangford, who collected the requisite funds, went to Cairo, and unaided, opened and managed a hospital with wonderful success. And Sister Dora, whose achievements have made her name a household word in many homes. But all this is not commanding armies. To be sure, there was, about 450 years ago, a woman who did command an army right royally, but that proves nothing, for all women are not Joans of Arc.

Another reason against woman suffrage is men, who are the natural protectors of woman, do not deem the polls a proper place for her, for though liquor-selling may be prohibited on election day, yet it is not unusual to see drunken men at the polls. Drinking saloons are licensed by law, and men are allowed to take in so much liquor as to drive all the manhood out of them, and in such a state to go home to their wives and children. Sometimes men get into drunken brawls in a barroom, and finding their movements restricted, rush headlong into the street, that they may have larger space to continue their fray, and though women are obliged to pass along these streets, our lawmakers look on with seeming unconcern. But at the polls alone men do not think it right we should be thus exposed. Well, I for one am thankful there is one place where men wish women to be protected from that prince of evils, the use of intoxicating drinks. Some years ago two men were engaged in a fight on a street in San Francisco; another man came toward them with a woman on either arm. As the party drew near, the assailants separated and gave them space to pass between them. The late Col. E. D. Baker, who was present, said, reverently, "God's true policemen." But that was only one man's opinion. Another reason why women should not be given the ballot is, men do not wish to impose so heavy a task upon them. Men were made to bear the heavier burdens of life and women to be cherished and protected. Of course, so far as I can see, men receive their full share of cherishing. Now take the "Briggs" family for example. Hannah is a dreadfully hard-working woman, but she does seem to have a great number of sick spells, but when she faints away her husband Josiah could not so much as find the camphor bottle, though I have no doubt it has stood in the same identical spot for a dozen years (for Hannah is a very methodical housekeeper). Josiah is fond enough of his wife and would like to cherish her, I have no doubt; but, being a man, he don't know just how. But when he is threatened with pneumonia the way Hannah contrives to care for that man is altogether in keeping with her character. Such hot teas and mustard drafts, and bags of hops and womanly kindnesses generally! I tell you that man is cherished in sickness and in health; and, take all the men and women so far as I can see, the women seem to do their full share of burden-bearing, walking shoulder to shoulder with their husbands, and the men seem to receive their full share of being cherished. But then I must remember that I know but few people. And other women whose observation has been similar to my own, must take into account that their horizons are not very extended. At any rate, women should be thankful that whether they have a less heavy share of burdens than man, or not, men at least seem to think should be the case, even if they do not see to making it so.

Men do not seem to feel greatly the burden of franchise, but then no matter if the burden is slight, we should appreciate their kindness of man not wishing to impose even so small a weight upon us. Of course many a man remains in a state of the most perfect unconcern while his wife is wearing her life away with the too heavy burdens of housewife and house-mother. But then these things are essentially woman's work.

One of the strongest reasons against female suffrage, and one which should carry conviction with it, is, women are not sufficiently educated to be capable of voting intelligently. This I know is the case, and the fact that great numbers of foreigners are continually arriving in this country in a state of extreme ignorance, who need but a short residence here to enable them to become citizens, does not alter the case. They are men, and that, of course, makes all the difference in the world. One might hope that this large number of voters might soon be able to study up our Government matters so as to cast an intelligent vote. But in too many cases the emigrants arriving here soon have their brains too much benumbed by the use of whisky, wine and beer, to be very apt students in the science of government. That our home-born and bred youths make so slight a study of the political affairs of our nation is a matter of constant surprise to me. Take the class whom Tom hires to

work on his ranch. After a hard day's work they are too weary to read; and when Sunday comes, and I find myself hurrying through the cooking and dishwashing (which are the inevitable in the life of the farmer's wife), that I may have time to glance over the papers, I notice these men seem sorely perplexed as to what disposition to make of their 160 or 170 pounds a voidrupois, as the case may be, although Tom never fails to say to them: "Well, now, if you wish to read, there are plenty of late papers in the sitting-room," for Tom is so wedded to his newspapers he cannot understand any one else not having a similar fondness for them. Though I marvel at the apparent unconcern of these men who help to elect our lawmakers as to what these same lawmakers are doing, yet I should not be hasty in my judgments, for I have no means of knowing how many wakeful hours they have spent the preceding night revolving the affairs of State in their minds. Some years ago, when the wise men of our State were assembled in our Capitol drafting a new Constitution, I happened to speak to a neighbor in regard to the forthcoming election. The man replied with that assumption of superior wisdom which men so often assume toward women, that there was to be no election on the Constitution, that our Government did not do things in that way. I accepted this piece of information with becoming meekness, telling him I must have misunderstood Tom. A few weeks after this, when the election really did take place, I saw this man on his way to the village where he was going to cast his vote, with such a self-satisfied smile of urbanity on his face, I knew he felt well qualified to cast an intelligent vote, and I wondered who had informed him of the merits and demerits of that Constitution, for I knew he could not possibly have made any investigations on that important subject himself, as his time was much too closely occupied inventing ways and means by which he could so twist and turn "Uncle Sam's" laws, or so evade them entirely, as to add to his vast domains yet another quarter-section of land, or else his meditations were given to devising ways by which he could fence his last acquisition in that line with the least possible expense to himself, and with a disregard of roads, however old and well established, which would be amusing were it not accompanied with considerable inconvenience to others. I must say in my own mind I cannot quite believe that a man of this kind would vote with an eye single to the prosperity of the nation, but I do not state this and similar cases as showing the least need men have of being educated up to a higher standard, so as to enable them to elect wise and just law-makers, but only to show that there are exceptions to all rules, even to men's fitness to vote intelligently. But because it is right for men whose minds are engaged with other matters than the general good of their country, to help elect law-makers, is no reason why women (whom we all know are not intelligent in political matters) should vote.

There is another reason against the ballot being given to woman which strikes me as being very reasonable. That is because women are not inventors. To be sure, it is said that woman did invent the needle and the spindle, and numerous other things, but even if she did invent the needle she blunderingly got the eye in the wrong end of it, and never found it out for ever so many hundred years till men set it right with the wonderful invention of the sewing machine. These last years a woman has made an invention for the elevated railway, but that does not make women as a sex inventors. True, all men are not inventors. Take those Tom hires, for instance, why, they have not respect enough for the inventions of others to treat them with the least care! Owing to the fact that Tom cannot be omnipresent, the axles of wagons frequently become dry and burnt from too rare an acquaintance with oil. And the mowing machine Tom found, but this last summer with the little boxes (made to hold bits of cotton saturated with oil) so entirely covered with dirt as to show that the man who used the machine had not even been cognizant of these little boxes for oiling, though he claimed to have had a dozen years' experience in running mowers. But then, men have had a Stephenson, a Watt and an Edison among them, and indeed so many other inventors that it shows the ability of all men to vote well and wisely; and because women are not as a sex inventors, proves conclusively they have no right to vote.

I, for one, am thoroughly convinced of this, and am satisfied to take the best care possible of my cook-stove and sewing machine and the few inventions I have, and not ask for the ballot. That this plain repetition of the objections to female suffrage ought to convince the most obturate, is the opinion of

POLLY FROST.

SHE SHOT STRAIGHT.—The Chico *Enterprise* tells how, early one October morning, Mrs. James Crowder of Rock Creek Canyon heard their dog making a terrible racket. Her husband had gone up into the hills, so she went out herself to see what was the matter. A short distance from the house stands an oak tree, at the foot of which the dog was keeping guard. He could not be induced to leave but kept barking, and wagging his tail for his mistress to come and see what he had got in the tree. Mrs. Crowder approached, saw four coons perched among the limbs, and soon made up her mind that she would try the gun which Mr. Crowder keeps always loaded. She was no practiced hunter,

but she had determination and nerve to try, especially as the shot was tempting. Seeking out the best position, she took deliberate aim, and one coon came to the ground. The following shots were equally successful, four coons were counted for Mrs. Crowder's morning sport, and the faithful dog was happy.

James G. Clark on California.

We copy from the Milwaukee *Sentinel* of Oct. 16th the following extract from his letter to that journal, containing not a few original ideas of California and its "representative people of all creeds and classes." Our readers may remember that this widely known vocalist and poet paid a brief visit last spring to several places in the State. This article indicates Mr. Clark's disposition to trace a deep law and divine purpose in the conditions of individual and national life; he never forgets to look ahead. We understand that he proposes to spend the coming winter in San Francisco, and we presume he will give a series of public concerts. As he corresponds with several leading Eastern and Northwestern papers, judging from the following article, we may depend upon a valuable and more than ordinary advocate of the interests of the whole Pacific Coast. He says:

I have found on the Pacific Coast more broad-minded and mellow, many-sided characters among representative people of all creeds and classes, than I have ever found elsewhere. And I believe the long-dreamed-of Golden Age will first shine upon the land of the "Golden Gate." My reason are briefly these: First, the Pacific Coast, all the way from Mexico to our northern boundary line, is favored over every other locality on earth with scenery, climate and soil for the development of the brightest human character. Second, its present population is largely composed of a class whose characters have been molded and modified by a moral, mental and spiritual atmosphere free from old-time forms and despotism, which have cramped and deformed humanity in all the older countries. All things, not excepting different forms of oppression, when properly regulated and limited, have their uses as elementary aids in the production of human character.

The African, up to a certain period, was benefited through the harsh, cruel discipline of slavery to a superior race. But when he had reached that point where slavery began to distort and injure his character, as a whole, his chains were broken by the hand of the Infinite, who knows best when a great, licensed wrong has outlived its uses and become ripe for its doom.

In the first measures taken for the construction of a grand temple, rough, uncultured and unskilled men, with drill and blasting powder, are employed. Then come the trained stone-cutters with their chisels to perfect the blocks of granite and marble, after which the builders fit all the material into a perfect whole. So it is in the construction and perfection of human character—that great end to which all other means and ends are tending. New England with its hardships and cold winters applied to Pilgrim blood and brain, produced certain essential characteristics peculiar to itself, and at the expense of other and no less desirable qualities, which can only grow and flourish in more genial and inviting environments precisely such as the Pacific Coast affords. What is true of New England is no less true in different degrees of nearly all the States east of the Rocky mountains. In the dead levels of some of our prairie States the poetic instinct dies out, or declines for the lack of varied scenery to feed and stimulate it. And without this quality no high state of excellence is possible. Imagination is the advance agent of every new attainment in art, science and literature, the soul of human progress. And like everything else which is subject to the laws of growth, it must have its appropriate food.

The rare scenery and climate combined in California, Oregon and Washington Territory invite and develop the poetic tendency to a degree unsurpassed if not unequaled elsewhere on the face of the globe. We have middle-aged and elderly men of means throughout the States east of the Rocky mountains who need the saving and finishing grace of Pacific Coast climate and scenery.

There are men in New England who have so long been watching the "main chance" that their noses have become as long, cold and sharp as the steel plow points that pierce the subsoil of their native hills; men in our Northern tier of States who have been carrying on a defensive warfare against the annual invasion of merciless and despot winters until the golden rule has been buried out of sight in the snow, and even dear old Mother Nature herself has assumed the attitude of a cold-blooded and plotting enemy; men in the South who have been born and reared under the shadow of an institution that narrowed and deformed the oppressor more than it wronged the oppressed; men in our Middle and river States who have so long been plodding, acquiring and hoarding on the rich bottom-lands that they have no higher aims in life than to raise cattle and "haws" for Phil. Armour to slaughter, and no loftier aspiration or sentiment than that which roams content along the desert sands of our modern "realistic" school of fiction; men in our great commercial centers who have exchanged small souls for vast wealth and who

have "cornered" the cotton and wheat markets, and stolen telegraph companies and woolen-mills, and nearly everything else except a march on Satan.

All these need change of scenery, climate and occupation, such as may be found in San Diego by the sea, or in that peerless "vale of valleys" where Escondido proved that the saloon is not necessarily the elixir of commercial any more than of moral life; or in National City, where the enterprising Kimball Brothers have converted a wild seaside ranch into orange, lemon and olive groves and gardens of roses; or on Royal Coronado beach, where the white surf of a clear, green sea invites you to its soft caress in mid-winter as well as summer; or in Los Angeles, Pasadena, San Bernardino, Santa Barbara, Santa Rosa, San Jose, Santa Clara and scores of other "saints"—not forgetting San Francisco, the best and at the same time wickedest saint of all—in a land of a thousand beautiful and wonderful valleys, with mountains to match all the way from Mexico to Puget Sound, the most enchanting body of mingled isles and waters on the continent. This mighty Western empire flowing with milk and honey, and blest with all manner of grains, vegetables, fruits and flowers, and with a climate unequalled elsewhere on earth, is inviting us to seek the "Golden Gate." And, to the classes I have named in this letter, I would add, "go West," old man; it may "restore your souls" and save you the experience of Dives.

JAMES G. CLARK.

Home and Mother.

The influence of home is like a mighty river that moves on with silent but untiring and resistless sway. Whatever makes us what we are, is but the reflection of constant association. The manners, customs, and habits of the child's early associates are reflected upon his heart, and there assume a definite form. Whether his character in after life springs from seeds of good or evil, depends upon the influence that surrounded his home.

The influence of good example in the home is powerful. The child imitates the selfishness or unselfishness as it is presented to him in his home surroundings.

Home prepares him to choose the path he is to take in life, and whether it is the path to perdition or to godliness, depends upon the influence that molded his character.

It is in the Christian home, where the links of love, charity, and the regards for the right are united, that we see the destiny of the nation. The outgrowth of such a home will be a government of justice, freedom, and liberty.

In the words of Milton, "Childhood shows the man as morning shows the day." The true manliness which characterizes the lives of all our great and worthy men originated in the homes of their childhood. The children of today are to make up the nation of to-morrow. And the prosperity of the nation is dependent upon the home.

As a slender vine, when the support is taken from it, twines itself around the first object presented, so with the child if he has not the moral force imbibed in him is always ready to be taken up by the weak. In the Christian home the "Fountain of Morality" gushes forth. The connecting link between heaven and earth seems to be the little child at his mother's knee learning to worship God and walk the path that leads to heaven.

"Mother." What music in that word! The chords of every heart vibrate to its sound. What head does not bow down with reverence at the thought of a mother's love? Even the hard-hearted criminal, in his dismal cell, although he may care naught for man or God, bows his head with shame, and tears of guilt fill his eyes, and blushes of remorse cover his face at the mention of his mother's name. The thoughts of the past come vividly before his mind. He thinks of her who sacrificed so much and toiled so hard for his sake. His hardened nature is softened, and with tears of repentance he cries aloud, "Mother, forgive me." The dying soldier on the battle-field, amid strife and the roar of the cannon, utters a deep sigh at the sound of "Mother," mentioned by the parched lips of a comrade.

What sacrifices are those like a mother makes for her children. Brothers, sisters, and friends may forsake the erring one, but the mother finds some redeeming trait in her child and strives to correct his waywardness, to which all nature is inclined, and like a star, guides him back to the paths of truth and morality.

The influence of the mother may be felt upon the whole world. Well may she be called the "Evangel of Goodness."

The memories of youth may fade from our minds, as the flowers in the garden wither and die; age, with its infirmities, may creep upon us to take the place of youth's pleasure; but the recollection of a mother's love still remains a precious jewel to brighten the darkness of declining years.

An ideal home is where love, joy, and peace harmonize, where dear relations mingle to unite their sympathies. Home without these sympathies is but a name. Unkind words and frowning glances are home's bitterest enemies.

A true character cannot be developed without the sunshine of love. How comforting to the weary one when his daily toil is over to return to his bright and peaceful fireside at evening.

"Home is not merely four square walls,
Home is where affection calls,
Home is where love can bloom."

YOUNG FOLKS' COLUMN.

The Two New Dresses.

The one before me is a dainty thing, of golden-brown cashmere, finished with "kiltings" and soft silk sash; lustrous buttons, and interlacing cord and tassels make a marvelous affair of the tiny basque. The dressmaker, a stately old lady, turns the nine-year-old maiden round and round, pats her blushing cheek, saying to her mother, "There, Mrs. Burr, that is just lovely—fit for the Queen!"

Annie thought so, too; but wondered why mother's eyes had such an "awful cryey" look in them, as she counted out the \$7 and laid them in the smiling woman's hand.

Dancing along at her mother's side, through the drifts of red and golden leaves, Annie's mind was soon filled again with the pretty dress and to-morrow's birthday party, when mother, reaching for her hand, said, "Shall I tell you a story about another new dress?"

"Oh, do, do!" In an instant the dancing feet were creeping along quietly with her mother's, who began:

"Many, many years ago—"

"Oh, just how many, mamma?"

"Well, more than thirty, I guess, little one. Mother was just as old as you are to-night; her hair fell over her eyes in brown curls like yours; her heart was as light and her feet as full of dance. But her papa was a poor man and her mamma was often ill. Her home was a small yellow cottage with a red front door, and it stood in a little green garden on the top of a hill, looking down on the beautiful river. Here I played with sister Martha and brother Tommy, and when our mother's headaches came on I turned housekeeper, put the potatoes into the hot ashes to roast, or stirred the 'hasty pudding' for supper. When it was ready father poured milk into three blue bowls, dropped in the golden pudding, and we three sat down before the bright fire to eat it, wondering if the fairies had anything nicer! For we had never so much as heard of Parker-house rolls, jelly cake or ice-cream."

"Dear me! poor mamma! I wish you had heard about ice-cream—it makes me lonesome for you!"

"No need, dearie, for we were jolly hearts, who did not even know the word lonesome."

"Well, at the foot of our hill, in the great white house, with a shining brass knocker on the front door, lived good Dr. Stanhope. His daughter Kitty, who was going away to boarding-school, had invited all the big and little boys and girls to a good-by party, on her birthday. Now, our mother was as proud of her little girls as any rich mother ever was; and more loving than any one I ever knew. It was hard for her to say 'No' to the gilt-edge billet, which read:

"OCTOBER 21, 1835.

"Kitty Stanhope's compliments, and she would be happy to have your company to tea, at five o'clock, Tuesday next."

"No shoes, no gowns," thought our mother. "If I can only finish these garments for Kitty, they might have shoes; but the gowns!" After thinking over her sewing a long time, she suddenly slipped away to the garret; opening a chest she took out and slowly unfolded the funniest dress you ever saw. It had been her mother's 'best gown'—a silk that looked black holding it one way, and crimson the other. Beneath this lay another quite as old and curious, of brown taffeta, with raised diamonds of bright yellow sprinkled over it. Well worn, of course they were, and not the properest thing in the world for such wee maidens. Nevertheless, she folded both, and tucking them into a basket, took her two girls by the hand, and walked through the leaves, as we are walking now, to a neighbor who made dresses and bonnets to earn bread for her children. The kind woman smiled all over when she saw the quaint gowns, but said, with a little pat on my cheek, 'We'll make them do beautifully.' Whereupon she began to pin to my waist the end of what looked to me 'most a mile' of white cloth, poking me under the chin, pinching up little seams here and there, and frightening me dreadfully with her big shears. As fast as she removed the pins she put them into her rather wide mouth, until I was actually afraid she would be choked to death, for she kept on smiling and chatting just the same. By-and-by she tried on the sleeve; how you would laugh to see it now—gathered full at the top, and, after swelling out like brother's balloon, suddenly growing small, till at the wrist my little chubby fist could just push through. Three plain breadths of silk made the skirt, which, sewed on to a very short waist, fell straight and close about my ankles. But the glory that shone out of the red and black folds of that little gown has not faded away yet.

"The long hours of day and night that our mother bent over her work for her girls! I knew little about then; through many of them I slept sweetly, or dreamed of the enchanting party so near."

"But to-day when the very same dressmaker, only grown rich and famous, patted my little daughter's cheek and praised her dress, another sight came back to me; two sober frocks laid out on mother's high bed, two pairs of shining shoes standing close together on the hearth, my mother's smiling eyes as she smoothed my hair,

giving us careful directions as to our behavior on this our first appearance in the great world.

"Oh, that wonderful, wonderful party, in that great parlor all alight with tall candles, and the laughing fire on the hearth; the big birthday-cake piled with snowy frosting and sugar-plums; the dear, welcoming face at home when it was all over, and best of all, I do believe, the telling it all to our happy mother, while she tucked us into our white bed! I remember now my secret wonder, how anybody could look so happy and shining who had not seen it all. But she kept the same shining face and patient voice through years of care and poverty, till her work was all done, and we folded her tired hands and laid her softly down to rest. And, dear, I have been asking our Father to let me leave to my little girl a legacy better than ever so much gold, the memory of a good mother."—Mrs. Keene.

GOOD HEALTH.

Diphtheria.

EDITORS PRESS:—In the year 1876 or 1877 I saw an article in the *Stockton Mail* on a new treatment for diphtheria. This treatment was a German importation, I believe. I have heard nothing about it since. If you have any knowledge of this kind of cure, you would confer a great favor by publishing it, at least you may be able to tell us where to get information. We have become so disgusted with the drug system that we wish to find a way to get well without them.—CONSTANT READER, San Jose.

[The inquiry is submitted to our readers, who may have experience to relate.—EDS. PRESS.]

POISONING BY LOCUST-TREE BARK.—The inner bark of the fragrant-flowered locust (*Robinia pseudacacia*), commonly cultivated as an ornamental tree, and for its invaluable timber, has long been known to have a sweetish taste, resembling that of licorice, and to have emetic and cathartic properties. In the *New York Medical Journal* of January 22d, Dr. Z. T. Emery reports a case of poisoning of 32 boys at the Brooklyn Orphan asylum, from chewing some of this bark which they had obtained from the yard, where fence-posts had been stripped. In the mildest cases, vomiting of ropy mucus was observed, together with flushed face, dryness of throat and dilated pupils. In the severest cases, large quantities of ropy mucus, mixed with blood, were vomited. The other symptoms were retching, pain in the epigastrium, debility, stupor, cold and pulseless extremities, a feeble and intermittent action of the heart, dilated pupils and face of a dusky color. The patients were given subcarbonate of bismuth and brandy by the mouth, and morphine hypodermically; sinapisms were applied over the stomach, and bottles of hot water along the extremities. The patients were discharged from the hospital in two days.

IVY POISONING.—A correspondent of *Pop. Sci. News* writes: "I have always been extremely susceptible to the poison of poison ivy and oak so as to give me great annoyance, unless it is immediately checked on its first appearance. This common washing soda accomplishes for me, if properly applied. I make the application by saturating a slice of loaf-bread with water, then cover one surface with soda, and apply to the eruption, the soda next the flesh. When the bread is dried by the animal heat, I drop water on the outer side so as to keep it thoroughly moistened, and dissolve the soda crystals in contact with the skin. This, you will perceive, is merely a bread poultice, the bread being a vehicle through whose moisture the soda reaches the humor. I find that washing or bathing with soda-water, even continuously, will not suffice with me. My skin requires the heat and moisture of the bread in order for the soda to act on and neutralize the poison. I rarely have need to retain this soda poultice for more than 30 minutes on my affected part. No pain ensues. Formerly I suffered for weeks, as the poison would spread all over my body. Now 30 minutes measure the duration of its exhibition."

IMPURITIES IN CITY AIR.—Prof. Tyndall has developed the fact, in his microscopic studies, that the air of large towns and cities is filled with infinitesimal fragments of every imaginable kind of material. The horse-cars and heavier teams grind the dust in the streets so fine that it is easily suspended in the air; there are also found floating with it dust and gases contributed by every industry, atoms of food, fine particles of refuse, manure, etc., together with the germs which abound wherever there is decomposing animal and vegetable matter. From the clothing of the inhabitants there is thrown off dust of cotton, linen, velvet, fur, wool, etc. All these and countless other products float in the atmosphere of all large cities. Surely, it is not difficult to understand why a residence in the country promises better health and a longer lease of life.

THE CRAVING FOR LIQUOR.—Half an ounce of ground quassia steeped in a pint of vinegar is said to eradicate the craving for liquor. A teaspoonful of the solution in a little water is to be drunk whenever the liquor thirst comes violently, but finally the craving ceases entirely.

DOMESTIC ECONOMY.

Thanksgiving Turkey.

French works on cooking tell us that poultry and game should never be washed. This may do for French markets and appetites, but where poultry is sent to market undrawn, the inside is sometimes sour, and apt to give an unpleasant taste to the stuffing and the flesh as well. If the fowl has been drawn as soon as killed, and the gall has not been broken, it will not need washing; but if there is the least suspicion of taint, wash it well in cold water, to which a teaspoonful of soda, and two of salt, have been added. There is an infinite variety of recipes for stuffing a turkey. A plain dressing, which is the basis of all, is made with bread-crumbs mixed with butter, pepper, salt and thyme or sweet marjoram. The bread should be soaked in cold water and squeezed dry in a towel. The excellence of the seasoning will depend upon the skill of the cook. Add all seasonings a little at a time and taste to see when you have it right. If you have not served an oyster soup previously, an oyster or celery stuffing is most excellent. Use as much of the oyster liquor as may be necessary to moisten the bread, diluting it with half the quantity of water or milk, and about two dozen small oysters to a ten-pound turkey. In this case, an oyster sauce must be served with it. For this, bring to a boil the juice of half a pint of oysters, and one half-pint of milk, also boiling, thickened with two teaspoonfuls of flour wet with cold water, add the oysters, give one boil and serve. For a celery stuffing, the celery must be stewed and mixed with the bread crumbs, which should have been moistened with hot milk. A sauce is made by heating a half-pint of milk, thickening it as above, and adding celery that has been cut in half inch pieces and stewed until tender; season with butter, pepper and salt, and the least trifle of grated nutmeg. You may also change your dressing by the addition of cold minced veal or sausage meat.

Now, having decided upon the style in which your turkey is to be dressed, and having washed it preparatory to the process, fill the body and craw as full as may be, and sew the aperture with cotton twine; draw the legs closely to the body, and tie or skewer them in place, or the bird will come out of the oven in anything but a shapely condition, with its limbs pointing to the four points of the compass. Bend the wings back under the body, place it in the baking-pan, season it all over with salt and pepper, and let it stand several hours before it goes into the oven, that the seasoning in the dressing may permeate and flavor the meat. Pour a little water into the pan, and put it into a moderate oven for the first hour, so that it may heat through slowly. Baste frequently, and increase the heat after the first hour. A ten-pound bird should be baked from two and a half to three hours. Half an hour before it is done, dredge it with flour, and baste every ten minutes until the cooking is finished. If it is not very fat, skewer thin slices of fat larding pork over the breast before baking. Serve brown sauce as well, made from the gravy in the pan, even if you have celery or oyster sauce. Make the brown gravy by adding a little hot water to the gravy in the pan, from which you have skimmed the fat. Thicken it with flour wet with cold water; and the stewed giblets chopped fine, and put a dash of lemon-juice to the seasoning. Serve currant or cranberry-jelly, or spiced plums, with the turkey.—*American Agriculturist*.

JULIET CARSON'S PLAIN DINNER.—Those who have the smallest provision in the way of variety in food and utensils call for our immediate attention, and to them our first consideration must be given. Begin with the supposition that one room serves as kitchen and dining-room, and that the heartiest meal consists of one hot dish, with potatoes and one other vegetable, and bread and some simple beverage. We will suppose that there is on hand flour, baking powder, salt and pepper, vinegar, a little butter or drippings (and much care should be taken to augment the reserve of the latter), a small supply of meat, with a good provision of potatoes and bread. A hot fire is to be cooked without making too large a fire, which would make the room uncomfortable for eating. The most savory, nutritious and abundant meal which can be made from these materials is composed of a stew, with dumplings, boiled or baked potatoes and hot biscuits. By combining the meat with dumplings, in the form of a stew, two advantages are secured. A smaller quantity of meat so cooked will satisfy the appetite as well as double the quantity cooked by baking, broiling, frying, or boiling without gravy or sauce, and it will be in the condition best suited for immediately satisfying the sense of hunger and assisting digestion. The savory sauce imparts to the dumplings the flavor and some of the nutritious properties of the meat. The potatoes must be cooked in the stew, if there were no facilities for baking them; but then our subject of providing variety would be thwarted. For this end the biscuit are suggested. The cost is but a trifle, and they replace the bread that would be eaten in their absence. With the addition of a little cheese, fresh fruit in season, or inexpensive canned fruit or preserves, or better still, applesauce from dried or evaporated apples, and the meal would be complete.

The Week.

Affairs of political and national import have caused many eyes to look anxiously eastward the present week. Elections have taken place in a dozen States beyond the mountains, and returns are eagerly scanned by both Democrats and Republicans, gains and losses noted, and efforts made to interpret the signs of the times. But especial and painful interest has centered upon the capital of Illinois, where the fate of the seven anarchists sentenced to hang in Chicago on Friday are in the balance, which the contending claims of stern justice and pity for the misled, of clemency for individuals and of public policy, must turn for death or life ere this reaches our readers.

In our own State, there have been some preliminary sprinklings of rain in the northern districts, but the initial downpour of the season is yet to come and longingly looked for. But the expectant rancher may take comfort from the weather-wise, who declare that signs are decidedly in favor of a winter rainfall heavier than the average. So mote it be.

Fruit-Growers' Convention.

The Opening Day at Santa Rosa.

[Editorial Correspondence.]

The convention of fruit-growers, under the auspices of the State Board of Horticulture, opened in the Athenæum at Santa Rosa at 11 A. M. on November 8th. Elwood Cooper, President of the State Board, presided; P. W. Butler of Penryn and Mark L. McDonald of Santa Rosa were chosen vice-presidents. B. M. Lelong, secretary, and A. K. Whittin, official stenographer, discharged their respective duties.

In opening the convention President Cooper delivered an interesting address. He alluded to the important services rendered by gatherings of fruit-growers of which the present is the eighth, or the fourth under the auspices of the Board. The last report of the State Board of Horticulture was mentioned as a credit to the State, and calculated to be of great benefit to fruit-growers. He also commended the last report of the College of Agriculture, instancing especially Prof. Hilgard's statement of the need of a State Entomologist. This fact had also been emphasized by a previous fruit-growers' convention, and he hoped the agitation would be continued until such an officer was secured to give instruction at the university and general information to the public. Mr. Cooper especially commended the report of the State Board and of the university to those seeking information about the olive.

Mr. Cooper spoke very wisely on the labor problem, the need of trustworthy and honorable laborers, the necessity of putting down all anarchical tendencies, of a better understanding of the mutual relations of labor and capital and of Government protection for industry and enterprise in all matters of need. Mr. Cooper also emphasized the need of good treatment of hired help, of convincing the laborer that you take an interest in him and desire his good as well as your own. If all these things are done there will be a grand future for the industries of the country. It is stated that during the last generation 50 per cent of the hand labor has been displaced by machinery, and yet wages are higher than ever before. There is no reason to anticipate trouble or any reduction of prosperity, if all parties do their duty to one another and to the State.

President Cooper spoke very encouragingly of the horticultural outlook in this State. Production is increasing and yet a good market is found and profitable disposition made of the produce. He acknowledged indebtedness to the Fruit Unions and all other agencies which have been effective in reducing freight rates and securing better disposition of the fruit. The coming year promises to be one of great activity in fruit-planting as in the other interests of the State. In conclusion Mr. Cooper mentioned a large number of subjects which should engage the convention during its progress.

The address was heard with much interest. Afterward a committee on Order of Business was appointed as follows: S. J. Stabler, Yuba City; A. T. Hatch, Suisun; Gilbert Tompkins, San Leandro; E. W. Woolsey, Fulton; Shepherd of Sonoma. A recess was then taken until the afternoon session.

An Excursion.

As all things were not ready for a session in the afternoon, the convention adjourned until evening. The writer and P. W. Butler of Placer county had the good fortune to receive an invitation from Luther Burbank to ride with him about the town and over the hills. After viewing the improvements in the way of beautiful residences and grounds, imposing business blocks and miles of well-graveled streets, many of which have been secured since the writer last visited Santa Rosa, a ride was taken eastward, passing the delightful group of residences surrounding the picturesque home of Mark L. McDonald, and thence over the hills into Rincon valley. This pretty little valley we skirted on the west, along a road overlooking it from point to point, until we came to the entrance of the property of Capt. Guy E. Grosse. Thence the course turned westward or toward Santa Rosa, but pursued such a winding way around and among the hills that one could not ask for a drive more varied or picturesque. Capt. Grosse has done a wonderful and important work in reclaiming these rocky and brush-clad hills. He has planted groves of chestnuts, avenues and

orchards of olives, and acres upon acres of vines, where a short time ago was a waste of rock and rubbish. The chestnuts so far as we saw were still very small but thrifty. The olives had made a splendid growth and the vines made an excellent show. Here and there is left a strip of land covered with the most beautiful Douglas spruce, again a clump of Manzanita, and again a bunch of gnarly old scrub oaks. These breaks of wild nature here and there among the planted growths give a most beautiful variety to the landscape. But the crowning beauty of Capt. Grosse's enterprise does not appear until one comes to the descent upon the west side of the hills, the first sharp rise above the floor of the Santa Rosa valley. The hillside is so steep that the roadway has to turn sharply upon itself again and again to secure a grade upon which vehicles can safely travel. This coursing to and fro upon the face of the hill gives an ever-changing view of the valley, first, perhaps, far southward to the Petaluma district, then directly westward to the Sebastopol country and then northward in the direction of Healdsburg. We never realized before the extent and beauty of Santa Rosa valley proper as clearly as it appeared from the point mentioned; then beyond this were glimpses of the tributary valleys; then one began to search out different features of the landscape; Santa Rosa, with its straight streets, imposing buildings and bowers embowered in green; then the varying hues of orchard and cornfield and vineyard recurring in endless variety as one passes rapidly from one point of view to another. We cannot adequately describe the beauty of the scenes. We do not know whether Capt. Grosse has a name for this hill or not, but we would name it Panorama Hill, for we can think of no other word which will convey any idea of the extent and variety of its outlook, and this is altogether inadequate, as the highest achievement of the artist is but a far approach to nature's work.

After descending from the hill, we again crossed the turn and visited Mr. Burbank's Santa Rosa nurseries, a couple of blocks south of the courthouse. Mr. Burbank has now nearly 40 acres in nursery, and such trees as we had time to examine were surely thrifty and excellent. He is propagating olives extensively, but the demand this year has already caught up with his available stock. We saw the trees of the red-flesh Japan plum which we described recently in the RURAL. The tree is a much stockier grower than the Kelsey and ripens its wood earlier. Mr. Burbank has a wonderful walnut, evidently a hybrid between the black walnut and the English walnut, a beautiful tree with a characteristic foliage and an apple scent to the leaves which is remarkable. The tree has not fruited yet; but whatever its fruit, it seems destined to be of note as an ornamental tree.

Evening Session.

At the evening session there was a good audience present, and President Cooper introduced Dr. A. S. White of Santa Rosa, who delivered an address of welcome to the visiting horticulturists on the part of the Fruit-Growers' Association and the Board of Trade of Santa Rosa. After a warm welcome, the speaker entered upon an interesting description of the area, resources and industries of Sonoma county. The address was eloquent, and abounding in statistical data, from which most interesting conclusions were drawn. The speaker was heard with marked attention throughout and heartily applauded. He gave the aggregate value of the products of the county at \$6,000,000 annually, and rapidly increasing. Sonoma ranks fifth in wealth of the 52 counties of the State, the assessed valuation of property being \$28,000,000, and the rate of taxation will not exceed \$1.75 per \$100, including State, county and city taxes. At present the industries, productive and manufacturing, are being rapidly developed, routes of transportation are multiplying, population is increasing, and all present statistics of the county's growth will soon be far exceeded.

Mark L. McDonald of Santa Rosa being called upon, made an excellent speech emphasizing the points made by Dr. White, and called Sonoma county an empire in itself, outstripping in resources and productions some of the States of the Union. He thought the credit for laying out the lines of Sonoma county so as to make it grand and rich should be publicly placed where it belongs, to Gen. Vallejo, who was

deputized by the Mexican Government to this work and was best prepared to do it.

Gen. Vallejo coming upon the platform, was warmly applauded and made a pleasing address full of local hits and historical reminiscences which were greatly enjoyed. The convention then adjourned for the day.

The Experiment Stations.

There was a convention in Washington last week of directors of Agricultural Experiment Stations to consider the situation in which such institutions are placed by the passage of an Establishing Act without any appropriation to carry it into effect. An appeal was made to the officials of the Treasury to see if the Act itself could not be held to make the appropriation, but such a decision could not be secured. The support of the stations must therefore be provided by the coming Congress, and all who believe in the usefulness of the stations should unite in urging Congress to make the appropriation. This action was taken by the State Grange at the recent meeting in Santa Rosa, in the adoption of a set of resolutions setting forth the leading facts in the case and continuing as follows:

WHEREAS, We receive with gratification assurance from the Regents of the State University of California, and from E. W. Hilgard, Professor of Agriculture in the College of Agriculture of said University, that the provisions of the law shall be put into practical operation in this State just as soon as appropriations by the General Government for that purpose shall become available. Therefore be it

Resolved, That the State Grange of California, in annual meeting assembled, most earnestly prays that the Congress of the United States shall provide the funds for the execution of the law for the establishment of agricultural experiment stations in the several States, in order that this most important work may be begun at the earliest possible moment.

Of course such action by the State Grange or by other agricultural organizations is based upon the belief that the money when appropriated will be used faithfully and distinctively for the purposes set forth in the law, and not for other purposes. It is well enough to have assurance beforehand that such is also the determination of the men who will have charge and direction of the work in the different States. At the convention to which we have above alluded, a committee was appointed to report upon a system for the organization and management of agricultural experiment stations. They submitted a report, which was adopted. The committee, after stating that their attention was directed solely to experiment stations connected with colleges and under the same general governing board, advise as follows:

1. That all appropriations received under what is known as the Hatch bill should be applied in good faith to agricultural research and experiment, and the dissemination of the results thereof among the people, and that any diversion of funds to the general use of the colleges would be a direct violation of the plain spirit and intent of the law and a disappointment of just public expectation.

2. That the experiment stations especially referred to should be so far separate and distinct from the colleges that it shall be possible at any moment to show to any authorized inspector or investigator that all the funds derived from the United States under the Hatch bill have been expended solely for the purpose of agricultural experimentation according to the intent of the law.

3. That every department to be known and designated as an agricultural station should be distinctly organized with its duties and control clearly defined, and with a recognized official head, whose time shall be chiefly devoted to this department, who should be on an equal footing with the other heads of departments or professors of the college, and whose compensation should recognize the fact that the duties of the position occupy every month of the year.

4. That the publications of the stations should be entirely separate from those of the college. The quarterly or more frequent bulletins should give their readers the result of experiments as fast as completed, and only as completed, or as distinct chapters are completed. These bulletins should enlarge on practical points, such as the improvement or restoration of soils, the development of plants and the breeding of stock, when suggested by work done, even to the extent of repeating well-known principles and facts, when these need to be taught.

The declaration of intention adopted as above favors the belief which is undoubtedly well founded that there will be no "overshadowing" of the agricultural work to the extent of diverting its funds, and that the people will receive the worth of their money in agricultural investigation and not otherwise. We believe this assurance will increase the interest of agriculturists in the movement and will lead them to use their full influence with the next Congress to secure the needed appropriation.

TACOMA is enjoying an extensive boom in commerce and in local improvements.

Causes of Rain.

[An address prepared by Lieut. J. E. Maxfield, U. S. Signal Service, for the meeting of the State Grange at Santa Rosa and published by authority of the Grange.]

Of course all rain comes from the moisture which is at all times present in the air. To understand the process by which this invisible moisture becomes rain, a knowledge of its nature is necessary.

If there be a little water introduced into a glass vessel from which the air has been exhausted, it will seem to disappear almost instantly. Its presence, however, can be detected by the pressure it exerts upon the sides of the vessel. It has simply changed from the liquid state to that of a gas; from visible moisture to invisible. If other small quantities of water be introduced, they, for a time, will seem to disappear like the first, but after a time the water introduced remains as water and does not assume the gaseous state. If the vessel now be heated, the water remaining will gradually evaporate and disappear as the temperature rises. Thus it is learned that a given space will hold only a certain amount of moisture in an invisible state, and that this amount is larger, the higher the temperature. If the vessel now be cooled, the water begins to appear again and, the more it is cooled, the greater the amount of water. If these experiments had been made with a vessel containing perfectly dry air, the results would have been the same as in the case of the exhausted vessel, except that the water introduced would not have evaporated instantly, the process then requiring considerable time. Now, in nature, this process of evaporation is constantly going on; water from the oceans, rivers, lakes and the earth itself is passing into the air as an invisible vapor, and that this vapor may be turned into the form of clouds and rain, it is only necessary to cool it sufficiently, as in the case of the vapor in the glass vessel.

There are a number of ways in which this cooling may be brought about. Air is cooled by mixture with colder air, by contact with the cooler earth, or by simple radiation; but these causes act so gradually that they probably never bring about more than thin clouds, fogs and dew. To give rain, a large mass of the air must be suddenly cooled, and it is believed that this is done only when air is forced or drawn up from near the earth's surface to some distance above it. In this case the air as it rises is brought under diminished pressure, expands, and consequently is cooled. That the expansion of air cools it may be seen from the fact, that when a vessel containing moist air is rapidly exhausted by means of an air-pump, a mist is seen to gather, showing that the invisible vapor has been cooled and is being turned to water. Thus, whenever we find a strong ascending current of moist air, there we find rain, and such a current is believed to exist near the center of all storms, and to be the immediate cause of the formation and maintenance of them.

Whenever the air over a part of the earth's surface becomes warmer and more moist than the surrounding air, it, from these very causes, becomes lighter and rises. In rising it is cooled, as we have seen, and, if the air be moist enough, rain falls. Now it can be shown that this formation of rain in the ascending current tends to keep the air in it warmer than the surrounding air at the same level. Consequently the upward movement is thereby strengthened. To supply the place of the ascending air, other air is drawn in from all sides toward the ascending current. This does not move inward in straight lines, but, owing to the rotation of the earth on its axis, is constantly deflected to the right in the Northern hemisphere. The air consequently circulates around the ascending current with a spiral movement before it reaches the center and ascends. Now, just as a bullet attached to a string exerts a pull on the string when it is whirled, so the air moving

around a center has a tendency to move outward. Thus the barometer near the ascending current falls on account of this outward tendency, and we have a fully-developed storm, its characteristics being a low barometer near the center with an increasing pressure in all directions, an upward movement of the air, with rain and winds blowing spirally around the center. Thus, a storm is simply a great eddy in the air.

A storm thus formed does not remain stationary, but is swept onward by the movement of the air in which it is, just as an eddy in a stream moves onward with the current. As the atmosphere in the middle latitudes has a general movement to the east, storms generally move from west to east. The direction of their

of warm, moist air. This is notably so in the case of the Gulf stream in the Atlantic ocean.

A storm thus formed continues as long as the air drawn in is sufficiently moist to give rain, when it is cooled by ascending. When the air drawn in becomes dry, however, the cooling it experiences is not sufficient to cause rain, and there is then nothing to keep up the ascending current. It ceases, the air is no longer drawn in from all sides, and the storm has disappeared.

We are now in a position to take up the occurrence of storms and rain on the Pacific Coast. Storms come in from the west here as they do in other parts of the country. We have already seen that storms tend to move toward the side on which the air is most moist.

the northern boundary of the United States we have a great many storms come in at this point. Secondly, it has already been stated that whenever over a considerable space the air is warmer and more moist than the surrounding air, the conditions are favorable for the birth of a storm. Now, in winter we get just this needful contrast of temperature, the air over the ocean being warm and that over the land cool, and as this contrast is greater as we go north, more storms will originate on the northern coast than on the southern. Again, for reasons which there is not time to explain, it is found that all over the globe the frequency of storms increases as we go north from the equator into middle latitudes. As a result of these causes, it is found, as already stated, that nearly all of our storms come in or originate on the coast north of Cape Mendocino.

Let us glance at what takes place in California when a storm appears off the northern coast as described. The air is drawn toward the storm, giving a south wind, and as the storm moves a little to the east this becomes a southwest wind. Great masses of air are thus drawn in from the ocean over the land, and as they meet the mountains of the Coast Range and later of the Sierras, they are forced upward and cooled, giving clouds and rain over the State. Thus, the effect of the storm travels southward until it often extends beyond the southern boundary of the State. At other times when the air is less moist or other conditions are less favorable, it will extend only a short distance into California, giving rain only in the northern part of the State.

There are given herewith two charts showing the appearance and extension of a storm down the coast as described.

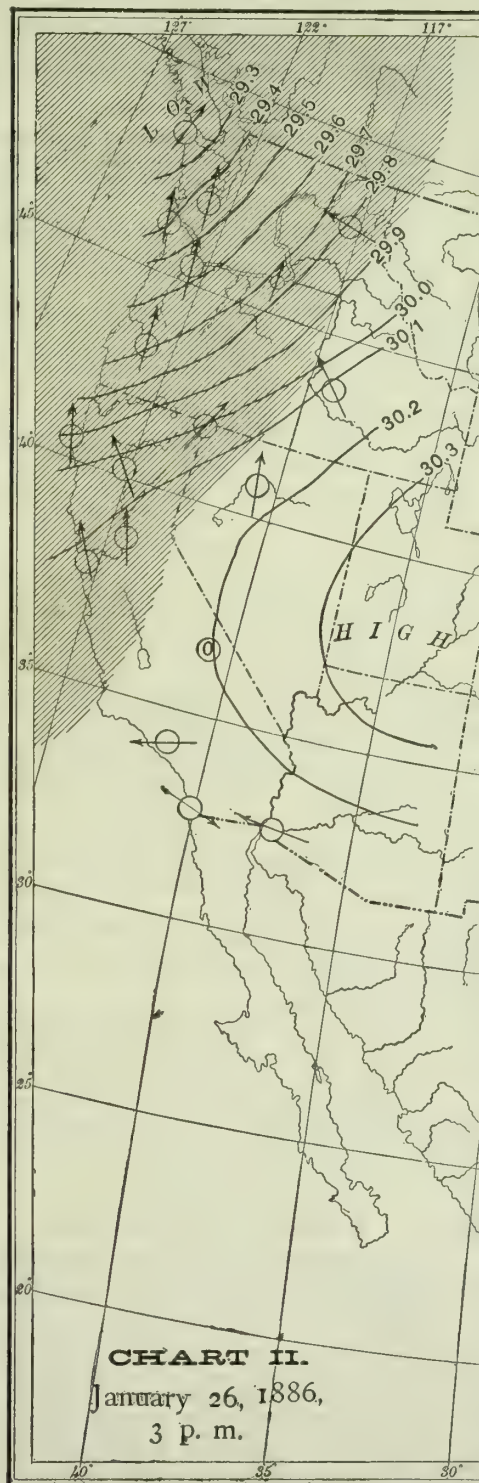

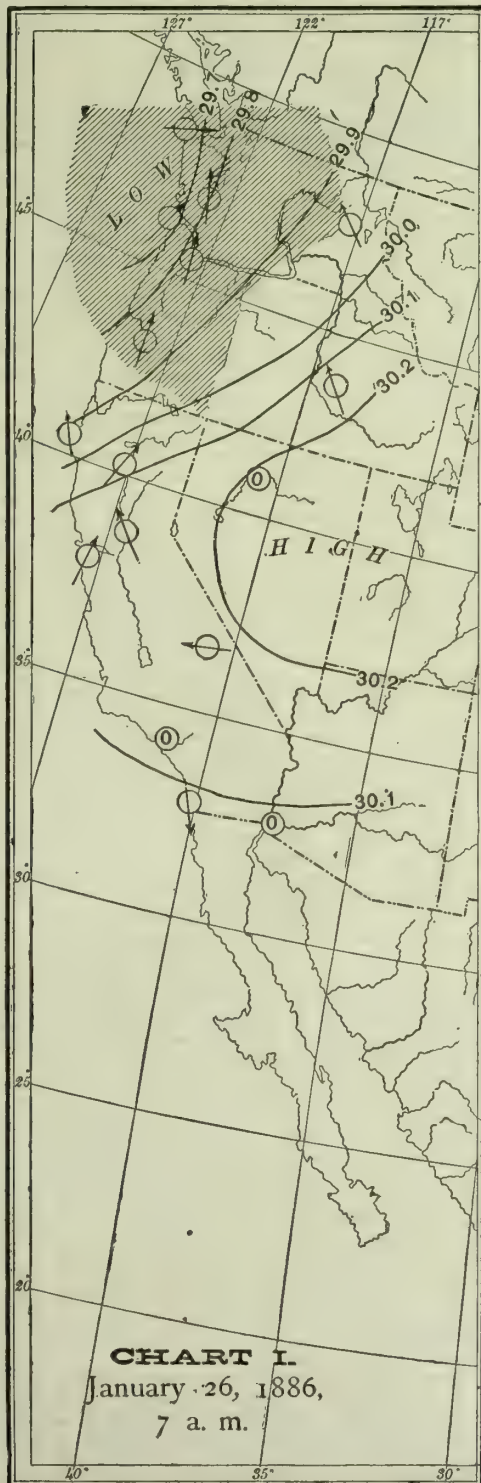

The curved lines are isobars or lines drawn through points where the barometer stands at the same height. Thus, the line numbered 29.7 on chart I means that at all points on that line the barometer stood at a height of 29.7 inches. Similar lines are drawn for 29.8 inches, 29.9, and so on. The shaded portion of the chart indicates where rain is falling or has fallen within eight hours of the time for which the chart was made. Chart I represents the conditions at 7 A. M. on January 26, 1886. Here we see a storm just appearing near Cape Flattery and marked by the characteristic low barometer with increasing pressure in all directions. Rain had already fallen as far south as Southern Oregon.

Chart II represents the conditions eight hours later at 3 P. M. Here the storm center had moved a little to the northeast, and the storm had extended some distance south of San Francisco, as will be seen by reference to the shaded portion of the map. Later charts show that this storm finally moved eastward, and was followed by the clear weather with northwest winds which are found on the west side of a storm.

During the winter season storms similar to the one shown follow each other on the northern coast of the United States in rapid succession. Some pass east or dissipate without extending down the coast. Others, as has been stated, extend beyond the southern boundary of California, and often hang on the coast for a week or more before passing away. These conditions give, as we know, almost continuous rains along the coasts of Oregon and Washington Territory, while in California there are intervals of clear weather.

STAGHOUNDS AND WOLVES.—A pack of staghounds was lately brought into Montana, to kill wolves upon the sheep and cattle ranges. They prove strong, fleet and plucky, beating the wild marauders in every instance, even when outnumbered two to one. Their sole diet is cornbread and buttermilk. Is there not a hint in this for our coyote-plagued sheepmen in California?

THE peanut harvest of Virginia is estimated at 1,000,000 bushels.

APPROACH AND PROGRESS OF A STORM ON THE PACIFIC COAST.

movement, however, is greatly modified by other things, most notably by the topography of the land over which they pass, and by the distribution of moisture around them. For example, a storm is drawn toward a mountain range; since the air on the side of the storm on which the mountain range is is forced to ascend over the range as it is drawn into the center of the storm. Being thus forced up, it is cooled, and the rain thus formed tends to make the ascensional movement greatest at that place, or, in other words, to bring the center of the storm to that point. For a somewhat similar reason storms tend to move toward the side on which the air is most moist. In this case the heaviest rain occurring on that side, the upward movement becomes strongest there, or the center of the storm moves in that direction. For this reason it is found that storms over the ocean tend to follow the course of the great warm ocean currents, because there they find an ample supply

Now, in the summer the air over the Pacific Slope is rendered very dry by the heat of the sun, and storms coming from the west are drawn away by the moister air to the north and do not reach the coast, and in cases where the cooler air from the ocean is drawn in over the land and forced to ascend, the heating it receives from passing over the heated earth more than counteracts the cooling it receives in ascending, consequently there are no general storms and little rain on the Pacific Coast in summer.

In winter, however, these conditions do not exist, and storms come in upon the coast unimpeded. Some, without doubt, originate immediately upon the coast. More than nine-tenths of these storms have their center north of Cape Mendocino. Three reasons may be given for this. First, we have seen that storms tend to follow the great warm ocean currents, and as the Japan current strikes the coast near

The Fairs.

San Jose—5th District.

The fair held in Horticultural hall, San Jose, the second week in October, under the auspices of the San Mateo and Santa Clara Association, proved highly satisfactory. The directors worked hard enough to make it a success, and well earned the gratitude of the Fifth District. There were, of course, many articles of merit among the mercantile displays, and the specimens of ladies' handiwork with needle and pencil; but to dwell on these is not within our province.

The exhibit of fruit—green, sun-dried, evaporated, canned and crystallized—taken as a whole, was remarkable for its variety and excellence. Huge squashes and pumpkins, which so impress the new-come Easterner with their marvelous proportions, were there, raised without irrigation, and a local scribe suggested that if Michael Angelo got his idea of the ribbed dome of St. Peter's from a pumpkin, it must have been a remote ancestor of the Santa Clara stock. As companion pieces to the great cucurbits, Thos. Ashbourne showed a trio of non-irrigated beets, of only three months' growth, which weighed respectively 45, 57 and 67 pounds. I. C. Mills' superb display of fresh and canned tomatoes was entered too late to carry away the first premium of its class.

The beautiful array of jellies in glass, made by Mrs. E. O. Smith, Mrs. Newhall and Mrs. Watkins, which had won three silver medals at the Mechanics' Fair in San Francisco, was here again on view and much admired.

E. Bourguignon's floral display, occupying three large tables in the center of the hall, embraced a profusion of cut flowers and a vast collection of plants, both outdoor and conservatory. His perfect and gorgeous chrysanthemums, blooming tuberoses, cactus dahlias and fine orchids and a floral sofa of exquisite design, were peculiarly pleasing.

A baby-show, with a dozen contestants and prizes for the fattest and the prettiest of both sexes, and for the prettiest twins, was the special attraction Thursday evening, and on other nights Prof. Sherman's illusions and prismatic fountain furnished entertainment.

The fair, taken for all in all, was commonly admitted to be at least the equal of any that had gone before it, and its patrons crowded the building, making it also a financial success.

Awards.

The following are the awards most likely to interest the RURAL's reader. They are arranged by the names of the recipients:

Fruits.

O. J. Alber—2d collection pears, six varieties pears, 20 lbs silver prunes, paper-shell almonds, sun-dried pears, sun-dried prunes, flowers and plants by amateur, collection apples, six varieties apples.

E. Bourguignon—Greenhouse, ornamental and flowering plants, hanging baskets, cut flowers, bouquets, etc.

A. Damonte—Glaze fruit.

G. A. Fleming—Evaporated fruits; evaporated apricots, plums, prunes, pears, apples, cherries. Sun-dried apricots and cherries.

J. H. Flickinger—Domestic fruits in glass, jellies and canned goods, sun-dried peaches.

Mrs. C. D. Horne—Single variety pears, collection figs, 2d six varieties table grapes, display grapes, bunch of grapes weighing 9 lbs, collection tomatoes.

C. C. Morse—Garden seeds, California product.

G. B. Polhemus—50 lbs butter.

John Rock—2d, six varieties apples, collection pears, 2d, six varieties pears, collection plums, collection peaches, three varieties prunes, blackberries, soft-shell almonds, hard-shell almonds, English walnuts.

C. T. Settle—Three varieties pears.

Orvis Stevens—Three varieties apples, single variety apples, 2d, collection apples, sun-dried fruit, sun-dried prunes.

G. F. Wakefield—Exhibit squashes, best and largest pumpkin.

Mrs. L. J. Watkins—Collection quinces, home-made jelly, black walnuts.

Mrs. T. Zingg—Six varieties grapes, 2d, display grapes collection California ornithological specimens.

Los Angeles—6th District.

The eighth annual fair for the Sixth District—embracing San Bernardino, Los Angeles and Ventura counties—was held at Los Angeles, Oct. 10th to 15th. The opening took place under showery skies; but by the second night the display in Hazard's pavilion was claimed to be the best collection of the products of Southern California ever gathered together under a single roof. "It seemed," said a local reporter, "as if every one had determined to make the exhibition striking for its excellence."

The San Bernardino exhibit, in charge of G. W. Beatty, T. J. Fording, A. M. Apin and E. J. Perdue, was an admirably arranged collection of the various fruits, both citrus and deciduous, which grow in that famous valley. The peaches, the bananas grown on the Highlands, the pomegranates, and the superior quality of the samples of silver prunes, dried pears, nectarines and apricots, were mentioned particularly.

Westminster made an excellent showing of fruits and vegetables, under the supervision of Messrs. Bentley and McFadden. Her apples were remarkably fine, several of the contributors having from 9 to 14 varieties each, and the pumpkins, cabbages, potatoes, sorghum, corn, butter, and peanuts drew special notice.

Downey's exhibit also contained apples and grapes in considerable variety, and sweet potatoes and pumpkins of uncommon size, besides

pears and quinces, melons, walnuts, oranges, lemons, etc. Compton was represented by pears and apples and gigantic beets and squashes.

Pomona's invoice, intended to surpass all her previous efforts, was unfortunately delayed upon the road. An exhibit of California ferns in the art gallery was very attractive, and so was the baby-show Friday afternoon.

Mrs. Garey bore away the palm for plants and flowers, and C. N. Wilson's display of honey and apiarian goods received an award.

The attendance, though not so large as had been hoped for, went on greening as the week grew old, and made a good average.

Among the races at the park, a 30-mile ride, by Carl Pugh of San Bernardino, and M. Pryor of San Juan Capistrano, proved very exciting. Each had six horses to select from at the end of each mile. The race was closely contested from first to last, the mountings and dismountings of each rider being an important feature. The first half of the race was favorable to Pryor, but he was soon passed by Pugh, who maintained the lead to the end of the long ride, and came in about a quarter of a mile ahead in 6½ minutes.

Awards at the Park.

Among the awards for cattle and horses were the following, the reports, through some oversight, having failed to give the owner's names:

Cattle.

DURHAM—Best bull, 3 yrs old and over, Juan; 1-yr-old, Bernardino Wiley. Cows, best 3-yr-old and over, Airdrie's Cherry; 2 yrs old, Bernardino Admiral.

JERSEYS AND GUERNSEYS—Bull, 3 yrs old, Ashantee Sultan. Cows, 3 yrs old, Youcoupe.

DEVONS, AYRSHIRES, HOLSTEINS AND HOLDEBURN—Best 3-yr-old and over bull, McKenzie.

HERDS—Best herd of thoroughbred cattle, Bernardino Wiley, Airdrie's Cherry, Lady Mary ad, Lady Grant 6th, Bernardino Admiral; ad do, Ashantee Sultan, Barrett's Mariposa, Youcoupe, Young Butter Fingers, Rosy Lee.

SWEETSTAKES—Best bull, any age or breed, Ashantee Sultan. Best cow, any age or breed, Airdrie's Cherry.

Horses.

THOROUGHBRED—Stallion, 4 yrs old and over, Grover Cleveland; 3 yrs old, Ed. McGinnis; colt, 1 year or under, Crawford; mare, 2 yrs old and over, Rosedale; colt, 1 year or under, Senovia; dam, other than thoroughbred, with not less than 2 of her colts, Nellie, with colts, Comoar and Snowball, by Del Sur.

GRADED—Stallion, 4 yrs old and over, Falcon; colt, 1-yr-old or under, Harry Gage; mare, 4 yrs old and over, Jennie Lind; 3 yrs old and over, Georgia.

DRAFT HORSES—Stallion, 3 yrs old and over, Duke; mare, 3 yrs old and over, with colt, Rhet; colt, Leon.

ROADSTERS—Stallion, 4 yrs old and over, Oscar Steinway; 3-yr-old, Jack Hill; gelding, 3 yrs old and over, John Delaney; mare, 4 yrs old and over, Carrie B.; 3-yr-old mare, Georgia; double team, Lucky and Rowland.

CARRIAGE HORSES—Matched span of carriage horses, Prince and King.

GENERAL PURPOSES—Stallion, 4 yrs and over, Chief of Echoes.

COLTS—Yearling horse colt, Lightfoot, by Hardwood, dam Nellie; sucking colt, Leon, by Patterson's Leon, dam Rhet; yearling colt, Tono, by Salisbury, dam by Whipple's Hambletonian; sucking mare colt, Ruth P., by Lexington, dam Jenny Lind.

SWEETSTAKES—Best stallion, any age or breed, Bachelor; 2d do, Grover Cleveland; best mare, Jennie Lind, by Dashwood, dam by Belmont; 2d do, Narcola.

JACKS—Best jack, Maltese Jack.

Susanville—11th District.

The fair grounds of the Eleventh District Association lie on a plain about half a mile east of Susanville. The track and the accommodations for live-stock are praised by visitors, who were there in goodly number at the fair opening, October 3d. E. V. Spencer delivered the address at the Methodist church, which was crowded with attentive listeners. The display of horses, cattle and swine was quite large, and much interest was shown in the stock parades.

No pavilion exists there as yet, and a large warehouse in town was hastily fitted up to serve for exhibition purposes. The show of ladies' handiwork, both useful and ornamental, was extensive. Big vegetables were there in variety and abundance; but the output of fruit was scanty, owing to the destructive frosts last spring.

It is understood that the financial results were very gratifying; and one who was present, remarking upon the gentlemanly and lady-like deportment of visitors generally, said that during his many years' residence in California and Nevada, he had never seen an assemblage so numerous as that at Susanville fair week, in which there was so little drunkenness and disorder; not a fight nor a single arrest was reported.

Fair at Fresno.

Under an Act approved March 9, 1887, the counties of Merced, Mariposa, and Fresno constitute Agricultural District No. 21; but there was such delay about getting directors appointed and completing an organization that anything like a representative district fair or agricultural show proper this season was deemed out of the question. There was quite a gathering of horsemen, however, at the Fresno fair grounds during the first week in October, and the Committee of Award, although they found

no competition, recommended the following animals worthy of premiums:

THOROUGHBREDS.—Three-year-old mare, Stella Clark; two-year-old stallion, Boy Bolton; yearling stallion, Joaquin; three-year-old mare, Leap Year. ROADSTERS.—Four-year-old stallion, D. J. McConnell; three-year-old stallion, Geo. H. Bernhard; yearling colt, Owens Bros.; sucking colt, M. A. Cotton; sucking filly, J. G. Dawes.

HORSES FOR ALL PURPOSES.—Three-year-old stallion, George Collins; yearling stallion, Josh Cravens; three-year-old mare, D. J. McConnell; two-year-old mare, Dick Myer.

BUGGY ANIMAL.—C. C. Bradley.

DRAFT HORSES.—Three-year-old stallion, P. B. Donahoo; two-year-old stallion, J. O. Davis; best draft mare, sucking colt and draft team, T. C. White.

Awards were also made to Dr. Prather for a pen of fine China Poland hogs that attracted much attention.

The directors hope to be able, at the next meeting, to offer better premiums and pay more attention to the exhibition of fine stock other than fast horses.

Visalia—15th District.

The Tulare Valley Agricultural Fair occurred at Visalia, Oct. 10th to 15th. The concourse of people during the week is said to have outnumbered that on any other such occasion, and the daily receipts, it was thought, would average \$400. Kern county, however, was hardly represented in any way, and calling to mind her admirable contribution to the Mechanics' Fair in this city, the Delta takes the directors gently to task for advertising largely in Fresno county, which is not in the 15th District, and little, if at all, in Kern, which is in the district.

At the park, 40 new stalls and 200 feet of sheds had been added, but all the space available was called for. Among the live-stock, horses predominated. Beside the racers there was a very noticeable span of high-grade Normans, roans two and three years old, exhibited by Mr. Rey, of Butler & Rey, and a fine imported Norman stallion, six years old, belonging to Treacott & Eaton of Tulare City. The latter firm also had on exhibition a family of five colts sired by the above-named stallion, all of which bid fair to become model ranch-horses.

The cattle on exhibition were choice, if not numerous. Thos. Rockford showed three pure-blooded and two young graded Holsteins; Geo. A. Parker, four graded Holstein calves. A. I. Weston had two graded Durham cows and one calf. Jasper Harrell exhibited pure Hereford bull and cow. H. C. Moore had on the grounds 13 shorthorn bulls, recently purchased in the East, which were advertised to be sold at auction. Elias Gallup of Jonesa had on exhibition 10 heifers, from 8 to 14 months old, sired by a thoroughbred Holstein bull bred by Smiths, Powell & Lamb. They were fine specimens of stock from graded Durham dams.

There were also a few swine—as may be seen by referring to the list of awards below.

The pavilion was formally opened Wednesday evening, and was brilliant with gas jets and electric lights. A large and varied output of farm and orchard products, gathered chiefly by Miller & Creighton, and arranged by W. H. Millard, was very prominent. This embraced, among other things, samples of wheat, oats, barley and alfalfa; Indian and Egyptian corn, tomatoes, pears, quinces, apples, and a squash weighing 103 pounds from A. I. Weston; corn 16 feet high, grown by J. H. Thomas on land from which a crop of hay had been already cut this season; also from the same, splendid fruit in cans and glass jars, and glass covered boxes of dried fruit; oranges and lemons, R. P. Putnam; pomegranates, Thos. Creighton; J. W. Martin sent oranges; J. S. Johnson, a large pumpkin; Wiley Watson, honey-locust pods, an olive branch showing the berry, and samples of hops; J. S. Spier & Son, pawpaws, almonds, grapes and other fruits; O. Osborne of Pleasant valley, pears and apples; and Jos. Potter contributed quinces and pomegranates.

In a fine display of fruits from the neighborhood of Porterville, collected and sent in by E. F. Hockett, there were lemons, limes, oranges, pomegranates, English walnuts, soft-shelled almonds and grapes, donated by Dr. P. F. Chapman, H. R. Henry, B. S. Ward and J. D. Tyler.

It is thought by some that the premium list should be revised, more encouragement being given to the pumpkin, spud and fruit-growers of the valley and less lavished on the "speed program;" but the cold reception which the gamblers met with was noteworthy and gratifying to those who desire to see the genuine agricultural fair interest maintained and furthered.

We append those parts of the

List of Awards

Which most concern the farmer and the horticulturist:

Horses.

THOROUGHBRED—G. A. Parker's stallion Rosewood; Owen Bros.' mare Gold Cup.

STANDARD BREED—W. H. Hammond's Pasha, 6 yrs old; H. Hellman's Strathway, 2 yrs; W. H. Fox's W. H. Wilkes, 1 yr, 1st prem.; H. Perkins' Iris, 1 yr, 2d.

ROADSTERS—J. Heinlein's Algona H., 1st; R. O. Newman's Thos. H. Benton, 2d; Geo. Dodge's mare Galatea, 3 yrs.

FAMILY—Geo. Dodge's family of Legal Tender colts.

DOUBLE TEAM—G. R. Anderson's matched iron greys.

ALL PURPOSES—G. Collins' stallion, 1st prem.;

T. D. A. Collins' stallion Stonewall, 4 yrs old, 2d; J. Fowler's Tony, 1 yr old, 1st; F. Gordon's 2-yr-old, 2d; O. A. Erwin's 3-yr-old stallion Lore Roxby.

DRAFT HORSES—Treacott & Eaton's Mazett; W. I. Burnett's Cleveland, 2-yr-old; Butler & Rey's 2 and 3-yr-old mares; San Joaquin Lumber Co.'s team of greys; Treacott & Eaton's draft suckling.

JACKS AND MULES—R. O. Newman's jack Domingo, and his suckling mules; A. Mitchell's 2-yr-old mule.

Cattle.

GRADED DURHAM—A. I. Weston.

HOLSTEIN—T. Rockford, cows; G. A. Parker, 1-yr old bull, Grade Holstein, E. Gallup, heifer calf; G. A. Parker, bull calf.

HEREFORD—J. Harrell, cow and bull.

GRADE DEVON—J. A. Patterson.

Swine.

POLAND CHINA—Elias Gallup.

BERKSHIRE—Butler & Rey.

Pavilion Exhibits.

Miller & Creighton, best display agricultural products; Visalia Cannery, canned fruit; Pioneer Land Co., Porterville, display of citrus fruits, almonds, persimmons and pomegranates; O. Osborn, orange branch with fruit on; O. P. Byrd, fleece of wool; Geo. Thyarks, raisins; J. W. Briggs, dried fruit; Mrs. Bargeman, cotton; Wen Esteven, Italian chestnuts; Josiah Gregg, honey; A. I. Weston, pears and tomatoes; Seth Smith, castor beans; H. B. Van Tassel, largest pumpkin; Mrs. I. H. Thomas, jellies in glass; L. V. Nanscaven and I. H. Thomas, fruit in glass; Mrs. H. Perkins, natural flowers.

Claus Spreckels on Beet Sugar.

In another place we give a note from one of our Watsonville readers concerning the sugar meeting held in that place on November 5th, and a statement from one of the directors of the new company as to what is required in the establishment of a factory. The following is given by a correspondent of the *Evening Bulletin* as Mr. Spreckels' address at Watsonville, and it will be found very interesting:

"My friends, I have just returned from Austria, Germany and France, where I inspected thoroughly the cultivation and manufacture of beets into sugar. My visit has convinced me that it is advisable to locate sugar-beet factories in California and all over the United States. I have made up my mind that there is no country like California. Here we can raise a million tons of sugar. We have the soil and the climate, and only need to put the machinery into motion. I am not exactly a farmer, but I know something of the methods in this business. You can succeed if you have good machinery with the latest improvements. It was tried here 18 years ago and failed, even when sugar was 12 cents a pound. I can succeed now, and it shall not be a failure. I am only one of 65,000,000, and cannot do everything alone. But I must have the support of the farmers.

"Compare the situation of the farmers here and in Germany. We must have industries to uphold the families who live here. German farm lands have been cultivated for a thousand years in beets and grain, and I felt sorry that many farmers here were not as well fixed as they are in Germany. Some of you have not had the opportunity to become independent and wealthy, but valleys like this one are not to be found all over the State.

"You must remember that you must not take away from the soil all the time, but you must put something back. If you have a tank full of water and only take one glass of water away from it each day, it will in time become empty. In the same way land recedes in productiveness if you fail to put something back in it. Every three years you should grow a crop of beets. The first year, beets; the second year, grain; the third year, manure the land and again grow grain, and then cultivate beets again. Thus, if you have a farm of a hundred acres, you can each year have 33 acres in beets, and you will find that those 33 acres will give you a better return than the whole of the other 66 acres. Farmers should net from \$50 to \$75 an acre for their beets, while for wheat you only clear about 80 cents a bushel, with 15 or 20 bushels to the acre.

"I propose to erect factories that will consume 350 tons of beets in 24 hours. This will require seven tons of lime, which is a good fertilizer, and can be returned to the soil again. Sometimes you find feed is scarce, you can cut your straw and take the pulp from the beets to feed your cattle, when you will have sleek cattle all the year round and be able to put plenty of manure back to the soil.

"In Germany the farmers say that they cannot raise wheat to compete with California, but they do better than us in sugar. Germany exports 600,000 tons of sugar and produces 1,024,000 tons. We will do the same here.

"I am now in my 60th year, and it would kill me to fail in what I undertake to do. It is not money that is an object to me, but I want the people of California to be able to show that Claus Spreckels has done something for this State when his bones are at rest.

"In Austria there are 233 beet-sugar factories; in Switzerland, 254; in Belgium, 183; in Holland, 44; in Germany, 402; in Denmark, 9; in Sweden, 9; in Spain, 10; in Italy 7, but the last two are not a success. There are 900 factories in Europe. France produces from 500,000 to 600,000 tons of sugar, and it has one central factory. Ten miles away there are small plantations where the beets are out by

machinery and diffused. From these all the liquor is pumped to the central factory, but I would prefer to bring the beets by teams or rail to the factory. I have not yet selected a place, but am ready to put up ten factories if you will help me and show where you will raise the beets.

"The first factory I will erect myself if you guarantee to cultivate a certain number of acres with beets every year. If one factory is not large enough, then I will erect another, or you can do so if you want to, and I will give \$100,000 toward it.

"In Germany two-thirds of the factories are owned by the farmers themselves, and with this interest and 100 acres of land, they have become rich by the beet-sugar industry.

"It is for you to consider whether Pajaro valley is willing to raise beets or not. My idea is, that there will be no trouble about it. For the factory there must be certain facilities—water, fuel and limestone. You have the land, and I think you can have the fuel and the limestone. If you want to own a factory yourselves, I will assist you and guarantee that it will pan out well. If my life is spared, I want to see all the sugar that is used in the United States grown here, and I want to see this country export it."

Value and Cultivation of Beets.

In reply to numerous questions put to Mr. Spreckels from among the large audience, he said that he had not made any definite arrangements, although he had visited several localities. He decided first to meet the farmers of this valley, where beets had been formerly raised. Beets would be worth from \$4 to \$5 a ton, according to their saccharine contents. He had seen a sample from Santa Maria valley that was richer than sugar-cane. It contained 91 per cent of sugar, while the sugar-cane grown there contained only 88 per cent. The fairest way to determine the value of beets would be to take a few beets from each load and analyze them, averaging the whole load on the basis of the samples taken. Thus, if the beets contained a higher percentage of sugar, the farmer would get a better price, in the same way as a farmer growing a good, plump wheat would get more than one who had an inferior quality. The lowest price paid for the beets would be \$4 per ton and more, according to the nicer saccharine contents.

Meeting of State Board of Horticulture.

The State Board of Horticulture met Monday morning in their rooms at 220 Sutter street, Elwood Cooper presiding and B. M. Lelong, secretary. The following members of the board were also present: Boggs, Vallejo, Chapman, Peck, Block and Kimball.

Mr. Cooper stated that since his elevation as president of the board his term had expired, and although he had been reappointed, he considered that he was no longer president. The board then proceeded to elect a president, and Mr. Cooper was unanimously re-elected. Mr. Kimball was elected auditor, and Messrs. Boggs, Block and Kimball were chosen as an Advisory Committee. A. K. Whitton was elected stenographer.

Mr. Lelong, secretary, made a report detailing the business of his office and stating that the duties had so increased that he needed the assistance of a clerk. After discussion as to the financial ability of the board to meet the additional expense, it was decided to provide a clerk, the amount of compensation to be fixed from month to month, in accordance with the state of the finances, by the Executive Committee.

A communication was received from Senator Hearst calling attention to the near assembling of Congress and asking for information that would enable him to frame a bill in the interest of the fruit-growers of the State. The communication was received and ordered referred to the Fruit-Growers' Convention to be held at Santa Rosa.

A communication was received from the Board of Education of Colusa county, asking that the report of the Board for the year 1881 be revised and a number of the same be issued in order that it might be used as a text-book in the public schools. The communication took the same order as the one preceding it.

A request was received from Santa Barbara asking that the meeting of April, 1888, be held in that city. Action on the communication was laid over until the next meeting of the Board. The report of W. G. Klee, State Inspector of Fruit Pests, was also laid aside until the Santa Rosa convention.

The board then adjourned to meet at Santa Rosa.

AFRAID OF SULPHUR.—Importers of fruit in New York are anxious about the fumigation of ships from Italian ports, and are making inquiries as to the intention of the authorities. One merchant said: "The process of fumigation is most destructive to fruits. I have lost several large cargoes that way. I expect considerable fruit in Italian ships which will be due here next month, and am afraid that I shall lose a great deal of it. Sulphur causes green fruit to rot. I had a large cargo of almonds shipped to me a month or so ago, and in the same ship was a consignment of sulphur. Nearly half of my almonds were ruined by sulphur fumes."

THE GIANT POWDER COMPANY.

PATENT OWNERS OF

NOBEL'S DYNAMITE,
NOBEL'S EXPLOSIVE GELATINE,
NOBEL'S GELATINE-DYNAMITE,
Best and Strongest Explosives in the World.

As other makers IMITATE our Giant Powder, so do they Judson, by Manufacturing a second-grade, inferior to Judson.

BANDMANN, NIELSEN & CO, General Agents, San Francisco.

JUDSON POWDER,

The Only Reliable and Efficient Powder

For Stump and Bank Blasting. From 5 to 20 pounds blows any Stump, Tree or Root clear out of ground at less cost than grubbing. Railroaders and Farmers use no other.

Farmers and Viticulturists, Attention!

FERTILIZE! FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,

DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

DR. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,

E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 1 pound each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

TO

FRUIT GROWERS, FRUIT SHIPPERS, CANNERIES, ETC.

The ALLEGRETTI GREEN FRUIT TREATMENT and STORAGE SYSTEM COMPANY announce that they are now ready to store and treat all kinds of Green Fruit, Vegetables, and other Perishable Articles, on Storage System, by the week, month, or for shipment East.

This system is well known among fruit-growers, its power of preserving fruits, etc., in a fresh state, having been fully demonstrated with most satisfactory results.

NITROGENOUS SUPERPHOSPHATES

—OF THE—

MEXICAN PHOSPHATE & SULPHUR CO.,

The Best Fertilizer in the World!

**IN USE IN ALL PARTS OF THE OLD WORLD AND ACKNOWLEDGED TO BE
 THE BEST KNOWN.**

We have been shipping this material for years to our Agents, Messrs. SCHRODER & MICHAELSON, HAMBURG, and under date of January 4, 1887, they wrote:

"The demand for your phosphates continues very good, as you will see from our having sold so far ahead as September and October arrival, at full prices, and we could to-day place a much larger quantity if we only had them to offer."

Under date of January 26, 1887, Messrs. SCHRODER & MICHAELSON, alluding to letters acknowledged, write as follows to H. M. NEWHALL & CO.:

"They referred partly to the quantity of Mexican Guano which we may expect to receive in the course of the present year, in regard to which our repeated inquiries addressed to the Company had so far brought no reply. We are glad to note from your telegram that Mr. Halsey has now written us on the subject, but we are, on the other hand, somewhat disappointed at the SMALLNESS of the figure you name (8000 to 10,000 tons) which we hope is exclusive of the 'Tranmere' and 'Saigon' cargoes. We have, in fact, in consequence of the numerous inquiries for this guano, been placed in an awkward position, through not being able to give any reliable information to our buyers in regard to the quantity of Mexican Guano forthcoming during the present year."

Its Introduction into California has been marked with the most gratifying results.

**IT IS THE CHEAPEST, BECAUSE THE MOST EFFICACIOUS! THE SAFEST, BECAUSE DIVESTED OF ALL ORGANIC MATTER!
 AND IS TOTALLY INOFFENSIVE TO TOUCH OR SMELL!**

We invite correspondence with Farmers, Viticulturists and others interested, and are prepared to give the minutest details in regard to this most valuable Fertilizer. For particulars of Analysis see certificate of Dr. Schneider and testimonial of Professor Hilgard in another column.

Arizona Honoring Miles.

On Tuesday of this week the citizens of Arizona, in grateful recognition of the services done them by Gen. Nelson A. Miles, presented that famous Indian-fighter with an elegant gold-hilted sword.

The occasion was made a gala-day at Tucson. There were visitors from various portions of the Territory, and the denizens of the adjoining country came pouring in—Mexicans, Indians and all—till the town was flooded with the tide of people. A band of several hundred Papago warriors, hereditary foes of the Apaches, rode through the streets in paint and feathers. About 300 Mexicans appeared on horseback, and civic societies and school-children were in line.

The procession, numbering some 3000 persons, and headed by the Fourth U. S. Cavalry band, was reviewed by Gen. Miles and staff from the balcony of the San Xavier hotel, and then attended the honored guest to the park, where the presentation ceremonies were performed.

Gen. Royal A. Johnson presided, and after prayer had been offered Justice W. H. Barnes of the Supreme Court of Arizona made the address of welcome and presentation. He sketched the advance of civilization upon the wilderness, the struggles and hardships of settlers on the frontier, the craft and cruelty of the savages, and, above all, the terrors and atrocities of the warfare waged by Geronimo, Nachez and their followers, happily ended by the sagacity and prowess of Gen. Miles.

Judge Barnes spoke for half an hour, his eloquent address being often interrupted by applause, and when, at the close, the General rose to accept the sword handed him by the orator, the entire audience rose also in a tumult of enthusiastic and long-continued cheers.

Gen. Miles' response was not only graceful and felicitous, but singularly interesting also. In his opening acknowledgments he said:

I feel that you have honored me in the highest degree by making me the recipient of this token of your gratitude, and I accept it as an emblem chosen by the people of a vast Territory, not as a testimonial to me alone, but more especially in recognition of the services of that gallant body of men who, in a recent arduous Indian campaign, achieved most gratifying success. Aside from its intrinsic worth, its beautiful design, wrought in precious metals and executed with artistic skill, I prize far more than all else that spirit of generous consideration which prompted you to join together in so graceful a compliment, and I shall treasure it with more than grateful appreciation.

On this occasion I have but one regret, and that is, that the officers and soldiers who were engaged in that worthy cause, some of whom gave their lives in helping to secure peace for this Territory, cannot be present to witness this manifestation of your gratitude; and I would be less than worthy to command such men did I not accord to them the full measure of praise which their faithful services so richly deserve.

He spoke at considerable length upon the problem which confronted him, when he was assigned to the command of the department in April, 1886, and how he became convinced that permanent peace and security could be attained only through the capture and utter disarming of the hostiles, and banishing them with all their abettors and sympathizers to a far-distant region. Finally, said he:

When that was accomplished, I felt that the citizens of Arizona and New Mexico could enjoy a lasting respite from Apache depredations, and the military could be relieved from the interminable, dangerous and laborious service of contending with that dreadful foe of civilization.

Nor did he omit to mention the efficient aid and co-operation toward the success of his campaign that was given by the people and officers of the Territory and by Gov. Torres of Sonora.

The close of his response was the signal for another mighty outburst of cheering. A floral tribute from the ladies of Yuma was presented; letters were read from Gen. Sherman, the Secretary of War, the Governors of New Mexico, Sonora and Chihuahua and other persons of distinction; and an address by Carlos Velasco was tendered on behalf of the Mexican Republic.

After the people had pressed upon the platform to take the General by the hand, he was escorted to his hotel by the G. A. R. In the evening, the festivities were continued with a grand reception and ball and an illumination of the city.

We have deemed this occasion worthy of somewhat extended notice as marking an important stage in the history of our territorial neighbor. Her riddance of the savage pests that so long harassed settlers within her

borders, and the opportunity now secured to her citizens of cultivating the arts of peace without fear of pillaging and murderous Apaches, goes far toward guaranteeing the prosperous development of Arizona.

The Beet-Sugar Enterprise.

EDITORS PRESS:—For the last week or ten days, Messrs. A. N. Judd and Gus Sanborn, two prominent Watsonville farmers, have been canvassing the valley for the purpose of ascertaining of farmers their willingness to engage in beet culture, and to be prepared to make definite proposals to Mr. Claus Spreckels when he arrives here, which event happened to-day. At two o'clock the rink was filled with a very large number of eager farmers drawn hither to hear the proposals of the great sugar king. The meeting was called to order by Mr. Edward White, who in a few well-chosen words introduced Mr. Spreckels. This gentleman came forward without ostentation and gave a lucid account of the manner and extent of the sugar manufactories of the world, concluding by making the statement that California could and should supply not only herself but export large amounts of this valuable article, thereby saving millions of dollars to the State. On being informed that the signatures of farmers to the extent of 3000 acres of land suitable for beet culture had been secured, Mr. Spreckels expressed himself much pleased, but could make no extended pro-

JENNY LIND GOLDSCHMIDT.

posals, as a location would necessarily govern him in his future definite arrangements. On motion, a committee on location and consultation, consisting of Dr. Chas. Ford, W. R. Radcliff and Wm. V. Gaffey, were appointed with the request that they report at their earliest convenience, after which the meeting adjourned sine die.—ONE WHO WAS THERE, Watsonville, Nov. 5.

Our correspondent does not state whether Mr. Spreckels stated explicitly what he desired in the matter of location, but we may gain a point by inference from a letter written by J. L. Koster of this city, who is a director in the great incorporation which has been organized with Mr. Spreckels at the head. In a letter to E. C. Smith of San Jose, Mr. Koster writes:

In relation to selecting a site for the plant for the Beet Sugar Company's factories, I would say that the company is looking now for the most eligible site for that purpose, and that it will require a large area of ground where the sugar beet can be grown, with soil like that near Alvarado, to raise the quantity of beets required. The company does not intend to buy these lands, but only the products of sugar beets grown thereon, and expect from the owners of such lands their co-operation with this company by the donation, gratis, of from 40 to 60 acres of land, whereon their factories are to be placed, as it will enhance the value of every acre of land surrounding the factories immensely. In Germany, every person possessing beet lands has grown wealthy. Adobe lands cannot be used.

This will perhaps give the reader a clearer idea of what the company expects.

In another column of this issue may be found a full outline of Mr. Spreckels' address at Watsonville, which may be taken as the basis upon which his great enterprise is to rest. This statement will, no doubt, attract wide attention.

Jenny Lind Goldschmidt.

Madame Goldschmidt, who died in London a few days since, at the age of 66, is better remembered in America as Jenny Lind, "the Swedish nightingale." People now in middle life can well recall the marvelous popular excitement which anticipated her coming to this country, and the furor of enthusiasm which attended her singing in various cities of the Union nearly 40 years ago. The rush and rivalry to purchase tickets to her concerts, the enormous profits which accrued to her and P. T. Barnum, under contract with whom she had crossed the ocean, and her triumphal progress from place to place are part of the history of a past generation. It is many years since she withdrew with her husband into private life, whence she came forth at intervals for some benevolent purpose; but the news of her death awakens tender memories of a woman whose personal character and charitable deeds were as lovely as her voice was enchanting.

California Poultry Association.

A special meeting of the California Poultry Association was held in this city last Saturday evening, November 5th. There were present

Shipping Young Gum Trees.

EDITORS PRESS:—I have about 3000 or more young gum trees, grown from the seed, which are now from three inches to nine inches in height; they are still in the shallow boxes in which the seeds were planted. I wish to transplant them in Antelope valley, Los Angeles county. Will you please enlighten me as to the safest and surest way to transport them? The freight charges for 400 miles of distance would be too great, were they shipped in boxes.

An early answer to my inquiry will greatly oblige a subscriber to your valuable paper.—B. F. H., San Francisco.

[We should ship them in the boxes, even at the cost of freight, believing that we would more than get our money back in the greater number which would grow after being set out without displacing the earth from the roots. If we had had such a job in view, however, we should have sent down the seed and grown the trees nearer the plantation. Perhaps some reader can give a safe way of handling the seedlings without the dirt, but we do not know of any. We suppose, of course, that the trees have to take things as they come, after planting.—EDS. PRESS.]

HEREFORD SALE.—The sale of the Hereford cattle recently made in this city by Killip & Co., for Vaughan & Williams, shows that this breed is attracting much attention, and that there is a growing market for the celebrated "white faces." The prices realized were very good, amounting to \$12 630 in all for 32 head of Herefords—an average of \$407 a head.—C. F. Swan and J. C. Bailey being the principal buyers, these two buying nearly the whole herd sold. These prices should encourage importers, for there are many other cattle growers who would like to get good blood as well as those who purchased this herd.

A Valuable Map.

The beautiful map of California, compiled by the Geological Survey, is now issued in a thoroughly revised form, giving new surveys, township and range, railroad lines, new cities, towns, and county boundaries. As now completed, the map is a most valuable acquisition to business offices or private libraries.

Those wishing to procure this admirable map should do so at once, as this is probably their last opportunity, the price of the map being now reduced to a very low figure, and the expense of labor and material in printing being very great. It is beautifully colored in outline form suitable for the use of schools.

The price, well mounted on cloth, rollers, etc., is \$3.50.

Those wishing copies can procure them by addressing the agent, E. M. SLEATOR, 529 Shotwell St., San Francisco.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

THE Fish Commission boat Albatross has about finished fitting out for her extended Pacific cruises, and will probably leave the Washington navy-yard in a few days.

THE San Bernardino postoffice business has developed so rapidly that the postmaster is compelled to employ extra clerical help at his own expense.

ABOUT 20 head of Alvaro Evans' band of sheep died from the effects of eating frosty alfalfa the other morning on Powning's Addition, Reno.

To Consumptives.

Or those with weak lungs, spitting of blood, bronchitis, or kindred affections of throat or lungs, send 10 cents in stamps for Dr. R. V. Pierce's treatise on these maladies. Address the doctor, Buffalo, N. Y.

"How Can She Ever Love Him?"

Is what you often hear said when the prospective groom is the victim of catarrh. "How can she bear such a breath?" "How resolve to link her destiny with that of one with a disease, that unless arrested, will end in consumption, or perhaps in insanity?" Let the husband that is, or is to be, get Dr. Sage's Catarrh Remedy, and cure himself before it is too late. By druggists.

How Women Would Vote.

Were women allowed to vote, every one in the land who has used Dr. Pierce's "Favorite Prescription" would vote it to be an unfailing remedy for the diseases peculiar to her sex. By druggists.

Prof. Loissette's Memory Discovery.

Prof. Loissette's new system of memory training, taught by correspondence at 237 Fifth Ave., New York, seems to supply a general want. He has had two classes at Yale of 200 each, 350 at Oberlin College, 300 at Norwich, 100 Columbia Law Students, 400 at Wellesley College, and 400 at University of Penn. etc. Such patronage, and the endorsement of such men as Mark Twain, Dr. Buckley, Prof. Wm. R. Harper, of Yale, &c., place the claim of Prof. Loissette upon the highest ground.

THE SCORPION'S STING.—Professor A. G. Bourne has made a number of experiments on three species of scorpions found at Madras, with the object of determining whether the popular notion that scorpions can commit suicide is true. He finds that it is undoubtedly physically impossible for a scorpion to sting itself in a vulnerable place, and when one is placed in very unpleasant circumstances, it not unfrequently lashes its tail about and causes actual penetration of the sting. But the poison of a scorpion is quite powerless to kill the same individual or another of the same or even of another species. Two scorpions, when fighting, repeatedly sting one another with little if any effect, the stronger killing the weaker by tearing it to pieces. The poison may be pressed out of the sting with the fingers or a pair of forceps, when it is found to be a milky white fluid with a very pungent smell resembling that of formic acid.

INSECT REPRODUCTION.—Perhaps no more striking illustration of the wonderful reproductive power of certain insects could be given than that contained in a work recently published by Theodore Wood, an English entomologist. It is assumed, first, that 100 aphides weigh no more, collectively, than a single grain; and, second, that only a very stout man can weigh as much as 2,000,000 grains. Then it is found that if multiplication were entirely unchecked, the tenth brood alone of the descendants of a single aphid would be equivalent, in point of actual matter, to more than 500,000,000 very stout men, or one-third of the human population of the globe, supposing each person to weigh 280 pounds.

TO REMOVE SHEPHERDS' MARKS.—As is well known, the removal of shepherds' marks from the wool occasions great trouble. They are frequently cut out with shears. This, however, is difficult, costly and tedious. A French firm received a patent some time ago for a process by which they remove these marks quickly by submerging the raw or worked wool for from 15 to 20 minutes in a bath heated to 104° Fahr., and containing a sufficient quantity of water-glass to raise the solution to 2° B., and besides this four pounds of soap.

HE APPRECIATED THE TABLE.—At the Western house in Marysville, a few mornings ago, the *Appeal* says the waiters in the breakfast-room were electrified by the numerous orders they received from one man. In less than 25 minutes he drank nine cups of coffee and ate 15 sausages, besides innumerable slices of bread, scooped all the auxiliary dishes, and upon reaching the cashier's counter modestly proffered a smooth quarter, remarking that he had enjoyed a hearty breakfast.

Lands For Sale and To Let.

FARMS FOR SALE.

One Small Hop and Vegetable Farm. The annual yield of this place will equal 50 to 75 per cent of the purchase price.

One Fruit Farm of 50 acres. This year's crop will amount to nearly half the amount asked for the place.

120 Acres; all first-class Fruit Land; 70 acres planted to Fruit and just beginning to bear.

135 Acres; good Hop and Fruit Land near this city.

Also, several other Good Tracts, and 20 Good City Lots.

All these Tracts are intrinsically worth the money asked for them without the "Boom," and with it a handsome profit.

Terms easy. For further particulars call on or write to

S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 9, 1887.

In the produce market, the past week was quiet, with very few changes in prices. Continued dry weather is a source of uneasiness in some sections. The foreign grain markets have been only moderately active, but the tone reported is one of considerable strength. To-day's cable is as follows:

LIVERPOOL, Nov. 9.—Wheat, quiet but steady. California spot lots, 6s 2½d to 6s 5½d; off coast, 3s 6d; just shipped, 3s; nearly due, 3s 3d; cargoes off coast, quiet; on passage, few bids in market; Mark Lane wheat, quiet; English country markets, slow; French, firm; wheat on passage to Continent, 200,000 qrs.; wheat and flour on passage to U. K., 1,474,000 qrs.; wheat and flour in Paris, quiet; weather in England, wet.

Foreign Review.

LONDON, Nov. 7.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: Trade in native wheat throughout the week has been in buyers' favor. Sales of English wheat during the week were 66,087 quarters at 30s 3d per quarter, against 49,325 quarters at 30s 8d during the corresponding period last year. Flour is dull. Foreign wheat continues to lose strength. Supplies keep pouring in and rates are low. Flour values are weak. Corn is quiet. Seven wheat cargoes arrived, one withdrawn and three were sold. At to-day's market wheat was dull and dragging. Prices were notably unchanged, but all sales were in buyers' favor. Flour was dull and cheaper. American was flat. Corn is dull. Round is scarce and rather dearer. Oats are weaker. Peas are 6d dearer.

Chicago Markets.

A special telegram received by S. S. Floyd & Co. from Chicago is as follows:

CHICAGO, Nov. 7.—Wheat market continues dull and neglected; local operators want to see some life in the market before they go from shore and are waiting for the outsiders to start the ball rolling. Visible supply shows 1,200,000 bu. increase for last week. This makes the total visible supply 35,144,574 bu. This is still 22,000,000 bu. less than this time a year ago. Corn market, lifeless. Receipts of wheat at 7 primary points to-day, 541,936 bu. Shipments, 311,603 bu. No session of the Board to-morrow in New York or Chicago, on account of State election. Wheat, Dec., opened 73½; highest, 73½; lowest, 72½; closed, 73½. Wheat, May, opened, 78½; highest, 78½; lowest, 78½; closed, 78½. Corn, Dec., opened, 41; highest, 41; lowest, 40½; closed, 40½. Corn, May, opened, 45½; highest, 45½; lowest, 45; closed, 45.

Eastern Wool Markets.

BOSTON, Nov. 5.—The wool sales for the week comprise 1,683,500 lbs. of domestic fleece and pulled and 220,000 lbs. foreign, making the weeks transactions close up at 1,903,500 lbs. against 1,797,800 and 2,097,800 lbs. for the two previous weeks' transactions. There were sold 190,000 lbs. California spring and Oregon and 30,000 lbs. California fall at private terms.

NEW YORK, Nov. 7.—The demand is moderate but the situation is not without some encouraging features. Advances at hand report gathering strength in Australia. The trade thinks the market has seen its worst, and feels hopeful. Among sales were 10,000 lbs. Eastern Oregon at 20c, 20,000 lbs. fine Territory at 19c, 10,000 lbs. spring California at 22½c.

PHILADELPHIA, Nov. 7.—The market is dull and featureless. There is little change in prices for desirable wools. The feeling among holders is pretty steady. Sales include 2000 lbs. Territory, fine, at 14c; 7500 lbs. same, fine medium and coarse, 15½c; 3000 lbs. Montana, fine medium, 20c; 4000 lbs. Territory, medium, 22c.

Eastern Wheat Markets.

CHICAGO, Nov. 9.—72½c for cash, 72½c for Nov., 73½c for Dec., 73½c for Jan. and 78½c for May.

NEW YORK, Nov. 9.—85½c for cash, 83½c for Nov., 84½c for Dec., 85½c for Jan. and 89½c for May.

Florida Oranges.

NEW YORK, Nov. 5.—The *Mail and Express* says: The first shipments of Florida oranges are just arriving. A large proportion of them are rusty and the flavor is not so good as it will be in a couple of weeks. Leading dealers estimate the crop this year at 1,000,000 boxes, or 200,000 less than last year. This estimate may prove to be a low one, as many new groves come into bearing for the first time this year.

California Fruit at the East.

CHICAGO, Nov. 5.—The supply of fruit from California is only moderate. The demand is good and prices rule steady and firm. Peas are nearly out of market, as the season for them is nearly over. They sell at from \$1.75 to \$2.75 per box, according to condition. Grapes from all quarters are getting scarce and there are very few in market. Prices have risen, as predicted some time ago, and rule at \$3.75 to \$4 for Tokays in double crates and \$2.75 to \$3.25 for Muscats in same size packages. Only moderate offerings of quinces are noticed, and as they are all mostly off quality, there is a light demand and slow sales. Good quinces bring \$1.50 to \$1.75 per box, while common bring less.

Eastern Hop Markets.

NEW YORK, Nov. 7.—The hop market remains more or less unsatisfactory. Strictly choice hops are in demand at 20c to 23c, but are very scarce. Interior reports show weak markets at all points. Pacific coast, 1887, fair to prime, 16c to 20c; same, 1886, common to good, 8c to 12c; same, 1885, good to prime, 5c to 7c.

Raisins.

NEW YORK, Nov. 7.—California raisins, 2-crown, \$1.95 to \$2; 3-crown, \$2.10 to \$2.40; London, \$2.15 to \$2.40.

Local Markets.

BAGS—Calcutta June-July delivery next year, can be bought at 7½c.

BARLEY—The market is active on Call for futures, with heavy sales recorded at slight fluctuations. The tone of the market appears to be strong. To-day's sales are as follows:

Morning Session: Buyer season—200 tons, 96½c; 200, 96½c; 1000, 96½c. Buyer 1887—100 tons, 87½c; 400, 87½c. Old contract—100 tons, 87½c. Afternoon Session: Buyer season—300 tons, 96½c; 1900, 96½c. Buyer 1887—700 tons, 87½c; 300, 87½c.

BUTTER—The market is without essential change. Choice grades are still scarce and command high figures.

CHEESE—The market is steady and firm. The stock of choice is quite light. The East reports a weaker market.

EGGS—Strictly choice fresh laid are scarce and wanted. The market is lightly supplied with all kinds, which causes a strong market.

FLOUR—The market is barely steady at the lower quotations.

WHEAT—Transactions on Call in futures continue to increase, showing that more operators are being drawn in. Prices, the past week, showed but slight changes. At to-day's Call, the sales recorded are as follows:

Morning Session: Buyer season—400 tons, \$1.44½; 100, \$1.44½. Afternoon Session: Buyer season—1900 tons, \$1.44½; 100, \$1.44½; 200, \$1.44½.

COMMUNICATED.

Market Information.

Cereals.

Owing to the near approach of seedtime, farmers naturally desire all the information they can regarding the present condition and future prospects of wheat, and that too from the most reliable sources. The latest information bearing on the subject is that given by the New York Produce Exchange Reporter, which is herewith annexed. The Reporter says that the statistical position of wheat, not only in this country but also for foreign countries, is a strong one, and operators do not feel like putting out large lines of "short" wheat, and cover whenever the market develops more than ordinary firmness. A feature of the trade has been the increased orders from abroad during the past week, both for immediate and future delivery, indicating rather more confidence in the position at present prices. The visible supply of wheat is now some 22,481,347 bushels less than last year, being according to last statement, reported at 33,443,191 bushels, against 55,924,538 bushels same date last year. Indications are favorable for a larger increase in the visible supply for the week closing than there was last week. The following table is made up on basis of the October report of the agricultural department:

	Bushels.
Crop of 1887 as returned by the Agricultural Bureau.....	450,000,000
Reserves July 1st, estimated at.....	70,000,000
Total.....	50,000,000
Minimum reserves.....	40,000,000

Leaving available for home use and export.....480,000,000
The estimated requirements of 61,780,000 population, including food, seed and manufactures, are.....345,000,000

Exports of wheat and flour both coasts in the 16 weeks from July 1st to October 22d, including that to the East Indies, and to Canada for consumption, there have been about.....54,000,000

Available export surplus October 22d.....81,000,000

According to the above table, if 15,000,000 bushels are to go to Central and South America and West Indies, but 66,000,000 bushels remain to be shipped for Europe to July 1st next. The above Government estimate of the crop yield is looked upon by many operators as absurd. The Reporter in commenting on the Government report, says that from their correspondents scattered all over the country, it learns that the quantity of old wheat now in the country has not been less in 30 years. The same paper also says that "consumers' stocks, the world over, are almost unprecedentedly small, and from the crop figures furnished us by our old and reliable correspondents, we assume the exports of the country for the cereal year will not exceed 80,000,000 bushels. The excess of production over consumption, at its maximum with the large general world's crop of 1884, has since diminished, and has at the present time nearly if not quite disappeared. This statement is illustrated and emphasized by the statistical fact that in the United States alone the aggregate crops of the last three years since 1884 are more than 200,000,000 bushels less than for the three preceding, including 1884. A similar comparison holds true in the wheat crops of the world for the same periods. Values are in no small degree affected by the statistical facts that the rye, oats, barley, root and potato crops of Europe are greatly deficient, while in the surplus-producing sections American kindred crops, and the meat-producing crops of corn, hay and oats, have seldom been so generally short. The general opinion is that prices have touched bottom on this crop. Supplies generally are moderate, and the hand-to-mouth policy is not so persistently followed as it sometimes has been."

Oregon advices report continued heavy receipts of Walla Walla wheat, with buyers' ruling bids about \$1.10 at Portland. The quantity in store at Portland was 10,000 tons. Valley wheat was in fair inquiry, but held above buyers' views.

In this city trading is light, owing to holders' views being above shippers'. The latest sale of strictly No. 1 shipping wheat is reported to have been made at an advance on \$1.30. Dry weather and continued firmness in the English and French markets. Millers have been taking the more choice grades with more freedom, at from \$1.35 to \$1.45, but then these grades on the market are in light supply. Barley has exhibited more strength and general activity the past week than for some time past. There appears to be a growing impression that the supply here will barely meet the consumption up to next harvest, and as stocks become depleted, prices will advance. Continued dry weather increases the consumption. Oats are strongly held at full prices, with some

out of the market except at a still higher range of values. Light stocks and a fair demand cause the strong market.

Corn continues to hold firm. The supply of choice Californian is only an average, and firmly held. The crop of the United States is now placed as low as 1,350,000,000 bushels, while the highest estimate is 1,550,000,000 bushels.

Fruits.

Both wine and table grapes have ruled fairly steady throughout the week. Choice, sound table grapes are wanted for shipping up North.

Apples continue to grow in favor as the holiday seasons approach, causing choice sound to be more readily placed, with at times a slight advance on top prices. Defective apples are still slow, except at concessions.

Quinces are dull. Pears are steady and firm. Limes and oranges are unchanged.

Strawberries continue to rule fairly steady. It looks as though the local market had touched bottom on dried peaches, and a better inquiry prevails for unpeeled dried peaches, though there is still a very soft feeling in peeled dried peaches. It is said that a quiet concentration has been going on for some time in peeled and evaporated peaches, and that much higher prices can be looked for shortly. Prunes still continue firm, supplies being chiefly in the hands of one party. Dried apples are weak and in buyers' favor.

In the local market, raisins continue in their old unsatisfactory condition, strong for a day or so, then dropping off again as supplies accumulate. The market in New York continues firm for shipments up to November 15th. Considerable loose in sacks are coming. The holiday demand is fairly active.

Feedstuff.

Hay continues to grow scarcer and higher for the more choice, but buyers, at the advance, are slow in taking hold and purchase in as small quantities as possible. Continued dry weather increases the consumption and causes holders to hold more firmly at full figures.

Brans, middlings and ground barley are going into consumption upon a larger scale than known for years. The market is firm.

Live-Stock.

Choice bullocks are scarce and command better prices. Several large holders are reported to be stall-feeding. Choice mutton sheep are wanted, with a slight advance reported to have been paid. Hogs are in fair receipt, with only choice hard-fed fetching top prices. Packers expect lower prices when corn-fed hogs come in. In horses there is nothing new to report. Matched teams and good driving animals are wanted, but work horses are slow and hard to sell.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7½c; first grade, grass fed, 6½c; second grade, 5½c; third grade, 5c.
MUTTON—Ewes, 5½c; wethers, 6c.
LAMB—Spring, 7c.
VEAL—Large, 6c; small, 6c.
PORK—Live hogs, 4½c for heavy and medium; hard dressed, 6½c per lb; light, 4½c; 4½c; dressed, 6½c; soft hogs, live, 3½c. On foot, one-third less grain for or stall fed, and one-half less for stock running out.

Vegetables.

Onions have made another advance, with choice hard reported to be scarce.

Free receipts of potatoes the past week kept values down, notwithstanding the demand was good. Cabbages are strongly held, with a free call reported for the hard, sound heads.

Tomatoes are slow and in buyers' favor; other summer vegetables show few changes.

Beans are not coming in so plentifully. The market is strong at full figures, with at times a slight advance paid for a round parcel of very choice.

Owing to the low prices ruling for canned tomatoes, packers bid down for raw tomatoes, and as the retail trade is only fair, prices rule in buyers' favor.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way.....	333,667	252,780
In port, disengaged.....	87,240	72,000
In port, engaged.....	26,231	96,018

Totals.....447,140 420,798
To get the carrying capacity, add 60 per cent to the registered tonnage as given above.

Wool is without change. Desirable clips are reported to have been sold last month. Hops, if choice, are wanted, but fair to good are more or less neglected. Choice to extra choice hops appear to be scarce the world over.

In poultry, there are no changes to note. Consignments of dressed turkey continue to come to hand from Selma.

San Francisco, Nov. 9, 1887.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

FALL—1887.

It is said that the next railroad built in Northern California will be that from Pinedo, in Placer county, to Georgetown, in El Dorado county. The road will be 35 miles in length, good grade, and will open up an almost inexhaustible timber belt.

PERCHERON HORSES.

FRENCH COACH HORSES.

More Imported and Bred than by

McLean's Orchard and Field Cultivator.

PATENTED AND MANUFACTURED BY

N. McLEAN, Watsonville, Cal.

This Cultivator has been in practical use for the past four seasons, and its popularity is increasing with farmers of all classes. It is the acknowledged superior of any other machine of its class, and long since passed the experimental stage, as its many merits and growing success attest. With the exception of the pole, it is entirely constructed of the best iron and steel, thus making it impervious to sunshine or rain. Many attempts have been made by other makers to improve on the McLean Cultivator, but their efforts have failed, and it remains the superior of all competitors.

For descriptive circulars, prices, etc., address

N. McLEAN, Watsonville, Cal.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, Household, Storehouse, Domestic Animals, etc., with Remedies for their Extermination.

By MATTHEW COOKE,

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

THE ranges in Monterey county have suffered so much by fires that stockmen will have to move their stock from the devastated district. The farmers have suffered great damage.

FRESNO is to vote upon the question of issuing bonds in the sum of \$100,000 for a complete system of sewerage.

Total.....	76	Grand total.....	260

43,000 acres of Vine, Fruit, Olive, Fig, and Farming Lands, being the balance of the Company's property, are for sale at \$10 to \$35 an acre, on same terms— $\frac{1}{3}$ cash, balance in four equal payments on or before 2, 3, 4 and 5 years; interest, 6 per cent per annum. Parties who have purchased are building, fencing, planting olives, vines for wine and raisins, fruits, figs, wheat, oats, barley and all other products adapted to the soil and climate. These lands are located in San Luis Obispo county on the Salinas river and are traversed by the Southern Pacific Railway for 15 miles, affording near market to all parts. All lots have timber for domestic use, and good water at 20 to 40 feet. There is living water in springs and streams on many tracts and sufficient rainfall throughout, requiring no irrigation.

CHAS. J. HOLMES, Manager.

University of Wisconsin Farmers' Institutes.

EDITORS PRESS:—As an object lesson at the Wisconsin Farmers' Institutes, that will materially improve the 45,000,000 pounds of butter annually made in the State, and increase the revenue of our farms, it has been decided to have modern creaming done at all the Institutes the coming winter, and have butter publicly made.

The De Laval Separator Company will send two of their hand machines and have them operated to show that method of creaming. The same opportunity will be given to those having other kinds of creamers for them to exhibit, raise cream and make butter if they desire. It being understood that so far as the creaming of milk is done it is to be at the expense of the several operators.

Oil or butter tests will be made at the same time of the mixed milk used by the parties for the purpose of comparing methods and results.

This part of the work will be done without expense to the parties. The work will be done at the noon recess, and in no case will the time of the regular sessions be taken for the purpose.

W. H. MORRISON, Supt.

Madison, Wisconsin.

HOW TO BECOME HAPPY AND HEALTHY.—Some good things are heard now and then in the elevated railroad cars, and the advice of a noted physician to a young man who complained of nervousness, loss of vision, night sweats, and a poor appetite, the other morning, is one of them. "Throw away your cigarettes and eat a good bowl of mush and milk for your breakfast," said the learned doctor, "and you will not need any medicine. Indian corn is essentially an American institution. As the staple food of 'our daddies,' it can really be said to have helped to lay the foundation of this great American Republic. With its product, the hog, it was in the not very remote past almost the sole food supply of the rural districts, and the dishes that can be prepared from its various forms are of much greater variety than can be prepared from wheat. Like Sambo's rabbit, it is good to roast, to bake or boil, and can be fermented and turned into whisky, but its stimulating qualities are best produced by making it into a mush. It contains a large amount of nitrogen, has qualities anti-constipating and is easily assimilated. Though originally the poor man's food, it has come to be the rich man's luxury. It is cheap and has great nutritive properties. A course of Indian meal in the shape of Johnny-cake, hoe-cake, corn or pone bread, and mush, relieved by copious draughts of pure cow's milk, to which if inclined to dyspepsia a little lime-water may be added, will make a life now a burden well worth the living, and you need no other treatment to correct your nervousness, brighten your vision, and give you sweet and peaceful sleep."—N. Y. Mail.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Important to Tree Planters.

One hundred and twenty-five thousand Fruit Trees for sale at a bargain, consisting of Apple, Pear, Peach, Apricot, soft and hard-shell Walnuts; also 2000 Fan-Leaf Palms. Sales will be made in lots, or the Nursery and stock will be sold on the most liberal terms as to price and payments, or will be exchanged for real estate. Inquire of J. M. Hixson, Real Estate Agent, 75 N. Spring street, Los Angeles, or address the proprietor, Milton Thomas, P. O. Box 304, Los Angeles, Cal.

INCREASE IN THE DURATION OF HUMAN LIFE.—"Only 50 years ago," says Sir Spencer Wells, "the average duration of human life in Great Britain was 30 years; to-day, according to statistics, it is 49 years. In 50 years the population has increased by eight millions. At least two millions of this increase may be put down as the fruit of improved sanitary and medical work and of victory over preventable sickness."

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Money Loaned

One Trial Only.

A single trial of the Le Roi des Savon [will establish its superiority over all soaps and] soap compounds.

HEALTH AND STRENGTH REGAINED.

COPIES FREE.

YOUNG AND MIDDLE-AGED MEN, and others who suffer from nervous and physical debility, exhausted vitality, premature decline, etc., are especially benefited by consulting its contents. Everything such sufferers wish to know is fully given in its pages. If in need of medical aid or counsel, read it before "doctoring" or investing in medicines or appliances of any description, and you will save time, money and disappointment. If using medicine or medical treatment of any kind, read it and learn the better way.

THE REVIEW exposes the frauds practiced by quacks and medical impostors who profess to "practice medicine," and points out the only safe, simple and effective road to health, vigor and bodily energy.

Beware of the sham curative articles called Shields, Generators, Girdles, Pads, Brushes, Corsets, Clothing, Plasters, etc., now deceptively advertised as Electric, Voltaic and Magnetic. These articles are as entirely spurious as the advertisements concerning them are insidious. This can be easily detected by a simple test which is fully explained in THE REVIEW.

Electric Belts and all curative appliances are treated upon—all about them. Belts on thirty days' trial (?) and other fallacies reviewed. Thousands of dollars saved nervous debility sufferers and others by the advice given.

Reader, are you afflicted, and wish to recover the same degree of health, strength and energy experienced in former years? Do any of the following symptoms, or class of symptoms, meet your diseased condition? Are you suffering from ill-health in any of its many forms, consequent on a lingering, nervous, chronic or functional disease? Do you feel nervous, debilitated, fretful, timid, and lack the power of will and action? Are you subject to loss of memory, have spells of fainting, fullness of blood in the head, feel listless, moping, unfit for business or pleasure, and subject to fits of melancholy? Are your kidneys, stomach, urinary organs, liver or blood in a disordered condition? Do you suffer from rheumatism, neuralgia or other aches or pains? Are you timid, nervous and forgetful, with your mind continually dwelling on the subject? Have you lost confidence in yourself and energy for business pursuits? Are you subject to restless nights, broken sleep, nightmare, dreams, palpitation of the heart, bashfulness, confusion of ideas, aversion to society, dizziness in the head, dimness of sight, pimples and blotches on the face and back, and other despondent symptoms? There are thousands of young men, middle-aged and old who suffer from nervous and physical debility. There are thousands of females broken down in health and spirits, who from false modesty or neglect prolong their suffering.

Why further neglect your health and future happiness or continue to be dosed, drugged and quacked when THE REVIEW, which costs you nothing, teaches us the true and only way to permanent health, strength and vigor? "THE REVIEW," or "HEALTH AND STRENGTH REGAINED," contains particulars and information worth thousands to suffering humanity. THE REVIEW is now in its ninth year of publication. Complete specimen copies mailed free. Address

Hardware and Agricultural Implements. IMPROVED GRANGER GANG PLOWS.

WITH ONE EXTRA SHARE TO EACH BOTTOM.

The Improved
GRANGER GANG,

as now constructed, is conceded to be the best Bench Beam Plow in use. It has superseded the reversible Mold Gang wherever introduced; it being more durable, lighter draft, does not require the amount of team, and leaves the ground in much better condition.

WITH LIFTING DEVICE.

Its success has been unparalleled, and meets a long-felt want for a cheap and effective Gang Plow in a very satisfactory manner.

It has demonstrated conclusively that our plan of putting shares on the bottoms, instead of using what are called "reversible" molds, is the right one. We have proved that one of our small, thick cast-steel shares will last as long as both edges of a double-edged mold, and when it is worn out it can be replaced for less cost than a reversible mold.

A reversible mold is necessarily of an awkward, clumsy shape, being simply a concave piece of steel, rust as a board would warp if laid in the sun.

By using shares on our bottoms, we are enabled to make the mold-boards of a form that will draw as easily, and turn as well as those used on any plow.

We put from three to eight plows in a Gang. They cut from 8 to 10 inches each, and will plow from two to six inches deep. This plow is made in a style never before attempted in this State. The frames, which are clear, well-seasoned lumber, are put together in the strongest manner, and are well painted. The wheels are provided with improved detachable hubs, that can be cheaply replaced when worn out.

One of the forward wheels is a castor, thus permitting the plow to run freely, and effecting a great saving in the draft. The bottoms are provided with our chemically-hardened steel molds, that will wear three times as long as the soft sheet steel molds used by other manufacturers. The shares, which are of double the thickness near the point, are cast cast steel, and can be easily and quickly sharpened when necessary.

These Gangs do their work evenly, leaving the ground in light, friable condition. They have been thoroughly tested in the field, and the set of the plows on the frame carefully adjusted to secure the lightest draft consistent with good work.

The Croaker.

The croaker may serve a good purpose in the economy of nature, on the theory that all created things are designed for some use. The point of view from which a thing is regarded has much to do with determining judgment of

activity in California affairs and predicts reaction. Fortunately such croakers are few. They have lost their voice during the many years that California has been going steadily forward.

Let the croaker appeal to the geese; it is the only audience which can appreciate his serv-

California Pork.

We print upon a following page a very striking illustration of the effect of different food upon the flesh of the hog as determined by accurate experiment in Wisconsin. The data secured should be turned to practical account by

ened" with grain before marketing, there is no better pork in the world than is made here. Another important item in the career of the California hog is, that he passes most of his life out of doors and enjoys our glorious climate to its fullest extent. He generally has the freedom of a large field, and thus plenty of exer-

THE CROAKER'S WARNING OF THE APPROACH OF THANKSGIVING.

it. The ill-omened bird, as the poets say, which is proclaiming approaching danger to the poultry from the holiday slaughters, does not, from our point of view, accomplish any good, because he may spread discontent without saving the necks of the geese who listen to him. It is much the same with croakers generally. We presume some of them are tuning their voices to a wail, because the rain comes not, and if so, they will do no good, because there is every chance that we shall have all the water we can dispose of. The rain will fall upon the croaker and the hopeful alike, but the greater joy will certainly come to him who hopes and is confident of blessing, because he is by nature of his mind better fitted to appreciate a good thing. It will be much the same with the croaker, who is miserable over the present

ices. We will add force to his words and declare that the prospect is that the holidays of 1887 will make a greater inroad upon the feathered ranks than any previous holiday season in this State. We have more mouths to fill and heavier purses to secure supplies to fill them. There will be grand, good times this year for all but the geese; let the feathered hosts beware!

THE steamer Parthia, sailing from Vancouver the 11th for Yokohama and Hongkong, took out 190 Chinese and a full cargo, principally flour. She was to call at Victoria for 150 more Chinese.

THE *New Era* states that work at the agricultural works at Benicia is very brisk at present.

feeders. We note the results with especial satisfaction because the food which the hog receives in California is much of the kind declared by the experiment to be best for the building up the whole body of the hog used for promoting a healthy discharge of its animal functions. The California hog fares far better for protein substances than his Western contemporary. Here the hog which lives on corn alone would be hard to find. Along the dairy regions of the coast there is abundance of skim-milk, and if there is any fault to be found it is that grain food is deficient other than excessive. In the interior the hog revels in alfalfa, which is also a food rich in protein, and is finished up on barley which is less "heating" than Indian corn. The California hog has good growing food in his skim-milk and alfalfa, and if his body is properly "hard-

cise, and his habitation of a "stye," in which his Western cousins swelter and stifle and become diseased, is almost unknown here. All these things give us healthy swine. There are occasional losses from disease, of course, and even some herds are almost swept away; but prevalent disease, such as causes such frightful losses in the prairie States, does not exist here. The California hog has a good time, and he shows it.

THE California State Board of Trade has removed its headquarters two or three doors to the south, and now occupies more commodious apartments on the southwest corner of Second and Stevenson streets, under the Grand hotel, S. F. The managers seem to be extending their labors energetically and successfully.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

The Coast Valleys to the Santa Ynez.

EDITORS PRESS:—It was recently my pleasure to take a trip through some of the coast counties and greatly to enjoy the improvement that has taken place since my visits of two years ago and more. The advantages of climatic influences and of productive capacity of the different portions of our State are so varied that one cannot help being interested in every move he may make in journeying through this favored land. The mountain portions of California will always have their advantages, and the interior warm valleys theirs, while the delightfully situated coast valleys and foothills will claim the attention of thousands who come to learn of the merits of the Pacific Coast. As homes are sought after as well as business opportunities, all portions of the State will be benefited by the influx of new residents and the final settling down of those who have long been in California and adjacent regions. This latter is of no small moment to the welfare of the State that those who have for years, perhaps, been unsettled in mind and home, should realize that the sooner they come to an investment in a home, the greater their chance of securing one at all upon any terms within their means.

Value of California Lands and Climate.

It is evident that the time is now at hand when it behooves those who wish to settle down upon landed property to make their choice early. This thought was forced upon me peculiarly from some of my own past experiences and from my recent observations of the great changes undergone in the past two years, and now rapidly undergoing this autumn and winter.

The ride through the wonderful Santa Clara valley, my old home, with its pretty towns and its beautiful city of San Jose, was an enjoyment indeed, and a reminder of many pleasant days and years there spent. Two years ago property there was sold far below its intrinsic value, during a temporary period of discouragement. Now the same properties are approximating their true values, and are hard to be secured at many times the value of those days. This past season has demonstrated to many doubting ones, and to those heretofore strangers to the wonders and beauties of California, the great returns which may follow fortunate investment in these charming coast valleys. When I saw that lands, after being planted in orchard, as for example a piece of eight acres that I planted in 1882 for a friend, putting in apricots and French prunes, was sold recently for \$12,000, I began to feel that the statement I had often made several years since that such property would, ere long, become worth \$1000 per acre, had already come to pass. The many attractions of these valleys for healthful, pleasant homes are becoming duly appreciated, and not many years hence we will see every available acre in the suitable portions of California, each in itself a paradise.

Much as many may deary the stress we put upon climate, yet that is a factor of the greatest importance to us. In no other part of the world is there a climate that can be compared with this of our own California, with such variations as may suit every invalid, almost, and make life enjoyable to the well also. There is no question whatever that our climate should be considered worth as much and even more than our very choicest land and should be paid for as cheerfully. Twenty-two years' residence in California has convinced me of the truth of this statement.

In passing through these regions along the coast, and yet a little inland, it is remarkable to witness the wisdom of the old Mission fathers displayed in the selection at suitable intervals of the Mission-sites. In no instance did they make a mistake, as the San Diego, San Luis, San Gabriel, Santa Barbara, Santa Ynez, San Luis Obispo, San Miguel, Monterey, San Jose and all attest. In some, in fact almost all of them now of these Mission valleys as you may term them, the settlement has become close. It is a pity that the old Missions should be allowed to go on into decay. They should be preserved with the greatest care for the future generations. To me it is a great attraction to see these old temples of the wisdom and industry of noble, self-sacrificing men who were the real pioneers in redeeming the waste places of an unknown land.

Improvement and Progress.

Leaving San Jose and passing on down through the Santa Clara valley, the evidences of a constant and active improvement are manifest on every hand. Large stock-ranges have been transformed into beautiful orchards and vineyards, with tasteful home-buildings at frequent intervals. Gilroy has changed greatly within two years past, the settlement of aggravating land questions having given titles a stability which they have heretofore lacked.

A very noticeable feature all along the railroad on that route is the very substantial and ornamental depots now to be found at every point. Arriving at Castroville, after passing through a portion of the fertile Pajaro valley, not, however, seeing the best of it from the car windows, dinner is taken with comfort and luxury, an excellent meal being furnished for 50 cents.

In the vicinity of Castroville, it always

seemed to me that about as much wind prevailed as in any portion of California, but I have yet to learn that such winds are unhealthy, except in the way of being somewhat too bracing to those of weak lungs. The great Salinas valley has not yet been cultivated to much else than grain, and for the many years I have known it I can see but little change in it. It is not attractive to the eye to see that no improvements go on to the land, even if it be profitable to the purses of the owners. Time will, however, change this to a greater or less extent.

The terminus for so many years, Soledad, has now become a way station and the railroad has been rapidly extended the past year through the great length of the Salinas valley, opening up much new country and giving access to numerous side valleys of which the Cholame is one of the most important. At suitable intervals are convenient stations with telegraph, express and mail facilities, and with attractive villages springing up as by magic. At the old San Miguel Mission is quite an important town now, where I quite well remember in the old stage days only a store and stage station existed. The railroad here passes through the old Mission grounds, cutting the walls, portions of which are still standing, in twain. The front of the Mission church faces away from the train to the right. Heretofore from the time of leaving the Pajaro valley we have seen but little timber. Soon now a new country of oaks is entered and by the time we get into the Paso Robles region it is evident that the name is well given, the noble Pass of the Oaks being the most attractive and grateful to the eye, after so long a trip through a treeless region. Is it not strange that so many can be content to live in a country for years where nature has not been kind enough to furnish trees, and not do some tree planting to redeem the desolate appearance of things? This fault has been one of too long continuance in the large wheat-growing regions, but happily that spirit is giving way to progressive ideas, and the thought of making home comfortable and pleasantly attractive to the young, by the ornamentation given by the planting of fruit and other trees, the cultivation of a flower garden and those seemingly small but very necessary adjuncts of a perfect home. It has often been forced upon my attention that one of the chief things lacking in farm-life here has been the too-little attention paid to make the home attractive to the children, and thus save them from the desire to go to the town and city as the only desirable places of the world in which to live.

A little time spent at the Paso Robles Hot Springs is a pleasant diversion, and a comforting one as well, when you enjoy the baths. As the genial clerk of the hotel remarked: "You get as much Hammam bath here for 50 cents as you can get in San Francisco for \$2.50." This resort has long been noted for its remarkable healing hot springs. Rheumatic and neuralgic diseases are directly benefited, and as an alternative to the clogged-up system, this medical water has long enjoyed a world-wide reputation. The atmosphere here, too, is most conducive to the comfort of invalids. The new town is growing fast, and the character of the buildings is of a permanent and attractive nature. The brick block in which is the Masonic hall is one of the finest to be found outside of the large cities. One of the most elegant drug stores of the State, owned by Mr. Booth, occupies the prominent corner of this fine block. It is the understanding that new and expensive brick buildings will be erected next season by the proprietors of the Hot Springs—the Messrs. Blackburn Bros. & James—to replace the present structures. The plans of the new hotel, which I saw, if carried out, will give to California one of the most elegant and commodious hotels to be found anywhere.

Although the railroad is at present extended a few miles further to Templeton, the stage ride through the oaks to that place is a pleasant one, and from this point it is a compulsory one to San Luis Obispo, a distance of 24 miles. It is, however, not a disagreeable one, for the same character of country covered with oaks is passed through for many miles, the Santa Margarita ranch, owned by Hon. P. Murphy, consisting of many thousand acres of land, and crossing the Santa Lucia range of mountains over a good grade, the descent is rapidly made into a very different country, the warm, dry climate of the interior Salinas valley giving way to the moisture-laden atmosphere of the San Luis Obispo Coast. The difference from dryness to moisture is striking. This is so marked that it is not wondered at that one of the most valuable dairy districts of the State is to be found here in this portion of San Luis Obispo county.

Many persons here have achieved a competence and even wealth in the dairy business. The large and flourishing town of San Luis Obispo, now taking on the appurtenances of a city, is here established, having been for many years the distributing point of commercial supplies and the county seat. Many beautiful homes adorn the town and valley. A great impetus was given to the growth of this section by the construction of the Pacific Coast Railway, a narrow-gauge road now running from the port of San Luis Obispo, Port Harford, to Los Alamos, a distance of 63 miles. This road is now being extended some 12 miles to a new terminus in a portion of the great

Santa Ynez Valley.

To those who have not been in this portion of the State, this would at once seem to be a

country by itself, and different from any other in many ways, and the man would be hard to suit who could not in this region find land and climate adapted to his needs. A reference to the map will show a territory something near 150 miles in length, commencing on the north at Cambria, where the coast range of mountains begins to recede from the ocean, and gradually falling back in a southeast trend, and widening out until in the Santa Ynez valley, itself some 75 miles in length, it is lost by the closing together of the Santa Ynez range with the main Coast range. This is somewhat in the shape of a leg of mutton, with the thick and fat portion of it lying in the main Santa Ynez valley. In the upper portion of this area about Cambria and Cayucas are many of the rich dairy farms. All through are interspersed ranges of hills and lying between them fertile valleys of varying extent and area. Along the coast are fogs, of course, but somewhat inland these are far less, and in many valleys there is almost entire freedom from fog and strong wind.

A few miles south of San Luis Obispo is the northern boundary of the immense possessions of the well-known and everywhere respected Steele Bros. These gentlemen, while in possession of such a kingdom, have been mindful of the welfare of others besides themselves, and have made themselves beloved by all by their fair dealings and their public spirit, never being behindhand in yielding a hearty co-operation to whatever will benefit their county and State. Their uprightness and integrity in all their immense transactions has won for them an enviable reputation and a guaranty to all who have dealings with them that their word is as good as their bond. They have evidenced their desire to accommodate small landholders by the selling of many hundred tracts of land to others who have made profitable homes thereon. One of the richest of their possessions was the now noted

Arroyo Grande.

One of the richest tracts of land in the State, and in the center of which is the thriving town of Arroyo Grande. This locality is now, however, getting out of the reach of persons with moderate purses, just as all the choice tracts of land in the State are fast becoming so high-priced that the poor must hasten if they would secure a foothold. In the Arroyo Grande are to be seen beautiful orchards, vigorous and thriving trees that do one good to behold. Moreover, these trees are laden with the choicest fruit. Not only fruit grows here, but it is one of the head centers of the bean industry, which is of no mean proportions, as the 20 and 30 car trainloads of beans now being transported to supply the all-consuming East will testify. The large crops of beans in this State are grown in but very few localities for market purposes. In fact, the land where this industry can be carried on profitably is very limited indeed. Other products of this character are grown in this portion of the State as nowhere else. The Arroyo Grande is quite near the ocean, and after leaving here and crossing the Nipomo country the road emerges into the broad

Santa Maria Valley.

In the northern portion of Santa Barbara county, much of which in the lower portion near the sea is a wide expanse of sand, while much is also land of great fertility. That nearest the ocean of which Guadalupe is the center is in the fog belt, while further up the valley the thriving town of Santa Maria is making vigorous strides. Surrounding this is a country making rapid advancement; wheat-growing and grazing has been the great dependence. Here an artesian well is now being sunk in the center of the town expecting to obtain a flowing well. There is no reason to suppose that in many of these valleys artesian flowing water cannot be obtained, and at various points such wells will be sunk and the fact ascertained. There is a notable fact, however, that in much of all this territory alluded to, irrigation is not required. Going up by railroad and leaving the broad Santa Maria valley, low hills are crossed and the

Los Alamos Country

Reached. Los Alamos is the town for this section of country, for no other exists that I could learn. This being for so long the terminus of the narrow-gauge railroad, has made it a good business point for numerous mercantile houses and for a very profitable hotel, which has been well kept and where the tired traveler can eat at well-supplied tables and sleep in comfortable beds. This valley, in respect to climate, is much like that of the Santa Maria, but it has an attractive feature in the large white oaks that are found dotting the landscape. At this point, up to this time, travelers have had to leave the all-convenient rail travel and betake themselves to the stage to make the distance of 60 miles to the city of Santa Barbara. This stage ride, after crossing a low mountain region some 10 miles in distance, is through a country most marvelous for some 40 miles of its route.

This is in the Santa Ynez valley, a kingdom in itself if there were no other California, and yet almost unknown. That such a region should so long be unknown to the general public seems marvelous, yet there are reasons for this. No longer, however, will this immense territory of fertile land remain in obscurity, for the railroad development going on by the building of the main line of the Southern Pacific railroad through this rich region will bring it prominently before the people. Other leaven is working and the efforts now being made by energetic men will mark a wonderful change

before long. The paradise of the fruit-grower, the delightful home for the invalid, the charming climate for all to enjoy, the rich lands for the wheat-grower, the verdure-clad hills for the stock-raiser, are all to be found here.

I purpose in another article to give a description of this great valley of the Santa Ynez. Auburn, Cal. S. F. CHAPIN.

HORTICULTURE.

Berries.

EDITORS PRESS:—Of all the great varieties of berries that are indigenous to the American, the strawberry, raspberry, blackberry, huckleberry and cranberry are the most familiar in the market, and all can be transplanted and cultivated profitably; but the writer believes there are two other berries that would amply reward the man who has enough enterprise to procure the plants and try propagating them in the genial soil and climate of California.

J. S. Newberry in *Popular Science Monthly*, in an article entitled, "Food and Fiber Plants of the Indians," mentions a huckleberry that surpasses in the excellence and abundance of its fruit any other huckleberry, and from the description given it is widely different from the black huckleberry that grows in some of our northern coast counties, or the blueberry (of the same family) that is a stranger in San Francisco markets, but is not unknown in Eastern markets.

Prof. Newberry says of this huckleberry; "It covers great areas on the flanks of the Cascade mountains in Oregon, where the forests have been burned off, growing two to four feet in height, standing close on the ground, sometimes really bending under its load of berries. These are round, half an inch in diameter, of a light wine color, of a delicious vinous flavor. So abundant is this fruit that sitting down in a clump of bushes, I have filled a quart cup without changing my position."

"The Indians make long journeys to the localities where these berries grow most abundant, and gather and dry them for winter use."

There is no doubt that both this huckleberry and the blueberry by cultivation could be made to produce fourfold what they do in a wild state. The blueberries of Wisconsin grow on a light, sandy soil, and have a bloom on them like some of our grapes. A few persons who have tried transplanting and cultivating the blueberry have met with success. The size of the berries is increased by cultivation, and there is also an increase in productiveness.

Blueberries stand transportation well, and do not become stale and soft as soon as either strawberries or raspberries. In Wisconsin they were brought into town in lumber wagons, over rough roads often for a distance of 20 to 25 miles, yet were in good condition. Large quantities were dried for winter use, and the juice of blueberries fermented makes a pleasant wine.

Service-Berry.

This berry is well known and highly spoken of by those who have tested its merits. The service-berry, whose botanical name is *Amelanchier Canadensis*, grows throughout nearly the entire wooded region of the Mississippi, not as tree, but as a shrub which forms tufts or thickets, that in some regions become store-houses of delicious food. The berry is black when ripe, ovoid in form, often half an inch in length. It is very sweet, palatable and nutritious, and no one need to suffer from hunger where it is plentiful. Prof. Newberry says of their prolific growth: "I have seen thousands of acres thickly set with bushes six to eight feet high, fairly bending under the weight of fruit. Service-berries are dried and stored in large quantities by the Indians for winter use."

A friend of mine living near a large town in Northern Illinois, who devoted part of his land to growing small fruits for his home market, obtained a choice variety of raspberries accidentally. He owned part of a grove of timber, situated convenient to his farm, where he procured his firewood.

One summer day, in the raspberry season, in driving into the grove after wood, he noticed a small bunch of raspberry bushes, covered with berries which seemed of unusual size. They looked so fine, he was tempted to try them, and found that they were not alone superior in size, but in flavor, to any other wild raspberries that grew among the timber. He placed marks about the bushes, tied bits of cloth about them, and the next spring removed them all, and separated them, and carefully planted them by themselves, and they proved to be a better market berry than any raspberry he had heretofore grown.

A trial of the service-berry and the huckleberry, described by Prof. Newberry, as well as the Eastern blueberry, by some horticulturist who can afford the expense, and understands how to grow berries successfully, might increase our list of market berries and prove a success financially. M. A. S.

BESSEMER AND COMMON STEEL.—The difference between Bessemer steel and crucible steel is as follows: Bessemer steel is made from pig iron direct, while crucible steel is made from bar iron, which is first cemented in charcoal, then broken up and melted in crucibles, then cast into ingots, which are afterward heated and rolled to the size wanted. The cementation in charcoal is done to charge it with the proper amount of carbon.

THE STOCK YARD.

Dehorning Cattle.

I believe in dehorning cattle for the following reasons, viz.: Horns are not necessary to the health, comfort or welfare of domestic animals. In a wild state horns were provided in nature for self-protection. In a domesticated state horns are not only unnecessary but dangerous both to man and beast. Having lost valuable animals and come near losing my own life and the life of a child by cows supposed to be perfectly docile, and frequently seeing accounts from the public press of persons killed by domestic animals, I feel that my opinion is based on positive evidence. I know by experience cattle may be dehorned without injury to health or any useful quality, and that cattle so treated become docile and easy to handle.

We dehorned three large bulls and turned them into the corral together, and it was as good as a circus to see them perform. They immediately started in for a fight and the air resounded with their battle-cries while they covered themselves with dirt. They soon discovered that their power for mischief was gone, and became gentle to each other and a child can handle them. One of them had the habit of taking a gate on his horns and walking through at pleasure. His second move was for the gate—he placed his head in position to take the gate on his horns and raised it up in the usual way, but the gate did not rise. He stepped back and looked at it in astonishment. He tried it three times, when it dawned on his understanding that his power had departed and he made the welkin ring with a cry of disappointment. It is important to sever the horn from the head of the animal in just the right place to secure the best results, which requires some skill and a knowledge of the structure of the head and horn, but this can be easily acquired. The skull of a cow, calf and bull will enable a person to see just where the cut should be made. H. H. Haaff has published a work of 48 pages on the subject of dehorning, price 30 cents, that is worthy of a perusal by every cattle-raiser. He has also invented tools for dehorning well suited to the work, which he will furnish at a low price if addressed to Atkinson, Ill. Mr. Haaff says: "The saw the writer uses is a pointed tool so made as to operate at the very place, to prevent bleeding or growth of horn afterward. On this depends the whole operation. The gouge for calves works automatically, and it takes but a moment to make a mulley of any calf." These tools and the book containing full directions for dehorning may be had of G. G. Wickson & Co., 3 and 5 Front St., San Francisco. Being in no way interested in the sale of the work or tools referred to, they are mentioned for the benefit of farmers. The time is not far distant when horns will disappear from our herds, and H. H. Haaff will be regarded as a public benefactor.—I. C. Steele in *Cal. Patron*.

Polled Bulls Not Innocent.

EDITORS PRESS:—As so much is being said about dehorning cattle just now, I send you a clipping from the Chicago *Live-Stock Journal*. I have been among bulls and handling them all my life (at least for more than 40 years of the 53 that I have lived), and the only bull that I have any recollection of seeing that had killed a man was a Polled-Angus bull at the English Royal show in 1855. I suppose this would be a good text for an article on handling bulls, but as I have written on that subject for the *RURAL* before, I will leave it for the present, any more than to say in regard to danger, that there is more in the handling of bulls than in their horns. I never had a vicious bull, nor ever had the handling of one. ROBT ASHBURNER.

Baden Farm.

The following is the item to which our correspondent refers:

The going to death of three men recently has been used as an argument by advocates of dehorning, and they have urged the removal of the horns indiscriminately from all cattle, particularly bulls. Now comes the report from Minnesota that Mr. John Sherwin of Otter Tail county has been killed by a Polled-Angus bull. The animal became ugly, rushed at Mr. Sherwin, threw him down, then dropping on his knees bunted him until he was unconscious. He died soon afterward from his injuries.—*Live-Stock Journal*, Oct. 11th.

Home Canning of Meat.

EDITORS PRESS:—Is there any practical way that farmers can put up fresh meat in cans? We now buy canned meat, but do not like it; the canners cook it too much, and it does not have a good flavor. Answer through the PRESS, if you choose.—F. B. CLAYTON.

Perhaps some reader can give an account of experience as desired.

HOG CHOLERA REMEDY.—An exchange says that burnt corn is a sure and speedy remedy for hog cholera. The best way is to make a pile of corn on the cobs, effectually scorch it and then give the affected hogs free access to it. This remedy was discovered by E. E. Lock at the time his distillery was burnt in Lewiston, Ill. A large lot of stored corn was so much injured as to be unfit for use, and greedily de-

voured by the hogs, several of which were dying daily. After the second day not a single hog was lost, and the disease entirely disappeared. The remedy has been tried in a number of cases since, and has never failed.

THE LUMBERMAN.

The Redwood Forests of Mendocino.

Mr. W. W. Clendenin, who has recently been sojourning in Mendocino county, sends the *San Jose Times* the following paper upon the great redwood forests and lumber interests of that section of the State. It will be of interest to new-comers to California, and contains information for old residents as well:

"You will never miss the water until the well goes dry." Old settlers of this valley remember the magnificent redwood forest that 30 years ago covered the eastern slope of the Santa Cruz mountains between Los Gatos and Stevens Creek. That forest disappeared many years ago, much of it being wasted and destroyed by those who did not know or appreciate its value. The redwood timber on the western slope of those mountains is rapidly disappearing and a few years hence scarcely a vestige of it will remain. For building, fencing and many other purposes the California redwood is the most valuable timber in the world. As the wood contains no resin, no other timber stands fire as well, and black redwood never rots or decays. As an evidence of this fact, there is in Humboldt county a redwood tree that fell many years ago, and on the top of this log, more than a hundred feet from its roots, a fir tree is growing that is three feet in diameter, the redwood log being about the same size where the roots of the fir tree straddle it. Midway from the roots of the redwood log to where the fir tree stands, a section of the redwood was cut out, a short time ago, for a roadway, and the timber was found to be as sound as it was the day it fell. How long that redwood log has lain there is a problem for some smart Aleck to solve.

Mendocino Redwood.

I recently visited the redwood forests of Northern Mendocino and during the trip gathered considerable information in regard to the redwood timber trade on this coast. At Mendocino City I visited the Big River Lumber Co.'s mill and watched the modus operandi by which the huge redwood logs are converted into merchantable lumber. The logs are rafted down the river a distance of 12 or 13 miles, and are drawn into the mill from the water on a car, two at a time. All the logs over four feet in diameter are split through the center with a big mule saw and then passed over to the circular saw. The circular saws—two of them are used, one above the other—are 60 inches in diameter, and they plow their way through a three-foot log, 16 feet long, in about eight seconds. This company received an order, while I was there, from the San Diego Water Co. for 2,000,000 feet of clear lumber. The capacity of this mill is 90,000 feet per day. The next place visited was the new band-sawmill at Fort Bragg. This mill was built last year and is the first band-sawmill put up on this coast. The Fort Bragg Lumber Co. own a large tract of timber land and have three sawmills in operation. The mill that I visited is situated on the coast and the other two are back in the timber. A railroad runs from the wharf back into the woods a distance of six and a half miles, and the lumber and logs are brought down on the cars. This company employ about 1000 men and ship all of their lumber to San Pedro and San Diego. The week that I was there they shipped 1,200,000 feet.

The Powerful Band-Saws.

In the mill that I visited, two band-saws are used, and the capacity of the mill, when both saws are run, is 90,000 feet per day. These huge band-saws are 52 and 54 feet in length and 6½ and 8 inches wide. They run over wheels nine feet in diameter and they go through a big redwood log like a hot knife through a roll of butter. As a band-saw cuts a furrow through a log but one-eighth of an inch wide, they save over the circular saw 280 feet of lumber on every 1000 feet cut and they require but little over one-half the power to run them that the circular saws do. The lumber cut by the band-saw is much smoother than that cut by the circular saw. An ingenious contrivance in this mill—the men called it the "Yankee fireman"—carries the sawdust away from the saws and feeds it into the furnaces, and all that the firemen have to do is to open the furnace doors once in awhile and stick in a few slabs to make the wet sawdust burn freely.

Exportation of Redwood.

The foreign demand for redwood lumber is rapidly increasing. It is shown by the State Board of Forestry that the shipments of redwood to Australia, the Pacific Islands and Mexico in 1885 were 9,500,000 feet. In 1886 there was shipped to these points, according to the statistics of the redwood trade, 15,900,000 feet, nearly double the amount of the previous year. The great bulk of the redwoods of Santa Cruz, San Mateo, Sonoma and the southern part of Mendocino counties is cut, and it has all gone in Santa Clara, Alameda and Marin counties. The northern part of Mendocino county, Humboldt county and a small part of

Del Norte county are all that can be counted on to supply the bulk of the demand for the future. On Ten-Mile river, 20 miles north of Mendocino City, the redwood forest extends a distance of nine or ten miles from the coast, and there is found some of the grandest redwood trees in the State. These trees are mostly six and seven feet in diameter, and rise from the ground as straight as a ship's mast to a height of 300 feet, many of them being 200 feet to the first limb and keeping their size nearly that distance up. The writer was informed by a young man, who is well acquainted with that section of the country, that farther up the river he had measured a redwood tree which was nearly 30 feet in diameter.

That the enormous demand for redwood lumber will constantly increase, there is not the shadow of a doubt, for new towns are springing up like mushrooms all over the State, especially so in the treeless section of Los Angeles, San Bernardino and San Diego counties. Our matchless redwood forests are now melting away before the woodman's axe and the ravenous tooth of the saw like snow under a tropical sun. A score of years hence scarcely a vestige of it will be left, and then our people will know and appreciate its great value.

STEAM LUMBER SCHOONERS.—A new feature of the lumber trade on this coast is the steam schooner. The steam schooner is a California production, introduced only a few years ago, and they are rapidly taking the place of all other rigs in the coasting trade. They cost \$40,000 each, and are, for the most part, vessels about 150 feet long, 16 feet beam and 10 feet depth of hold. They measure about 280 tons and carry compound surface-condensing engines of 250-horse power. They are fast sailers, capable of carrying large deckloads, and are just the thing for our rock-bound coast. At the present time five of these vessels are in course of construction at one shipyard in San Francisco. The Fort Bragg Co. owns one of these vessels, and is having another one built in San Francisco. Quite a town has been built at Fort Bragg during the past year, and it now contains three hotels, two stores, eight saloons, postoffice and school. The demand for redwood lumber in the southern part of this State during the last three years has been enormous, and it is rapidly increasing. Three or four steamers have been carrying lumber from Humboldt and Mendocino to San Diego, and every coastwise vessel is under engagement and new ones cannot be supplied fast enough to satisfy the demand.—*San Jose Times*.

POULTRY YARD.

About Turkeys.

"The turkey is a native of America," writes Helen E. Buck of Lancaster, Mass. "The obscurity which hangs over the domestication of this bird, except by industrious ferreting among old family records and memorandum-books, shows that those who carried it to the Old World, whence we obtained our stock, doubtless had no idea of the value of what they were transporting, but probably regarded it like any other remarkable production of nature—a macaw or tortoise. The English name, 'turkey,' is somewhat difficult to account for, but by historical accounts we believe the name to have been given by the English, as about the time when the bird appears first to have been known in England, the Turkish power was held in dread in Europe. It might have been that the outlandish aspect of this bird, its deep, guttural notes, its haughty carriage and irascible disposition led to the imposition of the name.

"Among the living tributaries to the luxury of man, the turkey is an instance of the results yet to be expected from the exploring spirit of our day.

They are Profitable.

"The rearing of turkeys is one of the most profitable pursuits in which one may engage under proper conditions. Upward of \$100,000 worth of turkeys are annually brought into the Eastern markets for consumption and for use as breeders. At the present time a number of varieties are reared, but of thousands of birds prepared for market, a large percentage will not average over six pounds each. Of the pure bred stock, the breeding turkeys require care and skill. As a rule, broad-backed, full-breasted and large-boned breeding birds are selected. Young hens will lay more eggs, but not of young size as older ones. Six hens and a tom make a very good breeding pen, but one can use as many as 12 hens with a good, vigorous tom. Owing to their stealing nests, they cause much trouble, so we find it a much better way to have yards attached to their buildings with two-feet by-four coops for laying-boxes, or piles of brush carelessly placed about in the yards, which answers the same purpose.

"It is often the case that turkeys lay in the early part of the day, and can be released in the afternoon to roam at large, which will insure greater fertility in their eggs. For sitting, turkeys should be allowed to occupy the same coop as when broody, or by making a covering over the brush. Great care should be exercised in keeping the eggs clean, as they sometimes sweat and get gummy. Lukewarm water can be used in such cases to clean the eggs. This process should be done when the turkey is off the nest and out of sight, as they are very sensitive creatures, and in some cases would leave

their nests should they notice it had been turbed.

"The time of incubation with turkeys is 28 days. Young turkeys are very delicate, and the less handling and fussing with that they receive for the first 24 hours of their existence the better chance for raising them. Leave the care entirely with the mother hen until she shows a desire to roam in fresh fields with her young. Then remove the whole family to a coop, which should be in readiness, of a size four by six feet, say 3½ feet front, 2½ feet back, giving a slanting roof of one foot in pitch. Place boards around the body of the coop, with spaces three-quarters of an inch between each, thus insuring plenty of fresh air. This coop should be thoroughly whitewashed and provided with a board floor covered with clean sand. The front should be made to close at night and in stormy weather. An orchard where but little grass is growing is preferable to any other place for starting them. Mother hens can be confined to the orchard by a light board or shingle secured on their backs by soft, flat strings drawn through holes and tied under their wings. This method will not injure them in the least. After the first 24 hours, they will begin to look about for food.

How to Feed Them.

"The young turkeys should be fed with egg-bread curd or light bread crumbled in milk. Hard boiled eggs with a little black pepper are excellent for a morning feed during the first week. After this period crushed corn, boiled the same as hominy, with a clean dish of sour milk, will answer very well until they are four weeks old, when they should have an addition of cracked corn and wheat just before retiring for the night.

"After the turkeys are six weeks old they can be allowed to roam at large and roost in a low shed or under a cornhouse. They may be taught to go home every night by taking pains to feed them near their roosting-place. Care should be taken to feed them on the same ground but a short time in succession, as the ground becomes stale. One can change about after they get accustomed to their roosting-place without danger of their wandering off in search of new quarters. At this age the turkeys may be fed on whole grain at night. A warm feed, consisting of cornmeal, one-third as much middlings and the same of ground oats, mixed with boiling water, makes a good morning feed. Boiled potatoes once a week may be added to the morning feed. Cayenne pepper added in small quantities to their feed on damp mornings serves as a gentle stimulant."

Chicken Lice.

EDITORS PRESS:—This pestilence that "walketh by night" and "sticketh closer than a brother" by day, is the bane of all poultrymen living in warm climates. When I purchased my present home, I found chicken-house, sheds, wood-piles and fences covered with an innumerable host in gray attire, all thirsting for blood. The poultry showed "discretion the better part of valor" by taking to the trees to roost. If I made a protracted stay in the yard, I soon felt that I would like "to mount and soar away" from the visible and yet invisible pest. Forced to meet the enemy, we armed ourselves with whitewash and brush and advanced upon his stronghold. First, the nest-boxes, roosts and all boards that would furnish hiding places were taken out and burned; then the entire house, sides, ends and roof, inside and out, was given a coat of whitewash. When dry, all crevices were dusted full of air-slaked lime. The floor was cleared up and six inches of fresh soil wheeled in. A separate room for the nests was built. This was given two coats of whitewash. Nest-boxes were coated inside and out, and a handful of sulphur scattered through the hay in the nests. For roosts, two poles were hung from the rafters of the house by wires; at every two feet cross-poles were laid and held in place by projecting nails. This roost was two feet from the ground and level to avoid crowding on top nests. The ends and sides swung clear of the roof by two feet. This gave me a roost that no vermin could reach from floor or walls, with poultry on or off. It was of easy access on all sides if I wished to catch a chicken, and could be removed in a minute when the house needed cleaning.

All the loose lumber about the yard was burned; that remaining was whitewashed. Once a week the inside of the chicken-house and all parts of the roosts were given a coat of whitewash, and the floor cleaned. The poultry were given a dust bath, and once a week fed sulphur to cause them to shed any tramp lice they might be affected with. Soon the place that knew these pests knew them no more forever.

I would like to add, the three requisites are cleanliness, dusting-place, and a roost that the lice cannot reach with the poultry, on or off.

Murphys, Cal.

E. H. SCHAEFFER.

Sore Head in Fowls.

EDITORS PRESS:—Having seen an inquiry in the *RURAL* to know what will cure the disease called sore head, I give my remedy: Take salt and vinegar, made strong, and wash their heads freely a few times, and in a few days they will be well. If their mouths are sore, take and make a swab with a small stick and a piece of fine cloth, and wash their mouths well with the vinegar and salt at times. It is a sure remedy. N. Temescal.

SARAH F. JOHNSON.

The Grange Attains a Majority.

[By MORTIMER WHITTIER, N. L.]

November 16th the National Grange commences its 21st annual session in the city of Lansing, Michigan. It meets under the most favorable circumstances. The Governor of the State, Cyrus G. Luce, is, and has been for several years, at the head of the Grange in his State. In the matter of organization substantial progress has been made. Nearly twice as many new Granges have been instituted as in last year, or in any one year for many past. Hundreds of Granges in all parts of the country have been reorganized. Rhode Island, the only State in the Union that never had a Grange, comes to the front with nearly every township organized. In matters of legislation, much progress has been made. The work of the Grange in the direction of railroad control has been crowned with success, and the Interstate Commerce law has come to stay. Laws, State and National, controlling the sale of adulterated dairy products, have been passed and sustained. Efforts to remove the tariffs on farmers' "raw materials," and leave existing high tariffs on manufactured goods, have been defeated. Tax-reform bills have been passed. Better men in all parties have been elected to office. The great temperance cause has been advanced, and in thousands of ways in thousands of neighborhoods, the business, social and educational interests of the farmer, and of all his family, have been advanced. In no one year since its birth, 21 years ago, can the Grange point to so many and so great practical results, and it comes to its years of manhood, its majority, flushed with success, and with bright hopes and prospects for its future.

PROMISING PRODUCTS.—It is difficult to say which of our products promises best just at this time, when all seem to have such a grand future. We were struck, however, with the greatness of the dried fruit industry when Bro. D. C. Feeley told us the other day of the hundreds of carloads which would be shipped this year from Santa Clara county, and of which we hope to have full statistics in time. The aggregate is something immense. Bro. Feeley told also of his hopes in the shipment of fruits for winter sale at the East. It is well known that the cold-storage companies in the great Eastern cities keep Eastern grapes until late in the winter, and if they thus treat the superior grapes of California it seems almost certain that great quantities can be sold at good prices. As a test of this matter Bro. Feeley has sent a carload of the choice table grapes for the growth of which he is noted, and they will be put in cold storage and placed upon the Chicago market in February. We anticipate good results from the fact that the quality of the grapes on entrance to storage are fine. Bro. Feeley has given us good opportunity to judge of this fact by the gift of a box of half a dozen assorted varieties, which we have gladly enjoyed, and for which we make due acknowledgment.

THE WORTHY MASTER'S KNOWLEDGMENTS.—Bro. Overhiser, W. M. (Gloria S. G.), has an official card in the *Recot-Union* expressing his warmest thanks and kindest wishes to the people of Sacramento and vicinity who so liberally responded to and assisted him in making up the display for the Natl. Grange, to be placed on exhibition at Lansing, Mich., and for their liberal money donation to defray the expenses of the exhibit, every dollar of which, he assures them, shall be faithfully accounted for.

MR. AND MRS. BABCOCK. North Temescal celebrated the 25th anniversary of their marriage Nov. 9th. A number of their friends were present, and handsome gifts befitting the "Silver Wedding" were received. Mrs. Babcock is well known as the former Secretary of Temescal Grange, of which both her husband and herself were charter members in June, 1873.

HON. WM. JOHNSTON, W. M. of the State Grange, was in this city last week securing a large centrifugal pump for draining on his fine fruit farm at Richards, dozen miles below Sacramento. Like many other fruit-growers, Brother Johnston has garnered well this year; and like a thrifty American who believes in his native land, is proving by his works his faith in its future.

A BASKET LUNCH.—Temescal Grange will have a basket lunch from 1 to 1 P. M. Saturday, Nov. 19th, and open the Grange at 1 o'clock for work in the till, and perhaps the fourth degree. It is the first experiment of the kind by this Grange. God will answer if it prove worthy of recommendation. A good attendance is hoped for.

BENNETT VALLEY GRANGE is planning a Christmas-tree social.

APPLE BLOSSOMS IN NOVEMBER.—Mr. Wm. Hofschneider of the firm Jos. Winterburn & Co. steps into the editor's room this Wednesday morning, with a little twig just plucked from a Winter Greening tree on his place near Fruitvale. The twig bears several well-developed apple blossoms, and Mr. H. says the like beautiful promises cover an entire tree. No, we were not used to see such things in November when we lived back East, but the phenomenon cannot be called very rare in California. Our glorious climate sometimes beguiles the orchard.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

PEANUTS.—Haywards Journal: Tuesday we secured a peanut bush from the Bassett place. Mr. B. pulled it out of the ground, and underneath were the peanuts, clustered about the roots like potatoes. There were fully a hundred peanuts on the vine. The vines were planted in June, and have indeed made remarkable growth.

CARROTS.—From one acre Frank Mendall of Castro Valley realized 20 tons of carrots, which he readily disposed of at \$5 per ton, clear. \$100 an acre is not such a small sum about this time of year.

Amador.

DISTRICT ASSOCIATION.—Jackson Ledger, Nov. 12: The first annual meeting of the 26th Dist. Agric. Assoc'n, comprising the counties of Amador and Calaveras, was held in Lone last Monday. There was a very small attendance. W. P. Peek, the Jackson Director, was about the only one present from the outside. Between 20 and 30 votes were cast. From the financial statement presented it appears that, if all the money still outstanding in promises is paid, the Association will be about \$1000 in debt. Over \$2000 remains to be collected, of which \$1200 comes from the State, which will of course be paid. The track, etc., it was estimated cost between \$6000 and \$7000, of which between \$4000 and \$5000 was subscribed in Lone and vicinity. The gate receipts and privileges more than paid for the expenses attending the fair. \$2100 was paid in prizes for racing contests, and about \$300 in premiums for exhibits. U. S. Gregory and W. P. Peek were re-elected Directors. In the matter of building a pavilion, it was thought that an appeal for help from both counties would be in order. After some discussion it was resolved to leave the appointment of committees and general management of the new enterprise in the hands of the Board of Directors.

Fresno.

A TWELVE-MILE VINEYARD.—Cal. A. P. telegram, Fresno, Nov. 12: The Cal. Land & Wine Co. has purchased a tract in this county six miles long and two wide and will plant it to raisin grapes. W. C. West, the Horticultural Commissioner of this district, has been chosen superintendent. Over 100 men will be employed. The contract for building a dwelling of 12 rooms and a house for the hands with 40 rooms has been let. The capital behind it is several millions.

Plumas.

AN INVINCIBLE BRONCO.—Quincy National: Geo. Herring started from Indian valley for Gibsonville, in a cart drawn by a wild mustang. When he came to the soda springs he stopped to get a drink, stumbled against the mustang and frightened it so that it started to run, with George hanging to the lines. Horse, cart and driver went over the grade and down the hill 50 feet, bringing up against some bushes. He got the horse and cart back on the grade, when the horse fell and was unable to rise. George tied the halter-strap to the cart, and proceeded to unharness. As soon as the harness was off, the horse struggled to his feet and went off the grade again, dragging the cart by the halter-strap. George managed to get the horse back on the grade again, leaving the cart, and attempted to ride back, but was ignominiously bucked off twice in about a minute, and compelled to lead the horse to Shoshly, where he got a saddle and attempted to resume his journey. The bronco again bucked him off; his foot hung in the stirrup and the horse ran over him a couple of times and kicked his clothes nearly off. George came to the conclusion that a freight wagon was the safest mode of traveling, so he came to Quincy with Mr. McCutcheon, arriving a little sore and with his clothes badly damaged.

San Benito.

PUMPKINS FOR COWS.—Free Lance: Many of our dairymen are feeding pumpkins to their cows, and report the result very satisfactory. At \$3.50 a ton, pumpkins are said to be more economical for cows than bran, and the result in the quantity and quality of milk is much better.

GRAPES.—The finest box of grapes we have ever seen was a box presented us by Wm. Palm-tag. The grapes were grown on his vineyard in the Gabilan foothills. The clusters were remarkably large, full and symmetrical. There were three varieties, Muscat, Flaming Tokay, and Rose of Peru. We do not believe that a better box of grapes can be furnished by any vineyard in the State.

San Bernardino.

HEAVY ORANGE CROP.—Riverside Press: Cole & Suman, proprietors and manufacturers of the patent orange-tree props, are working night and day and are still some 20,000 behind in supplying their orders. This indicates an immense crop this year, as the trees are over-loaded to a much greater degree than last year to require such an increased demand for props.

San Diego.

SAMPLES FROM SAN JACINTO.—Register, Nov. 3: Wednesday morning we inspected the fruit, vegetables, etc., that were being packed in boxes to be shipped to San Diego for exhibition. The first that met our gaze was a small-sized sweet potato, five feet three inches in

length, and a pumpkin weighing 110 pounds. Fine peanuts, beets, Irish potatoes, corn, watermelons, muskmelons, peaches, onions and various other products of the valley were being shipped. This is the right move, and it will show the people of San Diego and the incoming tide of immigration what can be raised to perfection in this beautiful valley. On its fertile plains are successfully and profitably raised wheat, barley and all other cereals produced throughout the State, oranges, figs, apricots, nectarines, plums, almonds, walnuts and vines of all varieties.

San Luis Obispo.

BIGGEST IN THE U. S.—Chronicle dispatch, Nov. 11: J. D. Roberts of Arroyo Grande today received a check for \$150 from W. H. Maule of Philadelphia as a premium for the largest specimens of onions and beets raised in the U. S. the present season. The largest onion weighed 5 pounds 2½ ounces. Mr. Roberts last season produced a pumpkin weighing 274 pounds and a beet weighing 100 pounds.

San Joaquin.

LODI ALFALFA.—Cyclone, Nov. 10: Geo. F. Cluff three weeks ago last Saturday sowed a small plot at his place on the Pope tract in alfalfa seed. This was irrigated for two weeks, but during the last seven days, there being no wind, and the irrigating being done by means of a windmill, the alfalfa received no water. This morning Mr. Cluff pulled and brought to town several bunches of the clover. It was found that the root was 12 inches long, and the growth above ground 8 inches, making the growth from the seed in three weeks 20 inches.

LARGE ALMOND TREES.—Wm. Langhorst of this city has three large almond trees growing on his place. One of them measures 58 inches in circumference two feet above the ground and is 30 feet high. The other two measure over 40 inches.

Santa Cruz.

THE WATSONVILLE DRIER.—Courier-Item: By the kindness of the secretary, Mr. A. A. Morey, we are able to present a synopsis of the operations of the company for the present season. Amount of fruit purchased: Apricots, 40 tons; peaches, 25 tons; prunes, 30 tons; apples, 195 tons or 8600 boxes, for which was paid: Apricots, 1 to 1½ cts. @ lb.; peaches, 1 to 1½ cts.; French prunes, 2 cts.; German prunes, 1½ to 1½ cts.; apples, 20 to 30 cts. per box. Employed 30 to 45 hands; weekly pay-roll, \$260. The experiment has proved satisfactory to stockholders. The fruit found ready market at good prices. The capacity will be increased three times for the coming season's work, with a capacity of 25 to 30 tons of green fruit per day, and will employ about 100 hands.

FLAX-MILL PROPOSED.—Pajaronian: Mr. Hatfield, proprietor of a flax-mill near Menlo Park, was in Watsonville Wednesday. He came to the valley seeking a new site for his mill, and will locate here if farmers will agree to put 600 or more acres in flax each year. He will pay \$10 per ton for the flax cut green and unbaled, and will furnish the seed. His factory will employ 25 men. He felt much encouraged by his talks with the farmers, and we trust he will move his works to this valley.

Solano.

EDITORS PRESS:—The weather has been damp and cloudy, and signs of rain plenty, but now the sun shines brightly and all immediate prospects of a shower have vanished. Dust is abundant everywhere, and there is more or less sickness in the shape of colds, sore throats and light bilious attacks, which always occur at the change of the seasons. There have been quite a number of cases of diphtheria in Suisun and Fairfield, some fatal. Mr. J. W. Gates picked some white freestone peaches last week which grew on a seedling tree. They were of fair size, and would be a good variety to bud from for late peaches. Everybody has been busy since fruit was done, with housing boxes and trays and getting ready for the rains. Some have commenced pressing. Pruning vines now will make them start early, which is not desirable where there is any danger of frost. There has been a great deal of building done around here this summer and fall, and carpenters have been in demand. A pamphlet descriptive of Solano county has been issued containing 84 pages. It is well printed, has some good views of buildings and natural scenery, and contains a large amount of valuable information. Persons wishing a copy can get it by applying soon to Platt & Sons, Vacaville.—G., Nov. 14th.

SHORT BITS.—Dixon Tribune, Nov. 12: Probably before this number of the Tribune reaches all of our subscribers, Chas. Martell of Vacaville will begin the shipment of oranges. The weather is getting so cool and damp that it is difficult to cure the second crop of raisins by the sun-drying process. Summer-fallowed grain is about all sown and farmers are anxiously waiting for rain.

Tulare.

LEMOORE LOCALS.—Visalia Times, Nov. 10: No frost yet. There is still a good supply of grapes, apples and pears in the market and a few peaches. Game is plentiful and our young men are having much sport killing geese, ducks, swans and cranes. The farmers are busily engaged in seeding their lands. There will be a large acreage sowed in this section this season. Large quantities of seed wheat have been hauled from here to the West Side in the last few weeks. Thousands of acres will be put in wheat in the Summit lake and Huron sections this year which will force the sheep men to hunt

pastures new. Mr. Newton of Pomona was here a few days since and bought two carloads of horses which he intends to ship to Los Angeles county. He says that the horses in this section of the State are superior to those in the southern counties.

Yuba.

FOOTHILL POTATOES.—Marysville Appeal, Nov. 11: A search yesterday at all the stands and stores where potatoes are sold, revealed not a single sack from the foothills east of this city. "Mountain potatoes," said one dealer, "are certainly superior to the valley-grown potatoes. All that are brought to town are easily sold by the producer." Another dealer said: "We have potatoes from Dayton, Nevada, on which a heavy freight is paid, and they are not as good as can be grown in our foothills, but they can be purchased in quantities, and that is the reason we handle them. It is surprising that more attention is not given to raising potatoes by foothill land-owners." The other day a man named Campbell hauled into Red Bluff 400 sacks of mountain potatoes which he raised on two acres of land. There was over 40,000 pounds in the lot, for which he received \$750 from C. R. Mahew. No doubt a large product of potatoes will eventually be made by the foothill region. The lack of cheap transportation is at present one of the drawbacks to the cultivation of the tubers in the hills.

GLANDERS STAMPED OUT.—A Marysville township farmer told an Appeal reporter yesterday that the report that glanders was assuming an alarming shape out there is without foundation. There have been two or three cases, but all trace of their existence has been destroyed.

NEVADA.

FALL ALFALFA.—Silver State: Commissioner Thies of Lovelock says ranchers are busy harvesting the third crop of alfalfa. The crop on his ranch is about three feet tall, but not so heavy as the first crop. The first crop was cut in the latter part of June, the second in August, and he started mowing the third crop on the 22d of September. The three crops on his ranch average over six tons to the acre.

OREGON.

GRAPE TRANSFORMATION.—Rogue River Courier: Dr. McFadden has brought us a cluster of grapes weighing 2½ lbs., which are somewhat a curiosity. Seven years ago the vine was planted a "White Sweetwater." For three years the fruit was "White Sweetwater," and then came a change. In the fourth year the grapes took a reddish tinge, and each subsequent year changed in color and contour until now they resemble somewhat the "Isabella." The flavor also improved, and Dr. McFadden now regards the changed grape as about the best of his varieties. A large number of cuttings have been taken from the vine and a new name is to be given them.

DEATH OF MRS. JAMES M. COSTIGAN.—Mrs. Kate A. Costigan, wife of James M. Costigan, died suddenly at the family residence, 1305 Franklin street, of neuralgia of the heart. Mrs. Costigan was a native of New York, and 39 years of age. She had lived in Oakland and Alameda county for many years, and by her many noble traits of character endeared herself to a large number of friends, who will join with her family in mourning her death. The funeral services were held on Sunday afternoon at 2 o'clock, from the residence of the family.—Oakland Tribune, Nov. 11th.

Mrs. Costigan was for a time a member of Eden Grange. We well remember that she with willing heart and hand assisted the Temescal sisters at the Harvest Feast. Her funeral was largely attended, and many friends mourn her loss.

NAPA NURSERY.—Leonard Coates issues his annual price list and catalogue with the famous Centennial cherry still occupying the place of honor. Mr. Coates' list contains several new seedlings of great promise which are worthy the attention of planters, and his general collection is good. An ornamental card with tested remedies for insects is calculated to do much good and is in handy form for preservation for reference.

THE SHORTHORN AUCTION. advertised for December 7th at the Sacramento fair grounds, will doubtless draw together many admirers of the stanch old Durham stock. Sixty head of high-bred cattle from R. M. Dunlap's Galesburg (Ill.) farm are to be sold, and Col. Judy of Tallula is to be the auctioneer.

FANCHER CREEK NURSERY.—F. Roeding, proprietor of the Fancher Creek Nursery, Fresno, issues his wholesale catalogue for the current season. It covers a large selection of deciduous fruits, and is especially full in the list of figs, nuts, etc.

THE CAMELLIAS IN GILLS' NURSERIES on Twenty-eighth street in Oakland are wonderfully luxuriant growers and prolific bearers. His conservatory is 16 feet in height, and he was obliged to raise the roof two feet last season in order to give them room to rise.

WHO SENT IT?—We have received a postal note from Selma, Fresno county, without the name of the sender. Will he do us the favor to send name and amount of order?

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Sierra Valley Grange Fair.

EDITORS PRESS:—Seven years ago Plumas Grange held her first fair, and has held them annually ever since with increasing success, until this season, when it was thought best to give way in favor of the Sierra Valley Grange, which has been reorganized within the last few months at Sierraville.

The fair took place Oct. 13th and 14th, and proved indeed a surprise to those individuals (to be found in every community) who are gifted with a prophetic faculty of foreseeing failure in every new enterprise. The fair was also a surprise to those who had never attended any of those held by Plumas Grange. That a region of so great an altitude, and so given over to summer frosts, one, moreover, where the people are so far removed from each other, could bring together so large a variety of products, and those of so fine a quality, was a fact of which many among us had no previous conception.

When this mountain valley, 5000 feet above the sea, was first settled, no one thought of it as an agricultural region further than grazing and producing some hay were concerned. The first field of grain was put in by the firm of Arms & Enoscoe, about the year 1862. Some of this grain was sold in Virginia City for 12½ cents per pound. Soon after this the same firm brought the first thrashing machine into the valley. Now, grain-raising is one of our most important industries, and four thrashers—one steam and three horse-power—are kept busy for weeks.

The samples of grain and natural grasses at the fair were interesting to those who have watched the growth of different industries in our valley.

Every year the residents here are paying more attention to home-making, and gardens are made, not only on the hillside ranches, but also in the frosty tule. The display of vegetables was remarkably fine, being, as the writer was informed, better than at the Nevada State Fair in Reno. Artesian water has helped to bring about this happy result.

The display of fruits, though small, proved its culture to be among the possibilities in portions of our valley.

The results of the efforts of childish hands in the culinary line looked toothsome and inviting. The flowers as well as the fancy-work showed that the perplexing cares of every-day life had not deprived our women of their love of the beautiful. The display of fancy-work particularly was better than a few years ago at the district fair.

Some very fine honey was on exhibition; also cheese from the factory of Wm. Arms. This is an industry which a few years ago some of our best dairymen thought could not be successfully carried on, owing to the difficulty of curing at our high altitude, etc.

A collection of Mexican curiosities, exhibited by Dr. Maurice Pritchard, attracted much notice.

Some very fine horses were to be seen; also some horned stock. Our farmers have paid considerable attention to improving their stock. Many of our large horses have been shipped to San Francisco, where, we are informed, they stand well in the market.

A committee from Plumas Grange was appointed to lend what assistance they could toward the Sierra Valley Grange Fair. This committee, consisting of District Lecturer A. B. Huntley, Owen McElroy and Mrs. Hattie Bringham, had had so much experience in overcoming difficulties at our Beckwith fairs as enabled them to render efficient service to the Sierraville Committee—Master George Haines, N. Strang and B. F. Lemmon—who, with others, felt greatly pleased at the success of the first fair of Sierra Valley Grange. P. F.

The above is a good answer to those who question, "What good has the Grange done?" Also, to those who may ask, what can the Grange do? National Ranch Grange, Watsonville Grange, Santa Rosa and Bennett Valley Granges, and Plumas and Sierra Granges can all echo back telling answers, as well as many others.

Mind the Elections.

The Constitution of the California State Grange designates the first regular meeting in December as the time for electing officers of Subordinate Granges for the ensuing year. In many Granges this occurs on Saturday, December 3d—the anniversary of our noble Order.

We recommend that special pains be taken to provide for interesting exercises on this occasion, and that notice be given early and generally, so as to draw together as large an assemblage as may be. We hope that you, brothers and sisters, will each take a personal interest in the matter of picking out the most effective and promising official timber and wisely yoking older and younger members in electing the ticket for 1888.

See, too, if you cannot do something toward reviving any dormant Grange in your own neighborhood. The time is auspicious. What will you do to improve it?

Sacramento Grange.

EDITORS PRESS:—A pleasant family reunion of Grange-goers took place at the hall on the 12th. The young and gay, the middle-aged and gray veterans in the field, mingled in their best attire. A smile of pride beamed upon their countenances—perhaps they received their photographic impress in the vale of Saint Rose, and have kept them ever since. Why should not Grangers be happy? We have whole families gathered in circles. The Grange was born for such purpose, and we count them by hundreds within our native land schooling themselves for every-day life.

Sacramento Grange can pride herself on having members who devote their early years to training themselves in many ways to better their after life. Our young sisters are engaged in cultivating their voices both in elocution and singing, learning painting and other accomplishments; while our young brothers are fitting themselves for various pursuits. Our older members, more sedate in bearing, are tilling the soil and pursuing their various occupations connected with agriculture.

The benefits resulting from the formation of the Order are noticeable throughout the length and breadth of our land, and as the anniversary of our Order is near at hand, Sacramento Grange will not be backward in observing the natal day. A committee has been chosen to interview our brother Grangers in the county at some early date, in regard to keeping the day, in commemoration of those few who gave it birth; and, no doubt, appropriate exercises will be agreed upon, that all may enjoy the family gathering.

Two sisters and a brother passed in the fourth degree and made full-fledged Grangers. One was balloted for and two applications received. So you see our numbers are growing.

During the field-work, the sisters in the upper hall were preparing one of those outlays which the brothers have a peculiar toothsome aching after (perhaps you have felt the same distressing organic void—in view of the usual palatable make-up, so delicately displayed and fit even for the gods to encounter). One brother calls on you always to prepare a counterpart. I am afraid our brother's mind is too much taken up with fancy dishes, or is not skilled in the make-up for such occasions, for every sister has a way of her own and you cannot please them better than by praising their work, and no two tables are just alike, so he must be "a little off."

Suffice it to say the duties of the occasion were well performed if the hen-roosts were robbed, the pumpkins stolen, or grapes flched from the vine, and hot coffee taken to wash down the varied dishes set for the honest Granger.

After such a task the members were drawn in by our modest W. M. stating that to aid in digesting the heavy burdens we had assumed above we would be entertained by a short program, which was as follows: Duet, Sisters Stevens and Sims; recitation, "Home," Flora Greenlaw; essay, "Dignity," H. W. Johnson; song, "Wooin'g," Lulu Rich; declamation, "Labor," Robert E. Greer; song, "The Old House at Home," Jos. Holmes.

A sister who thinks the brothers do not attend the meetings of the Grange often enough, and to get them here at the near annual election, proposed that all the sisters prepare a gift for the delinquent brothers. Not to be outdone by the better-halves, the males alone voted to make them a surprise on that occasion. So you may hear of some great event between the equal rights—or shall I say "Woman's Rights"—on the 1st of December. Our late State Grange must have made a great impression on the members of Sacramento Grange. The brothers will have to walk straight the coming two years, or they may be handled to the right, to the left, to the front, to the rear, in marching order. Adieu till the 1st of December. R.

Grange Birthday at Oakland.

Eden and Temescal Granges join in invitation to the officers of the State Grange, Past Masters and all other Patrons, to unite in literary, musical and social exercises at Oakland, at 10 o'clock A. M., December 3d.

Brother S. T. Coulter has been invited to make one of his pertinent Grange addresses on that occasion. It is hoped that he will be supported with brief speeches from a goodly number of the State Grange officers and veteran Grange speakers. We learn that Bennett Valley Grange will not have any exercises upon that occasion, and that a number of its good Grangers will be present at Oakland on the 3d. We hope they will be joined by many Patrons from Granges that do not hold special anniversary exercises of their own, yet, knowing the difficulty of many Patrons in going far from home on such an occasion, we wish to state very plainly that this meeting is not designed to compromise or take the place of local celebrations of the Grange anniversary. It is sincerely hoped that most of the Granges in the State will either celebrate by themselves or join with neighboring Granges in making the day a happy and joyous one, so that a good and lasting influence may extend to all farmers in their various neighborhoods.

In our next issue we hope to give more particulars in regard to these exercises. Let us hear from all Granges on this subject.

Exhibits for National Grange.

SACRAMENTO, CAL., Nov. 7, 1887.

MESSRS. EDITORS:—By your request we herewith report that we have packed and shipped to the National Grange, to be held at Lansing, Michigan, the following articles from the various counties mentioned:

SACRAMENTO COUNTY—Mrs. Lockett, two bottles grape must; one-half dozen boxes of very fine dried fruits, of various kinds. Mr. Isaac Lee, branch with olives on and licorice. Mrs. H. C. Kirk, one bush with oranges. Mrs. Joseph Gray, oranges and lemons. Mrs. E. B. Crocker, oranges on bush. Dan'l Flint, bale of hops and alfalfa seed. W. R. Strong & Co., two boxes of grapes. Dr. Harvey, one box fruit. Mr. C. H. Cummings, two boxes fruit. Mr. Wm. Johnston, box of fruit and pampas grass. E. K. Alsip & Co., six boxes of grapes. Mrs. Reel, pampas grass. Mrs. Parsons, persimmons. O. A. Lovdall, bunch of large persimmons. Mr. E. Greer, nuts and fruits. Mr. J. Rutter, box fruit. Natoma vineyard shipped one box sample grapes. Dutch Flat, one box assorted fruit. Also one large box from Sacramento county, containing assorted fruit.

We could not get the names of the parties shipping from other counties, as they were not furnished us. We will give you the number of boxes from each county.

Mr. Newman of San Francisco, two cases silkworms and silk. Two boxes from State Board of Trade, San Francisco. A. T. Hatch, Suisun, one box assorted almonds. Santa Rosa, H. W. Byington, shipper, six boxes assorted fruits. San Jose, 37 boxes; among the shippers we made out the following names: Eleven boxes from Yerba Buena vineyard and one box from Barber & Washburn. Six boxes from Pacific Orchard cannery. One box from George A. Fleming. Three boxes from Farmers' Union. From Stockton and Lodi, 27 boxes fruit, chicory and assorted merchandise. Among the shippers being the Stockton flour-mills, California Chicory Company and E. F. Grant. From Napa, two boxes. O. W. Hendricks, Secretary of State, bundle of large palm leaves for decoration. One bundle of newspapers from Oakland Enquirer. G. N. Platt & Sons, Vacaville, one box fruit. Contra Costa county, six boxes assorted merchandise.

We are sorry we are unable to give the names of other contributors, but I presume the Worthy Master upon opening the boxes at Lansing, Michigan, will find the names of all the contributors. There are a great many points from which we expected shipments of fruit that did not contribute anything, and we are greatly disappointed and think they will be the loser thereby, as one object lesson is more convincing than all the periodicals or reading matter you could furnish to impress correct ideas upon people abroad. The exhibit forwarded will make a very creditable display. Yours very truly,

EDWIN K. ALSIP.

We are informed that the following have been forwarded by mail or express since the car left Sacramento:

By Past Master I. C. Steele, Pescadero, San Mateo county, a glass-framed bouquet of sea mosses and shells, an album of sea mosses, abalone shells, natural and polished, sea-shells in case, pebbles from Pescadero sea-beach. The bouquet and album were the result of much "pains-taking," "labor of love" on the part of Mrs. E. M. Dickerman, nee Steele, of Pescadero. The beauty and variety of these mosses, pebbles and shells, must make one of the richest and most beautiful of exhibits.

A choice collection from Contra Costa county, we believe, was forwarded after the exhibit car left Sacramento. Please forward lists not yet published, friends.

From San Jose.

Yours of the 12th inst. received, and in answer will say, I shipped to National Grange, Lansing, Mich.: 10 cases of assorted wines; 3 cases of canned fruit in glass; 4 cases of canned fruit in tin; 2 boxes green apples; 2 boxes of pears; 1 sample wheat; 1 sample barley; 1 box containing four dozen cartons assorted glass fruit; 15 crates of assorted grapes; 1 box English walnuts; 1 large box assorted dried fruit; 1 box dried prunes; 1 large squash; 1 large box containing pamphlets giving the resources of Santa Clara Co. Weight in all one ton and 50 pounds. Most respectfully yours, CYRUS JONES, Chairman Committee.

LOOK OUT FOR THEM!—The Los Angeles Times tries to put people on their guard against a gang of genteel and plausible swindlers who have lately come to winter in California. They are "confidence" operators of the most polished and pretentious type. Both the men and women dress well and seem to have plenty of money. Among their numerous games is one that has never before been worked on the coast, although it is very old in New York and other Eastern cities. It is worked in this way: The "crooks" arm themselves with a lot of cheap brass watches, which they scatter around at pawn shops. The watches are pawned by the female thieves for from \$20 to \$30, and as soon as the pawn-ticket is placed in the male robber's hands he sails out and soon has some "sucker" on a string. The crook is very hard up, and won't his dear friend take up the ticket? The watch cost him over \$100, and he will sell the ticket to his dear friend for a few

dollars." The sucker thinks he has a chance to get a good watch for less than half its value. He goes down in his pocket and digs up \$15 or \$20, and the crook turns over the brass-watch ticket. The sucker betakes himself to the pawn shop, throws down \$30, and marches off with his Peter Funk watch. He goes to his jeweler to have it set, and in a boastful manner tells how he got it for less than half its original cost, when the jeweler informs him that he can buy them at the rate of \$50 a dozen. The poor gull sees too late that he has been made a fool of, and in nine cases out of ten he will steer clear of criminal detectives, if possible.

Backing an Upright Journalist.

At a regular meeting of the Santa Rosa Grange, held Saturday, Nov. 12th, E. W. Davis, E. A. Rogers and Jona. Roberts, who had been chosen a committee to draft resolutions regarding the arrest of R. D. Cannon, editor of the Santa Rosa Republican, on a charge of criminal libel preferred by one Clinton C. Tripp, submitted the following:

WHEREAS, One Clinton C. Tripp has brought suit to recover a part of the land on which the city of Santa Rosa is built, and a portion of adjacent lands; and

Whereas, Said Tripp has not, by any legal decision, obtained title, nor is it likely he will obtain title to any of said property, though the suit might have been tried and decided many years ago, had Tripp so elected; and

Whereas, Said Tripp has undoubtedly held said suit on the calendar of court for the sole purpose of causing a defect in the title to all of the property against which said action was brought, in order that he might be able to "levy an assessment" in case any of said land was sold; and

Whereas, He has levied many of said "assessments;" and

Whereas, Mr. R. D. Cannon, editor of the Santa Rosa Republican, has fairly, fully and truthfully shown Clinton C. Tripp in his proper light; and

Whereas, Clinton C. Tripp has caused the arrest of R. D. Cannon on a charge of Criminal Libel, thereby causing the people of the State of California to become the prosecutors of one of our esteemed citizens who has done a public service in exposing the schemes of Tripp; therefore

Resolved, That Santa Rosa Grange pledges its hearty and united support to R. D. Cannon and the Santa Rosa Republican in the contest with C. C. Tripp.

Resolved, That we will individually and collectively contribute in any and all legitimate ways to the protection of our protectors, and the support of any outspoken, honest journal. That the arrest of R. D. Cannon on a warrant sworn out in another county was unwarranted, cowardly and revengeful, and we believe was not done with a desire to obtain or accord justice.

Resolved, That, in our opinion, the editor of the Republican did a public service in publishing the articles on the Tripp claim.

Resolved, That a copy of this preamble and these resolutions be furnished Mr. R. D. Cannon, the Santa Rosa Republican, the Sonoma Democrat, and the Santa Rosa Day Book.

Resolved, That we, as an organization, are anxious that the law shall take its course, believing that thereby justice is done and that Clinton C. Tripp will be shown to be without an honest claim either against Mr. Cannon or the property he sues to recover.

Resolved, That the suit now pending, viz., the Tripp suit, should, in our judgment and in justice to all concerned, be pushed to speedy trial and decision.

Anti-Debris in Yuba.

A conference was held last week, as we learn from the Marysville Appeal, between the supervisors of Yuba county and the Advisory Board of the Anti-Debris Association.

Dr. C. E. Stone, president of the association, had received answers from Senator Hearst and Congressmen Morrow, Vandever, McKenna and Thompson, respecting the invitation extended the California Senators and Representatives in Congress to visit this section and see for themselves the injury and danger to navigation caused by hydraulic mining. Senator Hearst and Congressman Vandever expressed regrets that their engagements would not allow them time to come. The others would try to make the inspection as desired. Senator Stanford and Congressman Felton had not then been heard from.

The offer of a reward of \$500, by the county of Yuba, for evidence to convict certain hydraulic mining companies of a violation of anti-debris injunctions, which has just gone into effect, does not stop the employment of watchmen by the Anti Debris Association.

DANVILLE GRANGE, at their mid-October meeting, celebrated the 14th anniversary of their organization with a Pomona feast. They appear to be prospering as a Grange. At their meeting the 5th inst., the tariff question was taken up, and the discussion proved so earnest and entertaining that it is to be resumed on Saturday of this week, at 1 P. M., and neighboring Granges are invited to participate.

CONTRA COSTA SOCIALITIES. — Alhambra Grange's social, week before last, was well attended and greatly enjoyed. The seasonable hours at which these parties are brought to a close induce many of the older folk to share in their pleasures. Valley Grange had a social hop in Odd Fellows' hall, Pacheco, Friday evening, 4th inst. About 50 couples were present, and as usual they had a good time.

The Grange Attains Its Majority.

[By MORTIMER WHITEHEAD, N. L.]

November 16th the National Grange commences its 21st annual session in the city of Lansing, Michigan. It meets under the most favorable circumstances. The Governor of the State, Cyrus G. Luce, is, and has been for several years, at the head of the Grange in his State. In the matter of organization substantial progress has been made. Nearly twice as many new Granges have been instituted as in last year, or in any one year for many past. Hundreds of Granges in all parts of the country have been reorganized. Rhode Island, the only State in the Union that never had a Grange, comes to the front with nearly every township organized. In matters of legislation, much progress has been made. The work of the Grange in the direction of railroad control has been crowned with success, and the Interstate Commerce law has come to stay. Laws, State and National, controlling the sale of adulterated dairy products, have been passed and sustained. Efforts to remove the tariffs on farmers' "raw materials," and leave existing high tariffs on manufactured goods, have been defeated. Tax-reform bills have been passed. Better men in all parties have been elected to office. The great temperance cause has been advanced, and in thousands of ways in thousands of neighborhoods, the business, social and educational interests of the farmer, and of all his family, have been advanced. In no one year since its birth, 21 years ago, can the Grange point to so many and great practical results, and it comes to its years of manhood, its majority, flushed with success, and with bright hopes and prospects for its future.

PROMISING PRODUCTS.—It is difficult to say which of our products promises best just at this time, when all seem to have such a grand future. We were struck, however, with the greatness of the dried fruit industry when Bro. D. C. Feeley told us the other day of the hundreds of carloads which would be shipped this year from Santa Clara county, and of which we hope to have full statistics ere long. The aggregate is something immense. Bro. Feeley told also of his hopes in the shipment of fruits for winter sale at the East. It is well known that the cold-storage companies in the great Eastern cities keep Eastern grapes until late in the winter, and if they thus treat the superior grapes of California it seems almost certain that great quantities can be sold at good prices. As a test of this matter Bro. Feeley has sent a carload of the choice table grapes for the growth of which he is noted, and they will be put in cold storage and placed upon the Chicago market in February. We anticipate good results from the fact that the quality of the grapes on entrance to storage are so fine. Bro. Feeley has given us good opportunity to judge of this fact by the gift of a box of half a dozen assorted varieties, which we have greatly enjoyed, and for which we make due acknowledgment.

THE WORTHY MASTER'S ACKNOWLEDGMENTS.—Bro. Overhiser, W. M. California S. G., has an official card in the *Record-Union* expressing his warmest thanks and kindest wishes to the people of Sacramento and vicinity who so liberally responded to and assisted him in making up the display for the National Grange, to be placed on exhibition at Lansing, Mich., and for their liberal money donations to defray the expenses of the exhibit, every dollar of which, he assures them, shall be faithfully accounted for.

MR. AND MRS. BABCOCK of North Temescal celebrated the 25th anniversary of their marriage Nov. 9th. A number of their friends were present, and handsome gifts befitting the "Silver Wedding" were received. Mrs. Babcock is well known as the veteran Secretary of Temescal Grange, of which both her husband and herself were charter members in June, 1873.

HON. WM. JOHNSTON, W. P. M. of the State Grange, was in this city last week securing a large centrifugal pump for land-draining on his fine fruit farm at Richland, a dozen miles below Sacramento. Like many other fruit-growers, Brother Johnston has garnered well this year; and like a thrifty American who believes in his native land, is proving by his works his faith in its future.

A BASKET LUNCH.—Temescal Grange will have a basket lunch from 12 to 1 p. m. Saturday, Nov. 19th, and open the Grange at 1 o'clock for work in the third, and perhaps the fourth degree. It is the first experiment of the kind by this Grange. Echo will answer if it prove worthy of recommendation. A good attendance is hoped for.

BENNETT VALLEY GRANGE is planning a Christmas-tree social.

APPLE BLOSSOMS IN NOVEMBER.—Mr. Wm. Hofschneider of the firm of Jos. Winterburn & Co. steps into the editor's room this Wednesday morning, with a little twig just plucked from a Winter Greening tree on his place near Fruitvale. The twig bears several well-developed apple blossoms, and Mr. H. says the like beautiful promises cover the entire tree. No, we were not used to see such things in November when we lived back East, but the phenomenon cannot be called very rare in California. Our glorious climate sometimes beguiles the orchard.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

PEANUTS.—Haywards *Journal*: Tuesday we secured a peanut bush from the Bassett place. Mr. B. pulled it out of the ground, and underneath were the peanuts, clustered about the roots like potatoes. There were fully a hundred peanuts on the vine. The vines were planted in June, and have indeed made remarkable growth.

CARROTS.—From one acre Frank Mendall of Castro Valley realized 20 tons of carrots, which he readily disposed of at \$5 per ton, clear. \$100 an acre is not such a small sum about this time of year.

Amador.

DISTRICT ASSOCIATION.—Jackson *Ledger*, Nov. 12: The first annual meeting of the 26th Dist. Agric. Assoc'n, comprising the counties of Amador and Calaveras, was held in Ione last Monday. There was a very small attendance. W. P. Peek, the Jackson Director, was about the only one present from the outside. Between 20 and 30 votes were cast. From the financial statement presented it appears that, if all the money still outstanding in promises is paid, the Association will be about \$1000 in debt. Over \$2000 remains to be collected, of which \$1200 comes from the State, which will of course be paid. The track, etc., it was estimated cost between \$6000 and \$7000, of which between \$4000 and \$5000 was subscribed in Ione and vicinity. The gate receipts and privileges more than paid for the expenses attending the fair. \$2100 was paid in prizes for racing contests, and about \$300 in premiums for exhibits. U. S. Gregory and W. P. Peek were re-elected Directors. In the matter of building a pavilion, it was thought that an appeal for help from both counties would be in order. . . . After some discussion it was resolved to leave the appointment of committees and general management of the new enterprise in the hands of the Board of Directors.

Fresno.

A TWELVE-MILE VINEYARD.—Cal. A. P. telegram, Fresno, Nov. 12: The Cal. Land & Wine Co. has purchased a tract in this county six miles long and two wide and will plant it to raisin grapes. W. C. West, the Horticultural Commissioner of this district, has been chosen superintendent. Over 100 men will be employed. The contract for building a dwelling of 12 rooms and a house for the hands with 40 rooms has been let. The capital behind it is several millions.

Plumas.

AN INVINCIBLE BRONCO.—Quincy *National*: Geo. Herring started from Indian valley for Gibsonville, in a cart drawn by a wild mustang. When he came to the soda springs he stopped to get a drink, stumbled against the mustang and frightened it so that it started to run, with George hanging to the lines. Horse, cart and driver went over the grade and down the hill 50 feet, bringing up against some bushes. He got the horse and cart back on the grade, when the horse fell and was unable to rise. George tied the halter-strap to the cart, and proceeded to unharness. As soon as the harness was off, the horse struggled to his feet and went off the grade again, dragging the cart by the halter-strap. George managed to get the horse back on the grade again, leaving the cart, and attempted to ride back, but was ignominiously bucked off twice in about a minute, and compelled to lead the horse to Shoo-fly, where he got a saddle and attempted to resume his journey. The bronco again bucked him off; his foot hung in the stirrup and the horse ran over him a couple of times and kicked his clothes nearly off. George came to the conclusion that a freight wagon was the safest mode of traveling, so he came to Quincy with Mr. McCutcheon, arriving a little sore and with his clothes badly damaged.

San Benito.

PUMPKINS FOR COWS.—Free *Lance*: Many of our dairymen are feeding pumpkins to their cows, and report the result very satisfactory. At \$3.50 a ton, pumpkins are said to be more economical for cows than bran, and the result in the quantity and quality of milk is much better.

GRAPES.—The finest box of grapes we have ever seen was a box presented us by Wm. Palm-tag. The grapes were grown on his vineyard in the Gabilan foothills. The clusters were remarkably large, full and symmetrical. There were three varieties, Muscat, Flaming Tokay, and Rose of Peru. We do not believe that a better box of grapes can be furnished by any vineyard in the State.

San Bernardino.

HEAVY ORANGE CROP.—Riverside *Press*: Cole & Suman, proprietors and manufacturers of the patent orange-tree props, are working night and day and are still some 20,000 behind in supplying their orders. This indicates an immense crop this year, as the trees are overloaded to a much greater degree than last year to require such an increased demand for props.

San Diego.

SAMPLES FROM SAN JACINTO.—Register, Nov. 3: Wednesday morning we inspected the fruit, vegetables, etc., that were being packed in boxes to be shipped to San Diego for exhibition. The first that met our gaze was a small-sized sweet potato, five feet three inches in

length, and a pumpkin weighing 110 pounds. Fine peanuts, beets, Irish potatoes, corn, watermelons, muskmelons, peaches, onions and various other products of the valley were being shipped. This is the right move, and it will show the people of San Diego and the incoming tide of immigration what can be raised to perfection in this beautiful valley. On its fertile plains are successfully and profitably raised wheat, barley and all other cereals produced throughout the State, oranges, figs, apricots, nectarines, plums, almonds, walnuts and vines of all varieties.

San Luis Obispo.

BIGGEST IN THE U. S.—*Chronicle* dispatch, Nov. 11: J. D. Roberts of Arroyo Grande today received a check for \$150 from W. H. Maule of Philadelphia as a premium for the largest specimens of onions and beets raised in the U. S. the present season. The largest onion weighed 5 pounds 2½ ounces. Mr. Roberts last season produced a pumpkin weighing 274 pounds and a beet weighing 100 pounds.

San Joaquin.

LODI ALFALFA.—*Cyclone*, Nov. 10: Geo. F. Cluff three weeks ago last Saturday sowed a small plot at his place on the Pope tract in alfalfa seed. This was irrigated for two weeks, but during the last seven days, there being no wind, and the irrigating being done by means of a windmill, the alfalfa received no water. This morning Mr. Cluff pulled and brought to town several bunches of the clover. It was found that the root was 12 inches long, and the growth above ground 8 inches, making the growth from the seed in three weeks 20 inches.

LARGE ALMOND TREES.—Wm. Langhorst of this city has three large almond trees growing on his place. One of them measures 58 inches in circumference two feet above the ground and is 30 feet high. The other two measure over 40 inches.

Santa Cruz.

THE WATSONVILLE DRIER.—*Courier-Item*: By the kindness of the secretary, Mr. A. A. Morey, we are able to present a synopsis of the operations of the company for the present season. Amount of fruit purchased: Apricots, 40 tons; peaches, 25 tons; prunes, 30 tons; apples, 195 tons or 8600 boxes, for which was paid: Apricots, 1 to 1½ cts. @ lb.; peaches, 1 to 1½ cts.; French prunes, 2 cts.; German prunes, 1½ to 1½ cts.; apples, 20 to 30 cts. per box. Employed 30 to 45 hands; weekly pay-roll, \$260. The experiment has proved satisfactory to stockholders. The fruit found ready market at good prices. The capacity will be increased three times for the coming season's work, with a capacity of 25 to 30 tons of green fruit per day, and will employ about 100 hands.

FLAX-MILL PROPOSED.—*Pajaronian*: Mr. Hatfield, proprietor of a flax-mill near Menlo Park, was in Watsonville Wednesday. He came to the valley seeking a new site for his mill, and will locate here if farmers will agree to put 600 or more acres in flax each year. He will pay \$10 per ton for the flax cut green and unbaled, and will furnish the seed. His factory will employ 25 men. He felt much encouraged by his talks with the farmers, and we trust he will move his works to this valley.

Solano.

EDITORS PRESS.—The weather has been damp and cloudy, and signs of rain plenty, but now the sun shines brightly and all immediate prospects of a shower have vanished. Dust is abundant everywhere, and there is more or less sickness in the shape of colds, sore throats and light bilious attacks, which always occur at the change of the seasons. There have been quite a number of cases of diphtheria in Suisun and Fairfield, some fatal. . . . Mr. J. W. Gates picked some white freestone peaches last week which grew on a seedling tree. They were of fair size, and would be a good variety to bud from for late peaches. Everybody has been busy since fruit was done, with housing boxes and trays and getting ready for the rains. Some have commenced pressing. Pruning vines now will make them start early, which is not desirable where there is any danger of frost. There has been a great deal of building done around here this summer and fall, and carpenters have been in demand. A pamphlet descriptive of Solano county has been issued containing 84 pages. It is well printed, has some good views of buildings and natural scenery, and contains a large amount of valuable information. Persons wishing a copy can get it by applying soon to Platt & Sons, Vacaville.—G., Nov. 14th.

SHORT BITS.—Dixon *Tribune*, Nov. 12: Probably before this number of the *Tribune* reaches all of our subscribers, Chas. Martell of Vacaville will begin the shipment of oranges. . . . The weather is getting so cool and damp that it is difficult to cure the second crop of raisins by the sun-drying process. . . . Summer-fallowed grain is about all sown and farmers are anxiously waiting for rain.

Tulare.

LEMOORE LOCALS.—*Visalia Times*, Nov. 10: No frost yet. There is still a good supply of grapes, apples and pears in the market and a few peaches. . . . Game is plentiful and our young men are having much sport killing geese, ducks, swans and cranes. . . . The farmers are busily engaged in seeding their lands. There will be a large acreage sowed in this section this season. Large quantities of seed wheat have been hauled from here to the West Side in the last few weeks. Thousands of acres will be put in wheat in the Summit lake and Huron sections this year which will force the sheep men to hunt

pastures new. . . . Mr. Newton of Pomona here a few days since and bought two carloads of horses which he intends to ship to Los Angeles county. He says that the horses in this section of the State are superior to those in the southern counties.

Yuba.

FOOTHILL POTATOES.—Marysville *Appeal*, Nov. 11: A search yesterday at all the stands and stores where potatoes are sold, revealed not a single sack from the foothills east of this city. "Mountain potatoes," said one dealer, "are certainly superior to the valley-grown potatoes. All that are brought to town are easily sold by the producer." Another dealer said: "We have potatoes from Dayton, Nevada, on which a heavy freight is paid, and they are not as good as can be grown in our foothills, but they can be purchased in quantities, and that is the reason we handle them. It is surprising that more attention is not given to raising potatoes by foothill land-owners." The other day a man named Campbell hauled into Red Bluff 400 sacks of mountain potatoes which he raised on two acres of land. There was over 40,000 pounds in the lot, for which he received \$750 from C. R. Mahew. No doubt a large product of potatoes will eventually be made by the foothill region. The lack of cheap transportation is at present one of the drawbacks to the cultivation of the tubers in the hills.

GLANDERS STAMPED OUT.—A Marysville township farmer told an *Appeal* reporter yesterday that the report that glanders was assuming an alarming shape out there is without foundation. There have been two or three cases, but all trace of their existence has been destroyed.

NEVADA.

FALL ALFALFA.—*Silver State*: Commissioner Thies of Lovelock says ranchers are busy harvesting the third crop of alfalfa. The crop on his ranch is about three feet tall, but not so heavy as the first crop. The first crop was cut in the latter part of June, the second in August, and he started mowing the third crop on the 22d of September. The three crops on his ranch average over six tons to the acre.

OREGON.

GRAPE TRANSFORMATION.—Rogue River *Courier*: Dr. McFadden has brought us a cluster of grapes weighing 2½ lbs., which are somewhat a curiosity. Seven years ago the vine was planted a "White Sweetwater." For three years the fruit was "White Sweetwater," and then came a change. In the fourth year the grapes took a reddish tinge, and each subsequent year changed in color and contour until now they resemble somewhat the "Isabella." The flavor also improved, and Dr. McFadden now regards the changed grape as about the best of his varieties. A large number of cuttings have been taken from the vine and a new name is to be given them.

DEATH OF MRS. JAMES M. COSTIGAN.—Mrs. Kate A. Costigan, wife of James M. Costigan, died suddenly at the family residence, 1305 Franklin street, of neuralgia of the heart. Mrs. Costigan was a native of New York, and 39 years of age. She had lived in Oakland and Alameda county for many years, and by her many noble traits of character endeared herself to a large number of friends, who will join with her family in mourning her death. The funeral services were held on Sunday afternoon at 2 o'clock, from the residence of the family.—*Oakland Tribune*, Nov. 11th.

Mrs. Costigan was for a time a member of Eden Grange. We well remember that she with willing heart and hand assisted the Temescal sisters at the Harvest Feasts. Her funeral was largely attended, and many friends mourn her loss.

NAPA NURSERY.—Leonard Coates issues his annual price list and catalogue with the famous Centennial cherry still occupying the place of honor. Mr. Coates' list contains several new seedlings of great promise which are worthy the attention of planters, and his general collection is good. An ornamental card with tested remedies for insects is calculated to do much good and is in handy form for preservation for reference.

THE Shorthorn auction, advertised for December 7th at the Sacramento fair grounds, will doubtless draw together many admirers of the staunch old Durham stock. Sixty head of high-bred cattle from R. M. Dunlap's Galesburg (Ill.) farm are to be sold, and Col. Judy of Tallula is to be the auctioneer.

FANCHER CREEK NURSERY.—F. Roeding, proprietor of the Fancher Creek Nursery, Fresno, issues his wholesale catalogue for the current season. It covers a large selection of deciduous fruits, and is especially full in the list of figs, nuts, etc.

THE camellias in Gills' nurseries on Twenty-eighth street in Oakland are wonderfully luxuriant growers and prolific bearers. His conservatory is 16 feet in height, and he was obliged to raise the roof two feet last season in order to give them room to rise.

WHO SENT IT?—We have received a postal note from Selma, Fresno county, without the name of the sender. Will he do us the favor to send name and amount of order?

Thanksgiving.

Tho' shrill-voiced winds go bawling by,
And sober skies look grim and murky,
Men keep the feast of pumpkin pie,
And slay the pompous bird of Turkey.
The crop-haired saints of Plymouth Rock,
Exiled the Mayflower's sacred wood in,
At every other feast could mock,
But—they were human—loved their puddin';
With sermon, prayer, and psalmody they rendered
thanks in meeting,
Then homeward solemnly they trudged, and rendered
thanks by eating.

Far north of Massachusetts Bay,
And westward ever wide and wider,
Has spread the honor of the day
And flowed its hospitable cider.
For all his roaming prodigals
The fatted calf the father slaughters;
The smiling mother round her calls
Her lusty sons and lissome daughters;
Love's beacon, lighted from old days, their home-
ward steps is leading,
And some, whom life has swindled, are not loath to
find good feeding.

Happy whose hearth is spared by fate,
Whose calmer pulses do not tingle,
As musing by his lonely grate,
He minds him of a dearer ingle,
Around whose fires with glowing hearts
His blood and name were wont to cluster—
Ah, well, that kind of wound still smarts
Beneath the balm of many a luster!
Shall we give thanks that strangers sit within our
hallowed places,
Or praise that now the dust of death enshrouds the
dear lost faces?

Go buy a turkey for the poor,
And make an end of silly questions;
Thank God, for once, that you are sure
To scape Thanksgiving indigestions,
Tho' dark November knows no ruth
For flower or song the frolic May had—
Yet for the golden hopes of youth,
As for the memories of the grayhead,
For the long peace of all the dead, for the brief
days of all men living,
May even wandering, homeless hearts make glad
Thanksgiving!

Miss Lucinda's Brooch.

A Thanksgiving Story.

It was the day before Thanksgiving. In the kitchen of the Graham farmhouse great preparations were going on for tomorrow's feast, for all the Grahams and their relatives, and many of their neighbors, were coming to eat Thanksgiving dinner there, and Aunt Susan, as everybody called Mrs. Graham, was one of those hospitable women who can never do enough for her visitors. Already on the pantry shelves great loaves of cake were ranged, sending out tempting odors to tantalize the children who kept hanging about the door for a glimpse of the good things. And pies, too, cranberry and mince, and doughnuts looking as if they were fairly aching to be eaten, and goodness knows there were mouths aching to eat them. "Oh, my!" cried Johnny more than once, "don't they look nice? I wish it was tomorrow now, don't you, Ruth? It's an awful long time to wait. I don't mean to eat another thing till tomorrow."

"Yes, they do look nice," said Ruth. "It took me all yesterday forenoon to stone raisins for the cakes, and I didn't eat hardly any, either. Aunt Lucinda says she knows she never made nicer cakes in all her life. I don't know which looks nicest, the cakes or the pies. I guess they are both good."

"I'd like to try 'em, anyway," said Johnny. "An' I tell you what, the turkey will be just boss, for he's fat as butter."

"It seems 'most wicked to kill him," said tender-hearted little Ruth. "I don't b'lieve he'd have had such an appetite if he'd only known what was going to be done with him."

"But turkeys was made to eat," said Johnny, whose appetite did away with all tender qualms of conscience.

Aunt Lucinda was sifting pumpkin for pies. It had been stewed the day before, but the pies had not been baked because Mrs. Graham held firmly to the belief that pumpkin pies were never at their best three days after making. "You make them to-day, an' I'll tend to the rest o' the work," she said. "Use all the eggs an' cream you want, Lucindy. I never knew anybody who could beat you makin' pumpkin pies. You've got jest the knack, somehow. I remember how Jack Stansbury used to say he'd like to live on 'em. Poor Jack! I wonder what's become of him."

Lucinda was thinking of Jack, as she forced the fragrant, yellow pumpkin through the colender. Jack had been her lover, years ago. Everybody had thought "it would be a match." She had thought so, and so had Jack. But often in this world things go wrong—or anyway, different from what we plan or expect—and a lover's quarrel had parted the paths which

should have merged into each other, and Jack had gone away, and for years nothing had been heard of him. He might be dead, Lucinda thought, and I am quite sure a tear fell into the pumpkin, and perhaps it was that which gave the pies such a rich, delicious flavor on the morrow. Who knows?

Like most lovers' quarrels, this one had been about nothing in particular. She often told herself that she had been most to blame. But she had been too proud—or stubborn—to say that when Jack and she talked the matter over, and so they separated, loving each other the same as ever, and he had seemed to drop out of existence. Poor Lucinda! Her heart was sore yet with its old sorrow, but she had borne it bravely and hidden it from curious eyes by a pleasant face. "If she is an old maid," the neighbors said, "she's as handsome as most girls. It was allus nat'ral for the Grahams to keep their good looks."

Busy with thoughts of the past, she sifted her pumpkin, and beat eggs and cream together and made the savory filling for her pies. "There!" she said, as the clock struck noon, "they're all ready for the oven. If you're going to see to the baking of them, I'll go and fix things in the parlor, Susan."

She went up to her room to wash her hands and comb her hair before she began the task of "fixing things" in the "square-room," as good old Deacon Graham called it. As she stood before the glass she discovered that her brooch was gone.

"Dear me! what if I've lost it?" she exclaimed. "It must be somewhere about the kitchen. I'll run right down and see."

Lucinda's brooch was an heirloom in the Graham family. It was an old-fashioned thing of gold that may have come over in the Mayflower. She had heard grandmother Graham say that it was old when it came to her. Because of its age, and because it had been given to her by her mother in her last sickness, Lucinda prized it very much. She always wore it. "She felt lost without it," she said.

The brooch was not to be found in the kitchen. The house was searched thoroughly. But in vain.

"Dear me!" said Lucinda, with tears in her eyes, "what can have become of it? I haven't been out of the yard to-day, and I know I had it on when I washed the breakfast dishes. I must have dropped it, and somebody stole it. Maybe the Ruggles children found it. They were here, and two or three others, I remember. I wish you'd run over and inquire of all of them, Johnny. I'll give you a handful of doughnuts if you will."

"It's a bargain," declared Johnny, and set out at once on his errand. But he came back without the brooch. Instead he brought a bloody nose.

"I told that Bill Ruggles I'd bet he had got it, an' he up an' thumped me," explained Johnny. "I'd a licked him, only I didn't feel like it, bein' so near Thanksgiving."

Lucinda couldn't sleep that night, for worrying over her lost brooch. It was almost like losing a friend. Because she had had it so long, and because of the fond old memories clinging about it, it had become a part of her life.

Thanksgiving day came, cool and bright, with a crisp, bracing air that brought a soft color into Lucinda's cheeks as she gathered white artemesias from the garden to brighten the parlor. Susan, as she looked out of the kitchen window, thought that her sister-in-law was as good-looking, in spite of her 35 years, as any of the girls, and then sighed a little over the romance in the other's life. Though Lucinda was always cheerful and seemingly contented, her brother's wife knew that her heart hungered for a home of its own. Every woman's does. It is natural that it should.

When Lucinda dressed herself to receive the Thanksgiving guests, she had to make an artemesia with a cluster of its green leaves answer for a brooch. The white flower, against the dark maroon of her dress, showed to such effect that she wondered if folks wouldn't think it almost too gay for a woman of 35. But before she had quite decided the matter in her own mind, she heard a wagon drive up, and looked out of the window to see cousin Nathan's family alighting at the gate. And with them was a stranger. He had already alighted and stood with his back to the house. Something in the broad shoulders and the peculiar carriage of the head struck Lucinda as familiar.

"Jack used to look something like that," she said, with a sigh. Then the man turned to shake hands with Deacon Graham, who had rushed out to greet his visitors with a face half-shaven, and she saw it was Jack himself! Changed, of course, but not so much so that she did not recognize him the instant she saw his face.

The roses faded out of her cheeks, and she had to sit down for a minute to recover herself. Jack was alive, and had come back! What had he come here for?

"Don't be foolish," she said to herself. "It's quite natural that he should come here, for cousin Nathan's wife is his cousin, and if he came to visit them, they couldn't leave him at home while they came here to spend Thanksgiving. Of course not. He comes in a friendly way, and why shouldn't he? So don't be silly, Lucinda Graham, but do your best to enjoy yourself and help other folks to have a pleasant time."

But she couldn't keep her heart from fluttering strangely as she went downstairs. In "the entry" she met cousin Nathan's wife.

"I hope you won't be offended, Lucindy,"

whispered that cheery little woman, as she kissed the other, "but Jack's come back, and I took the liberty to bring him along."

"You did quite right," answered Lucinda, and her cheeks were quite rosy now, for Jack came in, and she went up to meet him with a frank smile and an outstretched hand.

"I am glad to see you," she said. "We were talking about you yesterday, Susan and I, and wondering if you were living. It's been a long time since we have heard from you."

"You haven't grown a year older in looks," he said, and his eyes were full of a look that made her eyes falter and droop. Was he going to hold her hand all day? And so many looking on, too!

"My! that feller they call Jack keeps a lookin' at aunt 'Cindy just as we look at the pies an' things," said Ruth to Johnny, by and by.

"Looks as if he wanted to eat her up, then," chuckled Johnny, with a long, long sniff of the delightfully tantalizing odors coming from the kitchen. "Wonder if he ain't the beau she used to have ever so many years ago? I heard ma an' aunt Desire a whisperin' about aunt 'Cindy an' somebody she thought lots of, a little while ago, an' I'll bet that's him. Oh, my! Wouldn't it be jolly if she'd get married, an' they'd have a bang-up big wedding? I don't s'pose Thanksgiving's anythin' side o' wedding's. Wonder if they have turkey an' such things?"

Jack and Lucinda had no opportunity to talk over old times before dinner. She was busy with the guests and the arrangement of the tables, and he was busy renewing old acquaintances. But his eyes would follow the woman he had loved.

"Dinner's ready," shouted Johnny, by-and-by, and the deacon said the company might as well "pair off," and in the pairing off Jack was fortunate enough to secure Lucinda, and he took her in to dinner with such a radiant look on his face that cousin Nathan's wife nodded with great satisfaction to Susan, and that worthy woman nudged her husband, and told him to look at Jack an' Cindy, and he whispered back that they made a good-lookin' couple, an' he hoped—but the bustle drowned the rest of the sentence, whatever it was. Lucinda felt that everybody was watching them, and her cheeks got red as roses, and Jack, who was utterly oblivious of any one else, at least two-thirds of the time, thought she had grown handsomer as she had grown older, and felt an insane desire to throw his arms around her and tell her so, then and there, and ask her if the past couldn't be forgotten, or some of it, at least, and the divided paths be made to run together again.

"Why, Lucinda, what's become of your brooch?" spoke up cousin Nathan's wife, all at once, across the table. "I never saw you without it on before."

"I lost it yesterday," answered Lucinda.

"I'd give anything if I could find it."

Just then the pumpkin pies were passed.

"They're good, I know," said Susan, "for Lucindy made 'em, an' she can't be beat at pumpkin pies. You remember her pies, don't you, Jack?"

"Yes, I do," answered Jack. And then he took a piece, and whispered to Lucinda that he wondered if it would taste the same as it used to. And she blushed, and Susan winked at cousin Nathan's wife, and cousin Nathan's wife nodded back and the wink and the nod were as comprehensive and intelligible to the two women as a dozen sentences of spoken words would have been.

All at once Jack put his napkin to his mouth, and his eyes twinkled as he removed it.

At last dinner was over.

"Don't you want to take a walk?" asked Jack of Lucinda. "I want to look the place over, it's been so long since I've been here."

"Of course she does," said Susan, who had heard the question. "It'll do her good to get out o' the house, fer she's been tied up in the kitchen the last four days. Cousin Nathan's wife and I'll see to the work, so you jest bundle up an' git a mouthful o' fresh air, Lucinda."

The memory of other walks came back to Lucinda as they went out into the cool air of that November day. She did not feel like saying much. Neither did Jack, just then, so they walked along the road where the maples had scattered their gold, thinking much, but saying little.

At last—suddenly—

"I think you said you'd give anything to find your brooch again, Lucinda?"

"Yes, I would," answered Lucinda.

"Then you've got to be as good as your word," cried Jack, "for here it is."

"Where did you find it?" cried Lucinda in delight. "We hunted high and low for it."

"I found it in my piece of pumpkin pie," answered Jack. "I'm going to ask you to give me yourself, as reward. You won't refuse, will you? Let by-gones be by-gones. I was a fool, in the old days, and I knew it, all the time, but I wouldn't own it. Nathan's wife told me she knew you didn't hold such a terrible grudge against me, for all I used you so. How is it, Lucinda? Can you overlook the past, and make me happy by being my wife? You know what you said about the brooch, and I always took you to be a woman of your word."

He did not need a spoken answer to his pleading. He had it in her eyes.

"It doesn't seem possible that I'm going to have you after all the long years since we parted," he said, as they came up the steps from their walk. "Am I awake, Lucinda?"

"I think so," she said, with a happy, little laugh. "I don't remember that you ever had the reputation of walking in your sleep."

"I used to dream of kissing some one," he said, and then he kissed her lips, just as Johnny and another lad or two came around the corner.

"Oh, that boy!" cried Lucinda. "He's sure to go and tell."

"Let him!" said Jack rapturously. "I feel just like telling it myself."

"Don't be ridiculous—you're too old for that," said Lucinda, and they went in.

Johnny had to tell. He couldn't help it.

"It's all right, Susan," cried Nathan's wife in delight, when Johnny rushed into the kitchen with the news. "I told him I knew it would be."

"Dear Lucindy!" said Susan, wiping her eyes. "I'm so glad for her sake. This has been a Thanksgiving day, indeed, for it's brought two hearts together that never ought to have been separated. I wonder if they'll be married right away?"

"Will there be a wedding, ma?" cried Johnny.

"My sakes!" exclaimed his mother, "I forgot all about the boy. Who said anything about wedding's? What ideas young 'uns git into their heads, don't they?"

"You said you wondered if they'd be married right away, an' I know you meant Aunt 'Cindy an' that man Jack," said Johnny.

"You can't fool me!"

At Christmas, much to Johnny's delight, there was a wedding. He voted it "worth a dozen Thanksgivings," and Jack told Lucinda that it was the pleasantest party he ever attended.

"Why shouldn't it be, since it's our own wedding?" said she.

"Yes, and we've been waiting for it fifteen years," said Jack. "But better late than never!"—Eben E. Rexford.

Thanksgiving With the Poets.

All gracious and tender associations cluster around our Thanksgiving Day. Home loves and joys seem never quite so warm, so bright, so dear, as then. Never does the fabric of our national institutions seem so lofty in itself, so beneficent in its shelter. And never are the heroism, the devotion, the patience that secured its beginning, and therefore its being, seen more plainly.

The day, in memory, and realization and hope, is full of inspirations. It is no wonder that poets should sing of it very tenderly, that they should reproduce the setting of its cheer, should voice the spirit of the day, or should give us hymns that at hearth or altar may well be blending with our thoughts in that service of prayer and praise and penitence the soul holds in its silences before God.

Shall we not listen for a little while to what the poets are saying? At other seasons—at the Christmas-tide, when the New Year dawned, and on Easter morning—we have been glad to listen. We may hear verse as sweet, as melodious, as suggestive, now.

We shall hear dear Alice Cary, one of the sweetest of all our singers and one of the rarest of souls—with her noble womanhood, her great, true, loving heart, her strong, aspiring faith—in a strain very characteristic of her, tell her "Thanksgiving":

"For the sharp conflicts I have had with sin, . . .

For the divine award
Of strength that helps me up the heavy heights
Of mortal sorrow, where, through tears forlorn,
My eyes get glimpses of the authentic lights

Of love's eternal morn

"I thank thee for my common blessings, still
Rained through thy will
Upon my head. . . .

And I would make thanksgiving
For the sweet, double living.

That gives the pleasures that have passed away
The sweetness and the sunshine of to-day."

She paints us many a picture of

"The good old-fashioned homestead,
With its bounteous table spread!"

"And when the winds moan wildly,
When the woods are bare and brown,
And when the swallow's clay-built nest
From the rafters crumbles down;
When all the untrod garden-paths
Are heaped with frozen leaves,
And icicles, like silver spikes,
Are set along the eaves;

Then, when the book from the shelf is brought,
And the firelights shine and play,
In the good old-fashioned homestead,
Is the farmer's holiday."

We may hear Phoebe Cary calling:

"O men! grown sick with toil and care,
Leave for awhile the crowded mart;
O women! sinking with despair,
Weary of limb and faint of heart—
Forget your cares to-day, and come
As children back to childhood's home.

"Go, sit beside the hearth again,
Whose circle once was glad and gay;
And if from out the precious chain
Some shining links have dropped away,
Then guard with tenderer heart and hand
The remnant of your household band.

"Draw near the board with plenty spread,
And if in the accustomed place
You see the father's reverent head
Or mother's patient, loving face,
Whate'er your life may have of ill,
Thank God that these are left you still."

We shall hear Will Carleton:

"The God above! what can we say
Or do, with eyes so dim,

To make this Thursday Sabbath day
Thanksgiving Day to Him?
What love, though grace and beauty clad,
Can thrills to Him impart,
Who all the love has always had
Of every brain-fed heart?
What can we sing to One whose verse
Eternal song unbars?
What give to Him whose cloud-fringed purse
Is crammed with gleaming stars?"

We shall hear one saying:

"Come one, come all! Come home, come home!
From desert sands, from ocean foam,
Beneath the honored home roof-tree,
Join hands and hearts, and you shall see
Sweet thoughts, pure love, and honest living
Flow from the keeper of Thanksgiving."

"Tis then the dead become most dear;
'Tis then the living bring most cheer;
'Tis then the best within us seems
A spring toward our youthful dreams,
And life looks really worth the living
In the old homestead at Thanksgiving."

And another:

"The Pilgrim seed has taken root,
Despite the land so hard and gray,
And, flowered to this Thanksgiving day,
Shall yet bring forth abundant fruit."

And "H. H.":

"Despise their narrow lives, who will!
Pity their poverty, who dare!
Their lives knew joys, their lives wore crowns
We do not know, we cannot wear."

The influences of the day have won from
William Dean Howells these litany-like lines:

"Lord, for the erring thought
Not until evil wrought;
Lord, for the wicked will,
Betrayed and baffled still;
From the heart from itself kept—
Our thanksgiving accept."

"For ignorant hopes that were
Broken to our blind prayer;
For pain, death, sorrow, sent
Unto our chastisement,
For all loss of seeming good—
Quicken our gratitude."

We have one Thanksgiving idyl—J. G. Holland's "Bitter-sweet." It contains this hymn:

"For summer's bloom and autumn's blight,
For blending wheat and blasted maize,
For health and sickness, Lord of light,
And Lord of darkness hear our praise."

"We trace to thee our joys and woes—
To thee of causes still the cause;
We thank thee that thy hand bestows,
We bless thee that thy love withdraws."

"We bring no sorrows to thy throne;
We come to thee with no complaint;
In providence thy will is done,
And that is sacred to the saint."

"Here on this blest Thanksgiving night,
We raise to thee our grateful voice;
For what thou doest, Lord, is right;
And, thus believing, we rejoice."

And yet another hymn we have, not indeed
written for Thanksgiving Day, but given us at
the end of "The Poet's Journal" of Bayard
Taylor, as Edith sang

"To Ernest's heart his own thanksgiving psalm."

It seems to me there can hardly be a lovelier
one—one in which a sincerer and more submis-
sive thankfulness beats, or one more suited to
our Thanksgiving:

"Thou who sendest sun and rain,
Thou who sendest bliss and pain,
Good with bounteous hand bestowing,
Evil for thy will allowing,
Though thy ways we cannot see,
All is just that comes from thee."

"In the peace of hearts at rest,
In the child at mother's breast,
In the lives that now surround us,
In the deaths that sorely wound us,
Though we may not understand,
Father, we behold thy hand."

"Hear the happy hymn we raise;
Take the love which is thy praise;
Give content in each condition,
Bend our hearts in sweet submission;
And thy trusting children prove
Worthy of the Father's love."

The poet Whittier's songs of glad content
and psalms of trustful gratitude, his harvest
praises and household melodies, are held in all
our hearts too deeply to need repetition. He
notes how

"From our daily need,
The joy of simple faith is born;
And he who smites the summer weed
May trust Thee for the autumn corn."

That which he wrote a score of years ago is
as true and tuneful now:

"Rich gift of God! a year of time!
What pomp of rise and set of day,
What hues wherewith our Northern clime
Makes autumn's dropping woodlands gay!
What airs outblown from ferny dells,
And clover bloom and sweet-briar smells,
What songs of brooks and birds, what fruits and
flowers,
Green woods and moonlit snows, have, in its
round, been ours!"

And Lucy Larcom, hardly less New En-
gland's poet than Whittier's self, with her love
for its traditions and its mountains, shores and
rivers, her deep devotion—upspringing and out-
gushing in the lyrics which almost have wings
to upbear our souls, too—has many a heart
song and trustful carol we might linger over.
But in the faith told in two stanzas of her
"Praying Always," and in such belief alone, on
this, our Thanksgiving day, and through com-
mon days as well, we rest:

"And when arise serene days,
Whose air is praise,
The song of thankfulness we raise
On high of shall be,

Not that to some vast All we bend the knee,
But that each soul has one sure friend in Thee.

"Soul of our souls, with boundless cheer
Forever near,
Our being's breath and atmosphere,
The world seems bleak
Only when shelter in drear self we seek:
The joy of life is man to Thee may speak!"
—Olive E. Dana.

THE GREEN SEA OF THE CORAL ISLAND.—Prof.
W. K. Brooks, who accompanied the scientific
expedition sent to the Bahamas by the Johns
Hopkins University, writes as follows in a letter
to a Baltimore newspaper: Our pilot steered us
safely through the crooked inlet between Whale
Key and No-Name Key into the inner sound.
Here we saw for the first time that intensely
green sea which has been so frequently men-
tioned by voyagers among the coral islands.
The vivid color soon became more familiar, but
never lost its novelty, and it still holds its place
as the most brilliant and characteristic feature
of this highly colored landscape. The water is
so perfectly pure and clear that small objects,
like shells and starfish, are visible on the pure
white coral sand at a depth of 50 or 60 feet,
and the sunlight which is reflected from the
white bottom gives to the water a vivid green
luster which is totally unlike anything in our
familiar conception of water. The whole sur-
face of the sound seemed to be illumined by an
intense green phosphorescent light, and it looked
more like the surface of a gigantic polished
crystal of beryl than water. The sky was per-
fectly clear and cloudless, and overhead it was
a deep blue color, but near the horizon the
blue was so completely eclipsed by the vivid
green of the water that the complementary
color was brought out and the blue was changed
to a lurid pink as intense as that of a Novem-
ber sunset. The white foam which drifted by
the vessel on the green water appeared as red
as carmine, and I afterward found in a voyage
through the sounds in a white schooner that the
sides of the vessel seemed to have a thin coat of
rose-colored paint when seen over the rail
against the brilliant green.—*Swiss Cross.*

YOUNG FOLKS' COLUMN.

Pete's Thanksgiving Turkey.

[Written for the RURAL PRESS BY MARTHA T. TYLER.]

Pete had never had so much as a bite of tur-
key in all the 12 years of his life! That may
seem a strange thing to you, my bright-eyed,
rosy-cheeked, plump little well-dressed friends,
but I dare say there are many boys and girls in
the heart of every great city of whom the same
might be told, and it is well that you, my dears,
should sometimes think of this.

"What!" you exclaim, "not a mouthful of
turkey, or custard or jelly on Thanksgiving or
Christmas day?"

Not one. Pete had seen turkeys hanging up
in the market, to be sure, but of custard or
jelly he had no idea whatever. He knew cake.
Oh, yes, he had tasted cookies, and when he
had a nickel to spare he would invest it in
a square of gingerbread. To his experience
there was nothing else in this world so good as
warm gingerbread! Not that he could ever
really afford to buy it, but sometimes a puff of
hot air would rise from the underground
kitchen of a neighboring pastry shop, contain-
ing suggestions of fresh gingerbread and
various delicacies, and then poor Pete would
be tempted to part with his nickel. Most of
his money, however, he saved for his mother
at home. "What a wretched home it was, and
how hard a time he had to keep his mother
alive! She earned a little mite occasionally
from the sale of her flowers—they were paper
flowers, quite as beautiful, Pete declared,
as the real ones, only they had no
fragrance; but she had a cough and was
frequently too ill to exert herself.

Pete kept a peanut stand. At any time of
the day, and often until late in the evening,
he might have been seen there, a thin little figure
with large blue eyes and a pale face, pacing to
and fro before his roasting apparatus, and call-
ing out now and again in a shrill, treble voice,
"Hot roasted peanuts! hot roasted peanuts!"
to the passers-by. It never made much differ-
ence to him about the weather; he was a brave
lad, and when it rained he would move his
"roaster" under the awning of the fruit-stall
and continue his march and his cry just as en-
ergetically and hopefully as he did on sunshiny
days.

Pete had a friend and an enemy, both of whom
are concerned in this story. The first was a
beautiful little girl who lived in the large house
opposite. Many a time when it was damp and
cheerless, he would watch her pretty face smiling
out at him from the window and imagine the
sight of it made him feel warmer and more com-
fortable. Then, when it was pleasant, she was
certain to come over two or three times a week
for peanuts. Pete, to do him justice, cared
more for her than for her money. She would
talk to him so sweetly, and was always kind
and sympathetic. Once he told her about his
mother. How sorry she was! and then she had
wanted to pay him double for her peanuts, but
he would not agree to that, for you see he was
an honest little gentleman at heart, despite

his shabby clothes and his rather queer
English. His little friend said her name was
Angie. Pete did not know, but he thought it
might mean "Angel." "It ort to, anyways,"
he said; "there's no dif'rence, 'cept she ain't
got no wings and is littler." He remembered
to have seen pictures of angels, and he thought
they always smiled as she did.

Tom Sanders was Pete's enemy. He was a
great, rough boy, with a loud laugh, very fond
of practical jokes, and especially delighted
whenever he could victimize Pete, who was not
big enough, nor strong enough, to fight him.
Tom, perhaps, did not intend to be cruel, but
he was selfish—you understand—and thought
only of his fun. He called Pete "Skinny-
bones."

It was the day before Thanksgiving. Pete
had been wishing he could get a turkey for his
mother, but the fruitman said one would cost a
small fortune—from \$3 to \$5! "Turkeys is
high these times," added that authority, as he
arranged some celery in an artistic heap; "but
I'll tell you what I'll do, Pete. Yer a good
chap, and I don't mind losing ten cents on yer
once a year. Yer may take one of them
thick bunches home with yer to-night, if
yer like." Pete was very grateful for the
offer, but Tom Sanders, who had been
listening to the conversation, gave a scornful
laugh, for Tom's father was a poultry dealer,
and of course he would have turkey for his
Thanksgiving dinner, and celery too. But
wouldn't he play a fine joke on Skinny-
bones! It made him die laughing to
think of it. Late in the afternoon the good-
natured fruit-vender called out to Pete:
"Here, young man, just take this box of things
up to No. 421, on the next block, and yer shall
have some apples with yer celery." So Pete,
box under arm, trotted up the street, deposited
his burden at the back door of No. 421, and
hurried back to his accustomed haunt.

Heigh ho! what was that lying on his stand?
Some one had left a turkey for him. There
were the long legs and the long ugly neck and
head. The body was done up in brown paper,
just as he had seen turkeys tied up in the
wagons when there were a lot of them to be de-
livered. Oh! how glad he was for his moth-
er's sake. His face fairly glowed as he thought
of the surprise in store for her. He lifted the
package. It was heavy. He made a hole in
the paper to see what a fat one he had got.
There was nothing inside but a large red brick,
with a quantity of rags stuffed around it.

In a moment he understood that the ingenious
Tom Sanders had duped him. The legs and
neck were fastened to either end of the brick,
and the rags had been put in to shape the whole
something resembling the body of a turkey.
What a bitter disappointment the discovery was
to poor Pete! The tears came into his eyes,
nor could he repress them, even when Tom San-
ders jumped from behind the lamp-post where
he had been hiding, and asked him with a leer
how much he'd sell his turkey for. Pete couldn't
endure it any longer. He put up his thin little
arm and rubbed his ragged sleeve across his
eyes.

"Hello!" shouted his tormentor. "Skinny-
bone's a cry-baby."

"You naughty, mean boy," said a sweet
young voice, and Pete and Tom looked up to
confront the little angel and a tall, kind-looking
gentleman who held her hand in his.

"We saw the whole thing," the small lady
continued, "but you needn't mind at all, Pete,
dear. I told papa about you and your sick
mother, and we have brought you the largest
turkey we can find and a whole basketful of
goodies. We were determined you should have
a Thanksgiving dinner."

"Moreover, my lad," said papa compassion-
ately, for the boy's sad face touched him, "we
shall see if we can't do more than this for you
and your mother."

What a triumph that turkey was to Pete! It
was a monster of a turkey, and in the recesses
of the basket he found jelly, and custard, and
cake, far more delicious than warm gingerbread.

"Tom," said Pete, "you didn't mean to hurt
me; let us be friends. Come and have a bit of
cake." And that was the very best part of it, I
think.

Papa did not forget his promise, and Pete's
Thanksgiving turkey was the beginning of a
great change of fortune for our little hero and
his invalid mother.

CONTAGION IN PUBLIC BATHS.—It is reported
that an inquest was recently held in New York
in the case of a 13-year-old boy who died, it is
charged, from erysipelas contracted in the
public bath at the foot of East One Hundred
and Twelfth street. The medical testimony
showed that erysipelas and other dangerous dis-
eases are frequently contracted at the public
baths, particularly at low tide. The jury
found a verdict in accordance with the evi-
dence, and recommended that a physician be
stationed at each public bath, and that persons
suffering from contagious diseases be prohibited
from using the baths.

WHAT MAKES PAPER TURN YELLOW.—A re-
cent writer has shown that the yellowing of
paper is due to the oxidation of paper by light,
and especially the more refrangible rays. The
discoloration is more marked in wood papers
than in rag papers, and more rapid in moist
than in dry air. Two practical results of this
study are, first, to keep libraries as dry as
possible, and, secondly, that the electric light
is far inferior to gas or oil, as the refrangible
rays form so large a proportion of its light.

DOMESTIC ECONOMY.

The Old Cook Stove.

You are standing there in your place, old stove,
On this pleasant autumn night,
Brightening the gloom of this silent room
With your cheerful rays of light.
You never can know, as you gleam and glow,
What a pleasure you are to me,
As you murmur and sing, like a living thing,
Infusing my bowl of tea.

You had always a cheerful way of your own
For those twenty years and seven,
Since the risky farmer brought you home
To cook for his stout "eleven."
The neighbors told him the trade he'd rue,
And they wished he would, no doubt,
For nothing but a "Galbraith" stove would do
When the winter's frosts were out.

How I envy your record, my worn-out friend,
For the hungry mouths you've fed,
For your pots of soup and your roasts of meat
And your glorious loaves of bread,
And the puddings and pies of festive days,
And the good things the children love,
Send back their fragrance to join in the praise
I am giving to you, old stove.

What varied fortunes have followed those
Who basked in your cheerful light,
And warmed their youthful fingers and toes
In your blaze on a winter's night.
One rears his sons where the pleasant breeze
From the warm Pacific blows,
Another dwells where the cheery bells
Ring over the homestead snows.

Some planted their homes 'mid the Yankee hills,
Some here by Megantic's streams,
One lives in the murmur of Sherbrooke mills,
Where the broad St. Francis teems.
There is one in the West, who's away so long
That her memory alone remains,
And your owner dreams of his wife and weans
On Alberta's prairie plains.

Some draw their gloves over dainty hands,
And others their mitts of wool,
While some recline on their cushions fine,
And some on a wooden stool;
Some brows are wrinkled, once fair to see,
Some smiling with prosperous days;
Why, they'd almost pity both you and me
With our homely looks and ways.

Now there's one thing I've often remarked in life,
Since the days when I went to school,
That those who earned the gloves of silk
Got "left" with the mitts of wool.
But don't be "down on your luck," old friend,
Tho' like me you've passed your prime,
Let us both go cheerily on to the end,
Which will come in its own good time.

Then you'll be refined by the furnace blast,
And modeled with art and skill,
And shine as brightly as in the past,
And work with as good a will.
And I—may this furnace of worldly strife
Refine my soul for Heaven,
There to join the farmer, his good old wife,
And the glorified "eleven."

—Mrs. Geo. Arkley.

PUMPKIN MARMALADE.—Pare, core and cut
into small pieces a medium-sized ripe pumpkin
of rich color; take six pounds of sugar, one pint
of good cider vinegar, a dozen cloves and one
ounce of best root ginger; bruise the ginger and
tie it with the cloves in a spice bag, put it with
the sugar and vinegar in an earthen jar or
porcelain-lined kettle that will hold two gallons;
when it gets warm put in as much pumpkin as
the jar will hold, pressing it down, and boil
it until it is well cooked (it will be transparent
and soft); take it out with a strainer and set it
near the fire while the liquid boils to a thin
syrup, put the pumpkin back into the jar and
let it boil for half an hour, crushing it as much
as possible the while with a wooden spoon.

SWEET PICKLES.—Eight pounds of fruit, four
pounds of best brown sugar, one quart of vine-
gar and one cup of mixed whole spices, stick
cinnamon, cassia buds, allspice and cloves—less
of the latter than of the former. Tie the
spices in a bag and boil them with the vinegar
and sugar. Skim well, then add the fruit.
Cook ten minutes, or till scalded and tender.
Skim out the fruit and put into stone jars.
Boil the syrup five minutes longer and pour
over the fruit. The next day pour off the syrup
and boil down again, and do this for three
mornings. Keep the bag of spices in the syrup.

CHILI SAUCE.—Thirty tomatoes, three large
onions, three peppers, one tablespoonful of all-
spice, cloves, cinnamon, two nutmegs, two
tablespoonfuls of salt, one quart of vinegar,
one cup of sugar; chop the onions and peppers
very fine; cook tomatoes some first. Mix
thoroughly.

BOILED SWEET POTATOES.—Choose potatoes
of uniform size, wash and boil 20 minutes;
drain and lay in the oven, turning them sev-
eral times to prevent burning, until they yield
readily to the touch; serve without paring.

BEEF TEA.—Cut one pound of beef into dice,
put into a glass jar and set in boiling water 12
hours. Add boiling water till of the required
strength and season with pepper and salt.

CHICKEN SOUP.—Save the broth after boiling
a chicken, add to it a sliced onion, two beaten
eggs, six sliced raw potatoes and a thickening
of flour and water.

SPONGE PUDDING.—One cup of sugar, one
cup of flour, three eggs, 1½ teaspoonfuls of bak-
ing powder. Steam one hour.

The Week.

The two subjects which occasion most talk are the same which have prevailed for weeks—the absence of rain and the superabundant presence of the immigrant. The former is not yet a very great burden, although people who cannot plow dry would like much to have the ground wetted enough to put their teams to work and fear the results of a too short and hurried season in the field. Stockmen would also be pleased to have some fresh feed starting, for the season in this respect is exceptionally late. The delay of the rains also retards the opening of some kinds of business which need soaked ground to give lively times. But there is time enough, and with an old-fashioned, moist, California winter, all will be busy and prosperous.

The incoming tide of winter refugees is unparalleled. Cars and engines are too few, wayside dinner stations are eaten out, engineers and train hands are overworked, and still they come. It is stated that a single train brought 841 people into Los Angeles, and the city is as full as a country village in fair-time. The same condition, though in a less degree, is noticeable in the upper part of the State. It looks now as though there would be plenty of tourists and home-seekers to go around. It is only a matter of time.

A Good Year For a Thanksgiving.

Probably California was never in better humor for sincere thanksgiving than at present. It is true that the thankful spirit is not always produced by prosperity, and that discontent sometimes dims the fairest success. It is also true that, the world over, when thousands rejoice, there are individuals into whose lives grief has come, and darkness and disappointment will not flee away at the approach of a Thanksgiving holiday. For those to whom good things bring not joyful hearts, we can but cherish pity; and for those who bow in sorrow on the day of gladness, the sympathy of true friends goes forth unbidden. But while we pity or extend our sympathy as occasions require, we cannot but enter heartily into the general rejoicings which will mark the approach of Thanksgiving Day, 1887.

The year has been full of good things. Never has there been so general a disposition toward industry on the part of the people, and never, taking the whole field into account, has industry been so well rewarded. There has been a constant increase in the disposition of the people toward the upbuilding of the State, and the result, as has been frequently stated in our columns, a most wonderful activity in nearly all Californian affairs. It is gratifying to one who has full faith in productive effort as the only true basis of prosperity, to see that the whole population are striving to advance the State in that line. It is a signal triumph for industry. It alone would give occasion for a general Thanksgiving.

Passing to the field of production, which is our especial care, one has but to call up the multitude of mortgages which have been lifted this year to testify to the improved condition of our agricultural workers. Next come the train of improvements in homes and in fields, the new residences, new farm buildings, new irrigation facilities, railroads, etc., which are reported from all directions. The sawmills no longer stand with cold boilers, the throng of laborers and artisans have found plenty to do—than which there could be no better evidence of the progress of constructive arts and the abundance of work for those who have proper skill and disposition. This change in the general face of affairs has been in the main produced by the abundant products secured by our farmers, and the fair price which has been obtained for them as a rule. These facts have gone out throughout the country as a fit companion for the charms of our climate, and the result has been an influx of population and capital, so that now the prophets speak of "another 1849"—this time on a better and more enduring basis. Here, again, is a theme for thanksgiving.

While agricultural producers have prospered, while their increased ability to purchase has stimulated trade and manufactures, their success has also been a shining light which has attracted thousands to the investment of their surpluses in land and animals and trees, and has largely increased the number of small farms which are the backbone of a country's prosperity. It is not to be expected that all the amateur efforts at agriculture and rural benefits will satisfy or be successful, and yet it has often been shown that no occupation of men has so small a percentage of failures as agriculture. Some will fail through action suggested by their inexperience, but even those who fail may console themselves with the assurance that they lost in a good cause and were not mulcted of their savings by gamblers' arts. The majority will succeed. They will make many a nook and corner beautiful with their cultures, and their families will grow strong and rejoice in innocent country pleasures. Thus they will advance the State in production, in morals and in population. Let them rejoice and give thanks.

The fact that our State was never better fitted than now to welcome the self-reliant and capable from all lands, should not be overlooked. We have abundant room for hundreds of thousands, and we can show them how to win a livelihood better than ever before. The day of small things is a period of great promise.

Making California a synonym for immensity in all respects, has been a brake upon our progress as a State. California is now becoming better known, and better knows herself. And each new fact in her self-education calls for thanksgiving.

Forestry at the Fruit-Growers' Convention.

The Santa Rosa Convention continued its work after the introduction which we noted in last week's RURAL. The proceedings included a number of interesting essays and discussions, which we shall duly present to our readers in full form as rapidly as we can find space, beginning with our next issue. We note this week one item of the week's work, and that is in regard to forest preservation and extension. The subject was introduced by Hon. Abbot Kinney, president of the Forestry Commission, in an admirable and carefully prepared address, of which we expect to present considerable portions hereafter. At this time we choose but a single paragraph from the address and append thereto the resolutions adopted by the convention, so that our readers can have early information of the measures which the friends of forestry are advocating. Mr. Kinney said:

This State needs very different treatment from a forest point of view in its different sections. Parts of it would be promptly ruined by the removal of even extensive areas of mountain brush, as in the south, while parts would be much benefited by diminishing the forest area in a reasonable manner, as on the North-western Coast. In extensive portions of this State plantations of trees should be made as wind and frost-breaks, and generally for climatic purposes, as well as to give local supplies of fire-wood and timber, while in others there may be an advantage in permanent clearings on the arable lands. The decision in such matters should come under the control of an intelligent State forest management, so also should the commercial outtings in the forest to prevent waste, to use only the ripe timber or judicious thinnings from too close growth to insure reproduction in the forests; to prevent and put out fires, and to secure such fees from the users of forest products as at least to pay the cost of management.

The rapid exhaustion of forests in the United States indicates clearly that the present demands for timber in California must soon be largely increased; the purchase of considerable areas of timber lands by foreign and Eastern capitalists shows that this danger is upon us; now is the time to act. For this reason, if for no other, I recommend the abrogation of the protective tariff on lumber which takes from the whole people for the benefit of the few lumber combinations and sets a price upon the head of every tree in the land. Whatever reasons can be adduced for the protective system which places the taxing power of the Government in the hands of private persons, and at the expense of the masses, enriches the few; none of them can apply to the forests for these; it is our interest to keep and not to destroy; all persons, of whatever tariff views, should unite in demanding the repeal of the timber tariff.
